A few minutes before sunset we were lucky enough to have presented to us one of the most striking and sublime natural phenomena it was ever my good fortune to witness. The clouds on the western horizon, which had up to this time greatly circumscribed it, lifted to the extent of three or four degrees, and the mountain was suffused with a glow of golden yellow light, thrown from the sun, then wholly unobscured. A smart shower of rain came on at the same moment, and then, a little to the south of east, appeared a rainbow of dimensions and brightness wholly transcending all my previous experiences of this phenomenon. I am sure I do not err when I say that it presented all but a sixth of a perfect circle. To bring the position more clearly before the minds of my readers, I would ask them to take a watch in their hands, and look at it as if desirous of ascertaining the time. The rainbow which we saw embraced all the degrees of the circle from the figure VII to the figure V. in the corresponding position on the other side. In order to witness this magnificent sight as perfectly as possible, I hastened to the little peak of which I have spoken, and there viewed it, lost in delight and admiration. Owing to the rarity of the atmosphere the reflection was singularly distinct, especially on the eastern side of the bow. I subsequently puzzled myself sorely with the old question, 'Does the rainbow actually exist independently of the human eye which beholds it, or in other words, is the existence of the eye the condition on which the existence of the rainbow depends'? I shall hardly be reproached for the confession that my knowledge of the science of optics brought to me no satisfactory solution of a question which has puzzled philosophers for many years, though, for all I know, it may now have found an answer accepted by all the schools.

Night closed in on us with a clear sky and therefore a very low temperature. The smoke from the wood fire, which was sufficiently painful to the eyes even while the door of the hut remained open, now became wholly unbearable when the cold obliged us to close it. Gathering about or upon us every shred of woollen we could muster, we lay down under our blankets on the boards, separated from them by but one thin skin of matting, and with a bundle or two of straw sandals for pillows. Hour after hour we lay awake in misery, shivering with a cold which froze the very marrow, and impatient at the slow passage of the time. Once or twice I rose, to enjoy, so far as was possible under this cruel cold, the splendid sight presented by the heavens. The moon was in her last quarter and was in close conjunction with the planet Venus, which shone in matchless beauty with a dazzling radiance. Every star I could recognize seemed promoted to a higher magnitude, so keen and clear was the atmosphere, but the temperature admitted of but short observations, and I was glad to return to the hut. As the slow hours dragged wearily on, there floated through my mind over and over again the sublime passage in the *Lobgesang*, "Watchman, what of the night? Will the night soon pass?" At last the answer came "The night is departing," and looking out I saw the sky laced with the first streaks of dawn, and "morn in russet mantle clad" walked on the top of the eastern hills. The pilgrims now began to muster up from the eighth rest-house, where very many had passed the night, and in a few minutes there must have been something like a hundred and fifty of them standing facing the east at the edge of the crater. Every succeeding minute added to the light, the clouds began to take a crimson tinge which became more and more golden as the sun approached the horizon, and the moment was at hand which, with many of us, had been the hope of years. And now ensued a deep and most impressive silence throughout the whole assemblage. Hands were joined and extended in the attitude of prayer, many fell on their knees and lowly murmured words which, whether of more or less deep meaning, could hardly have been less than expressions of gratitude or supplication to the Supreme Being, and a priest, standing in front of all, pronounced, in a more measured and reverent manner than is common with the Buddhists, some hymn or prayer appropriate to the occasion.

I envy no man who could remain unimpressed by such a sight, which indeed moved me deeply. It is on occasions of this kind that the religious sentiment seems to declare itself an ultimate irresolvable fact of our nature, declaratory at once of the existence of a Supreme Being and of relations between Him and ourselves which we may hereafter more clearly apprehend than is now possible to us.

* * * * * * * * *

We had now to prepare for our descent. The coolies were summoned to help pack our limited baggage and stores, and we took a slight breakfast. And I would here notice a fact worth a passing remark, although the explanation of it did not strike me at the time. We all complained bitterly that our tea, instead of being hot and comforting, as we had fondly hoped it would be, was little more than lukewarm, although certainly made with boiling water and not allowed to stand more than the usual time. It did not occur to any of us that the low temperature at which water boils at this altitude was the true cause of our disappointment, though our brains must have been badly frozen for the fact to have escaped us. Of course the heat from the water was rapidly abstracted by the cold air which surrounded the tea-pot. But certainly this was not the sole cause of the mockery to which we were exposed at the spout—I cannot say the hands—of the traveller's kindliest companion.

As I was determined to test the question of the time of descent this year, I took the precaution before starting of comparing my watch with that of Mr. Rickard, and noted the trifling difference between us. I was somewhat encumbered with the extra clothing I had put on as a protection against the night's cold, but was disinclined to dispense with it, at least until further down the mountain and warmed with the exercise of the descent. We left the summit at exactly 5.50, and bowled away until we arrived at the first rest-house entering the wood on the descending track. Here I discarded my superfluous clothing, though forced to carry it with me; and my companion, having no motive, as I had, for doing the work against time, promised to follow me more at his leisure, for our pace had certainly been trying. I started down the path through the wood at a diminished though fair pace, and arrived at Maga-ishi—the end of the straight road from Shubashiri—exactly at 7. I here left my bundle of clothes, and a memorandum of the time at which I arrived, calling the people of the house to witness it, and then started along the straight, not at all fatigued but badly foot-sore. Indeed, to this cause I chiefly owe the fact that I reached Shubashiri in less than two hours from the summit. The pain I suffered from blisters was lessened by running and increased by walking; and although it was a broiling morning I ran a third of the way down the straight. The *waradji* tree was reached at exactly 7.15; the porch at 7.40, and the tea-house at 7.45, and the whole distance thus accomplished in 1 hour and 55 minutes.

I think it will suffice to say, however, that far from overestimating the feat, I regard it as one which any fair

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

walker who has been accustomed to mountain work, especially the rapid descent of mountains, could easily perform and even beat. If I may be permitted the intrusion of a reason personal to myself, I left Yokohama racked with rheumatism, and resorted to the hot waters of Ashinoyu to dispel it. They produced the desired effect, but as the yalways relax the system terribly, I was about as far from climbing condition as a man could well be. Last year I made the ascent and descent in one day with the greatest ease. This year I could not have done so.

My sole object in giving these distasteful personal details is to prove, what I have always asserted, that the descent may be made under two hours by any fairly good mountaineer, and that my descent of last year was unduly protracted by the mistakes due to my inexperience of this special mountain, and the absence of all intention of coming down it against time. The question raised is now fairly set at rest. Mr. Talbot came down in 2 hrs. 2 minutes, and, as he had walked up from Shubashiri on the same day, his feat ranks far before mine, though had I been in walking trim, I should like to have tackled so sturdy a mountaineer.

The question of the time in which the descent may be made, is, however, far from settled. Twenty years ago I would have engaged to do it in an hour and three quarters, but I must leave to younger men a field in which no great triumph is ever achieved over the age of thirty.

There are reasons why my time will not be easily or often beaten, however. The first is, that, on the first descent, some mistake is almost sure to be made, either by losing the path, which is very easily done in a mist, or some mishap may occur due to inexperience operating in another direction. Few men care about doing a feat of this kind twice, and some knowledge of a mountain is requisite to give that entire confidence which is requisite for its descent at a great pace.

I must again beg my readers to pardon the intrusion into this account of my visit to Fusiyama of the personal details which beset it. But my purpose was a special one, and I could not prove that I had fulfilled it without giving these details.

In conclusion, I may be permitted to add a few words of tribute to Hakoné as a place of resort during the trying month of August. It is true that the village is rather a miserable place. It is true, too, that it is extremely liable to protracted wet weather. I have known seventeen thoroughly wet days out of twenty-three. But when, as this year, the season is fine, Hakoné really possesses great attractions. The mean temperature is from ten to fifteen degrees below that of Yokohama, and this alone is an unspeakable boon. If the lake alone possesses no remarkable beauty it is still a delightful object when lying basking in the sunshine. Bathing in it is a special luxury, so exquisitely soft and clear is the water, and rowing or canoeing passes many a pleasant hour. If there be no great variety in the excursions, there are still several which make a delightful day—Atami, Mishima, the Otometôge, the round through Ojinoku to Kigu, Myanoshita and Ashinoyu, Gotemba, the ascent and ramble on the summit of Komagatake, a visit to the Ten-province stone, &c., &c. It is a pity that a bathing-house or two is not built upon the lake. A swimmer, of course, takes a boat and springs into thirty feet of water. But bathing accommodation for ladies might easily be made at some suitable spot, and would conduce greatly to their enjoyment here. The tea-houses are, on the whole, as good as can fairly be expected, and, with a little pains I think that a piece of ground might be found and laid out for lawn-tennis at no great expense. But the proprietors of the tea-houses are poor and sadly deficient in enterprize.

W. G. H.

The Japanese Government have sanctioned the holding of an Exhibition of native and foreign curios and works of art, to be held in Nagasaki, in the spring of next year. No trouble or expense will be spared to make it a success. A building suitable for the purpose will shortly be erected, and arrangements entered into with firms in England and elsewhere for a supply of goods such as have never been seen in Japan before.—*Rising Sun.*

HISTORY OF THE TOKUGAWA DYNASTY.

Chapter III.—*Continued.*

Ôya Yoshitaka would gladly have escaped the alliance but could find no means of getting away, and found himself obliged to concert with Masaiye and Nagamori some plan of action. Môri Terumoto was made leader and a mutual fidelity sworn.

False charges are published against Iyeyasu. Mitsunari and his party raise troops.

A circular was sent to all the barons round about, far and near, recapitulating thirteen distinct charges falsely preferred by Mitsunari and Yoshitaka against Iyeyasu. Troops were collected at Ozaka where some forty barons assembled, and the forces they brought with them numbered, horse and foot, a hundred and fifty thousand men.

When the circular came into the hands of Kuroda, Yoshitaka and Katô Kiyomasa, they saw through the designs of Mitsunari to bring about his own aggrandisement by a pretended zeal for Hideyori, with whose authority he pretended to be invested, and refused to join him, persuading at the same time Hideaki to ally himself with the eastern party.

Tachibana Muneshige, on receiving the circular, conferred with his *Karo*, but they were divided in opinion, and after due deliberation he resolved to join Mitsunari at Ozaka, upon the ground that he was bound in gratitude for the favours he had received from Hideyoshi to obey his son's orders conveyed to him through Mitsunari, however much he might distrust the latter.

Alleging the commands of Hideyori, Mitsunari and his party sounded a deputy of Iyeyasu, Masayoshi, but the latter, after placing the women in safety, made his way to Fushimi.

Mori Terumoto now occupied the western portion of the castle at Ozaka, and the army being eager for action, it was resolved that the offensive should be at once taken, Terumoto and Naganori remaining behind to guard the person of Hideyori.

Hideiye, Mitsunari and Masaiye determined to march into Minô and Owari and occupy those provinces, it being agreed that in the event of Iyeyasu advancing from the east, Terumoto should at once join them with the troops left in Ozaka With their forces thus united it was confidently expected that a single engagement would decide the struggle in their favour. This understanding being arrived at, the march eastward was commenced and siege laid to Fushimi, which, however, was vigorously defended by Mototada.

Iyeyasu now quitted Yedo and reached Koyama in Shimotsuke, where, on receiving news of the attack on Fushimi, he sought the advice of his kindred and principal adherents. Ii Yoshimasa declared that now was the time for the Tokugawa family to seize the government of the empire and advised an immediate recall of the forces scattered throughout the country. At last a plan of action was resolved upon. The leaders and their followers were, however, first of all assembled, and informed that Mitsunari, in concert with Kagekatsu, had laid hands upon their families in Osaka, and held them as hostages, pretending to act in the name and with the sanction of the young heir of Hideyoshi; that the difficulty of the situation in which they found themselves was undesirable, and that those who wished to save their wives and children by joining the western forces were at liberty to depart, and would be furnished with sufficient forage and provisions for that purpose. Fukushima Masanori rejected the proposal with scorn, exclaiming 'who is there among us who under circumstances such as these would desert his chief out of consideration for his family.' These vigorous expressions met with the approval of the assembled leaders, and Masanori was appointed to the command of the van with Terumasa for his lieutenant, while the general direction of the war was confided to Nawomasa and Tadakatsu, and Yuki Hideyasu was entrusted with the government of the city of Yedo and the surrounding country. Such then were the preparations made to meet the advance of Kagekatsu.

Hideyasu took up a position at Utsunomiya, while Iyeyasu taking the Tôkaidô and Hidetada the Nakasendô, were to march westward. The barons of the Kaidô pro-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

vinces Yamanouchi Kadsutoyo, Horiwo Tadauji, Nakamura Kadzyoshi, Ikeda Terumasa and Fukushima Masanori surrendered their castles in earnest of their intention to join the eastern army, and marching into the province of Minô, halted at Jige. The state of parties at this time was most confused, adherents of the western and eastern Government being scattered throughout the Empire, crossing each other, so to speak, like the weft and warp of a woven fabric.

The eastern army marches out of Yedo.

In the 8th month our troops set out on their march, corps after corps, from Yedo. At the same time Iyeyasu moved from Koyama, and the castle of Fushimi was besieged by the enemy, against whom it was for ten days and nights bravely defended. At last, however, some of the garrison turned traitors and set fire to the castle. The enemy took advantage of the confusion and pressed his attack, which resulted in the surrender of the place, upon which Mototada put an end to himself with his own hands.

Ota Hidenobu, falling into dissipated and spendthrift habits, became unequal to the government of the eastern provinces which had been entrusted to him, and the resources of the country under his rule were diminished to such an extent as to render the raising of troops there a tedious and difficult matter. Mitsunari, who had returned to Sawayama from Ôzaka and had endeavoured by falsely giving himself out as acting with the sanction of Hideyori to raise the country round about, had previously sought to attract Hidenobu to his cause by liberal offers of land, and was now joined by the latter, who took command of the town of Gifu, the key both of the western and of the eastern provinces. Many barons of Isé and Owari, overawed by this concession to the power of Mitsunari, joined the western league. Their new chief repaired the defences of Ôgaki and made it his headquarters, and after being joined by the besiegers of Fushimi, found himself at the head of an army of a hundred and eighty thousand men.

Iyeyasu returns to Kiyosu.

The Mikawa chief, on learning his opponents' position, did not allow himself to be in the least dismayed, and occupied Kiyosu with fifty thousand men under the command of his generals Nawomasa and Tadakatsu. Here he found himself some seven *ri* distant from Ôgaki, and for some time both sides remained inactive.

Among the eastern forces, meanwhile, a rumour arose that the leaders of the front line had entered into a secret understanding with the enemy. Nawomasa and Tadakatsu in alarm sent to Iyeyasu and entreated him to give his personal attention to the matter. Murakoshi Yoshinawo was accordingly ordered to make the two generals acquainted with their chief's views. They went to meet the envoy, and on hearing the nature of their lord's commands were greatly disturbed. Directing the envoy not to give the message he had received from his master but one with which they furnished him in lieu of it, they called together the principal officers and presented him to them. Yoshinawo however, reflecting that if a different message was to be given his master must certainly have known of it, thought it better to stick to his duty and state plainly what he had been originally instructed to say. He therefore told the assembly that his master had ordered him to inform them that he was incapacitated by a violent cold from immediately taking the field, much as he regretted the inaction to which they were thus condemned, and which he knew was most contrary to their feelings. The two generals changed colour at this unexpected conduct of Yoshinawo and for some time the assembly remained silent. At last Katô Yashiakira stepped forward, exclaiming that he understood the message, that the Jibu (Mitsunari) falsely pretending to serve the interests of Hideyori was responsible for the war, that they had never forgotten the benefits they had received from Hideyoshi or had any desire to take up arms against his heir, and that Iyeyasu, above all, had been unwilling to march westwards.

One of the barons present, Masanori, clapped his hands in assent, and after some further deliberation it was determined to take the offensive. Gifu was accordingly at once attacked and after a short resistance reduced. On hearing of this disaster, the troops at Ôgaki hastened to the assistance of their friends and several engagements ensued, but these were unsuccessful and the Ôgaki forces returned to their quarters. Previously to these events Kobayakawa Hideaki had made overtures to Iyeyasu, in pursuance of which he led the men under his command to Takamiya (in Ômi) and excused his further advance by a plea of illness. Môri Hidemoto at the same time entered Minô and was persuaded by his relatives and principal followers to join the eastern army. He accordingly opened communication with Iyeyasu, of which the western party was of course ignorant, and encamped at Nangûzan in Minô, Matsuôyama in the same province being at the same time occupied by Hideaki.

Meanwhile our troops waited for the arrival of Iyeyasu before again taking the field.

In the 9th month Iyeyasu quitted Yedo at the head of some twenty-five thousand men and marched westwards, drums beating and colours flying, in the direction of Gifu. At this epoch the men of Minô and the eastern provinces in general adhered to the party of Iyeyasu, while those of the western provinces for the most part favoured the cause of Mitsunari, and the chiefs who were mighty in war remained at their estates watching the course of events, and ready to declare for the winning side.

The arrival of Iyeyasu greatly raised the spirits of his troops and the leaders entreated to be allowed to attack Ôgaki. He replied, however, that the position was a strong one, and that the garison, which was numerous, was well provided with provisions, while Hideiye their commander, in spite of his youth, was no contemptible soldier. He had the assistance, too, of Masataka, Yoshihiro, Yukinaga and Masaiye; to attack him could not but result in a disaster. Mitsunari, on the other hand, was no general, and would probably, relying on his speriority in numbers, venture to fight in the open where he would certainly be defeated, in which case Hideaki and Hidemoto, who had already joined the eastern party, might hang upon his rear. The Mikawa chief lost no time in carrying out his plan, and a small body of men were at once ordered to the front to reconnoitre the enemy's position.

The leaders of the Ôgaki garrison, meanwhile, could arrive at no settled plan of action defensive or offensive, and under these circumstances invited their men to join in their deliberations. Hideiye addressed them, assuring them that his means of defence were ample, and that he was quite prepared to meet the enemy whenever they should attack him. He added that in that event he should endeavour to harass them by repeated sallies which would oblige them to fight in the streets, and would thus gain time for the arrival of the Kômon of Aki, between whose forces and the besieged their enemies would then be hemmed in and exposed to a certain defeat.

Mitsunari did not approve of the suggestion of Hideiye, and gave it as his opinion that they ought to take advantage of their superiority in numbers and march against the eastern provinces; to remain cooped up in a single castle and not take the field would cause the whole country to wonder what object they could have in view.

The majority agreed with Mitsunari; it was determined to take the offensive without delay, and the same night troops marched in the direction of Sekimura in Minô. Iyeyasu managed to get information of this movement and exclaiming with glee that the enemy was now about to fall into the trap he had laid for him, issued his orders and appointed Fukushima Masanori to the command of the van, Tadayoshi Shimotsuke no kami with Ii Nawomasa and Honda Tadakatsu being selected as his lieutenants. The right wing was placed under the command of Kuroda Nagamasu, Katô Yoshiakira, Tanaka Yoshimasa, Ikoma Kadzumasa and Hosokawa Tadatomo, and the left wing under that of Tôdô Takatora and Yamanouchi Kadsutoya, while the reserve was in charge of Hachisuga Yoshichika. The Mikawa chief commanded the centre in person. Horse and foot the eastern forces numbered some seventy-five thousand men. Ukita Hideiye took up a position, facing the centre of the eastern army, at the base of Temmanzan in Minô. To his left he had Shimadzu Yoshihiro and Konishi Yukinoga, to his right Oya Yoshitaka. Ishida Mitsunari posted himself with his rear against the slopes of Ibukiyama. Kobaya-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

kawa Hideaki and Môri Hidetsugu remained behind at headquarters. Wakizaka Yasuharu encamped at the foot of Matsuóyama, while Nabeshima Katsushiye, Nagatsuka Masaiye and Ankokuji Yekei occupied the northern slope of Nangu-zan. Horse and foot the enemy numbered some hundred and twenty-eight thousand men.

The eastern and western armies meet at Sekigahara.

On the 15th day at dawn Iyeyasu put his whole army in movement and reached Momo-kubarino in Minô. A thick mist enveloped his forces, so dense that it was impossible to see a yard ahead. Both armies came in sight of each other at Sekigahara in Minô. About eight in the morning the mist cleared off and revealed the white standard of Iyeyasu to Mitsunari. Overjoyed at the sight the latter cried that his enemy, by venturing to attack him, had ensured his own destruction; hemmed in as he was by the main body in front and by the troops posted at Nangû in the rear, the chief of the Tokugawa house would that very day behold his power destroyed for ever.

A signal rocket was then fired and the western forces kept in hand waiting for the advance of Iyeyasu. Drums beating and horns blowing our men now put themselves in movement. Todoyoshi, Nawomasu and Todakatsu attacked the position occupied by Yoshihiro, who defended his post with great vigour. Hideiye meanwhile advanced against Masanori whose men fled in a sudden panic. The reserves were brought up to his assistance and the attack was repulsed. Kuroda Nagamasa had previously organised a band of devoted followers ready to sacrifice their lives in an attempt upon Mitsunari in person. The attempt was now made. Kuroda led his men in front of the battle and fell upon and slew Shima Katsutake, their enemy's general. Yoshimasa and Kadsumasa followed up the attack but were repulsed by Maihijogo and Gamobichiu. Mitsunari was delighted at this success, and ordering a rocket to be fired sent news of the victory to Nangû. He then quitted his position on the hill, and his men, with loud shouts and drums beating, joined the front line, which thus reinforced at once advanced.

Nagamasa, Yoshiakira and Tadaoki now fell upon the flank of the advanced forces of the enemy, while Yoshimasa and Kadzumasa turned back to the assistance of the eastern troops. The leaders of the left wing attacked the camp of Ôya Yoshitaka. The fight thus became general, spears were crossed and arrows and bullets traversed the air like the threads of a web. Noon passed and victory still remained uncertain. The western army showed great valour, and Hideaki watched the course of the struggle undecided how to act. To force the latter to a decision a musketry fire was opened upon him, whereupon he descended from his position and attacked Yoshitaka with eight thousand men. Upon this Iyeyasu ordered a general advance, drums beating, the noise of which mingled with the shouts of the combatants made the welkin ring. The western troops were thrown into great confusion, our advanced line seized the opportunity and drove them back. The left wing of the eastern army took Yoshitaka prisoner, then with the assistance of the right wing surrounded Mitsunari and compelled him to fly. Yukinaga and Yoshihiro also sought safety in flight, and thus the western army suffered a complete defeat. They were hotly pursued by the victors and many thousands of heads were taken.

The hesitation of Hidemoto.

When the rocket fired by the order of Mitsunari signalized the commencement of the fight, Hidemoto, who was a trimmer, proposed to join the western troops, whose chances of success seemed to him better than those of the eastern forces, but his leaders would not entertain the idea and he therefore gave directions that his men should halt for refreshment. His troops muttered among themselves that the pretext for the halt was a false one. Anxious as to the results of his inactivity, Hidemoto sent messengers to congratulate Iyeyasu upon his victory, and excused his not presenting himself in person on the ground of his former relations with the western party.

Our leaders, meanwhile, resting upon their successes, hastened to the presence of their chief.

(To be Continued.)

A SERMON FOR THE YOUNG.

(From the Japanese.)

"Shingakudôwa:"—Second volume, 2nd part.

(1) "Lo the full ears in many an autumn plain
"Each of the summer's toil a witness mute."

"Good acts if few make no great name—bad acts if few make no great ruin," as the saying is,—in everything this system of accumulation is of terrible importance. Even the huge ridge pole of the well-known *Sanjiusangendô* in Kiyôto (thirty three *ken* temple); even the mast of a thousand *koku* ship, has had its commencement in a shoot no larger than a toothpick, till by the life given it of heaven it has grown to a mighty tree. And although one watched day and night at no time could one say "there it has grown so much": nevertheless, as a proof that every moment it is growing and growing there it stands a gigantic tree.

Now he who is continually doing good closely resembles what I have instanced. For example, call the heart the male principle, or Heaven, and the body the female principle, or Earth. Then, in whatever we do, let us follow the promptings of this heavenly heart—let us do speedily what we know to be right, and rectify quickly what we know to be wrong. In every way let this earthly body obey the teachings of heaven, in no way opposing the movements of the life it receives therefrom. This is, in short, the continually doing good we have previously spoken of, and may be called a shoot of good fortune. But then the obverse of this—the ever doing of evil—that which knowing in the heart to be good we fail to do because inconvenient to the body; that which knowing in our hearts to be bad we do not desist from because the performance is convenient to the body, saying "pooh! there's no harm in this," and momentarily doing that which is adverse to the teachings of heaven; this again may be named a shoot of misfortune. Doing good is like the prairie flowers in spring, whose growth is not apparent, but which still are growing without doubt. Again the doing of evil is like a razor hone. Though we watch each time it is used we perceive no decrease, yet decrease it does without doubt, and in course of time it becomes like a sharp spear's head which no body will deal with, and in fine disappears from sight, going none know whither. "In the house of the evil doer are many calamities."

(2) "Dire is thy fate oh careless heart
"That to thy self doth say
"Tis nought—a trifle this I do,
"It is the world's way."

If we stride forward right leg and left leg turn about, we may go westwards to Nagasaki in Kiushiu or eastwards to Matsushima in Ôshiu, or wherever we please; but we persist in stepping backwards till we land in a mud bank or a ditch and come by some grievous injury. Let each one of you young folk carefully perform the duty of to-day and beware of backsliding.

Call it sin or call it misfortune, the most calamitous thing which can happen to a mortal is when one shall slay a master, a parent, or a husband. These are the three capital crimes; and of old the murderer of a master had his head sawn off, the slayer of a parent was crucificed, and she who murdered a husband was torn asunder by oxen. In the last case, the criminal was stretched in the form of the character 大 on a cross 12 feet in height, and to each foot was fastened a rope the opposite ends of which were tied to the horns of two oxen. Then when the time came the executioners filled their mouths with water which they blew in the faces of the oxen, who slowly retreated tearing the culprit in half. Was not that a horrible fate? At the present day, however, the moderation of our rulers is such that there are no punishments so severe, nevertheless as regards these capital crimes, even an attempt at murder is visited with crucifixion. Even now, in Kiôtô and Ôsaka, when the slayer of a master is exposed in public, a large saw is placed at his side, it appears.

Now if we search out the origin of all these calamities we shall find them originate in rude replies to parents and sulky behaviour towards masters, and that these peccadillos have in-

(1) *Tamikusa no natsu no kusegi no hodokodo no ko ni araware te miguru aki no ta.*
(2) *Kabakari no koto wa ukiyo no narai zo*
To kokoro ni yurusu hate wa kurushiki.

creased and increased till they end as described. There's an old stanza which says.

(3) "The white snow falls i' the lake
"And with its waters mingles, but anon
"It freezing clings to its borders."

The first harsh reply or sulky face passes unnoticed by the world, and to oneself does not appear to matter much, but by-and-bye it ends in such terrible guise as parricide or the slaying of a master. Then do men cry "see there, see there!" and the delinquent himself perceives his cruel position; but let him grieve never so much he cannot retrieve what he has lost. So we see how necessary it is to suppress the harsh answer or sulky face at the first blush. So it is in all things—small matters accumulate till they become great.

In connection with this it has been said

(4) "When the servant shall slay his lord, or the child his parent,
"this is not the work of a day but the outcome of things."

From this we see that the word 'good' is but a synonym for 'joy,' and 'evil' for 'sorrow,' and that these are but another name for the 'beginning' and the 'end'.

To use the simile of the feet again. When they go forward right and left by turns this is called 'good,' and the goal is called 'joy' or 'good fortune.' But those feet which slide backwards are the symbol of evil, and their goal, the mudbank or ditch, is 'calamity' as it were. Young people, and children in particular, must grasp fully the meaning of this. To every wish of parents or masters let their response be ever "aye, aye." This is the chief point.

"Come," say your parents in the morning, "get up now." "Aye," say you, and rise at once. Or should they send you an errand "Aye," say you, and off you go. Or again, "do your reading or writing lesson." "Aye," say you, and commence forthwith. Do this and you are storing up good actions, or in other words you are doing your duty towards your parents. If instead of obeying, you answer them harshly, or pout and grumble from morning to night you are storing up evil. In other words this is the first bud of what ends in parricide. For instance, Chômatzu's (5) parents call him, and he, pretending not to hear, mutters out "Oh there they are calling again. I suppose it's 'go a message' as usual, bother take it." Again comes the call "Chômatsu," but he keeps silent and goes on with what he is doing. At this the voice gets louder. "Here Chômatsu." "E-eh! what is it now" is the answer. When called to task for this brusqueness, "well I did say e-eh! and what harm either?" "Is that the way you answer your parents?" "Eh! what a noise all about nothing. Look at Sansuke next door, he makes his parents wash his feet," replies he, making evil conduct his pattern, and flattering himself with the idea that he is "a trifle better than Sansuke at any rate."

This is the reversing of the very heavens and earth—the very head and front of unfilial conduct. He is working up to what must end in exposure on the cross. But of this he thinks not, and as day follows day he treats his parents rudely, and this increases till he actually gnashes his teath with anger at them.

By and bye he comes to raising his hand in menace, till, his hand becoming deft, anon he strikes them. Then, if this even shame him not, he at length comes to kicking them, and getting used to that, in fine he arrives at the terrible crime of murder. This is the "outcome of things" we have spoken of. All this applies to masters as well as to parents. While yet temporizing with his harsh answers and sulky temper, the delinquent finds himself exposed on the cross to the public gaze. Arrived at such a pass as this the murder is out, and there's no help for it; so hasten all of you while there is yet time to obey the teachings of the undefiled heart, and to continue advancing in the paths of fealty and filial duty. And you children, when your parents shall scold, you must not pout and sulk, for all over the world the hearts of parents are centred in a child, joyfully denying themselves food that he may eat, or clothes that he may be clothed; enduring the pangs of poverty, that he may prosper. Even the roots and herbs of the ground grow thin, and are bitter and sweet by turns for the good of the young shoot. By coaxing and praise, and sometimes when you do wrong by scolding, your parents are but striving heart and soul that you may not turn out bad; so much so indeed, that each time you are reproved you ought to thank heaven for it with clasped hands, studying obedience in everything more and more.

About the period Meireki (A.D. 1650) in Higemura in the department of Miyoshi in the province of Bingo—an out of the way place among the mountains, some 16 or 17 *ri* from my native place, the castle town of Hiroshima—there lived a farmer called Seiyemon, an extraordinary example of filial piety. He was but a small farmer but came of an uncommonly old house, being the descendent of a certain Sakoda Mino no kami, an adherent of the great house of Miyoshi Shikibu no Taiyu. But with the lapse of years had come reverses, and at the time I speak of the family were farmers and lived in the ancestral village of Higemura. Now this Seiyemon was an unusually good son, and though, of course, from the lapse of time the exact account of his actions has not come down to posterity, I will here relate his admirable conduct in one instance. In a neighbouring village, called Miyoshimachi, dwelt a relative of our *Daimiyo*. To this village, one day, Seiyemon was dispatched on an errand by his father, and the roads being muddy from the rain he put on his straw shoes; but the mother seeing this said, "straw shoes won't do, put on your rain clogs," which he immediately did. With a "well, good-bye, I'm off" he was just setting out, when his father cried, "with these" bad roads you'll tire yourself wearing rain clogs, put on your straw shoes." This done he once more essayed to depart, when his mother cried, "you're going on a visit and your feet will get dirty with straw shoes, put on your rain clogs." Once more he attempts to start, when his father cries, "when the roads dry you will find it hard work with those rain clogs, put on your straw shoes," to which he again assents, and so on changing time after time, till finally he issued forth with a clog on one foot and a straw shoe on the other. On his way to Yoshimachi a friend met him and said, "what makes you come out in such an absurd style as that?" "Oh! my father told me as the roads were bad to wear straw shoes, and my mother that I must put on clogs or I should soil my feet, so, both being my parents must be equally obeyed, and I came away in this fashion." Really now are there not some very filial children in the world! One can see from this what a good son he must have been, and the thought of it brings tears to one's eyes. His conduct coming to the ears of the lord of the soil, he was pleased to bestow praise on Seiyemon, and by-and-bye gave him a grant of land rent free. This was in the third year of Meireki, and thirteen years later his Honour, hearing that he was in poverty sent him a present of money; and later on when his son Shichibei had succeeded him, and when by reason of their debts they were well nigh ruined, the succeeding lord of the manor, remembering the virtues of Seiyemon, discharged all their debt. From that time forth their house continued to prosper. They are even now farmers, and still possess the certificate presented them by his Honour. The whole account may be read in a book called "Filial piety in Geishiu and Bishiu." From this we see how, although old and honorable families often lose their position and sink, this family of Seiyemon's, because of his love for his parents, so far from deteriorating, gradually increased in prosperity up to this present day. Let us rejoice and be thankful that it is so. The ups and downs of life are like the spring and autumn of the year, and chop and change with the lapse of years, but those who follow the true path do not fail utterly, and therefore has it been said "in the house of the righteous there is great joy." So let each and all of you strive in all ways to obey your parents cherefully, for this is the chief end.

FANTASIES AND FACES.

ARROGANCE.

Of the many persons whom I habitually encounter in my morning walks, none is so regularly to be seen at a certain hour as THE OFFICIAL. He is punctual as the sun himself. Nay, if the sun climbing over the long arm of the matsu tree in the graveyard at the end of the street were to proclaim it half-past nine o'clock, at any time but that in which the Official is to be seen picking his way amongst the puddles at the dyer's corner, he wouldn't be worthy of credence, but might be set down off hand as a mendacious and vexatious sun, given to playing tricks upon travellers, and setting worthy people by the ears who, having business appointments in the morning, have regulated their watches by him over-night. The chronometer in your pocket, for all it's compensation balance, *might* go wrong or be affected by the weather, but not so my Official; for hail, rain or snow he's punctual in his comings and goings as beseemeth him who holdeth office. I have unhesitatingly put him down amongst my "Faces" as an Official, partly on account of this very regularity, and partly because of certain indications about his person and his bearing which seem to point him out as of such quality. He carries himself as if he fully estimated his own importance as a portion, and a very particular portion too—or I'm much mistaken—of a great machine, which takes it's first revolution at ten of the clock in the winter and eight in the summer solstice—a machine which cannot work if he is absent, and which is essential, you may be sure, to the well-being of the state, if not of the whole human race. As a person who receiveth his monthly stipend regularly, his face betrayeth no anxiety, and his demeanour is orderly and satisfied. He weareth his head set up upon his neck as one who would say to all and single:—"Behold me, my good friends and neighbours. In me you see a man who hath no cause to hang his head, for I am in easy circumstances and have no cares. Nor to wear it on one side, for I have no perplexities. Nor yet to throw it back as though asserting my importance, as I, and they who are acquainted with me, know my value." His face betrayeth a becoming arrogance, such as is most proper in an Official, and his back is stiff and straight—a fortune to such as have in the course of their official duties to bully and browbeat their inferiors. And yet not so stiff and straight but that he can bend it with great alacrity to his superiors, as may be now and then witnessed when he encountereth persons of quality upon the road, although how he ever seeth them is a mystery, as he walketh with his eyes fixed upon the ground as though common mortals were beneath his notice. Indeed, I much misdoubt me if he hath ever seen me, notwithstanding that we have shouldered one another any day these five years As is right and proper in a person of such consequence, his habitual expression is a sneer, which stands him no doubt instead of armour against attacks and importunities of vulgar people, and is a half way house to laughter with such as it is seemly to endulge in mirth before. A little further lifting of the upper lip, and an elevation of the angles of the mouth, and the sneer becomes a smile. Hardly a pleasant one, it must be confessed. An acid *risus*, like unto a fruit unduly forced into an unseasonable maturity. He rarely condescends to laugh outright. Levity in an official is unbecoming and out of place, no doubt. And perhaps it is well that so it should be, for when he does so far unbend, he discloses a canine tooth of extraordinary size, which gives him a strange resemblance to a carnivore and disappoints the spectator, inasmuch as his laugh is out of keeping, for instead of a growl it is a hiss. Nature, in a frolic, hath also endowed him with prodigious jaws. Mighty engines of destruction, square, massive and more fit for crunching bones than masticating rice. He's hardly a pleasant looking fellow, this prim official with his sloping eyes and massive jaw and canine teeth. He looks as if dame Nature had changed her mind when he was half constructed, and in place of turning out a beast of prey had made a kind of anthropoid instead. She sailed very close indeed to the other type, however. A suit of fur, striped or spotted as the case might be, with claws to match and a trifle of tail, perhaps, and our Official would have been much more at home in an Indian jungle or a Libyan desert, than amongst the haunts of busy men.

Law & Police

IN H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, August 21, 1876.

J. SMEDLEY *vs.* DRUMMOND HAY.

This was a claim for $49, balance of rent alleged to be due for three months ending 15th August.

Defendant pleaded non-indebtedness.

J. Smedley, sworn: Defendant agreed to take the premises No. 132B for one year from 15th July, 1874. That lease when it expired was renewed, or still continued till July 14th last. Mr. Hay still continued to keep the premises after the 14th of July, and at the end of the month began to remove his effects from the premises. At this time there were two months' rent owing. On the 31st July I sent in my account for the three months' rent, $135, of which I only received $84. I deny that there was an arrangement by which Mr. Hay was to leave the house on the 31st July by payment of rent up to that date. I allowed him to leave the house if he liked on the 31st July, but still he would have to pay me to the 15th instant. I deny that there should be any set off of $6.50 for repairs. I also deny a set off of $20 for trees; that matter is not settled. If rent is paid up to 14th August, I agreed to allow defendant $20 for his trees; that was on the 26th July.

To Defendant: I remember coming from Yedo, and you pointing out to me some repairs you wanted done inside the house and to a well cover. I asked you to attend to them, as living in Yedo, I could not do so. I did not recommend a certain person to do the repairs. I told you I thought a Chinaman might do. I told you to have them done for my account. At the early part of the year I allowed you a reduction on the rent. There is no agreement that the lease was renewed after July 1875. I collected the rent after the month had expired, not in advance. I remember one Sunday morning last July you told me you intended to leave the house at the end of the month. I do not remember the exact words you used. You showed that you owed me two months' rent at $45, and that there would be another half month's rent due. You asked me $25 for some trees, and I proposed to give you $20. At that time there was no dispute between us about the rent. I did not on the 1st August enter the house; I only entered the grounds. I have the right by the lease to inspect my property. My letter to you dated the 4th August was not to ask your permission to inspect the premises, but to ask you for the keys. I have not tried to let the premises from the 1st of August. I do not remember coming into the office at No 32 and telling you that I had a right to let the premises from the 1st August although I considered you a tenant until the 15th. The notice that I put on the property that the house was to be let was only put up on the 7th. When you sent me the keys I kept them, because I was bound to protect my property. I wrote for the keys, and you sent them the next day, and I kept them. I remember ordering you to put the house in thorough repair, because you had left the house in a disgraceful state. That was on the 4th August. On the 7th I reminded you of that letter, and on the 7th you called for the keys for the purpose of having repairs done. I remember receiving from you $83½ which, together with the $6½ in dispute between us, makes $90, which would make the amount of rent due up to the 15th July.

Defendant sworn: Early in July, when Mr. Smedley on a Sunday morning called at my house, I informed him that I wished to leave the house. He asked me when I wanted to leave. I told him I should like to leave on the 31st of the month. He said there would be no difficulty about that. We entered into an arrangement about the trees which I had planted, and it was finally agreed that the half month's rent from the 15th to 31st July, say $22½, was the amount to be paid to me for the trees. On the strength of my arrangement with Mr. Smedley I took Mr. Lilibridge's house from the 1st August. At the end of the month I left, wrote to Mr. Smedley, and told him that I had left the keys in possession of a servant sleeping on the premises. Mr. Smedley received the keys, and put up a notice that the house was to let. He came one day to the office at No. 32 and told me distinctly that he had a right to let the house from the 1st, although he held me responsible for rent up to the 15th. I have paid all the rent due to 31st July, deducting $6.50 for repairs and $20 for trees according to agreement. Mr. Smedley withdrew from the first amount of $22.50 allowed for the trees, but on referring the case to arbitration agreed to allow me $20

Original from UNIVERSITY OF CALIFORNIA

for them. With regard to the $6.50, that charge arose from some repairs executed by me at Mr. Smedley's request for his account, on the well cover, etc.

Plaintiff objected that these repairs were made previous to the expiry of the lease, and under the lease Mr. Hay should bear the expense of repairs.

His Honour pointed out that the lease had expired in July 1875 and had never been renewed, so that defendant could only be looked upon as a tenant from month to month.

The repairs were made about May or June 1876. I rendered the account to Mr. Smedley and he accepted it. The lease expired in July 1875 and has never been renewed. Early in the year I told Mr. Smedley I should leave the house if he did not reduce the rent, so he made a reduction. It was only after Mr. Smedly had consented to my leaving the house at the end of July that I entered into an agreement with Mr. Lilibridge to take No. 150 from the 1st instant, and I should not have done so otherwise. The keys were placed at Mr. Smedley's disposal on the 1st instant, and he actually took possession of them on the 4th, affixed a notice on the gate that the house was to be let, and on the 7th ordered me to make immediate repairs to the house, or he should do so himself the next day at my expence. I therefore advised Mr. Smedley that I considered my tenancy expired on the 31st July.

To Plaintiff:—Your conversation was to the effect that you would allow the half month's rent in satisfaction of my claim for the trees I had planted. I took no trees away after this arrangement. I think it was about the 15th when you came to see me. It was on a Sunday. It was only after I had left the house you complained of the short notice you had received, as you previously thought you had secured another tenant.

Judgment for defendant.

Thursday, August 24th, 1876.

OKUBO RIHEI *vs.* R. F. LIVINGSTONE.

The following judgment in this case, the hearing of which terminated on the 9th instant, has now been delivered.

JUDGMENT.

The plaintiff claims from the defendant payment of the sum of *yen* 954.95, being for money disbursed in succouring the shipwrecked crew of the Japanese vessel *Kaisei-maru*, wrecked at Tskapore, Furubetsu-góre, Chisima, (Kuriles) on the 10th July, 1873.

It is alleged that the *Kaisei-maru*, although flying Japanese colours, was owned by the defendant, and in support of this a document is put in signed by the defendant and one J. Coleman, which sets forth that the defendant and Coleman are responsible for all claims on and debts contracted by the said vessel, of which they are the sole owners.

The *Kaisei-maru* left this for the North on the 18th March, 1875, with a crew of thirteen all told. Of these six were foreigners and seven Japanese.

Kimoto Shimpei, a Japanese, was the nominal master, but the active command was entrusted to Goodspeed, who I understood to be an American. This duplicate command is thus expressed by Kimoto Shimpei: "I was to act as master so far as Japanese were concerned—that is, I was to act for the ship at any Japanese port she might put into—the actual navigator of the vessel was Goodspeed."

According to defendant's evidence the foreigners on board in addition to Goodspeed were Warner and Harris, said to be Americans, Isaacson and Keele, said to be Germans, and the sixth, name not given, supposed to be an Englishman.

The last-mentioned, together with Isaacson, are said to have reshipped, the former on board a French man-of-war, the latter on a German schooner, both of which were cruising near the scene of the wreck. The remaining four, Goodspeed, Warner, Harris, and Keele, were brought on to Hakodate, and thence to Yokohama: the Japanese crew obtaining employment at Hakodate.

I find that the sum of *yen* 174.95 was disbursed in providing for the shipwrecked men between Tskapore and Hakodate. This sum was paid by the officer who accompanied the men from the former to the latter place.

At Hakodate the sum of *yen* 180 was borrowed by Kimoto Shimpei from the local authorities, of which *yen* 174.30 were disbursed for the maintenance of the men at Hakodate and their conveyance to this, leaving a balance of *yen* 5.70, but a further claim is made of *yen* 7.50 for what is called "ship tax" advanced by the plaintiff, and the total amount claimed as by statement of particulars handed in at the request of the Court after the case had been closed is *yen* 356.75.

The plaintiff states that he, as the registered owner of the vessel, is being pressed by the Government to make good the sum, and and has therefore brought this action against the defendant.

According to English law in cases of wreck the claim of a seaman for wages on the owner of a ship ceases when his services are no longer required at the wreck, and it follows that the owner is not liable for any additional expenses incurred on the seaman's behalf. I have had to consider in this case whether the document signed by defendant, setting forth ownership and responsibility in respect to the *Kaisei-maru*, renders him liable for the amount claimed by the plaintiff, and it has been necessary that I should ascertain what Japanese law, if any, there may be on this subject.

I find that Regulation 15 of a series of Regulations published by the Japanese Government on the 24th April, 1875, governing wrecks and strandings of Japanese vessels sets forth as follows:—

"In case of a total loss both of ship and cargo, however considerable the various expenses incurred by the coast authorities in furnishing succour, they cannot be exacted from the ship nor from the owners of the cargo. Consequently, the share of expense to be paid shall be provided at Government charge, and therefore a minutely detailed statement of the expenses shall be kept and shall be sent into the proper authorities by the coast officials, authenticated by the Captain's signature and seal."

Japanese law would therefore appear to be very much in harmony with English law in the matter of the liability of a ship owner for expenses after the wreck of a vessel, and I am of opinion that defendant is not liable for the sum claimed.

The proper course to have been pursued on the arrival of the shipwrecked men at Hakodate would have been to report the circumstances to the United States Consul and German Consul at that port, who would doubtless have at once taken over charge of their shipwrecked countrymen, and either have provided them with employment there or sent them on to this.

Judgment is for the defendant.

RUSSELL ROBERTSON,
H. M.'s Consul.

Yokohama, August 24th, 1876.

U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

and

C. H. HASWELL } *Assessors.*
W. L. CLARK }

Monday, 21st August.

THE PEOPLE OF THE UNITED STATES *vs.* A. F. TYREE.

Prisoner was charged with having, on the evening of the 14th instant, broken open a door in Mr. Bohm's house No. 114, Yokohama, and having attempted to set fire to the house.

Mr. Bohm deposited in Court the $100 demanded by the counsel of the accused, Mr. Montague Kirkwood, as security for costs, and the accused A. F. Tyree, who had been released on his own recognizance, surrender himself for trial and was re-committed.

The assessors were then drawn, viz., Messrs. Haswell and Clark, and the trial fixed for Wednesday, the 23rd instant, at 10 a.m.

Tuesday, 22nd August, 1876.

Mr. Montague Kirkwood appeared as counsel for the prisoner, who pleaded not guilty.

His Honour observed that as a witness in the case was going to leave Yokohama to-morrow, he would proceed to take his evidence now.

James Cook, sworn, examined by Mr. Kirkwood: I am an American. I live at No. 140. I remember the evening of the 14th inst. I was at the Brooklyn Hotel that evening. Mr. John White came, called me outside, and introduced me to Mr. Tyree, who told me that my services were required on board the barque *Etta Loring*, and asked me if I could go on board that same evening. I said "Yes," and we all went in *jinrikishas* to the French hatoba. There Mr. White left us, and Mr. Tyree went with me to the boathouse, but he did not go with me to the ship. That was the last I saw of him that evening. When he came to the Brooklyn Hotel, it must have been about half-past seven. I sat down to my dinner at 25 minutes past six. I should say I was at the table about half an-hour. I then played at cards, and was at the second game when I was called out.

Cross-examined by the Court: I am a pilot. I have seen Mr. Tyree before, when he has been on board ships of which I had charge. I had never spoken to him before. When White called me out he said: "Here is a gentleman who has come ashore from the *Etta Loring*, and came to my house for a pilot."

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Tyree said my presence on board was required immediately. Tyree went with me to the boat house. When the boat was engaged I understood him to say that he was going to pay the *jinrikishas*. He went towards the *jinrikishas*, and as he did not return I went to look for him, and found he had left. After that I went down the bay, and did not see him until the 20th instant, at White's house. On the night of the 14th I dined at the Brooklyn Hotel. I know the time at which I sat down to dinner because I looked at the clock in the house. The proprietor of the Brooklyn Hotel is Ross Fox. I and Tyree may have been together about ten to fifteen minutes. The ship left at 8 o'clock that night. She was becalmed a little outside the lightship. I did not take the ship out, my services were not required. There was no other pilot in charge. I came ashore in a boat that same evening. Next day at 11 a.m. the ship got away with a breeze.

Re-examined by Mr. Kirkwood: The gas was lit in the Brooklyn Hotel whilst we were at dinner.

Cross-examined by Mr. Bohm: I stayed but a few minutes on board as I left about 8 o'clock. I looked at my watch just before stepping on board. A boat with two gentlemen and two children came alongside while I was on board. I cannot say if they stopped on board or not. I did not know them. Neither of them was Tyree. I saw no luggage in his possession. Coming ashore I did not meet any boat going out to the *Etta Loring*. The ship had at that time wind enough to sail outside the lightship, which she did.

To the Court: Tyree did not tell me that he was a passenger in the *Etta Loring*. He did not tell me the reason why he had called me on board.

To Mr. Kirkwood: If Tyree had any baggage with him I think I should have seen it.

To the Court: I am to go on board the German ship *Carl* in the morning to pilot her out. I am not certain that I can be here to-morrow afternoon. That is the reason why I have asked to be examined to-day. I should say it must have taken me ten to fifteen minutes on the evening of the 14th to pull off to the ship. The time depends on the *sendors*. I did not take much notice of mine.

Case adjourned until to-day at 10 a.m.

Wednesday, 23rd August, 1876.

After the assessors had been duly sworn, witnesses were called for the prosecution.

Mr. Kirkwood objected to accused being tried on two charges, and the Court ruled that only the attempt at arson would be gone into.

Kate Miller, sworn, stated:—I am the wife of Cap. G. W. Miller and have known the prisoner about 2½ months. He has come to our house often in the evening to read the newspapers. I live at No. 114 on the creek. Mr. Bohm's house is within four or five feet of ours, a narrow passage running between. The lower part of his house is of stone and the upper is of plaster, the back of the house is open and the yard common to both. I remember the night of the 14th August, I was on the front steps of my verandah close to the side walk, on the first step going down. The verandah goes along the front of the house and there is a small railing in front. Mr. McGregor and my husband were there. I saw Mr. Tyree come up in a *jinrikisha* from the direction of the bund and stop in front of the door next to my house. Mr. Tyree pointed his hand in the direction of Mr. Bohm's house and gave the *jinrikisha* man some instructions. The *jinrikisha* then went a little past Mr. Bohm's house and then turned back. Mr. Tyree then went in by the front door, and I saw him pass the hall window, and then the hall lamp disappeared. I then heard an unusnally loud noise which sounded as if someone was using a hammer or something on a door or woodwork. About the time the noise ceased the blinds or shutters of the windows on the 2nd story on the front corner facing my house were opened. The noise attracted my attention, and I saw a light there. Sometime after that, about 15 or 20 minutes, Mr. McGregor and I noticed a bright flash of light from the back of the house reflecting to the front. I expressed a fear that it was a fire but was told it was a rocket. I felt uneasy about fire as I had been burnt out once before, so had a good look round my house. I found all safe and lighted the lamp in my bed room. Mr. Bohm's small boy came to the door and stated to me in Japanese what had happened. I then went with him into Mr. Bohm's house by the back door, and saw a large amount of burnt paper on the hall floor about 8 feet from the door; the floor was partly burnt and also some of the woodwork of the stairs and partition. I called Mr. Brown's attention to it as he accompanied me into the house. The Japanese cook had a lighted lamp in his hand. I sent Mr. Bohm's small boy to see what time it was; he returned and said it was 5 minutes to 8. There was a difference of 5 minutes between Mr. Bohm's clock and mine. I did not see Mr. Tyree after I entered the house.

To Mr. Kirkwood:—I looked at my clock. I corrected my clock at 7 o'clock and found it was five minutes out. We are irregular in the time we take our meals, and eat when we feel hungry and drink when we feel inclined. I have felt thirsty this morning. I decline to state what I quenched my thirst with. We had tea about 4 o'clock on the 14th. I believe my husband had dined on board ship The lamps were lighted in my house at about twenty minutes past seven—that is one lamp in my bed room. I lighted it myself. I first saw Mr. Tyree just before I lighted the lamp, about five minutes perhaps. I did so just after the first time I had seen Mr. Tyree. My husband was on the verandah sitting on a chair, with his back to Mr. Bohm's house. Mr. McGregor was on the verandah when I first saw Mr. Tyree. I cannot say where Mr. Brown was. It was just getting dark. I did not make any remark the first time Mr. Tyree went to Mr. Bohm's house. I saw him going to the house twice, and one time remarked it to Mr. McGregor who was stil standing with his back to the fence. He stood there for fully an hour. I was on the step of the verandah. Mr. Tyree had time to have been down to the bund and get a *jinrikisha*. I cannot see Mr. Bohm's door from mine. I cannot see the lamp from any part of our house, but can see the light. It was about 10 minutes before I saw the light upstairs after I missed it from the hall. I heard the upstairs shutters open.

While Tyree was was in the house I was in my back room. I first looked round and came back on the verandah. I usually sit there. I did not speak to my husband as I did not wish to draw his attention to Tyree. I had been in the house several times but always came back to the same place. The noise only lasted a few seconds, when I looked up I could see no light. I did not pay much attention to the noise. I had no idea that it was Tyree, and never said it was. I never saw Tyree after. If I had known Tyree had caused the noise I should have enquired into it. There are four doors to Mr. Bohm's house, 2 in front and 2 in the rear. I cannot say how may people live in the compound. I saw no one go into Mr. Bohm's house but Mr. Tyree that time the same evening.

To the Court: Mr. Tyree had been previously boarding there, but I knew he had left. Mr. Bohm told me he had left.

To Mr. Haswell:—I cannot say how long the *jinrikisha* waited. I don't know whether Mr. Tyree paid the *jinrikisha* or not.

G. W. Miller sworn:—I reside at No. 114 and am husband of the last witness. I know the prisoner. I have know him about 2 or 3 months. I remember the night of the 14th instant. I was on my verandah. I sleep there every night till about four in the morning in an easy chair. I don't remember seeing prisoner that night. I saw my wife. She was standing out on the front step at the time. My attention was attracted by a noise in Bohm's house. I did not move. I was sitting or rather lying down with my back towards Bohm's house. I heard McGregor make a remark about a rocket or blue light. I was half asleep at the time. I did not go into Bohm's house. I was told about the fire at about 8 o'clock by my wife. Captain Clark and Captain Thomas were present at the time.

To Mr. Kirkwood.—Mr. Brown and Mr. McGregor were in and out of my house during the evening. I did not hear my wife speak about Tyree. My wife was in a state to know what she was doing and all that was going on. If she takes anything I am the only one that suffers.

P. Bohm, sworn:—I am an undertaker and coal dealer and live at No. 114, next to Captain Miller. I remember the night of the 14th. I had been during the early part of the evening on board the *Etta Loring*. I left the house in charge of my Japanese boys. I have known the prisoner about two months and a-half. He boarded with me from the 15th June to 17th July. When his month was up I pressed him to pay. When I could not get rid of him I locked up the room and kept his things. I left the barque *Etta Loring* at about half past seven with Mr. Douglas. I then went on board a steamer and returned home at a quarter to nine. On arriving home I was informed that the house had been nearly set on fire, and I went at once to see how it was. I found the woodwork of the stairs and hall was charred and also I found a quantity of burnt paper, evidently newspaper. The boy showed me, how he had found the lamp leaning against the wall. After hearing what Mr. Miller said to me I went

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to the German Consul. I returned home with a Sergeant of Police, to see the place, also Mr. Ressen of the German Consul ate. At about halfpast ten o'clock I went upstairs and wanted to enter the front room but found the door had been burst open. I found a heavy stone in the upper hall. I called the attention of Mr. Brookes to the smashed door. I locked the door again and left everything as I had found it and went to bed. In the morning I missed nothing from Mr. Tyree's room. The room was required for an inquest and I had to move his things. Mr. Tyree has not paid the amount of his bill.

To Kirkwood :—I left home about 5 o'clock. I dont remember where I dined. That evening I wanted to see the *Etta Loring* and went with Mr. Douglass. I received a note from Mr. Tyree that day saying "I wait to see you." The lamp in the lower hall is lighted when it gets dark, say at about 7 o'clock. Mr. Brookes lives in the house and another man. The compound belongs to me. In the front about 17 people reside, and in the back about 7. There is an opening from one compound to the other. The compound is bounded by two streets. Any one can go in by the back door without being seen by anyone from Mr. Miller's house. I am having some repairs done and had workmen about; they have not refused to work. I take in the *Gazette* (burnt paper produced.) The place burnt was a foot and 3 inches long and 5 broad. The stone is not one that I keep in the house. I may keep marble. The stone is about 15 inches long, 8 inches wide and 5 thick. One good knock would be sufficient to break the door.

J. M. Brookes, sworn:—I have a room at No. 114. I was living there on the 14th of this month. I was not at home that evening from half-past 6 to half-past 11. My room is upstairs at the end of the corridor. On going up to my room I fell over the stone in the passage; that was before Mr. Bohm told me about the fire. The door by the lock was broken, the post started and pieces of broken stone were adhering to the woodwork. Mr. Bohm showed me the place where the fire had been.

To Mr. Kirkwood.—I don't know that Japanese are in the habit of letting off rockets. I never saw them. I had my tea in my room and then went out at half-past 6.

The Court resumed at 1.30 p.m.

Kankitchi, a Japanese boy, cautioned, stated:—I am in the employ of Mr. Bohm and remember the fire at No. 114 on the 14th inst. I am 11 years old. When I saw the fire burning I ran to put it out and to call Mrs. Miller who lives next door. I first saw the fire as I was coming in from the back of the premises round by the front door. My father who is Mr. Bohm's cook was putting it out at the time. There were some newspapers and rags burning, and some of the wood-work was a little charred. I know the prisoner. I saw him on the 14th at the back of the premises. I saw the fire after I saw him. He was doing nothing but only standing there. It was a little before 8 o'clock when I first saw the fire. I looked at the clock and so know what time it was. I looked at the clock of my own accord, nobody asked me to do so. I saw the prisoner twice, once at the house about half an hour before the fire, and afterwards at the rear of the premises. He left by the front door. I saw him in the passage between Mrs. Miller's house and Mr. Bohm's. When I saw the prisoner neither of us spoke. I am quite sure it was the prisoner. My father discovered the fire before me.

To Mr. Kirkwood.—I don't remember how many times I saw the prisoner that evening. I don't remember when I saw him first. I met him once or twice in the daytime. He came to the house while I was getting food for my master in the forenoon. I saw him again in the afternoon outside in the porch. He asked me if my master was in and I told him "no." I was keeping watch in front of the house, sitting down doing nothing. I did not see him again till the evening when it was dark; he was then at the back of the premises in the passage. I only saw him casually and did not watch him. He was only there a little while. I only saw him once and that was after the fire as I went out of the house. I heard a door close. I had been into the house only once or twice before the fire. My father lighted the lamp that evening, I forget what time. I did not meet anyone else in the house that evening. The front door was open and the back door closed. I don't know what time my master came back that evening. I only went to the next house when I was sent round. I was in my own house from 7 o'clock to 9, that is at the back of the premises, with the exception of a short time. My father was with me all the while. A female servant lives in the house, in the corner room downstairs. Neither Mr. Miller nor any one else entered the premises that evening.

To the Court:—I came round from my room at the back by the passage and entered the house by the front door. I met the prisoner in the passage then. When I left the house it was by the back door and I went to my house. I saw Mrs. Miller on the verandah of her own house. She came and had a look where the fire had been in Mr Bohm's house.

Senzo, a Japanese cautioned, stated:—I am cook for Mr. Bohm and have been with him since June last year. I remember the 14th August; no Japanese came to the house that evening. The prisoner had been several times during the day to enquire for Mr. Bohm. I think it was a little before 12 o'clock. I was preparing some food for my master when the prisoner came with another foreigner and enquired if my master was at home. I sent my small boy to find out what they wanted, as my master was not at home. They left a note. In the evening prisoner came again and asked for Mr. Bohm, but he was out, I think he had gone to No. 42. I then put away the food and lighted the lamp, and then went to my room. Suddenly I heard a pounding at a door. I went out and met the prisoner who seemed the worse for liquor, and who again asked for Mr. Bohm. I said he was out and he went away immediately. I afterwards went round to the front with my wife and child. The child went by the passage. Generally when the lamp is lighted it throws out a glare at the front, so when I got round I thought the wind must have blown it out. When I went in to see what was the matter I found the lamp that is generally at the foot of the stairs had been placed against a little cupboard under the stairs, and there were a lot of rags and newspapers along with it which were burning; the woodwork was also burning. I put the fire out. I immediately sent my child to Mrs. Miller to tell her that I thought someone had been in mischief and playing with the lamp. When I put out the fire I did not put out the lamp. Mrs. Miller came round and I told her what was the matter. I saw the prisoner at first in the house close to my master's room, the lamp at the time was in its proper place and lighted. The prisoner went away immediately after asking for Mr. Bohm; he went by the front door. About half an hour or a little less afterwards I discovered the fire. I did not see the prisoner afterwards. I just stamped on the fire and put it out with my foot. After the fire was out my master took the paper and rags and put them away. I do not know whether the rags were Japanese or not, but think there was a red stripe on some of the rags.

Otoki, a Japanese girl, cautioned, stated:—I live at No. 114. I remember something about a fire. I met the prisoner about 5 or 6 o'clock the same evening. He was walking about. I only heard about the fire afterwards.

The Court adjourned till 10 o'clock to-morrow.

Thursday, August 24th, 1876.

J. H. McGregor, sworn.—I remember the night of the 14th inst. I had dinner at my own house at 6 or half-past. Mr. Brown and I then went out and walked towards the creek to see how the tide was, as we intended to take a swim. We went by Mr. Miller's house and they asked us to go in, but I remained outside, standing with my back to the fence. I stood looking towards Capt. Miller's house and up the creek. I had been there about twenty minutes, when I noticed a glare of fire in the air, like a rocket. I then sat down on the edge of the verandah, but just as I was sitting down, a man passed us. I asked Mrs. Miller who he was. She said it was Tyree. He then went into Bohm's house but came out almost immediately. I then went into Miller's house and asked for the paper and sat reading the *Gazette* for about half an hour. Mrs. Miller then came in with a small Japanese boy, and asked me to write a chit to Mr. Bohm about someone setting fire to his house. She wrote a chit. I then went home with Brown. I did not hear anything more till the morning. Next morning I went to Bohm's house and he showed me some burnt paper under the staircase, he also took me up stairs and showed me the door that had been broken open. The door itself was not much damaged, but the frame work was. There was a large stone lying in the passage, I should say it was about 15 lbs. weight, and appeared to have been soaked in water. It was common Japanese sandstone. We then came down stairs and Brown and I went away.

To Mr. Kirkwood:—When I got to Mrs. Miller's she was on the verandah standing against the post. I stood with my back to the fence for about 20 minutes. I was 4 or 5 feet from Mr. Bohm's house. I was standing at the corner of the fence. Mrs. Miller was about 8 feet further from Mr. Bohm's door than I was. I saw a man pass and turn into Mr. Bohm's. I saw the side of his face as he entered the door way. I have seen the prisoner once or twice before, I do not think he is the man I saw enter the premises. I think the person I saw had no whiskers. I saw him come out and walk towards Cook's. No one else came to Bohm's door either on foot or in a *jinrikisha* that I saw. No one could go

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

along the passage without my seeing them. I did not see anyone go along the passage. I heard no unusual noise. I know Bohm's compound: I have lived there over a year. I am acquainted with some of the people that live on the premises at the present time. There are a lot of disreputable characters living on the compound. There was a light in Bohm's house, the door was wide open, and the light was not removed while I was there.

To the Court. Mrs. Miller stood with her right side towards Bohm's house looking towards me. I was standing with my back half to the fence and half to Miller's house. Mrs. Miller was at one time on the steps and another on the verandah. She might see any one coming towards her house from the bund, but could not see them entering Mr. Bohm's house. I could see better than she could. I could see half way into the hall. I asked Mrs. Miller who the man was, because I did not know him, and she had seen him pass previously. I have not told any one that Tyree entered the house and remained five or six minutes. I do not remember telling the Deputy Marshall that "I only saw Tyree go into the house and that was all I knew about it." The flash of light was before I saw the man enter the house.

Thos. W. Brown, sworn.—I live at No. 126. I remember the night of the fourteenth, I was at McGregor's house to dinner. We dined at about 6 to half past, and afterwards went for a walk. We went into Captain Miller's by invitation. We found the family on the verandah. I did not go into the house at the time, but sat down in a long chair on the verandah. Mrs. and Miss Miller and Miss Thomas were there at the time and I think Captain Miller was also. McGregor remained standing in front of the verandah on the ground. After sitting about one quarter of an hour in the chair I went and stood against the fence. My face was towards Captain Miller's house. I think Mrs. Miller was on the steps of the verandah looking towards the creek. While talking to her I saw the rocket previously mentioned. After remaining there about a quarter of an hour I went into the back room to read the paper, and it was then the Japanese came in and told Mrs. Miller about the fire in Mr. Bohm's house. I do no know what the Japanese said. Mrs. Miller went out and came back in five or ten minutes, and said that someone had been trying to set Bohm's house on fire and asked me to go and look at it. I went accordingly and found some burnt paper under the stairs. I then went back to Miller's house and shortly after went home. While I was at Miller's house I did not see any one go in to Bohm's.

To Mr. Kirkwood. I saw no rags, and when I went in the lamp was in its usual place. I heard no great noise and noticed no other light but the rocket. When I went in the fire was all out, and I did not notice any smell of fire. I do not think there could have been more than one newspaper. I am not sure that Mrs. Miller said that she had been into Bohm's house when she came back, but she showed me where the fire had been when I went in with her.

Mr. Bohm produced two pieces of rags which he handed into Court, and stated that the blue piece had been found outside the door, and red piece had been given to him by Mr. Miller. He had seen rags like these lying about the hall the morning after the fire, and they were about foot from the charred place, but they were not themselves charred.

To an assessor:—I did not take care of any of the rags as they were not burnt and I did not think they were of any consequence.

To Mr. Kirkwood:—I could not swear whether my cook handed any to me or not. He may have handed them to me. I do not recollect whether he handed them to me or not. He pointed out the debris in the evening. I saw the paper. I cannot say what size the rags were. I can swear to the color and quality of the rags. There were sufficient scraps to make a child's dress. I saw them in the dust basket. My house is insured. It is insured for twenty-five hundred dollars. The remainder of the compound is uninsured.

This ended the case for the prosecution.

Mr. Kirkwood addressed the Court. He urged that there was utter insufficiency of evidence to establish even a *primâ facie* case, and that in all criminal charges the benefit of the doubt must be given to the prisoner. All imputations must be strictly proved. None of the witnesses in their evidence had testified to actual setting fire to the place, or that the prisoner was in the house at the time. He would endeavour to prove that the incendiary could not have been the prisoner and that, during the time in question, he was elsewhere. The Japanese evidence was very contradictory. Mr. Tyree went to Mr. Bohm's house, asked if he was in and then went on to the "Tennessee House." Mrs. Miller says the fire occurred at 8 o'clock and all that took place must have taken place between 7 and 8 p.m. Mr. Tyree had arranged for a passage in the *Etta Loring*. In the afternoon Mr. Tyree went to Mr. Bohm's and wrote him a note. At 6.30 in the evening Mr. Tyree went to Mr. Bohm's and found he was not in, from there he went with Mr. White to look for a man named Chesterman to act as pilot for the *Etta Loring* but could not find him; so they went to the pilot office, arriving there at twenty-five minutes to eight. After a short conversation with Mr. Cook all went in *jinrikishas* to the French hatoba. Mr. Cook went off to the barque, Mr. White went home, and Mr. Tyree went for his baggage; but, on getting it and returning to the hatoba, he was told the vessel had started. He returned to his lodgings, and the next afternoon he was arrested by the United States Deputy Marshal on the present charge.

Chas. Forsythe, sworn:—I remember the night of the 14th inst. I remember seeing the accused. He was in a *jinrikisha* and near Mr. Bohm's house. When we met he got out and talked to me about going to New York: he intended leaving that evening in the *Etta Loring*. We walked together towards Mr. Bohm's house, and when we got to the door he said he wanted to see Mr. Bohm, so we went in together and saw a boy he called Chesai. Mr. Tyree asked if Mr. Bohm was in, and on being told "no" asked for some paper on which he wrote a note and left it with the boy. This was between four and five o'clock. I should say nearer five. We then left and went to the "Eureka Hotel" and remained there about three minutes. I saw the landlord give some money to Mr. Tyree. From there we went to Mr. Tyree's lodging. I think the number is 122. We remained there till nearly six o'clock. I know it was near six o'clock as that is my dinner hour. I had dinner that night. While at No. 122 Mr. Tyree went out but returned in about twenty minutes, and said he had finished all his business except seeing Mr. Bohm. When I left at six o'clock, I bid him good bye and did not see him again that night.

A note was here admitted as evidence, stating that through the kindness of the captain a passage in the *Etta Loring* had been arranged for the accused.

John White, sworn:—I am the proprietor of the *Tennessee* house. I saw the accused on the fourteenth at about seven or a quarter past in the evening. I know it was about that time as I generally sit down to dinner at ten minutes or a quarter past six, and I had been at the table twenty or twenty-five minutes when I got up, lit my pipe and went accross the street to the barber's shop. I remained there fifteen or twenty minutes when I was sent for, and when I got back I found the accused waiting. I generally have my lamps lighted at half past six to seven o'clock. Tyree was in a *jinrikisha* when I got back. I did not see any luggage. He asked me if I could get a pilot. I told him to remain a few minutes and I would go and get Captain Chesterman. I went to Captain Chesterman's house, but could not find him. Tyree waited in the *jinrikisha*. I was looking for Chesterman a quarter of an hour or twenty minutes. I went backwards and forwards. We then went to the French hatoba to see if Chesterman were there, and remained some time looking at the *Etta Loring*. We then went to the Brooklyn Hotel and saw Cook. I called Mr. Cook out, and introduced him to Mr. Tyree and told him he wanted a pilot for the *Etta Loring*. Mr. Tyree asked him if he could go right away, and he said he could. Mr. Cook came along with me in one *jinrikisha* and Mr. Tyree in another to the French hatoba. They went inside the gates and I started for home. It took me six or eight minutes to get there. I called in at the Travellers Club on my way, and noticed the clock there. It was hanging against the wall and the time was eight o'clock. I distinctly remember noticing the time as I had promised to fetch the second mate from the *Cashmere* at half past eight. When Tyree went through the gates at the hatoba he said he was going off on board.

To Mr. Bohm:—Mr. Cook, Mr. Tyree and myself were together three or four minutes just while we were going to the French hatoba. I did not see that the *Etta Loring* was under way. She had her top-sail set. I only saw Cook and Tyree together for a few moments.

The Court then adjourned till 1.30.

Resumed at 1.30.

Louis Rees, sworn: I live at No 136. I recollect the 14th inst. I dined it at Mr. White's at about six or a quarter past. After dinner I sat in a chair outside smoking. I saw the accused about quarter of an hour after dinner. He came in a *jinrikisha* and asked for Mr. White. I called out for Mr. White from across the road, and he came over. Mr. Tyree asked if he knew of a pilot. White called for Chesterman who had been dining there. I went away for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

five or six minutes and Tyree remained about ten minutes after I came back. Tyree asked me to have a drink, and also if I had seen Chesterman. I remained there about twenty minutes. I did not see Tyree again that evening. I saw White about twenty or twenty-five minutes afterwards. I did not see any luggage in the *jinricksha*. I did not look at any clock.

The evidence of James Cook the pilot, given on Tuesday last, was here read.

A. F. Tyree, the prisoner, sworn:—On the evening of the 14th I had been on board the *Etta Loring* to arrange about a passage. I went about 3 o'clock. I had been on board about an hour and a half and then came on shore to hunt up my goods. I had a trunk at Mr. Bohm's. I called at the Eureka Hotel Before I got to Mr. Bohm's I met Forsythe. I stopped the *jinricksha* and got out to have a chat with him. I told him what I was about to do. We stopped at Bohm's house and I dismissed the *jinricksha* and we went into the house. I met the boy and asked for Mr. Bohm, but the boy said he was out. I asked for some paper and he showd me to a room with a desk in it and I wrote a note and left it with the boy to give to his master. I then went to the Eureka Hotel and remained there both fifteen minutes and then went to my quarters at No. 122, stayed some time, and then returned to see my things packed up. It was then that I passed Mr. Bohm's house the second time. I saw two boys, the cook and his child. I asked for their master but he was not at home. I then took a *jinrikisha* and went to Mr. White's house. I asked a gentleman if Mr. White was in, he said he would enquire, and shortly after Mr. White came and I told him I wanted a pilot. He started to look for Captain Chesterman, but came back shortly as he could not find him. We then went to look for another pilot. We went together in *jinrikishas* towards the Brooklyn Hotel pilot office. After stopping a short time at the French hatoba we went to the Brooklyn. Mr. White went inside, I remained outside. After some time he came out with Mr. Cook, and after explaining what I wanted we went together to the French hatoba. White left us there. I saw Cook get a boat and start off. I went back to No. 122 to get my luggage and took two *jinrikishas*, one for my luggage. When I got to the hatoba again I asked for a boat, but on the man understanding the name of the ship, said it was no use as she had gone. After ineffectually trying to make them go off as the vessel could not have gone to sea, I gave it up and took my luggage back to my room at No. 122. The next morning I went to look for the ship, but could not see her. I then went home and remained till three o'clock and was just going out when the Marshall came and said he had a warrant to arrest me.

To the Court:—I had only three drinks the night before, the first with Forsythe, the second with White and the third with Hyslop. I drank gin. The second time I went to Bohm's house it was a quarter or twenty minutes past six. I had no means of judging the time. I did not go back to Bohm's house after that, not nearer than my quarters. When I left Cook at the hatoba, I merely said I was going to get my things. I went direct from the hatoba to my lodgings; it took me about ten minutes. I saw no one at No. 122 when I got back, I only heard voices in the room over mine. I went straight back to the hatoba. I had to get the second *jinrikisha* then for my luggage. I should judge it would be a good deal after 8 o'clock, fully half-past. I should say I was away from the hatoba about 25 minutes. I was delayed on account of the roads being obstructed with making new drains. I heard nothing about the fire till I was arrested the next day at half-past 3 p.m. I know nothing about the breaking in of the door except what I have heard.

To Mr. Kirkwood:—I have resided in the east 22 years but only a short time in Japan. I was previously in China. I was a merchant at Ningpo for 18 years. I have never before been charged with any crime, and I have never been arrested.

William Smith, sworn:—I am a livery stable keeper at No. 119. I remember the 14th inst. I saw Mr. White that evening in front of his own house at about a quarter to eight. I had looked at the clock a few minutes before. He was coming from the Honmura road. He had been looking for Chesterman the pilot, and had just been seeing Mr. Cook off. I was going to my own house from No. 89.

To Mr. Kirkwood.—It was Monday evening. I met White a few steps from his own door. I did not walk with him. I could see into his door. I do not know whether the clock was right or not.

Mr. Kirkwood summed up at length to the following effect:—The Japanese boy who gave evidence was manifestly drilled. He said he went through the front door because the back dooor was shut, but it is most improbable that the back door should have been shut. He says that he met the prisoner after he had been in the house and came out; at one time he says he met him twice and at another time only once. But the boy never saw him go into the house nor come out of it. One time he says the prisoner came out through the front door, another time he says the prisoner was standing in the passage. If he had been in the house once or twice before the fire, as he says, he must have seen the prisoner if the prisoner had been in the house, but he actually never saw him there. As to the cook, he, in the counsel's opinion, knew who was the guilty person. In his evidence, before he was asked any question, he said "there had been no Japanese in the house that evening." There was no possible reason for making that disclaimer on account of the Japanese. That answer would not have failed to awaken suspicion. When he heard the knocking he went in, and found the lamp in its place, and the prisoner knocking at the door of the dining room, not upstairs at all, but on the ground floor; the prisoner leaves by the front door and the cook goes back to his own room. Immediately after he and his son go out and round to the front, and then the lamp is gone from its usual place, and the paper, floor, and partition are on fire. This is according to the cook, and according to him although his room was close to the back door, he always that evening went into the house by the front way. He stamps out the fire, and finds a roll of newspapers and some rags. The rags he hands to his master, who denies having received them, and what newspaper has been produced here has no rememblance to a roll. The learned counsel said he did not believe a word of his evidence as he had wilfully sworn to falsehood. The evidences of Mr. McGregor and Mr. Brown are strongly in favour of the defence, and, in fact, contradict the prosecution for whom they testified. The evidence of Mr. Bohm is of no value whatever, and should be regarded with suspicion. He says he scarcely gave himself time to examine the premises before he rushed off to his Consul, and as for the shreds of rags produced, it would be difficult to imagine they are what the cook says he saw. He states that he saw no rags that night, only some the next morning—similiar to a lot which he then saw in his dust bin. In conclusion, it should be observed that the whole compound is open to the street, and the compound itself partially occupied by tenants of disreputable character. As to Mrs. Miller's evidence, there is a little substratum of truth on which she builds a stupendous fancy structure. This evidence is always very difficult to value correctly. She a good example of how circumstances could lie. Women's evidence should always be received with great caution: their innate love of vain-gloriousness impels them towards unconscious exaggeration. Mrs. Miller is very apt at once to jump to a conclusion. The evidence for the defence tells the unvarnished truth. The tale of how prisoner spent his time that afternoon and evening, as given by that evidence, is most probable, and the witnesses could have no motive to tell anything but the truth. And what motive could the prisoner have had to commit that crime? (Here the learned counsel commented on motives for crime and quoted extracts from "Best on evidence.") Even if the prisoner could be proved to have been on the premises at that time, there was no evidence to show that it was he who attempted to set the house on fire. Does the evidence for the prosecution prove that the prisoner and the prisoner only could have committed that crime? In such case, it seemed to him, the Court must find, 1stly, that the evidence for the prosecution was trustworthy and that for the defence unworthy of credit. 2ndly, that on the evidence it is conclusively proved that the accused committed the crime, and that it would be inconsistent with reason to entertain a doubt whether it could not have been some other person or persons. If the Court acquits the prisoner, allowing that it could not have been done by him, he asked them to do so in a way that would show, as far as the accused was concerned, that this prosecution was brought without probable cause.

The Consul-General: The evidence of Cook acquits prisoner of having made the attempt at any other time than after he left the French hatoba. Cook says it may have taken him 15 minutes to pull to the ship, and when he arrived there it was 8 o'clock.

The Court now expressed its appreciation of the services of Mr. Kirkwood, and tendered him public thanks both on behalf of the community and of the prisoner, who ought to be most grateful to him for the able way in which he had conducted his defence.

Friday, August 25th, 1876.

His honour addressing the prisoner: After a most careful and patient consideration of the evidence and an examination of the premises, you have been found not guilty, and are therefore acquitted and discharged.

HARRIET MARTINEAU.

We regret to announce the death of Miss Martineau on Tuesday evening, at her residence, The Knoll, near Ambleside. She had just completed her 74th year. So far back as the year 1832, Miss Lucy Aikin wrote to Dr. Channing, "You must know that a great new light has arisen among English women," and a still greater authority, Lord Brougham, remarked to a friend about the same time:

"There is at Norwich a deaf girl who is doing more good than any man in the country. You may have seen the name and some of the productions of Harriet Martineau in the 'Monthly Repository;' but what she is gaining glory by is a series of 'Illustrations of Political Economy' in some tales published periodically, of which nine or ten have appeared. Last year she called on me several times, and I was struck with marks of such an energy and resolution in her as, I thought, must command success in some line or other of life, though it did not then appear in what direction. She has a vast store of knowledge on many deep and difficult subjects a wonderful store for a person scarcely 30 years old; and her observation of common things must have been extraordinarily correct as well as rapid. I dined yesterday in the company of Mr. Malthus and Miss Martineau, who are great allies. She pursues her course steadily, and I hear much praise of her new tales on the Poor Laws. I fear, however, that it is the character of her mind to adopt extreme opinions upon most subjects, and without much examination. She has now had a full season of London 'homizing,' and, as far as one can judge, it has done her nothing but good. She loves her neighbours the better for their good opinion of her; and, I believe, she thinks the more humbly of herself, for what she has seen of other persons of talent and merit."

Harriet Martineau was born at Norwich on the 12th of June, 1802. In her biography of Mrs. Opie she gives us a picture of life in this eastern cathedral city in the early part of the 19th century, when its Bishop was the liberal and enlightened Dr. Bathurst; and she tells us how the proclivities of the city, alike towards clerical exclusiveness and to intellectual stagnation, were largely corrected by the social gatherings of one or two highly cultivated families, and by a large infusion of French and Flemish manufacturing industry, the result of the revocation of the Edict of Nantes. The Martineaus were among the families whom that measure drove to our shores; and at Norwich they had flourished for the best part of a century, part of the family devoting itself to silk weaving on a large scale, while other members were in practice as surgeons, enjoying a high reputation in the city of their adoption. Not much is known of Harriet's father, who died early, except that he had eight children, of whom she was the youngest. Her education was conducted under the supervision of her uncle, one of the most eminent surgeons in the east of England, and who took every means to give his nephews and nieces the best instruction Norwich could afford. Like most persons of a high order of intellect, however, young Harriet Martineau at an early age resolved to walk alone, and not in educational leading-strings, and practically taught herself history and politics while her brothers and sisters were reading their "Goldsmith" and "Mrs. Markham." Not that she had any lack of teachers or instructors; but from a child she resolved to practise the virtue of self-reliance and to fit herself for life in earnest by such literary exertions as sooner or later, she felt, would at least make her independent.

She was barely of age when she appeared before the public as an author. Her first work, however, was not one which gave any great scope to literary talents, and must be regarded rather as a proof of her internal piety, on the model of the Unitarian school in which she had been brought up, than as a criterion of her intellectual ability. It was entitled "Devotional Exercises for the Use of Young Persons," and was published in 1823. It was, however, the harbinger of a long series of far more important works which were destined to appear thenceforth in rapid succession. In 1824 and the following year Miss Martineau came before the public as the authoress of two tales, entitled "Christmas Day," and the sequel to it, "The Friend;" these she followed up with several other stories all more or less dealing with social subjects, and more especially illustrating by argument and by example the rights and interests of the working classes. The best known of these are "Principal and Practice," "The Rioters," "The Turn Out," "Mary Campbell," and "My Servant Rachel." It is needless to add that in these the work of helping the weaker and poorer members of society is not only enforced upon the wealthier classes as a duty, but shown to be no less the common interest of both the one and the other. These publications carry down the story of the life of our author to about the year 1830 or 1831.

With this period we come to a new era in the literary career of Miss Martineau. This is shown by her choice of more elevated subjects, and possibly a more elevated tone is to be discovered in her treatment of them also. Her first publication after that date was a charming collection of "The Traditions of Palestine," and her next, if we remember right, her "Five Years of Youth." About the same time also she made her name made known far more widely than before by gaining three prizes for so many separate Essays on subjects proposed by the Unitarian Association. The subjects were independent of each other, though naturally connected in their plan; and on opening the sealed envelopes, containing the names of the writers, it was found that on each of the three subjects the successful competitor was a young lady, just 30 years of age, named Harriet Martineau. The three subjects were respectively, The Faith as unfolded by many Prophets; Providence, as manifested through the dealing of God with Israel; and the Essential Faith of the Universal Church. These Essays were published, and thoroughly established the writer's claim to the credit of being a profound thinker and reasoner upon religious as well as on social questions.

The next subject to which she applied her fertile and versatile pen was a series of "Illustrations of Political Economy," in which she attempted to popularize, by familiar and practical illustrations and examples, the principles which—speaking generally—Adam Smith, Jeremy Bentham, and Romilly, and other men of original minds, had laid down in an abstract and strictly philosophical manner. These "Illustrations" extended to above 20 numbers; they were afterwards republished in a collective form, and, having since been translated into French and German, have helped perhaps more than any other work of modern times to spread abroad, in other countries as well as in our own, a knowledge of that science which till our own day had been so little known and studied. These she followed up by two similar series, on cognate subjects "Illustrations of Taxation" and "Illustrations of Poor Laws and Paupers,"

In the year 1834 Harriet Martineau paid a visit to the United States, whither she found that the fame of her social writings had travelled before her. There she met with a most cordial reception from the leaders of thought and action on the other side of the Atlantic; and on her return to Europe she published her comments on the social, political, and religious institutions in the United States, under the title of "Society in America," and her observations on the natural aspects of the Western World and its leading personages, under that of "A Retrospect of Western Travel." On returning to England she found awaiting her plenty of offers of literary engagements from the leading publishers; but she chose to throw in her lot mainly whith Mr. Charles Knight who was than in the zenith of his high and well-earned reputation, as the publisher of the Society for the Diffusion of Useful Knowledge, under the auspices of such men as Lord Brougham, Grote, Thirlwall, and Lord John Russell. To Charles Knight's series of cheap and popular publications she contributed a most useful little manual called "How to Observe," which she followed up by others, respectively intended as guides for the Housemaid, the Maid-of-all-Work, the Lady's-maid, and the Dressmaker. With the object of lightening her literary labours by variety, she next employed her pen on a series of tales for children, which she gave to the world under the title of "Playfellow." Of these graphic tales the most popular were "The Crofton Boys," "The Settlers at Home," "The Peasant and the Prince," and "Feats on the Fiord." At the same time she addressed to children of a larger growth two novels of a very marked and distinctive character, called "Deerbrook" and "The Hour and the Man," the latter of which works passed through several editions.

About this time her health, which was never of the strongest, appears to have suffered so much from the continual strain of her literary exertions, that she was obliged to lay aside her pen, and Lord Melbourne offered and, we believe, even pressed upon her acceptance a literary pension. But she was either too proud or too independent to accept it; and possibly also even a higher motive came into play; at all event in declining it she was largely influenced by a feeling that "she could not conscientiously share in the proceeds of a system of taxation which she had reprobated in her published works." Her illness lasted several years; but she found means to turn even sickness to account by writing and publishing her "Life in a Sick-room,"—a book suggested by her own experiences of suffering, and, therefore, appealing powerfully to the sympathies of many of her readers.

In 1844, soon after her restoration to health and strength, we find Miss Martineau once more at work upon her favourite themes —social subjects—and publishing three volumes of tales and sketches, illustrative of the evil effects of our "Forest and Game Laws," which she followed up with a more fanciful work, "The

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Billow and the Rock." In 1846 she varied the monotony of her quiet and laborious life by a visit to the East; and she recorded her impressions of the scenes and countries through which she travelled in a book which she published in 1848, and which is still most justly popular—namely, "Eastern Life, its Past and Present."

In 1850 or 1851 appeared a work by Miss Martineau of a totally different character from all its predecessors—namely, a volume of "Letters on the Laws of Man's Nature and Development," which had passed between herself and a philosophic friend named Atkinson; and it was this work which first gave the public a hint that when she had reached something more than middle life she was inclined to adopt the teachings of the "Positive" school of philosophy, founded by Auguste Comte. Two or three years later she still more thoroughly identified herself with this school of thought and faith by giving to the world a condensed version of Comte's "Positive Philosophy." But while thus employed in the study of scientific and semi-religious subjects, she found time to devote to her "History of England during the Thirty Years Peace," a book which is to be admired for its singular clearness and the studied impartiality of its views.

We next find the indefatigable pen of Miss Martineau employed in contributing to the "People's Journal," and her essays in that periodical soon came to be so widely in demand that they were subsequently republished under the title of "Household Education." About the same time she employed her leisure hours in compiling a work of less pretension—we mean her "Complete Guide to the Lakes," which appeared in 1854, and for which her long residence at the pretty cottage near Ambleside, which she made her home during her declining years, eminently qualified her. From and after this date it was mainly as a contributor of leading articles, and of biographical and other literary papers to the *Daily News*, and as a writer of social articles, "historiettes," and graphic personal reminiscences of the celebrities of the present century, in the early volumes of "Once a Week," that we must look mainly for evidence of Miss Martineau's literary activity; but the weight of increasing years began to tell heavily upon her, and after a long illness in or about the year 1865 she almost entirely withdrew from those engagements. Her biographical contributions to the *Daily News* and "Once a Week" were republished in a collected form in the early part of 1869.

In this brief sketch we have had no space to mention the other works, mostly of a more or less ephemeral character, which are identified with the name of Harriet Martineau. Of these the best known, perhaps, are her "Essay on British India" (1851); "The Factory Controversy; a Warning against Meddling Legislation" (1855); Corporate Tradition" and "National Rights and Local Dues on Shipping (1857); "Endowed Schools in Ireland" (1859); "England and her Soldiers"—a work on the vexed question of Army reform (1859); and "Health, Husbandry, and Handicraft," a collection of stray papers contributed to some of the leading serials of the day.

At her charming home near Ambleside, so long as health and strength remained to her, Miss Martineau rejoiced to entertain a circle of attached literary and political friends, and to receive the visits of such strangers, both English and foreign, as cared to travel in order to gratify some higher interests than those of mere pleasure. From mere pleasure, apart from the business of life, and to mere pleasure-seekers and idlers and triflers, she had an unconquerable aversion: but if any one sought to benefit his fellow creatures, high or low, rich or poor, and to lead a useful life as a social being, and a member of the busy hive of English labour, or, indeed, of humanity at large, to him or to her the doors of Miss Martineau's house and of her heart were at once open. To the last, in spite of a painful chronic illness, she took the greatest interest in every movement which had for its object the social, physical, and moral improvement of the world in which her lot was cast, and she corresponded largely with the various leaders of such movements, who seldom sought in vain for her counsel and advice. If any lady of the 19th century, in England or abroad, may be allowed to put in a claim for the credit of not having lived in vain, that woman, we honestly believe was Harriet Martineau.

In the state of nature there an equally *de facto* real and indestructible, because it is impossible in that state that the simple difference between man and man should be so great as to render one dependent on the other. There is in the social state an equality *de jure* chimerical and vain, because the means destined to maintain it serves to destroy it; and because the public force employed by the strong to oppress the feeble, breaks the kind of equilibrium which nature had placed between them.—*Rousseau.*

LUNAR STUDIES.

(The Spectator.)

We wonder how many selenographers, properly so called, there are in this country. The Moon has been mapped and measured, and surveyed generally; her motions have been determined so precisely, that it was regarded as quite a serious matter when lately a very minute irregularity was discovered in her movements of which astronomers could give no account; her heat and light have been measured, and we have found how little she deserves to be called the "cold, pale moon," seeing that she is, on the whole, more nearly black than white, and at lunar noonday hotter than boiling water. But the selenographers proper form a class by themselves. They take a lunar crater, or walled plain, or mountain range, as the case may be, and in that chosen locality set up their rest. They study its aspect at lunar sunrise, mid-day, and sunset, now when the moon is swayed one way in her libration or balancing, anon when she is swayed the reverse way. Every spot and crevice upon or around the region selected is examined again and again for signs of change, and every appearance which can be regarded as in the slightest degree suggesting that there has been a change, is entered down in the record by which one day the world is to be convinced that the moon is not the dull, dead world astronomers have supposed. It argues well for the cause of selenography that a portly volume has recently been published for their benefit and encouragement. We infer that there must be a tolerably large selenographical constituency. The author of the work referred to, Mr. Neison, has been eight or nine years at work collecting material for this book,—selenographical fragments, so to speak. And moreover, which is even more to the purpose, so far as the future of selenography is concerned, he has made laudable efforts to show that there is certainly a good deal of air upon the moon, probably plenty of moisture, and possibly not a little vegetation. If there is not vegetation, there is, at any rate, he thinks, a process of alternate tarnishing and brightening-up of portions of the moon's surface: and if this is not exactly equivalent to life on the moon, it has a life-like effect, calculated to be very encouraging to his selenographical brethren.

First, as to the air and moisture, for even selenographers admit that life would not be very comfortable in a dry and airless world. It is reasonable to assume that when first starting in the solar system as a full-fledged planet, the moon had her fair share of both air and water. Her mass being about the eighty-first part of the earth's, she was entitled to an atmosphere similarly proportioned in quantity to the earth's. Now the earth has 5,300 millions of millions of tons of air, and therefore the moon in the same stage of planetary existence should have had more than 65 millions of millions of tons. Again, if the average depth of the ocean is about two miles, the earth has some 230 times as many tons of water as of air; and the moon, in the same stage, should have had, therefore, nearly 15,000 millions of millions of tons of water. But then the moon is very old,—not in years, indeed, but as a planet. She is in the sere and yellow leaf, even if she has not reached the winter of her existence. She is decrepit, if not dead; and as planets grow old, they lose more and more of their air, getting at the same time drier and drier. The air and water are not, indeed, bodily removed, but gradually absorbed by the surface. Taking due account of this circumstance, Mr. Neison will only allow the moon about 11 millions of millions of tons of air, and no surface-water at all, only a moist crust. But as he truly remarks, that is a great deal of air, after all, and a great deal might happen with a moist crust which would not happen with a dry one. Eleven millions of millions of tons of air should count for something in the economy of our satellite, and the warm rays of the sun poured during the long lunar day (a fortnight of our time) without intermission upon the moon's moist surface ought to effect changes of some sort. If selenographers have not yet noted important changes thus occasioned, then all the better reason is there why they should examine the lunar features more and more searchingly, till they find the evidence they require.

There are two lunar spots which the selenographer regards with special favour, because of the evidence they seem to give of change. One is a crater lying on the so-called Sea of Serenity, which some popular lunar observers regard as the left eye of the Man in the Moon. Here was once a deep crater, nearly seven miles across, a very distinct and obvious feature even with the small telescope (less than four inches in aperture) used by Beer and Madler in forming their celebrated chart. But, ten years ago, the skilful astronomer Schmidt, a selenographer of selenographers—who has, in fact, given the best energies of his life to moon-gazing—found this crater missing. When he announced the fact to the scientific

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

world, other astronomers, armed with very powerful instruments, looked for the crater which had been so clearly seen with Madler's small telescope; but though they found a crater, it was nothing like the crater described by Madler. The present crater is scarcely two miles in diameter, and only just visible with powerful telescopes; all around it there is a shallow depression, occupying a region about as large as the whole crater had been before. It seems impossible to doubt that a great change has taken place here, and the question arises whether the change has been produced by volcanic activity or otherwise. Sir John Herschel pronounced somewhat confidently in favour of the former hypothesis. "The most plausible conjecture," said he, "as to the cause of this disappearance seems to be the filling-up of the crater from beneath by an effusion of viscous lava, which, overflowing the rim on all sides, may have so flowed down the outer slope as to efface its ruggedness, and convert it into a gradual declivity, casting no stray shadows." But how tremendous the volcanic energy required to fill with lava a crater nearly seven miles in diameter, and more than half a mile deep! The volcanic hypothesis seems on this account utterly incredible, for if such energy resided in the moon's interior, we should find her whole surface continually changing. Far more probable seems the idea that the wall of this crater has simply fallen in, scattering its fragments over what had been the floor of the crater. The forces at work on the moon are quite competent to throw down steep crater walls like those which seem formerly to have girt about this deep cavity. Under the tremendous and long-lasting heat of the lunar mid-day sun, the rock substance of the moon's surface must expand, while during the intense cold of the lunar night a corresponding contraction must take place. Under the influence of this alternate expansion and contraction, the strongest of the lunar crater-walls must be tending to their downfall. Their substance must be gradually crumbling away. From time to time, large masses must topple over, and occasionally long ranges of crater-wall must be brought to the ground. It seems conceivable enough, certainly far more probable than any other interpretation which has been offered, that the crater-wall first missed by Schmidt was destroyed in this way.

The other favourite region of selenographers is a much larger one,—the great walled plain called Plato, and by the older astronomers the Greater Black Lake, sixty miles in diameter, and surrounded by mountains, some of which rise nearly 2,500 yards above the level of the floor. According to the selenographers, the whole of this floor changes in aspect regularly during each lunar day,—the lunar day, be it remembered, being equal in length to what we terrestrials term a lunar month. In the lunar morning-hours the floor is light, during lunar mid-day it is dark, and in the evening it grows light again. The idea of selenographers as to the cause of this change is that some process of vegetation takes place over this depressed floor (it lies more than half a mile below the mean lunar level); or else that vapours ascend when the sun's heat is poured on the floor and tarnish it in some way, while after mid-day heat has passed the vapours are reabsorbed, and the surface resumes its former lustre. The profane, however, urge that the whole matter is a mere effect of contrast: in the morning and evening the black shadows of the surrounding mountains are thrown on part of the floor, and the rest by contrast looks light, whereas at mid-day the same mountains (which are white and bright) form a ring of light all round the floor, which, therefore, looks dark by contrast. The selenographers maintain, on the contrary, that they have not been deceived by contrast, and *adhuc sub judice lis est*.

One can understand that to those who have leisure to pore, after the selenographic fashion, into the details of our satellite's surface, the work must possess a certain charm. Though the nearest of all the heavenly bodies, the Moon still lies so far away that very minute apparent signs of change imply really important disturbances; and though astronomers have given up the idea that there can be life of any sort on the surface of our satellite, yet she still has interest for many, as a world which was probably at one time the abode of many orders of living creatures.

Some men will admit of only two sorts of excellence,—that which they can equal, and what *they* term a still higher, that which they can surpass. As to those efforts that beat them they would deny the existence of such rather than acknowledge their own defeat. They are dazzled by the rays of genius, and provoked at their inability to arrive at it; therefore, like those idolaters that live too far from the temple, they form and fashion out a little leaden image of their own, before which they fall down and worship.—*Colton.*

Shipping Intelligence.

ARRIVALS.

Aug. 19 *Malacca*, British steamer, Edmond, 1,709, from Hongkong, Aug. 12, Mails and General, to P. & O. Co.

Aug. 21, *Acantha*, Japanese steamer, Ward, from Kobe, General, to M. B. Co.

August 21, *Nevada*, American steamer, Williams, 2,145, from Shanghai and ports, August 14, General, to M. B. Co.

August 21, *Kearsage*, American corvette, Captain McNair, 1,800, from Nagasaki, August 16.

Aug. 21, *City of Peking*, American steamer, Maury, 5,079, from Hongkong, Aug. 15, Mails and General, to P. M. S. S. Co.

Aug. 21, *Tennessee*, U. S. flag ship, Captain Wise, 4,200, 23 guns, from Hakodate, Aug. 18.

Aug 24, *Genkai Maru*, Japanese steamer, Connor, 1,917, from Shanghai and ports, Aug. 17, Mails and General, to M. B. Co.

Aug 25, *Shinagawa Maru*, Japanese steamer, Seikmeir, 900, from Kobe, Aug. 23, Mails and General, to M. B. Co.

Aug. 26, *Alaska*, American steamer, Howard, 4,011, from San Francisco, Aug. 1, Mails and General, to P. M. S. S. Co.

DEPARTURES.

Aug. 21, *Helene*, German schooner, Jaspersen, 149, for Chefoo, Ballast, despatched by Captain.

Aug 23, *City of Peking*, American steamer, Maury, 5,079, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

Aug. 23, *Tibre*, French steamer, De Girard, 1,010, for Hongkong, Mails and General, despatched by M. M. Co.

Aug. 23, *Sir Lancelot* British ship, Hepburn, 886, for London, Rice, despatched by Jardine, Matheson & Co.

Aug. 23, *Tokio Maru*, Japanese steamer, Dunn, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Aug. 24 *Carl*, German brig, Thomsen, 246, for Guam, Ballast, despatched by Captain.

Aug. 25, *Sumida Maru*, Japanese steamer, Gorlach, 800, for Hakodate, General, despatched by M. B. Co.

PASSENGERS.

Per Steamship *Malacca* from Hongkong.—Mr. and Mrs. Rangan and 2 servants, Messrs. Dixon, Waite, Harrison, Arthur, Bichard, and 2 on deck.

Per Steamship *Nevada* from Shanghai and ports.—For Yokohama: Mr. and Mrs Cunninghame Mr and Mrs. Boulet, Messrs. Hogge, John Smith, O. Smith, G. A. Escher, J. D. Ryke, Captain Percin, and 21 Japanese in the cabin, 264 in the steerage. For America: Mrs. C. W. Knowles. For Liverpool: Mr. Ellis Elins.

Per Steamship *City of Peking* from Hongkong,—For Yokohama: Miss K Waters, Mrs Morong, Messrs. D. Nowrojee and servant, Enick Flick, A. Newman, M. Kennedy. For San Francisco: Lieut. Blockinger, U.S.N, Messrs. G C. Castel, J. F. Sutton, M. McFarlane.

Per P. M. S. S. *City of Peking*, for San Francisco:—Mr. and Mrs. Wakayama, Miss L. B. Ross, Robert Kerr, T. Fieldon, Revd. B. E. Edgell, Miss Irving W. H. Callwell, W. J. Patterson, Col. J. Priestley, Madrashima, Mrs W. P. Mitchell, Mr. Johnson, U. S. Con. Hankow, Mrs. Johnson and 3 Children, E. Peshine Smith, S. M. Bryan, H. T. Skelding, G H. Vernon, Mrs. E. White and Child, Mrs. White, J. W. Stewart, T. J. Parker, M. A. Reynolds, O. B. Scott, J. A Scott, Mrs. J. A. Scott, J. K. Cunningham, Ah Yo, E. Muldone, John Long, Wm. Wilson, Peter Hughes, John Purdie, A-Woi, P. Maigre, W. B. Skedmore, Mrs. H. Y. Skelding and 2 daughters, Master Skelding, Paymaster Skelding, U.S.N.

Per Steamship *Tibre*, for Hongkong.—Mr. and Mrs. Goupil, Mrs. Driscoll and 1 child, Messrs. Ah Yu, J Kleimann, Couchot, P. Pratt, Ogura, Miaka, Kisimoto.

Per Steamship *Tokio Maru* for Shanghai and ports.—Mr. and Mrs. Maroka, Miss Maroka, (3), Mr. and Mrs. Koroö, Mrs. J. C. Davison, Messrs. Guidicelli, Tuck Sing, Sun Foo, Nering Bogel, Tama-ii, Oai, Oai, Jr., Koga, Oliver Smith, Baiya, A. A. Farrer, J. Middleton, Sutton, Geo. Lewis, and 13 Japanese in the cabin

Per Steamship *Genkai Maru* from Shanghai and ports —Mr. and Mrs. Rymer, Miss Gulick, Mrs. Hocking, Mrs. Heinemann, Messrs. G. Scott, J. Webster, E. Vincienne, Bougoin, Guyard, Billet, and one Chinese and 35 Japanese in the cabin; 5 Europeans, 4 Chinese and 493 Japanese in the steerage.

Per Steamship *Alaska* from San Francisco —For Yokohama: Miss E. C. Hutchins, Revd. Wm. Speer and wife, Revd. H. J. Foss, Revd. F. B. Plummer, Surgn. E E. Ver Menlen, U.S.N., Messrs. G. F. Kutz, U.S.N., Geo. F. Wilkins, U.S N, Chas. Belknap, U.S.N., E. M Hughes. U.S.N., J. D. Keiler, U.S N., L. Cameron and servant, A. Nicolson, R. B. Dow, H. Hobhouse, R. H. Elliott, F. B. Thurber, A. Dubuys, E. Grimet, F. Regamey, S. Matsmoto, A. Kuroda, R. Yatabe. For Hongkong: Messrs. O. Hoffman Burrows, E. Colley. Steerage: 3 Europeans, and 158 Chinese.

"Berkeley, Sept. 1869.—Gentlemen. I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley. for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—The demand for these goods continues, but transactions have not been quite so important as during the previous weeks. There is nothing fresh to report with regard to the various articles, and prices remain unchanged.

Grey Shirtings:—				
7 lbs.	38½ yds.	39 in.	per pce...	$1.70 to $2.10
8 lbs.	38½ yds.	44 in.	„ ...	2.00 to 2.50
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	2.00 to 2.50
9 lbs	38½ „	44 in.	„ ...	2.35 to 2.87½
T Cloth 7lbs.	24 „	32 in.	„ ...	1.55 to 1.75
„ 6lbs.	24 „	32 in.	„ ...	1.15 to 1.25

White Shirtings:—				
60 to 64 reed 40 yds.	35 in.	per pce.		2.30 to 2.50
Turkey Reds 24 yds.	30 in.	2—3 lb. per lb...		0.72½ to 0.95
Black Velvets				8.00 to 9.00
English Drills 15 lbs.	40 yds,	30 in.		2.70 to 2.90
Taffachelaes	12 yds,	43 in....	*nom.*	2.00 to 2.20

Yarns.—

No 16 to 24	per picul...	$29.00 to 33.00	
No. 28 to 32	per picul..	$32.00 to 38.00	
No. 38 to 42	per picul...	$39.00 to 42.00	
Reverse Twist ... 16-24 ...	„ ...	33.00	

Woollens.—Some transactions in this staple have taken place throughout the past week, encouraged by the high rate of exchange, which, however, induced some holders, who were anxious to realize, to accept lower prices both for English goods and *Mousselines*, and consequently quotations are weaker all round.

Plain Orleans	40—42 yds.	32 in....	5.00 to 8.00	
Figured Orleans	29—30 yds.	31 in....	4.25 to 5.00	
Shimagoro	30 yds.	30 in....	4.25 to 5.50	
Italian Cloth	—30 yds.	32 in....	0.27 to 0.35	
Camlet Cords	29—30 yds	32 in....	5.75 to 7.00	
Camlets Asstd.	56—58 yds.	31 in ...	16.50 to 17.50	
Lastings, Japan	22—30 yds.	32 in....	12.00 to 13.00	
Plain Mousseline de Laine	—30 yds.	30 in....	0.17½ to 0.19	

Figured Mousseline de Laine...	30 yds.	30 in...	0.23 to 0.27
Multicolored „ ...	30 yds.	30 in...	0.30 to 0.36½
Cloth, all wool plain or fancy..	48 in. to 52 in...		0.80 to 1.20
Presidents	54 in. to 56 in...		0.60 to 0.70
Pilots	54 in. to 56 in...		0.40 to 0.45
Union	54 in. to 56 in...		0.40 to 0.65
Blankets, scarlet & green 7 to 8 lbs....	per lb...		0.40 to 0.42

Sugar.—There has been rather more demand for *Formosa* kinds, of which sales have been made at $3.30. Other kinds are unchanged, with only a small enquiry.

Sugar:—Takao in bag	per picul ..	$3.30	
„ in basket	„	...$3.10	
Taiwanfoo do.	„	...$3.15	
do. in bag	„	...$2.90	
China No 1 Ping-fah	„	...$7.60	
„ No. 2 Ching-pak	„	...$6.80	
„ No 3 Ke-pak	„	.. $6.00	

China No. 4 Kook-fah	per picul...	$5.30	
„ No. 5 Kong-fun	„	...$4.70	
„ No. 6 E-pak	„	...$3.80	
Swatow...	„	...$3.00	
Daitong	„	...$2.55	
Japan Rice	„	...$2.26	
Kerosene Oil	„	...$2.26	

Kerosene Oil.—Sales at auction in small quantities have realized $2.25 to $2.26, natives being eager buyers. The market closes firmer, with a decidedly more healthy tone, and advices from New York at hand to-day, quote a considerable advance in all refined qualities.

EXPORTS.

Silk.—Since the 21st instant, arrivals are 820 bales. Deliveries amount to 850 piculs of Hanks and 200 of Oshiu and Sodai, now in course of inspection.

Exchange has further advanced. As regards prices, they are steady at previous rates for all those Hanks from No. 2 to 5 which form the bulk of purchases; they are easier for the finer grades, which in point of regularity are generally found not to be up to the mark. For the purchase of the Taysam sorts native manufacturers are now successfully competing with foreign buyers. Fine Oshius have not yet come to hand.

A few sales of filatures are reported at from $850 to $920. Nihonmatz, we are told, are held at over $1,000.

	At Exchange 4/6¼ in London.	*At Exchange 5.80 at 6 m.s. in Lyons.*	
Hanks.—Extra to No. 1...	$820 to 830	32 9 to 33 2	92 to 93
„ Best No. 1 & 2...	$790 to 810	31 8 to 32 5	89 to 91
„ Good No 2 ...	$760 to 780	30 6 to 31 3	85 to 88
„ Medium No. 2½	$730 to 750	29 4 to 30 0	82 to 84
„ C'mon. No 3...	$700 to 720	28 2 to 29 0	79 to 81
„ Inferior No 4 & 5...	$670 to 690	27 1 to 27 10	75 to 78

	At Exchange 4/6¼ in London.	*At Exchange 5.80 at 6 m.s. in Lyons.*	
Oshiu—Good & best ...	—	—	—
Medium .....$750 to 780		30/0 to 31/3	84 to 88
Hamatski.—No. 1 & 2...$650 to 680		26/4 to 27/5	73 to 77
„ No. 3 & 4 ..$620 to 630		25/2 to 25/7	70 to 71
Taysaam sorts.....	—	—	—

Tea.—A fair business has been done during the past week, settlements amounting to 3,600 piculs, comprising mostly lower classes; fine grades bring only offered in small lots and at exorbitant prices.

An entirely new feature has been introduced into our Tea market which is much to be regretted, that is, the purchase of some 800 piculs on credit for 30 days. Such terms place the Tea inspector in a most unsatisfactory position with regard to the native sellers, as he cannot under such circumstances cut the merchant for inferior delivery as hitherto, so that it is an innovation that we hope will soon be discontinued. Our only chance of dealing with Japanese to advantage is on the basis of hard cash, and strict delivery according to sample.

Common	$10.00 to 12.00	Fine	$23.00 to 29.00
Good Common	13.00 to 15.00	Finest	30.00 to 34.00
Medium	16.00 to 18.00	Choice	Nominal.
Good Medium	19.00 to 21.00		

EXCHANGE AND BULLION.

Exchange.—The business of the past week has been again equal to the average of the past few weeks, and as the supplies of dollars from outward continue on a small scale, rates have still further advanced and close firm at quotations.

Rates close as follows:—

STERLING—Bank 6 months' sight	4s. 6⅞d.
„ Bank Bills on demand	4s. 5⅞d.
„ Private 6 months' sight	4s. 6¾d.
ON PARIS—Bank Sight	5.60
„ Bank 6 months' sight	5.72½

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. tf.

SUPPLEMENT

TO THE

Japan Weekly Mail.

YOKOHAMA, SATURDAY, 26TH AUGUST, 1876.

LATE TELEGRAMS.

Bombay, 21st July.—The obituary notice of General Henry J. Barr, made in Reuter's Telegram from London, dated 19th instant, is contradicted.

London, 22nd July.—A Parliamentary Blue Book, consisting of 544 despatches relating to the Eastern Question, has been published, shewing that the intentions of Russia are pacific, that she has been anxious throughout to avert war, and to act in concert with the other Powers. Russia desires to maintain the political *status quo* of Turkey, and suggests forming the insurgent provinces into tributary States.

Lord Derby persists in his refusal to intervene one-sidedly, and instead of the suppression of the rebellion, he would have order restored before applying any scheme of reform.

A Servian despatch states that the Turks yesterday attempted to drive Olimpics across the Dvina, but were unsuccessful: after obstinate fighting, the Servians refused to cross and retired on Belina.

Other reports declare the Servians to have been beaten.

Heavy rains retard the movements of the main armies.

Constantinople, 22nd July.—General Ignatieff, the Russian Ambassador, has been granted furlough.

London, 23rd July.—The annual distribution of prizes at Cooper's Hill College took place on Saturday.

The Marquis of Salisbury presented them, and said that the silver panic made things appear darker than was really necessary; it might be the means of increasing the necessity for greater economy in future in the public works branch of expenditure which swelled when the Treasury was full but must be retrenched when it was empty. Economy was the very centre of our power in India. Our rule was accepted patiently because of its freedom from excessive imposts and capricious exactions. The Marquis dwelt upon the influence of individual opinion among the services in India, owing to the limited number of English people in the land. One drawback was the tendency to increase the distance between the governing and the governed. From a conversation with several gentlemen on the staff of the Prince of Wales during his visit in India he found they had brought home the painful impression that there was coldness between the races. He urged, therefore, the necessity of welcoming the entry of natives into the convenanted service rather than grudging them that privilege.

Simla, 24th June.—There is no truth in the rumours about the Viceroy's illhealth. He never was a robust man, but all he now suffers from is indigestion. This in no way impedes his work, and he is day and night mastering Indian questions and settling important matters.

London, 24th July.—The *Army Gazette* says that it is proposed to reduce the term of service for European regiments in India by one-half, the object being to make the Indian service dovetail with the short service system. The proposal to localize the European troops serving in India has been strongly condemned.

Berlin, 24th July.—The *Government Gazette* reports that the statements of the Deutsche Bank regarding the stock of silver was not authorized.

Alexandria, 24th July.—The Khedive has referred to the great powers for decision the question of judgments against the Daria bondholders.

London, 25th July.—Negociations are proceeding between the American Minister and Lord Derby for a new Extradition Treaty.

Referring to the recent announcement of the closing of the Courts in Egypt it has transpired that only the Summary Justice Court was closed by the President. The other Courts were closed, it being vacation time.

The Judges appointed to enquire into the matter decided that the President's action in ordering the closing of the Court was irregular, and consequently a new President has been appointed.

Simla, 26th July.—On the 15th instant the inhabitants of the village of Boskithel attacked a watering party consisting of several bheesties and mules escorted by two sepoys and two sowars who were proceeding outside an outpost very near the town of Kohat. The bheesties and sowars fled and the Boskithels reached the hills, being only 800 yards off, before a party who, on hearing shots, turned out of the fort, could reach them.

Great damage has been done to the Northern State Railway by the serious floods that have laid the country for miles under water.

Cholera has broken out afresh at Srinuggar; it has also appeared at Murree. Thirteen cases occurred up to the 25th, seven of which were fatal.

London, 26th July.—According to the *Daily News* correspondent at the Servian head-quarters the campaign appears to have collapsed. The Servians have abandoned the aggressive and are acting on the defensive, being now engaged in fortifying Saitchar.

A battle with the Turks is expected near Rissa.

Latest Turkish official despatches report an engagement with the Montenegrins between Beagin and Nevesigne. The Turks claim the victory.

The ceremony of presenting Sir Salar Jung with the freedom of the city of London took place in the Guildhall yesterday.

On receiving the freedom His Excellency assured the assembly that it was the earnest desire of the Nizam, and also of His Highness's Ministers, to maintain and strengthen the alliance which happily at present exists between the Hyderabad Government and England.

The *Daily Telegraph* has received letters from the Stanley Expedition in Africa, dated April, 1876.

OBITUARY.—Sir John Kaye.

ARRIVAL OF THE AMERICAN MAIL.

London, July 25th.—Earl Granville, in the House of Lords yesterday, argued that the refusal of the government to surrender Winslow could not be supported by the treaty of 1842. The Cabinet had acted in undue haste, and must use its utmost efforts to settle the matter. Lord Derby defended the conduct of the Ministry, repeating the arguments employed in the correspondence with Secretary Fish. The debate was postponed in consequence of the illness of the Lord Chancellor.

Constantinople, July 25th.—A semi-official organ says that Austria has declared her intention to occupy Servia, if the war is not finished very speedily.

Vienna, July 25th.—Five Ottoman corps are entering Servia, one into the Department of Eyub. Osman Pasha descends from Nische into Maroa valley, Suleman Pasha from Belgraduth while Fazil and Ahalt Pasha's command maintain the lines of communication.

Paris, July 27th.—It is stated that President MacMahon at a Cabinet council repudiated the scheme, which had been attributed to him, of forming a ministry from the minority. He adheres thoroughly to the constitutional position heretofore taken by him.

Vienna, July 28th.—The *Tagblatt* says Abdul Hamid

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Effendi, a young brother of Murad Effendi, is Regent of the Turkish Empire.

Paris, July 28th.—Ex-Queen Isabella and family leave to-day for Spain. The Spanish Embassador will accompany them to St. Jean de Luz.

Parakin, July 28th.—Prince Milan holds a council of war to-day. His forces are concentrating at Sienitza, where a decisive battle is expected.

London, July 28th.—A Vienna depatch says: It is reported that the Sultan has been much worse during the last two days, and the Ministers have much difficulty to restrain the Ulemas from indiscreet demonstrations. It is even asserted that his abdication is possible in a few days.

London, July 28th.—A *Times* Ragusa dispatch says: "The Prince of Montenegro's campaign is regarded as a failure. The retreat of the Montenegran army was because of an utter lack of efficient organization, the discontent of the troops and their distrust of their commander, most experienced chiefs having been sent on detached expeditions. The command of the main army was left to young and untried men. The battle on the 21st having demonstrated the incapacity of the commanders, and as the Turks were threatening the southern frontier of Montenegro, it was decided to retreat on the base of supplies. The army will probably be re-organised into a separate corps, and every branch of the service appears to have been utterly broken down. Only three Montenegran battalions were engaged at Banagana, and they were obliged to retreat because of a lack of ammunition. The total loss of the Montenegrans during the campaign has been under 300 killed and wounded. The troops are very indignant at the fiasco."

Semlin, July 28th.—The general political position of Servia is growing more serious and partisans of Kara Georgewitch become more threatening every day.

Sixty thousand Chassepot rifles, sold by Germany, have arrived in Servia by way of Roumania.

All accounts show that great antagonism has broken out between the native and foreign elements in the Servian army, and this has been brought to a crisis by the Prince giving the direction of affairs to General Tchernayoff. The native party, which is headed by the Minister of War, desires to remove the Prince to Belgrade or Schabatz, out to the reach of Tchernayoff's influence.

Kara Georgewitch's proclamation, which was placarded in several Servian towns on Wednesday night, declares that the deposition of Prince Milan is necessary because of his treachery. Kara Georgewitch offers to save the country.

A Berlin special says that the Greek Embassador to Germany states positively that Greece intends to maintain the strictest neutrality at present, but admits that events might arise which would require Greece to enter into action.

Russian officers and surgeons are arriving at Belgrade daily. The Czar will send one of his own physicians to attend the wounded at Belgrade. Many Odessa ladies have started for Servia to superintend the hospitals.

London, July 28th.—The Goodwood cup race was magnificently contested by six horses, and up to the last quarter it looked as though Preakness certainly would prove the winner. He could not, however, hold his pace, and in the final dash, New Holland forged ahead and won by two lengths. Temple Bar, who was a great favorite with the betting men, beat Preakness for the second place almost at the finishing line by only a head. The excitement among Americans was simply indescribable. The time of the winner was 6.02.

London, July 28th.—The *News'* Madeira special says that a blockade of the ports of Dahomey was declared on the 1st of July. The British man-of-war *Spiteful* is stationed at Whydah and the *Ariel* at Little Popo. Vessels now in the blockaded ports will be allowed thirty days to load and depart. It is not intended to attack Dahomey from the sea. An available force will go in boats to the capital.

Constantinople, July 28th.—General Ignatieff recently expressed the opinion that an armistice was inevitable within three or four weeks, and would probably be brought about by the united action of the six powers. He thought the present difficulties would be arranged by partitioning Bosnia between Austria and Servia and giving Montenegro to Herzegovina.

London, July 28th.—The defeat of the Montenegrans occasions discomfiture at the Russian court, where Prince Nicholas has been ostentatiously petted. Some Russian diplomats assert that it will be impossible for the Czar to repress the war spirit in Russia, if the Turks invade Servia. This probably accounts for the hesitation of the Turks.

Berlin, July 28th.—Extraordinary activity is prevailing in all the military departments, and preparations are being made for the mobilization of the whole army. The autumn manœuvres of the Third Army Corps are suddenly interrupted. The aspect of affairs in Servia is the subject of discussion in military circles.

Ragusa, July 29.—Advices received from Sclavonic sources state that Peko Paulovitch, the insurgent leader, re-assumed the offensive yesterday, inflicting a serious defeat upon the Turks.

Belgrade, July 29.—Colonel Antitich, after taking command of the Servian army, besieged Scintza on the 27th, thereby surrounding Mohamed Ali Pasha.

Ragusa, July 30.—Advices from Sclavonic sources confirm the intelligence of the complete defeat of the Turks on the 28th instant, near Urliza. The Montenegrans captured 300 Nizals, besides Osman Pasha, five guns and several flags. The Turks attacked the Montenegrans at Autchi, but were repulsed. Selim Pasha was wounded.

Paris, July 30.—A Vienna dispatch asserts that Turkey and Austria favor the Pretender Karageorgewitch. It is predicted that if Prince Milan returns to Belgrade vanquished, he will be dethroned.

The *Times'* special says the Turks at Wilcitza, after two hour's fighting, fled in an uncontrollable panic, and the greater part of the army was lost. Bilek is surrounded. There is a panic at Trebrinje. This disaster leaves Herzgovinia practically defenceless.

The *Telegraph's* Vienna special, speaking of intervention, says the initative will be taken by England at Belgrade and Constantinople, with the approval of the Powers. The belligerents are favorable to peace negotiations.

Belgrade specials say Col. Antich, Gen. Zach's successor, is bombarding Sunaza, which commands the pass between Bosnia on one side and Novibizar and the country whence comes supplies and reinforcements on the other. It is of vital importance to both combatants.

A Ragusa dispatch says Monkhatar Pasha admits losing 1,000 men in the fight with the Montenegrans.

London July 30.—A Ragusa special says Salim Pasha has been killed.

A Pesth special says the annexation of Bosnia by Austria is contemplated,

Paris, July 30.—It is said that arrangements respecting the consolidation of the Spanish National Debt was been concluded. The debt, which amounts to 250,000,000 francs, will be reimbursed by means of creating a six per cent stock, issued at 85 per cent, by a syndicate comprising the Bank of Spain, the House of the Rothschilds and many French and Spanish financiers.

London, July 31st.—The *Daily News* Pesth special says a telegram from Galitz reports that seventy-thousand Tcherkessians have revolted against the Russians in Circassia, and are overpowering the garrisons.

London, July 30th.—A Berlin dispatch says a thousand Germans settled in Russia are reported to have emigrated to Austria last week.

London, July 31st.—The *Standard's* special from Kalafat says the Turkish army crossed the Servian frontier to Nissa on Saturday. A great battle is expected. There is great excitement at the seat of war among Christians on account of the proclamation of the Dervish Pasha, Turkish commander in Bosnia, prohibiting quarter to Christians. A Paratjin dispatch says there is now a distressing want of medical stores in the hospitals and much needless suffering.

London, July 31st.—The Turks engaged Friday near Medun numbered 12,000. They were driven to Podgoritza, and lost two guns. The supporting battalion was annihilated.

London, July 31st.—Special telegrams give details of the massacre by the Turks in Bosnia. Three hundred

Original from UNIVERSITY OF CALIFORNIA

Christians were tortured and drowned in the village of Pervan; at Lima twelve women were cut to pieces, at Pavies sixty children were stoned to death, and at Rathlove one hundred and eighty girls were violated and murdered. At Sackatova 3,000 Christians were massacred.

London, July 31st.—Osman Pasha, captured in Novi Bazar, is not the great Turkish commander. Of sixteen Turkish battalions engaged four only have reached Bilechia.

Havana, July 31st.—Three hundred mounted insurgents under Roloff threw a baggage train off the track at Las Becca. One of the cars was iron clad, and contained an officer and seven soldiers for protection of the train. The soldiers were all killed. The insurgents sacked the train and carried off the contents, consisting of clothing, shoes, boots, etc. A train from Villa Clara with $60,000 in gold and much ammunition was recently captured by the insurgents. It is rumoured that Brigadier Generals Boyle and Arnin are prisoners in Cuba, for blunders committed in connection with this affair.

Paris, July 31st.—M. Casse, radical Republican, will submit a motion in the Chamber of Deputies, demanding the execution of the unrepealed ordinance of 1828, prescribing the expulsion of Jesuits from France. The judgments recently obtained by the Jesuits against newspapers, it is predicted, will give an impetus to the movement. Steps are being taken everywhere for petitioning the Chambers to expel the Jesuits. The expense entailed on the defendants in ten Paris and twenty country paper is 70,000 francs for each journal.

London, July 31st.—A St. Petersburg dispatch from Prince Nikata, says: "The Turks, under Makhtar Pasha, attacked us early to-day near Urbiza. A severe engagement ensued and the fighting is still proceeding. We have broken through the Turkish lines, and Osman Pasha was captured and brought here alive. We have taken many prisoners."

London, July 31st.—In the House of Commons Lowther, Under Secretary for the Colonial Departments, in reply to a question by Mr. Wilmot, said he was unaware of any intention on the part of the British government to attack Dahomey. A blockade of the ports of Dahomey was declared the 1st of July.

London, July 31st.—Brazilian securities have fallen three per cent., causing excitement in the market. Sensational reports are current that Dom Pedro committed suicide by cutting his throat. The report was probably circulated for speculative purposes.

The atrocities of the Bashi-Bazouks cause intense feeling throughout Greece, and her relations with Turkey are becoming alarming. The opposition newspapers of Greece demand that the country be placed in a position to command the respect of its neighbors.

London, July 31st.—The *Times* says Archbishop Butcher, of Meath, Ireland, committed suicide while delirious from suffering from congestion of the lungs and bronchitis. On the table was a slip of paper bearing the single word "mad."

London, July 31st.—A Santander special says ex-Queen Isabella was received by King Alfonso, Princess Asturia, and numerous military and civil officials, with fireworks, illuminations and salutes, on the occasion of her arrival.

The market price for silver at Amsterdam has risen from 90 to 93 guineas per kilogram.

August 1st.—Sixty Russian officers are expected at Nissa to enter the Servian army.

The Commander of the Servian troops who fired on the Austrian steamer in the Danube has been dismissed from the service.

A Berlin despatch says: It is stated from Selavonic sources that the Russian General Von Kauffman, well known as the conqueror of Khiva, is going to the Servian camp.

Ex-Marshall Bazaine of the French army directs the Turks at Sienetza.

A Berlin special states that Austria seems determined to annex Bosnia. Count Andrassy admits the necessity of the policy.

Russia has resolved to be unrepresented at Constantinople.

A Pesth despatch asserts that the story of the revolt of the Circassians in the Caucasus is exaggerated.

Paris, July 31st.—It is reported on information contained in special despatches that a number of Turkish desperadoes in Constantinople attempted to blow up the French Embassy in that city.

London, August 1st, Morning.—A Constantinople telegram says that the issue of paper money is to begin at once. The measure is regarded with dismay.

A Vienna despatch says that the abdication of the Sultan is imminent. It is expected that Abdul Hamid will be proclaimed Sultan to-day.

Paris, July 31st.—M. Casse's motion in the Chamber of Deputies looking to the enforcement of the law for expelling the Jesuits from the country has been abandoned.

Alexandria, July 23d.—The Judges unanimously approve the action of Judge Haakmann in closing the Court of Summary Justice, the Government not permitting the execution of judgment against itself, but appointing another Judge to hold court in his place. There was a demonstration to-day in front of the Courts, and cries of "Vive, Haakmann; justice for all." Chief Pasha, Minister of Justice, has come from Cairo to look over the matter in behalf of the Government.

Vienna, July 20th.—The voluntary subscriptions in Turkey toward the war expenses amount to £600,000.

The Emperors of Germany and Austria met at Salzburg on Wednesday. The interview was strictly private.

A Vienna dispatch says an outbreak of the party opposed to war is expected in Central Servia. False telegrams are being secretly disseminated announcing the annihilation of the Servian army. The adherents of the pretender, Karageorgeivich, are expected. The authorities are investigating the matter.

The weather is bright and hot.

A dispatch from Plymouth says that a few days before the disastrous trial trip of the *Thunderer* the boilers were tested by hydaulic pressure, by making the necessary wedging down of the safety and all other valves. It has been discovered that the wedges had never been removed. The communication valve was also closed, and no steam was able to escape even to the engine.

London, July 22d.—Minister Pierrepont says nothing has occurred in anywise altering the situation, notwithstanding the inferences that have been drawn. There is a prospect of negotiations for renewal of the extradition treaty on a more satisfactory basis.

London, July 22d.—The Emperor and Empress of Brazil arrived to-day from New York, and landed without demonstration. They drove to the railway station and proceeded to London.

The Merchants' Shipping bill passed the House of Lords last night.

London, July 26th.—A *Times* Berlin special says: It is expected that either before or shortly after the resumption of offensive operations by the Turks, which is imminent, an attempt will be made to reopen mediation discussion of the Powers.

A *Daily News* Belgrade special says: The Servian war has virtually collapsed. Henceforth an aggressive, campaign is quite abandoned, and the deepest despondency reigns in Belgrade. I have some reason to believe that an offer of mediation on the part of Great Britain would be favorably entertained by Prince Milan's advisers, though I have fears they are victims to Russian intrigue buried up by the chimera of Russia's intervention. Prince Milan's personal aid-de-camp has quitted Paratjin with the Russian officers who had been staying there for some days. No Servian corps are now outside the Eastern frontier. Saitschar is being strongly reinforced and provisioned as a defensive fortress.

The Turks have reopened communication bewteen Bjelina and Ratcha. Despite the efforts of General Olympies, the largest regiment of Servian regulars which was in garrison at Lemendrin, has started for Alexinatz.

An official bulletin claims that Dutnich has captured a fortified camp at Rakosine, commanding the only road between Nervi Bazar and Bosnia.

A *Daily News'* Vienna dispatch says: A great battle is expected on Friday, the Turks now having 30,000 men concentrated at Widden.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

London, July 26th.—The *Standard's* Vienna special says: The Servians intend withdrawing from all positions to within the frontier. The prevailing opinions in military circles are that the Turks will not follow their success, and that the condition of affairs is favorable to an armistice.

The *Daily Telegraph* announced this morning that letters from Henry M, Stanley, the famous explorer, had been received, dated April 24th, 15 days from Ujiji.

London, July 26th.—The *Telegraph* publishes dispatches to-day from Stanley, from whom five letters have just been received. One letter bears date of July 27, 1875, and was written at Mayhiga Island, Lake Victoria Nayanza, and describes the voyage from King Mtesa's territory at the northern end of Lake Victoria Nayanza. In this voyage Stanley and party narrowly escaped massacre by the savage and treacherous natives of Bumbych. The natives were beaten off after a severe fight, and the party arrived safely at camp after encountering a heavy storm.

The letters contains particulars of the highest geographical and ethnological value in the heretofore unknown regions lying between Lakes Victoria and Albert Nyanza, and the remarkable gambaryara which Stanley thoroughly explored and discovered. Among its high uplands were found a pale-faced tribe, forming a different race of people to the blackskinned denizens of the plains. Stanley is amply supplied with men and means.

The second letter from Duomoinuganda is dated August 15, 1875. Here the explorers established a camp on the the mainland within easy access of the lake. From Maybigga Stanley made an expedition across the lake to the Ukkereme island, at its southern extremity, from whence he re-crossed the lake again toward the region of the Ligunda. While the expedition was being transported in canoes, during the return voyage, Stanley inflicted severe punishment on the treacherous savages in Bambych for the attack made upon hisexpedition, mentioned in his first letter.

Versailles, July 26th.—The Senate has adopted a bill authorizing the Chamber of Deputies to vote a credit of a million and half dollars for the expense of the War Department. The Senate Committee on the Municipal bill, consisting of four supporters of the measure and five Bonapartists, are hostile to it. The Senators belonging to the Right definitely agreed yesterday to elect successively Legitimist, Orleanist and Bonapartist candidates to vacancies which will occur as the present life Senators die. Chislong, Clerical Legitamist, who will first be benefited by this arrangement, is already promised 124 votes.

London, July 26th.—The correspondence relative to the Salonica murder is published. The principal facts are already known. The report of the English Consul at Salonica to the Minister elect, fully and warmly exonerates the American Vice Consul from any participation in the seizure of the Government, which caused the outbreak. The Consul suggests that Elliot shall submit this testimony to the American Minister.

Paris, July 26th.—A Bucharest special says 25,000 Roumanians are concentrated on the Danubian frontier. The Turks are guarding the opposite bank. Shots were exchanged on Tuesday before Ostrow. It is reported that the Turks entered Roumanian territory and pillaged some houses. A conflict is apprehended.

London, July 56th.—Sir John William Keyes, the statesman and author, is dead.

London, July 26th.—Thomas Barges & Bro., merchants of Manchester, have failed, Liabilities, $300,000.

London, July 26th.—The Goodwood stakes were won by *Hampton*, *Admiral Byng* second, *Finis* third. Nine ran, including the American horse *Mate*.

London, July 26th.—The *Pall Mall Gazette* says: We are still of the opinion that the scandal of Winslow's liberation might have been avoided, or the responsibility attaching to England considerably lightened, had a firm attitude been assumed at an earlier stage of the proceedings.

Paris, July 23d.—Republican journals are bitter in their comments on the Senate's rejection of the bill restoring to the State the sole right of conferring University degrees. The Conservative journals are very moderate, and say there will be no ministerial crisis, as the Ministry did not make the passage of the bill a Cabinet question. The *Constitutionel* says the Minister of Public Instruction confirmed this view to his friends at the close of yesterday's sitting.

Madrid, July 21st,—The Cortes has been prorogued until November. Quesado, Martinez Campos and Canores del Casteno will accompany the King to Salvador to receive ex-Queen Isabella. Splendid preparations are making for her reception. Several frigates will meet the ex-Queen at St. Jean de Luz.

London, July 21st—A *Telegraph's* Vienna special says it is asserted there that the President of the Greek Council of Ministers has requested the King to return home immediately, as the Chambers must be called to vote credits for the mobilization of 40,000 men.

London, July 22—6 a. m.—The *Times* reviewing the differences between England and Russia, manifested by Eastern correspondence, says that the policy of non-intervention was adopted by England because of a rooted indisposition to intervene, but it is difficult to believe Russia had any other motive for a reserve than an inability to discern how to interfere effectively.

London, July 22nd.—Turkish representatives abroad say that the Sultan will appear in public in a few days, when a firman announcing certain important reforms will be promulgated.

Private telegrams from Constantinople say the Sultan is suffering from delirium tremens. The Sultan's brother has been sent to the war, in order to induce the Sultan to postpone his intended abdication.

Paris, July 22nd.—The *Journal des Debats* publishes a special dispatch from Semler, which affirms that the Servians were defeated before Belina, and that the Servian General Olympies' line of retreat is cut off. The news of the Servian General Tchernayeff's defeat at Niss, and his withdrawal to Alexinatz, are confirmed.

London, July 26th.—A *Standard* Paris special says it is reported that M. Francaise, member of the Commune, has been seriously wounded in a duel at Geneva by M. Virmezeh, the editor.

Paris, July 26th.—President MacMahon has granted 127 additional pardons to Communists.

London, July 26th.—The *News* Rome special says: Italy demands explanations from the Khedive in consequence of extortions practiced by the Emir of Zeila on the Italian Central Africa Expedition.

Paris, July 25th.—The *Gaulois* has a St. Petersburg special, stating that England has remonstrated with Russia on the proceedings of the Moscow Slavonian Committee.

Belgrade, July 20.—The fellowing is official: The Servians routed 4,000 Turkish regulars on Wednesday, near Radosinge, driving them toward Nova Varresch, after a desperate engagement lasting seven hours.

London, July 21—A. M.—A *Standard's* Widden special says, the Servians lost 2,000 killed at the battle of Ievon. They retreated across the river Timok, but have since recrossed. Osmar Pasha, on Thursday, annihilated 500 Servians who had occupied Nova, a few only escaped accross the Danube.

The *Standard's* Belgrade dispatch, says that the army had been organized in two great divisions; the Eastern division under General Tchernayeff, with General Leichjan as second in command, and the Western division under General Olympies with General Zach as second in command.

Ragusa, July 22d.—Mustar Pasha, Djelanin Pasha and Schlizck Pasha, with seven battlions of infantry, four companies of cavalry and eight guns, attacked the Servians in their intrenchments before Celina, on Monday, and after four hours sanguinary combat the Servians fled. The Turks captured four guns and four small forts.

London, July 20th,—In the House of Lords this afternoon Earl Derby stated he had just received a communication from the United States Government, the contents of which he would not state, but he had given a copy to Earl Granville, and he requested him to postpone his motion calling attention to the Extradition correspondence, as a discussion would inconvenience public business.

Earl Granville said his motion will not effect the nego-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

tiations, nevertheless he willingly complied with the request, and postponed his motion till Monday next.

Earl Derby announced that a small number of copies of the correspondence on the Eastern question will be distributed to-morrow.

London, July 21st.—John Jacob Lowenthal, the celebrated chess player and author, is dead.

Forty of the crew of the "Thunderer" were killed by the recent explosion, or have died from the effects of it.

Queenstown, July 21st.—The steamship "Russia" from New York has arrived with the Emperor and Empress of Brazil and suite on board.

Two more Glasgow mill owners intimate their intention of reducing wages 10 per cent. It is feared the reduction will become general. The employees of one large firm have struck, and those of another firm have determined to strike.

London, July 21st.—Public interest is still excited over the Balham mystery. New and suggestive evidence was given to-day, but it does not yet bear out the statement that Bravo, the barrister, was poisoned by antimony.

London, July 22d.—The match between the English, Scotch, Australian and Canadian teams, which began Wednesday, at Wimbledon, is concluded. It was won by England. The following are the scores at the three ranges—800, 900 and 100 yards: England, 162, 152, 115; Scotland, 152, 148, 135; Australia, 144, 125, 97; Canada, 139, 107, 91.

Belgrade, July 22d.—Official advice respecting the fighting on the 20th instant at Beljina states that the Turks, on their retreat, left a quantity of arms and ammunition. The Servians buried 450 Turks and advanced their entrenchments closer to Beljina. The Servian Ministers of War and Justice have proceeded to headquarters on the Dwina, and the Belgrade reserves have gone to the seat of war.

Vienna July 23d.—The published telegraphic account of the presentation of his credentials by Carbonti Pasha, at St. Petersburg, says he was treated with every distinction, but at the same time the Czar dwelt upon the state of affairs in Turkey in such a manner as to profoundly impress the Turkish Minister, who withdrew affected.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 36.] YOKOHAMA, SATURDAY, SEPTEMBER 2, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The weather remains warm, but the extreme heat of the summer has passed away, the nights are cool, and the enemy has done his worst. There is every promise of an abundant harvest. The country is like one vast garden, over which the eye luxuriates in amplest delight. Hardly a tinge of gold can yet be traced in the deep rich green of the fields, and though the season has been dry, no effects of drought are traceable in the country westward of the capital. All who can escape from work, even for a few days, are on the move either towards or among the mountains and lakes. Fusiyama has become the *mode*, if not the rage; and if a shiver can ever be said to be a luxury, the summit of the mountain at night permits of the very extremity of self-indulgence. Pope's line

Man never is, but always to be blest,

is well illustrated by the tourists. Here, men melt, waste their substance on, and increase their distress by, iced drinks. There, they freeze and cry out piteously for warmth. The punishment of the religions of the hot zones is an eternity of heat; that of the Esquimaux an eternity of cold.

So changeable is the condition of human affairs that all the tragic masks men were wearing three months ago, and have been wearing any time these four years past, have been cast aside, and replaced by faces expressive of abundant contentment. Then, silk was in its grave; exchange was like a column of mercury acted on by an air-pump; every sale of imports left a thumping loss; and men crawled about,—like Tithonus, as if consumed by an immortality of irreversible insolvency. Now, they are staggering under the weight of the golden manna which has fallen from heaven, and seeing not far distant visions of country-houses at home, with five and forty acres in a ring fence, within pony-chaise distance of the "opera-train." The wholesome food has wonderfully nourished the country, and will make this perhaps the most prosperous year it has ever known. The Finance Minister will get in his taxes easily, the discontent in the interior will sensibly diminish, and few provinces of the Empire will remain unblessed by the descent of Jove in the golden shower. Heaven only send that he does not come in this shape, as he once did, to deceive!

The defence of the *Sōmō Zasshi*—one of the most violent of the lately suspended newspapers—will be found elsewhere, and presents some curious features, not the least interesting of which is its method of dialectics, differing, as it does, so widely from that which would be adopted by an European advocate. Some of its pleas are perfectly absurd; for instance, that which contends that the special issue of the paper containing the incriminated writing should alone be prohibited from circulation; and that which contends that as the Home Department could not, in the nature of things, know what would be the future character of the paper, its permanent suspension was unjustifiable, even though temporary punishment might have been merited. The writers of the defence—for it is obviously the production of several—seem to have no idea that society has a right, in its own protection, to prohibit men from pursuing their callings in a manner which threatens its subversion. They also seem to think that possible future good conduct should be allowed to weigh in an attempted estimate of the gravity of some offence actually committed—an argument which would simply prevent the passing of any punitive sentence for any crime whatsoever If a man who was going to be hanged for a capital crime, pleaded for a remission of his sentence on the ground that he might, if set at large, become a useful member of society, men would say to him:—"Excellent wretch, you have to pay a penalty for what you have already done. We have no gift of prescience, and cannot therefore absolutely say that you might not become a St. Paul, a Howard or a Washington. But we infer, legitimately enough, from your past acts that you might repeat them, and we do not think it well to gratify you with the opportunity of doing this. Our punishment is irreversible; but but really this is not our fault."

When, however, the writers come to deal with the fact that they have been punished by the retrospective action of a measure passed after the commission of their offence, and so framed as to include it, they deal a deadly blow at the manner in which justice is administered in this country. Here there is no escape from the inexorable logic of their facts, and their position is wholly unassailable. But does any one suppose that the arguments, logic or protests of the mouse weigh one scruple with the cat? These things seem to us to prove how vain is all the talk about a free press under an absolute government, and how utterly men misconceive human nature who suppose, as some seem to do, that the Japanese Government is *desirous* to part with a share of its power and to place it in the hands of the people. In this respect the Japanese Government is like all other Governments; it will not part with one fraction of power which it can safely retain. The people will only get such share as they can extort from their rulers. The quarrels between governments and people on this question have ever been, and must ever be, long and fierce; and to suppose that it can be settled in kid gloves is to ignore the fundamental constitution of human nature. It will be a long affair of fines and imprisonments and martyrdoms, and there is no other way through it. On this the people may most confidently rely.

A translation will be found elsewhere of an important measure which has for its object the re-division and enlargement of the *kens*. The effect of this will be to neutralize the tendency to centralization which has become so strong since the Restoration, and on which comments have been freely

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

made from time to time in these columns. This tendency was one of the natural results of the Revolution, and year by year the provinces have fallen more and more under the direct sway of the Central Government, which, though alive to the objections incidental to such a condition of affairs, has presumably deferred the correction of it until the opportune time, which has now arrived. Would not this measure afford an opportunity for ascertaining how far some relaxation could safely and wisely be made in regard to the expression of public opinion by means of newspapers? Some rational solution of the Press question is undoubtedly one of the most urgent needs of the day, and every one is interested in attaining it. The Press is an established fact in this country, and, though still demanding some control, should be made an effective adjunct in the government of the Empire.

We learn from Nagasaki that the fire in Takasima mine was extinguished on the morning of Friday, the 25th ultimo, and that no damage is likely to result from it or from the flooding which was found necessary to extinguish it. We believe it was necessary to flood the mine only up to No. 9 level, and it is confidently expected that in five or six weeks from the present time moderate quantities of coal will again be available. The stoppage, we hear from Japanese sources, is proving of serious consequence to junkmen, coolies, and others in Nagasaki who find their employment temporarily stopped; and as no sailing vessels or steamers, other than those of the mail service, have any inducement to visit the port for the present, business in Nagasaki is rendered more than usually dull.

We are afraid that General Van Buren's view that the sailor must be absolved if the liquor is bad, is bearing some ill fruits. In a case reported this afternoon four seamen were brought before him charged with being drunk and incapable. They pleaded that they got their liquor at Livingstone's Saloon—the resort which gave rise to the Consul General's view above referred to—and they were warned and discharged. Now we are much with the Consul-General in his view of the harm done to sailors by poisonous liquors at these places of resort, and we wish the evil could be practically dealt with by the Board of Consuls. But it appears to us that the true bearing of the fact is to necessitate some efficient regulation of the drinking saloons, (which can in no justice be put down) and meanwhile to treat drunken sailors as drunken sailors.

A very agreeable entertainment was given on Thursday afternoon on board the U. S. Flag-ship, by Admiral Reynolds and the officers of the *Tennessee*. Dancing was entered into and kept up with much spirit in spite of the heat of the weather, and the hospitalities of the occasion were dispensed with equal abundance and grace.

We have been requested to announce that the usual afternoon service at Christ Church will not be held to-morrow.

From the "Japan Mail Daily Advertiser."

Monday, 28th.

From the *Akébono Shimbun.*

A new palace for the Empress Dowager is to be erected at Awoyama, Tôkiô.

From the *Nichi Nichi Shimbun.*

The publication of the *Tokaku Shimbun*, which has not made its appearance for a long time, was resumed at Sendai lately.

From the *Chôya Shimbun.*

A station is to be opened on the Railway at Tamachi, Shiba, between Shinagawa and Shinbashi.

From the same.

On the morning of the 20th instant the M. B. Co.'s steamer *Chitose Maru*, when bound from Yokkaitchi to Shimidzu, grounded on a shoal off the Omaizaki light-house. It was at one time feared that she would capsize, but the rising tide luckily floated her, and she got off without material damage. The same vessel touched ground again off Bôshu, just before arriving at Yokohama.

From the *Hôchi Shimbun.*

Owing to the high price of raw silk the cost of silk piece goods has advanced sixty per cent. There has also been a considerable rise in the price of indigo, on account of the failure of the crop this year.

From the same.

On the 15th instant the *Heian Maru* made a trip for the first time to a port close to Atami. It is intended that this line of communication to the famous hot springs shall be kept up, and so save visitors to them the inconvenience of a tedious journey by bad roads.

From the *Mainichi Shimbun.*

It is said that the steamers of the Mitsu Bishi Company will give up making use of the port of Shinagawa, and that Yokohama will be made the terminus for all their vessels. It is probable, in consequence, that the head office of the Company will be removed from Tôkiô to Yokohama.

Tuesday, 29th.

Her Majesty the Empress and suite left the Imperial palace, Tôkiô, in carriages at 7.30 on the morning of the 27th instant, for the Shinbashi station, where they took the 8.15 train to Kanagawa. After a brief stay at the station, Her Majesty entered her carriage, and preceded by the *Kencho* officials and a body of police, and followed by her suite, started on the road to Miyanoshita. Her Majesty stopped for the night at Fujisawa, and is not expected to arrive at Miyanoshita until to-day.

We understand that all the Kerosine Oil which has been shipped from New York to Anjer for orders, has been sold for arrival in Java, and that the only shipments which have been made direct to Japan are as follows:—

Per *Midnight* from New York 6th May,..... 20,000 cases.
Per *Stonewall Jackson* from New York 3rd July, 15,500 ,,
Per *C. L. Pearson* from New York 21st July,... 15,000 ,,

The two last vessels can hardly be expected to arrive here this year.

From the *Chugai Hiôron.*

The *Kuadzoku* are said to have met recently at the residence of H. E. Iwakura and there discussed the Capitalization of their incomes, and their own future prospects.

From the same.

It is rumoured that the Government is drawing up special laws to deal with those who are found guilty of treason.

From the *Nichi Nichi Shimbun.*

On Sunday last, about five hundred people assembled to hear Père Nickolai preach at the Greek Church, Suruga-dai, Tôkiô, and the building was so crowded that many had to turn away without being able to find admission.

From the *Hôchi Shimbun,*

Mr. Mori will leave for China, it is expected, on the return of the Prime Minister and other high officials from Yezo, but under no circumstances will his departure be delayed beyond the early part of October.

From the same.

The Exhibition of Uyéno will be opened on the first of March next year and will occupy an area of one thousand *tsubos*, the main building being constructed of brick work and the rest of wood.

Wednesday, 30th.

Mr. Machado, the Postmaster, has informed us that telegrams from the London Office have been received as follows:—Letters from Manchester of 14th July were accidentally detained, will leave London by British Packet of July 21st.

We learn from the *Nichi Nichi Shimbun* that a *Shidzoku* named Mitani, residing at Ginza, Tôkiô, was disturbed the other night by a noise in a room adjoining his sleeping

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

apartment, and suspecting that a thief had obtained admission to the house, got out of bed quickly and commenced cautiously to make investigation. It turned out that Mr. Mitani's suspicions were correct, as he discovered a thief in the very act of appropriating all the valuables he could conveniently lay hands on. Being interrupted, the latter made a bolt for the door, but was caught by the owner of the house. It required but a moment, however, for the thief to unslip the girdle which bound his waist, and poor Mr. Mitani found himself possessed of the thief's clothes, it is true, but the owner of them scudding away at a rapid rate in a state of nature. Mr. Mitani called "stop thief" and followed at full speed. His cries aroused some of guardians of the peace, who, seeing a man running down the street at the top of his speed with a bundle of clothes in his hand, not unnaturally supposed him to be the thief, gave chase and ultimately caught the wrong man. During the delay which explanations rendered necessary the thief himself got clear off, and Mr. Mitani was forced to return to his house, and console himself with the possession of the old clothes which he still retained.

To-day, being the anniversary of the death of Rokujô Tennô, the *Daijôkwan* will be closed. The *Chôya Shimbun* announces that on the same account there will be no issue of its publication to-day.

From the *Hôchi Shimbun*.

H. E. Sanjô is reported to have remained at Hakodate on account of ill health, while the other Government officials have proceeded further northwards.

From the same.

Orders have been sent to the Ôsaka Mint to produce silver coins this year to the value of three millions of *yen*.

From the *Chôya Shimbun*.

The Government has frequently shown its benevolence by presenting sums of money to the *samurai* of Aidzu, who fought for the Tokugawa cause during the late civil war, and now again are about to present some eighteen thousand *koku* of rice to be distributed among them.

From the *Chugai Hiôron*.

By the permission of the Governor of the Kumamoto *ken*, certain delegates, who had been elected by the people, met together to discuss public matters. On assembling the Governor sent them word that they should enquire into the condition of the *kucho* and *kocho* of the various wards, and also that of police constables, and decide whether it was not advisable that the salaries of all of them should be increased. The representatives of the people declined to discuss the matter at all, as in no way affecting them, but petitioned the Governor to be allowed to discuss questions of importance to themselves.

Thursday, 31*st*.

A vast quantity of dead fish was found floating in the Bay this morning, and boat-loads of them have been brought ashore, where they may find purchasers among the poorer classes. This curious mortality is referred by the Japanese—whether rightly or wrongly—to the operation of a typhoon outside, which, although at a considerable distance from us, has had the effect of pouring into the Bay a large quantity of water of far more than average saltness. The value of this conjecture may, and, we hope, will, be tested by experiment. The main fact can be verified by any enquirer with very little trouble.

The Agent of the Great Northern Telegraph Company has informed us that the Russian land-lines between Albazin and Strelinsk are interrupted.

Yesterday, being the anniversary of the death of Rokujô Tennô, was observed as a holiday by all the Government Departments, and the Ministers, high officials and *Kuadzuoku* were received by H. M. the Mikado at the Imperial Palace. The *Hôchi Shimbun* appears to have been the only newspaper in the capital which was published yesterday.

From the *Hôchi Shimbun*.

Mr. Nakabayashi, the late editor of the *Nichi Nichi Shimbun*, was summoned to the *Saibansho* yesterday and examined concerning a certain article published in No. 1,390 of that journal, and which appears to have contravened the Press-laws in some way.

From the same.

A letter from a Japanese student at Berlin states that the Chinese youths, who are also studying there, will very likely give up their studies and return to China before long, as the amount of thirty dollars a month which the Chinese Government allows each student is not sufficient to defray their expenses.

Friday, 1*st*.

The degree of Doctor of Divinity has, we learn, been conferred upon the Rev. Professor E. W. Syle, of Tôkiô, by Kenyon College, Ohio; also the honorary degree of Master of Arts upon Professor Horace Wilson of the *Kaisei Gakko*, by Pennsylvania College, and the same degree upon Mr. Hatakeyama, Director of the *Kaisei Gakko*, by Rutger's College.

From the *Chôya Shimbun*.

An eel, sixteen inches in circumference and nearly five feet in length, was caught a few days ago at Odawara, and its size was so extraordinary as to justify its captors exhibiting it to the Empress, who happened to be passing through the town at the time.

From the *Nichi Nichi Shimbun*.

A very large quantity of bullion has recently been imported from China to Kobe, for coinage at the Ôsaka Mint.

From the same.

Officials from the various *ken* assembled at the *Naimusho* on the 29th instant, to consult about the National Exhibition which is to be held at Uyéno next year.

From the *Hôchi Shimbun*.

The stage coaches running between Tôkiô and Utsunomiya were at first very irregular as to their time of departure, but complaints having been made, they have lately observed more punctuality in their movements, greatly to the convenience of the passengers who patronize them.

STUART ELDRIDGE M.D.
Surgeon-in-charge.

The Chinese were very much excited Thursday by the appearance of the planet Venus, at mid-day. It was regarded as a most portentous omen—implying no one knew what, but something to which it will be convenient to attribute war, famine, rebellion or any other evil that may chance to supervene.—*S. C. & C. Gazette.*

THE PROSPECTS OF TRADE.

IT can hardly be doubted that we are at this moment on the very crest of a wave of exceptional prosperity. The great impetus given to the export of silk by the diminished yield of the European silk-districts, has affected every branch of trade, and replaced a dismal inactivity and despair by a flood of life, hope and, already to some extent, realized profit. We can recall no period in the East within the memory of nearly a whole generation, which has so forcibly illustrated the mutability of human affairs; nor is it otherwise than peculiarly agreeable to draw attention to this their most marked feature at a moment when prosperity instead of adversity forces it into prominence. The light around us at this moment is that of Turner, not of Rembrandt: there is hardly a corner in shadow, and the heavy grey and even black clouds which have so long obscured the sun, have disappeared before this brilliant outpouring of his rays. Whether men listen more willingly to the moralist during a period of prosperity or one of adversity, is a question we shall not here attempt to decide. Suffice it, that whenever he may speak, or whatever he may say, his monitions are always distasteful; few listen to and fewer regard them.

Not the less important, however, is it, at a moment like this, to do what we can to forecast the future. Predict it with certainty, of course we cannot; control it, equally we cannot; but we may possibly do something to prevent its becoming a period of trouble similar to that from which we have just emerged.

First, then, what is the cause of the sudden prosperity which has come over the trade of this place? It is the unusual demand for silk in Europe, a demand which Japan has fortunately been able to supply to a greater extent this year than is ordinarily the case. Her own crop has been very abundant, and its quality better than might have been expected. Hence she finds herself in the enviable position of one who has a commodity he is willing to part with even at a moderate price, while multitudes are pressing him to sell it at a far higher price. Every pound of this commodity, therefore, under these circumstances, yields a large and wholly unexpected profit, and is pressed into the market with eagerness lest anything should occur to deprive it of the advantage accruing from an early sale.

But the demand for money consequent upon this eagerness both of the seller and the buyer, has raised the value of the specie against which the silk is exchanged, to a degree and with a rapidity quite unknown in the recent history of the fluctuations of the precious metals. It is, indeed, within our own recollection that, under a sudden pressure, produced by an exactly similar cause, viz, a great demand for silk in Europe, the Mexican dollar rose in Canton to 6s. 6d., and the Carolus dollar, a coin which had ceased to be made, but which was the favourite token in the silk-districts of mid-China, to 7s. 10d. But, since that time, there has been nothing like the great fluctuation observed here during the past three months. So late as the latter part of June, bank paper payable at sight was quoted at about 3s. 10d. the dollar; now it stands at 4s. 5d.: and exchange has thus risen over 15 per cent—a fact which, in view of the multiplicity of steam and telegraphic communication of the present day, is really quite astounding. The effect of this great rise in exchange has been to reduce to an exactly similar extent the profit which the Japanese have reaped on their silk. It is obvious that the foreigner was willing to give only such and such a price in sterling, or

Digitized by Google
UNIVERSITY OF CALIFORNIA

in francs, for his purchase; so that every fresh rise in exchange had the effect of reducing *pro tanto* the number of dollars he could afford to pay to the Japanese. And this is so far unfortunate, that as the price of silver, and therefore the value of the dollar, must again recede to something like its equivalent in Europe, the Japanese have laid in their silver at a fictitiously high price, and will find by and by that it is worth far less than at present. What, however, they must set against this fact is, that they have received for their silk many more dollars than they could at best have expected, and have been enormous gainers by their aggregate transactions. They have also enjoyed the advantage of supplying their wants of articles of European manufacture for a far smaller number of dollars than would have been the case had exchange remained at the rates current even so late as last June.

On the foreigners' side, the gains have been divided between the holders of silver—gains already realized—; the shippers of goods from Europe whose ventures have been converted from sources of loss into sources of profit by the rise in exchange; the shippers of goods who find their ventures arriving to a far higher market than they expected; and the intermediaries, such as carriers, brokers, &c., whose services are brought into specially active requisition at such times as these.

Having thus shortly shewn the causes of this sudden prosperity, and the manner in which its fruits have been distributed over various classes engaged in the trade, it may be well to try and form some estimate of the probability of its duration.

In the first place, it would seem likely that silk has reached a price which would render any further considerable advance very undesirable, if not very dangerous. Nothing is more certain than that the consumption of articles of only secondary necessity falls off proportionally to their rise in price. A rich man eats no more bread than a poor man, and the wife of a rich man will buy nearly—though not quite—as many silk dresses when they are dear as when they are cheap. But the masses of mankind are poor, and while they may be tempted to indulge in luxuries if they can obtain them cheaply, they cease even to think about them when they can only command them at the expense of necessaries The enormous activity of the silk manufacturers during a time when the raw material is cheap, proceeds from the demand of classes who cannot afford to touch it when it is dear; and the rise we have recently seen in the silk market in Europe will effectually quench the demand of those classes. Thus, reduced activity must be seen in the mills, a reduced demand in the mercers' shops, a reduced consumption among all but the very rich classes. Meanwhile, what has taken place here will take place all over the world. Every peasant who has a pound of silk to sell will send it to market, and every merchant who think he can make a shilling on the sale of that pound, will compete for it. Consumption will decrease, stocks will increase, and stocks must always beat speculators. Far from predicting any sudden fall in the price of silk, however, or its return to the rates ruling a year ago, it is tolerably certain that we shall see prices maintained at a high average level for many months, possibly for some years. But during such a time operations are always more or less dangerous. The price of raw silk at this moment presents an enormous encouragement to its production, at least all over the East, and when the market value of any article greatly exceeds the cost of its production, the period of decline cannot be very far distant. This is an ample reason for caution at present.

Then, as regards the probable rate of exchange three months hence, when a flood of manufactured goods will be poured into this country, what may we fairly expect? We were quite against the panic opinions held by many five months ago in regard to the future of the silver market. It was clear to us that if Nevada produced so much silver so cheaply as was said to be the case, the Mexican mines would have to be closed, for it is well known that they do not yield large profits; and this would tend to restore, within a moderate period, the disturbed equilibrium of the market. The quantity of silver Germany had to sell was more or less accurately known, and its future appearance on the market was reflected in the low quotations then current. But our present rates are extravagantly high in relation to the price of silver in Europe, where it exists in enormous abundance; and the high price of our dollar at this moment is solely due to exceptional causes which must disappear within a very few months. Meanwhile, goods will be arriving to a falling, although perhaps active, market, and exchange will as steadily decline. Wise men will not delude themselves that the tide continues rising for ever. The ebb will set in when the time for it arrives, and then the great difficulty comes, viz., to keep what has been made, and, in this case, so rapidly made.

SCIENTIFIC METEOROLOGY.

The world at large is by this time fully aware of the great saving of life and property that is effected by the employment of the telegraph both as a rapid means of transmitting "storm warnings," and of enabling systematic comparisons to be made of the meteorological observations that are taken simultaneously at many stations, and by means of which it is possible to predict with a considerable amount of accuracy the weather some hours in advance.

The United States spend over 250,000 dollars yearly in their Meteorological Department, and the signal office at Washington receives some three hundred weather telegrams daily. Other nations, foremost among which is England, having become firmly convinced of the commercial value of meteorological returns, are striving now to imitate the splendid system the United States has initiated and carried out for protecting navigation by the assistance of science.

Before, however, those empirical laws could be deduced which are employed now in foretelling the weather, there were required years of compilation and comparison of the observations obtained with barometer, thermometer, hygrometer, wind gauge and similar instruments stationed at many places. In any branch of a science as abstruse as Meteorology is, there is no short road to the end. At the beginning there is no alternative but persevering and laborious observation and record day after day.

But that coincidences of some kind or other will be observed, and from these coincidences empirical, or perhaps even rational laws, deduced, there can scarcely be a doubt, if only observations be made regularly and for a sufficiently long period by men with minds trained to grasp the slightest clue to the cause or the antecedent of any phenomenon. When daily observations were being made of the number of sun spots, who could have foreseen or divined that so apparently unimportant a phenomenon had a close connection with the weather on our globe? Yet it was not so very long before Mr. Baxendell pointed out that there was a change in the convection currents of our atmosphere depending on the state of the sun's surface as regards spots; next, Mr. Meldrum showed that the most frequent cyclones in the Indian Ocean occurred during the years of maximum sun spots; and, lastly, M. Poey drew attention to a similar correspondence between sun spots and hurricanes in the West Indies, all these phenomena occurring together and at regular intervals of eleven years.

It may be very difficult to understand the mechanism by which sun spots affect the weather, it is not so difficult, however, assuming the preceding, to explain the fact, pointed out by Sir E. Sabine, that during the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

years of maximum sun spots there is the greatest disturbance of terrestrial magnetism. To do this we shall derive assistance by considering for a moment what is known about atmospheric electricity. A vast amount has been said and written on this subject, and it is very important to separate what experiment has made certain for us, and what is merely conjectured from theoretical considerations. Numberless experiments tell us that the air close to the earth's surface is usually negatively electrified; that ordinary dense air as it exists near the surface is an insulator; that the rare air such as we know must be found in the higher regions is a conductor; and, lastly that the practical vacuum which probably exists in interplanetary space is an insulator. We do not know whether the rare conducting air of the higher regions is charged positively or negatively, or whether it is electrified at all. It has been conjectured that this air is charged positively; but if so it is very difficult to understand why the negative charge at the earth's surface does not (on account of the insulation of the intermediate air not being perfect, and on account of the mixing the air is constantly getting from heat convection currents) neutralize the positive charge of the higher regions, and it would, therefore, appear that some unknown means would in such a case be required to maintain this supposed constant difference of electric state. If, on the other hand, the higher regions be negatively electrified as well as the air at the earth's surface, the tendency to absolute equilization would be very much less. There is also another reason for giving weight to the theory that the upper regions are negatively electrified, and that is this: In those distant regions, where gravity is so small, and where, therefore, the air is little influenced by the earth's action, it might fairly be anticipated that it would not follow the earth's diurnal motion in the same obedient manner as does the air at the surface, but rather that it would have a tendency to lag behind and allow the earth to slip to a certain extent underneath it. This would then be equivalent to a negative electric current flowing round the earth from east to west, that is, in the apparent direction of the sun's motion, and such a current, it is well known, would produce exactly that deflection of the marked end of the compass needle towards the north which is commonly attributed to the earth being a permanent magnet. Consequently, any disturbance in the atmosphere, such as is known to take place in years of maximum sun spots, would alter the normal magnetic state of the earth and produce irregularities in the declination and dip. The above explains both the cause of the earth's magnetism and of its changes. If, however, we do not care to speculate on the former, then, as Prof. Balfour Stewart has pointed out, we may explain the irregularities by remembering that the motion of any conductor near a magnet generates an electric current in the conductor which in its turn reacts on the magnet; therefore, any motion of the air in the higher regions, which is almost certainly a conductor, must, since the earth is a magnet, generate an electric current in this air, and this current will disturb the normal magnetic state of the earth.

Magnetic irregularities seem, then, rather to be the result than the cause of atmospheric disturbances; so possibly may be the case with alterations of atmospheric electricity. Nevertheless a merely local change of the air is much more likely to affect a delicate electrical instrument than a magnetic needle however sensitive; hence indications given by the former, or rather the comparison of simultaneous electrical observations made at a large number of places will, it is to be expected, be of much greater aid to the meteorologist than magnetic observations in the preparation of "storm warnings."

Observations of atmospheric electricity acquire additional interest from the paper recently read by Mr. Broun before the London Royal Society, on "Simultaneous Barometric Variations in India," in which he arrives at the conclusion *that the attraction of gravitation is not the only attractive force concerned in the variations of atmospheric pressure.* This result he is led to by the simultaneous barometric observations made at Simla, on the Himalyan range, at Madras and Singapore, the last place being 2,700 miles from Simla, and 1,800 from Madras. These observations show that, although the climatic conditions are utterly different at these three places, barometric changes occur nearly simultaneously at them, and, therefore probably simultaneously over an area of at least a million square miles.

The startling effects observed on the 4th of February 1872, when tremendous disturbances in the land and submarine telegraphs throughout the world accompanied the Aurora Borealis seen in Europe, Asia, and part of Africa on that evening, and the great disturbance of the magnetic needle, add further confirmation to the belief previously existing of the connection of such phenomena; hence we are led to connect natural electric currents in telegraph lines with atmospheric disturbances, and look forward to the time when information of their direction and magnitude shall accompany regular meteorological reports.

We now come to a disturbance of great interest to people resident in this country, viz: earthquakes. Their cause is by no means clear. It is known that they follow a low barometer, and this might at first sight be explained by the fact that if any tendency existed for an upheaval of the earth, such an upheaval would be most likely to occur when the resisting atmospheric pressure was least; still, if it be remembered that the difference between the barometer at 30 inches and 28 inches only means a difference of less than one pound per square inch, it can hardly be imagined that so enormous a force as is displayed in earthquake shocks could be pent up by so small a resistance. Rather, we think, the connection of earthquakes and low barometer must for the present be placed in the class of unexplained coincidences.

There is another coincidence which a country like Japan affords a fine field for working out, and that is, strong natural electric currents in telegraph lines preceding earthquakes. We believe Professor Ayrton was the first to draw attention to this in a communication made to the Asiatic Society of Bengal during 1871, regarding the Indian earthquake of February 16th of that year, which was preceded for some days by unusually strong currents flowing from south to north in all the telegraphic lines in British India. During the Italian earthquake of March 17th of last year, Signor Agosti observed simultaneous electric disturbances on the telegraph lines at Urbino; in October M. Rivet transmitted from Martinique a note to the French Academy on the electric phenomena preceding earthquake shocks, and further confirmation has been received from Ireland. Without being led away by the well known proverb *omne ignotum, pro electro,* we think we may fairly ask,—Are earthquakes always preceded by electric currents, and are they usually preceded or accompanied by magnetic disturbances? To ascertain this, it would, of course, be desirable that regular measurements of natural currents in the telegraph lines as well as of the magnetic dip, declination, and intensity, should be regularly made. To do the first would not entail, we should imagine, much additional work on a telegraph staff already existing; and if it were found that it was only the principal offices that could at present be trusted to make regular measurements of the electromotive force of natural currents, we would suggest the furnishing of many of the intermediate offices with the cheap "Rhé Electromètre" of Marianani, which was brought to the notice of the London Meteorological Society during the spring of this year. This instrument, which in an ingenious way records the occurrence of electric currents of unusual strength, is, we believe, in regular use at some of the European telegraph offices. Making regular magnetic observations is a much more difficult and costly matter, yet this would only make their addition to the very valuable meteorological reports at present issued by the *Naimusho* all the more to be prized.

Up to the present time, probably the most valuable magnetic results obtained in Asia are those furnished by the Meteorological and Magnetic observatory of Zi-ka-wei, four miles S. W. of Shanghai. Their complete report, extending from September 1874 to December 1875, has recently been published, and occupies some 150 closely printed pages of the journal of the North China Branch of the Royal Asiatic Society. We may say in the words recently employed by the Revd. S. J. Perry of Stonyhurst England, when commenting on this Zi-ka-wei report "The care with which these observations are "taken, and the efficient way in which they are discussed

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"are an earnest of the plentiful harvest we have every "reason to expect."

Lastly, we do not consider the advocates of Scientific Meteorology are in the least to be discouraged by the wrong prophecies that were made by Lieut. Saxby in regard to the bad weather he expected from the 20th to 24th of June of this year, since, while we sincerely pity the poor fishermen of Fife and Forfarshire who lost a week's work in consequence of Lieut. Saxby's prophecies making them too much afraid to go to sea, still, we even more regret that their scientific knowledge has not sufficiently advanced to inform them that no one, not even Lieut. Saxby, can possibly foretell the weather so long in advance.

SPIRIT OF THE JAPANESE PRESS.

The Defence of the *Sômô Zasshi*.
(Môsô Zasshi.)

The following are the five objections held by the majority of our association against the recent suspension of the *Sômô Zasshi* by the Home Department.

The 98th notification of the Prime Minister announces that "A newspaper which may be deemed calculated to disturb the peace of the nation shall be suspended." The meaning which we attach to this is, that whenever a newspaper contains any written matter calculated to injure the peace of the nation, the issue which contains it shall be suspended; not that future issues which have not yet appeared shall be suspended. In other words, if matter appeared in No. 6 of the *Sômô Zasshi* (which was published previous to the issue of the Notification above referred to) calculated to endanger the peace of the nation, the Home Department should have forbidden the sale of this special number, and it alone; and there is not the least reason why the future publication of the journal itself should be suspended. Yet the Home Department has permanently suspended the journal without saying a word about the issue No. 6. We are thus deliberately of opinion that the Home Department has misunderstood the meaning of the Notification, and committed an act unauthorized by it. This is our first objection.

But, supposing that the Notification was intended to authorize the suspension of future issues of newpapers, how can any one foretell what will appear in those future issues? Even the editors themselves are undecided on this point, so that it is impossible to predict whether future issues will tend to disturb or preserve the peace of the nation. How much more was this the case with us after our editor Mr. Makoshi was sentenced to three years imprisonment just previous to this time, and when our association had not agreed as to who should fill the vacancy made by his loss? Yet the Government, by this act of suspension, seems to predict from the past what will appear in future issues of the paper. Now, to infer that because a newspaper has published something deemed prejudical to the peace of the nation in the past, it will do likewise in the future, is to imagine that because a man is corrupt his son will also be corrupt. No! We cannot conceive that any such unjust and tyrannical laws can exist under our present just Government. This is our second objection.

Again, supposing that a just inference could be made from the past issues of a newspaper as to its future character, and that however beneficial it might be in the future, it must be suspended for some past offence, we still do not see why the *Sômô Zasshi* was suspended. The words 'past issues' in this case can only be held to refer to the issues between the publication of the Notification and the period of suspension, and not to issues prior to such publication. For, to imagine that the future issues of the newspaper would be prejudicial to the peace of the nation, because articles published previous to the appearance of the Notification were so, is like making a law by which a man may be hanged in order to prevent his committing a capital crime at some future date. This is far worse than predicting what will appear in a newspaper from what has appeared in the past (the issue of the Notification having meanwhile been made). For, presuming this Notification to have been issued, the Press would have exercised increased precautions, because not only could the editors be punished, but the newspapers themselves suspended. Prior to the issue of the Notification, however, the Press was unaware of this, and thus this suspension of newspapers, on inferences made from matter published previous to the issue of the Notification, can only be deemed a mean attack made while the Press was off its guard, and had no reason for suspecting danger. Had we been ordered to suspend the sale of some of our previous issues, there would have been no injustice committed; but never before was there a case of the suspension of a newspaper by the retrospective action of a measure, and such an act can only be regarded as most cruel. Yet nothing can be more clear than that the *Sômô Zasshi* was suspended on account of articles which appeared before the issue of the Notification, as we did not publish a single number from the date of the issue of the Notification to the time when the journal was suspended. This is our third objection.

Moreover, we published opinions held by others which violated the Press-laws, merely for the purpose of criticising those laws, and therefore we never failed to place marks against the passages which offended in this respect, indicating to the public that they merely embodied the opinions of men animated by the madness of excitement, and must therefore not be accepted as sound reasoning. This being the case, we cannot admit that we ever did anything calculated to injure the peace of the nation, even previous to the issue of the Notification.

The question than arises whether our criticisms of opinions, the expression of which violated the Press-laws, had any tendency to endanger the peace of the nation; or whether we were guilty of this offence in using words themselves open to the charge, in our criticisms upon the opinions of others. It must be evident to any child that our criticisms were not our crime, but the words on which we commented. But, in criticising the writings of others, it is obvious that we are forced to state in our columns the opinions embodied in those writings, otherwise our task would be impossible. If this be an offence, it cannot be said that we are innocent of it, so far as the act of criticism goes, and it is on this account alone that the journal was suspended. But it must be acknowledged that the *Sômô Zasshi*, of itself, did nothing tending to endanger the peace of the nation—on the contrary, it so wrote as to preserve it. This is our fourth objection.

But again; even supposing that the *Sômô Zasshi* did not violate the Press-laws in its criticism of the opinions of others, but of itself violated those laws, we still cannot admit that it endangered the peace of the nation. Because although it has contended that oppressive governments should be overthrown and corrupt officials swept away, it has never contended that free governments should be overthrown or good officials displaced. Does not "endangering the peace of the nation" mean destroying *free* governments and sweeping away good officials?

Oppressive governments and corrupt officials are the real and constant sources of danger to the peace of the nation, and therefore their subversion involves, not danger, but safety, to the country. Regarded from the point of view of the national peace and safety, it must be said that although the *Sômô Zasshi* has been held to have violated the Press-laws, all that is really true is that the newspaper has contended for the national peace. Under these circumstances it cannot be urged that the *Sômô Zasshi* has done anything to endanger the peace of the nation. And this is our fifth and last objection.

Details of the Changes in Kens.
("Nichi Nichi Shimbun" of August 25th, 1876).

Consequent upon the orders for the abolition or amalgamation of the *ken*, or the alteration of their jurisdictions, the political map of our country has again undergone change in regard to its divisions, and we are especially caused to consider as a matter of importance the dilineation, on our maps, of the new boundary lines. Upon counting, on our fingers, the number of the *Fu* and *Ken*, we find that from the 21st of August, 1876, the capital towns where the Government of the people is directed consist of three *Fu* and thirty-five *Ken*, and we therefore believe that it will not be unprofitable labour on our part to compare with the map these fresh changes, and to publish, as shown below, their places of Government.

1. Tôkiô *Fu*; .....Is in the province of Musashi, and consists of the 2 departments of Ewara and Toshima, and portions of those of Adachi, Katsushika and Tama.
2. Kiôto *Fu*; .....Consists of Yamashiro, Tango, and 4 departments of Tamba, viz; Funai, Skaruga, Kuwata, and Amata.
3. Osaka *Fu*; .....Is in the province of Settsu, and consists of 7 departments, viz., Shimakami, Shimashimo, Teshima, Nosé, Nishinari, Higashinari, and Sumiyoshi.
1. Kanagawa *ken*; ...Sagami, and 4 departments of Mushashi, viz., Tama, Kuragi, Tsutsuki, and Tachibana.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

2. Saitama *ken*;.....16 departments of Musashi.
3. Gumma *ken*; .... .Kôdzukè—Formerly the Kumagaè *ken*; head office at Takasaki.
4. Chiba *ken*;.....Awa, Kadzûsa, and some departments of Shimôsa. The boundaries are, on the N. Sekiyado; on the E. the Tonégawa; and on the W. the Shintonégawa. Vide Daijôku'an Notification No. 76, of May 7, 1875.
5. Ibaragi *ken*;.....Hitachi, 4 departments of Shimôsa, viz., Sashima, Yûki, Okada, and Toyoda, and portions of the 2 departments of Katsushika and Sôma. (v. above Notification.)
6. Tochigi *ken*; . ....Shimôtsûké.
7. Sakai *ken*;.....Yamato, Kawachi, and Idzumi.
8. Miyé *ken*;.....Iga, Isé, Shima, and part of the department of Muro in Kii.
9. Aichi *ken*; ..... Owari, Mikawa.
10. Shidzuoka *ken*; ...Suruga, Tôtômi, Idzu.
11. Fukushima *ken*;...Iwashiro, 8 departments of Iwaki, and a portion of the department of Kambura in Echigo.
12. Miyagi *ken*;.....Rikuzen, and 3 departments of Iwaki, viz., Watari, Igu, and Karita,—together with a portion of the department of Uta.
13. Iwadé *ken*; .. ..Rikuchiu, the department of Kesen in Rikuzen, and the department of Ni-no-hé in Mutsu.
14. Aômori *ken*;.....Mutsu.
15. Akita *ken*;.....Ugo, and the dept. of Kadzuno in Rikuchiu.
16. Yamagata *ken*; ...Uzen, and the dept. of Akumi in Ugo.
17. Ishikawa *ken*;.....Kaga, Noto, Etchiu, and 7 departments of Echizen.
18. Shiga *ken*;.....Omi, Wakasa, and the 1 department of Tsuruga in Echizen.
19. Nagano *ken*;.....6 Departments of Shimano.
20. Yamanashi *ken*;...Kai.
21. Gifu *ken*;.....Mino, Hida, and 4 departments of Shimano.
22. Niigata *ken*;.....Echigo, Sado.
23. Hiôgo *ken*;.....Harima, Tajima, Awaji, 5 depts. of Settsu, viz., Yabé, Arima, Kawabé, Muko, and Uhara; and 2 depts. of Tamba, viz., Taki and Higami.
24. Okayama *ken*; ....Bizen, Bitchiu, Mimasaka, and 6 depts. of Bingo.
25. Shimané *ken*; .....Hôki, Inaba, Idzumo, Iwami, Oki.
26. Hiroshima *ken*;...Aki, and 8 depts. of Bingo.
27. Yamaguchi *ken*;...Suwô, Nagato.
28. Wakayama *ken*;...Kii.
29. Ehimé *ken*;.....Sanuki, Iyo.
30. Kôchi *ken*; .....Tosa, Awa.
31. Fukuôka *ken*;.....Chikuzen, Chikugo, and 6 depts. of Buzen.
32. Oïda *ken*; .....Bungo, and 2 depts. of Buzen, viz., Shimogé and Usa.
33. Kumamoto *ken*;...Higo.
34. Nagasaki *ken*;.....Hizen, Iki, Tsushima.
35. Kagoshima *ken*;...Hiuga, Ôsumi, Satsuma.

The boundaries being as given above, it will be seen that the Tô-zan-dô (including the thirteen provinces of Mutsu, Rikuzen, Rikuchiu, Uzen, Ugo, Iwashiro, Iwaki, Kôdzûké, Shimôtsûké, Shinano, Hida, Mino, and Ômi) is under the jurisdiction of the eleven *ken* of Aômori, Iwadé, Miyagi, Fukushima, Akita, Yamagata, Tochigi, Gumma, Nagano, Gifu, and Shiga. The Tôkaidô (including the fifteen provinces of Hitachi, Kadzusa, Shimôsa, Awa, Musashi, Sagami, Idzu, Kai, Suruga, Tôtômi, Mikawa, Owari, Isé, Iga, and Shima) is under the jurisdiction of the one *Fu* and eight *ken* of Ibaragi, Chiba, Saitama, Tôkiô, Kanagawa, Yamanashi, Shidzuôka, Aichi and Miyé. The Hokurokudô (including the six provinces of Echizen, Etchiu, Echigo, Kaga, Noto, and Sado) is under the jurisdiction of the two *ken* of Niigata and Ishikawa; Wakasa, however, has been placed under the Shiga *ken*. The five Home provinces, (including Yamashiro, Yamato, Idzumi, Kawachi, and Settsu) are divided out under the jurisdiction of the two *Fu* of Kiyôto and Ôsaka, and the two *ken* of Sakai and Hiôgo. The Sanyôdô (including the eight provinces of Harima, Mimasaka, Bizen, Bitchiu, Bingo, Aki, Suwô and Nagato) is under the four *ken* of Hiôgo, Okayama, Hiroshima, and Yamaguchi. Five provinces of the eight belonging to the Sanindô, after taking away Tamba and Tango, which are placed under the Kiôto *Fu*, and Tajima, which is placed under the Hiôgo *ken*,—(including Inaba, Hôki, Idzumo, Iwami, and Oki) are under the jurisdiction of the Shimané *ken*. Out of the six provinces of the Nankaidô,—after taking away Awaji, which is under the Hiôgo *ken*,—Kii is under the jurisdiction of the Wakayama *ken*, Sanuki and Iyo under that of the Ehimé *ken*, and Tosa and Awa under that of the Kôchi *ken*. The Saikaidô, too, (including the nine provinces of Buzen, Bungo, Chikuzen, Chikugo, Hizen, Higo, Hiuga, Ôsumi, and Satsuma, together with the islands of Iki and Tsushima) is under the jurisdiction of the five *ken* of Oïda, Fukuoka, Kumamoto, Nagasaki, and Kagoshima.

Thus, the extent of the jurisdictions comprises, in some cases, about 100 *ri*, with a diameter of some tens of *ri* in length. Upon comparing this with the period of the feudal regime, it will be found that not even the territory of the great *daimiôs* was equal to that of one small *ken* at the present date. If the present abolition and amalgamation has been carried out with a view to a facility of legislation for the people, then, again, the reforms to be set on foot together with this abolition must be considered of the utmost importance in regard to governing the people.

We have here, firstly, considered merely the geographical boundaries, but we hope, later on, to set on foot discussion in regard to this matter.

Provincial Government.

("*Chôya Shimbun*," August 31, 1876.)

The amalgamation of the *kens* has recently formed the subject of articles in the several newspapers, and writers in general have exhausted all their abilities and learning in discussing its pros and cons. Some say that this is the first step towards sharing the power that has been hitherto invested in the Government alone with the local authorities; others again seem to doubt lest, now that the jurisdiction of the *kens* has been extended, there may be some failures in the carrying out of their duties. Arguments of this kind are very numerous, but the main point to which we should look is the consideration as to whether this step will prove to the advantage of the people generally or the reverse. I will not, in the present instance, criticize the articles that have been written by others on the subject, but will, instead, give vent to my own personal opinions in regard to it, and that which I hold and which I now wish to prove is that this amalagamation of the *kens* will be productive of no inconvenience to either the governing or the governed classes.

Now the amount of business discharged in the local offices is probably in excess of that discharged in the different head departments in Yedo, still in the former they have only to observe the rules laid down by the latter for their guidance and, if they do so, they will fulfil their duty. They have not the power of discharging business which may arise out the regular routine according to their own judgments, and therefore, whether the extent of the jurisdiction be increased or diminished, it is not probable that the people will be affected to any great extent in either case. The two parts of their duties in which the people are chiefly interested, are their judicial and police functions, and if these only are properly attended to, the people will by that alone be enabled to enjoy perfect tranquillity and security. The collection of dues and taxes is of course a weighty matter, but it is largely entrusted to the chiefs of wards in cities and to the village authorities, and the duties of the head official in the *ken* is confined merely to revising the sum-total. He is, of course, not required to give personal attention to such subjects as education and the development of the country, and no fault could be found with him for leaving matters connected with repairing of the roads, erecting of of bridges, etc., to the care of the subordinate local officials and the people. This argument would go to shew that the duties of the head of the *ken* are of a very light nature, and that therefore not only will no inconvenience whatsoever arise from either the amalgamation of the *kens* or the diminishing of the officials employed therein, but that such a measure will redound much to the advantage both of government and people.

I have heard that the *Shihôsho* disapproves of the entrusting of judicial powers to officials vested with ordinary civil business, and that it has been therefore decided to subdivide the functions of that department, and that it is the intention to establish branches of it in the different local jurisdictions. If this idea is carried out, the present duties of the local officials will be largely curtailed, and, let therefore the district over which they exercise jurisdiction be never so large, no fear of any shortcomings need be entertained. So far indeed from that, it will prove advantageous that one person should supervise the large number to whom is committed the task of collecting the dues and taxes.

I have further heard that though the police expenses in the several *kens* have hitherto been fixed at six hundred thousand *yen*,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

these have, for special reasons, been recently augmented by one hundred and fifty thousand *yen*, thus bringing the total amount up to seven hundred and fifty thousand. Now an augmentation such as this at a time when every effort is being made to decrease the expenditure of all the departments, and to curtail the number of officers employed in them, shews that the Government is privately giving its attention to rendering the discharge of the police duties as perfect as possible. These duties form one branch in the administration of the *ken*, but it will appear that this, unlike the other branches thereof, is not to be affected by (the reduction consequent on) the recent amalgamation. And the reason of this is, that the strength of a police force always varies in proportion as a place may be large or small and the population numerous or the reverse. As the amalgamation of the *kens* makes no change in either of these respects, it follows that no diminution in the police force can be made in consequence of it. So far indeed from a diminution being made, an increase in the numbers of the force ought naturally to follow the recent increase in the expenditure. The people need therefore be under no apprehension lest there be any shortcoming in the discharge of the duties of the force. It is my opinion, for these reasons, that the people will not only suffer no ill effect from the recent diminution in the number of the local Government offices, but that if the judicial and police duties be properly attended to, the step will prove a great source of happiness to men. Learned men, how think ye?

(Signed.) MURAKOSHI NAGNORI,
Aioicho, Honcho.

THE THREE PRINCIPAL CLANS.

(Chôya Shimbun, August 26th, 1876.)

Since the abolition of the custom that had prevailed for five or six hundred years, by which the different *daimios* were immured, each in his own province, and the establishment of the *ken*, a uniform system of laws has been observed throughout the entire country, and the injustice by which each province observed only such laws as it pleased has been entirely extirpated from the land. The administration of the Government has thus been gradually perfected, and the degree of civilization which we enjoy to-day will, on comparison with that of ten years ago, appear as far above it as the heavens are above the earth, a fair result which can only be ascribed to constitutional government.

While, however, this is so, writers find in the government by *ken* things which appear unjust. They say that the *samurai* of the three former *Han*, Satsuma, Chôshiu and Tosa, appear, on the strength of the services by which they effected the revolution, to do every thing now just as it pleases them; that they are, even when guilty of violations of the laws, treated with indulgence by the Government; that they are not looked upon in a similar light to those of other *ken*; and that thus some relic of the old feudal system is stealthily maintained.

Although this is not the case, among the three *ken* which we mentioned that of Kagoshima furnishes to writers the largest food for suspicion; the language of its *Rei*, Oyama, in the assembly of the local officials (when he expressed strong disapproval of Popular Assemblies) is distrusted; as is also that of Mori Arinori in the debating club (when he said his *ken* objected to have as its administrator or vice-administrator natives of other *ken*). Many things besides these furnish food for distrust in the government of that *ken*; above all the leaving of the whole administration entirely to the discretion of the *Rei*, as the Cabinet has covertly done, and the understanding which it is said has been conveyed to him that he may observe or not any notifications which have been issued to the country in general, according as he may consider it to the advantage of his own *ken* to do so or the reverse. No reliance can be placed on such reports as these, but, if by any chance, such things should be, how could our present Government be said to differ from the domination of the military class in former days? We have always felt a strong desire to gain some definite information as to the condition of that *ken*, but have to our regret been prevented doing so by the veil of secrecy which appears to be thrown over its administration. It cannot be denied that if we glance at one or two superficialities connected with it, some food for distrust would be afforded, and false statements such as those which we have above quoted are probably exaggerations based only on these superficialities.

The revolution was effected entirely by the three *Han* we have mentioned, and about eight-tenths or more of those who direct the government of the country at the present day belong to one or other of the three. Owing to the idea generally entertained that those in power will show partiality to their natives places, it is inevitable that the slightest suspicion of such partiality that may arise should forthwith be considered to be well founded and be criticised accordingly. We, however, on our part are firmly convinced that our Prime Minister and the Councillors of State who are invested with so important an office as the protection of over thirty millions of people would not be guilty of such pettiness as this. They should, however, take care that no grounds for such suspicion should be given to the people.

Now the Kochi (Tosa) and Yamaguchi (Choshiu) *kens* have already, as their Administrators and Vice-Administrators, natives of other *kens*, and thus the suspicion with which the people have regarded them has to a great degree been dispelled. We have, however, heard, that among the Kagoshima *ken* officials down to the very lowest grades, there are some who are not natives of that *ken*, and the distrust with which the people generally regard it in consequence cannot be caused to melt away as easily as does the ice under the influence of the sun. Hence arises the adverse criticism on the Government of that *ken*, and this we regret to say we cannot easily contravert. We have, however, recently heard a piece of information in the streets, which if it proves to be true, must soon utterly dispel all the suspicions that people have hitherto entertained on this subject.

It is as follows:—That the administrator Oyama is striving to effect reforms in the Government and that he has applied for permission to the Government to select from among the natives of other *kens* several officials of the ranks *Sô** and *Han*, and that this permission has been already granted to him. If this prove to be true not only will a relic of the feudal times be got rid of and the commands of the Central Government made universally effective throughout the Empire, but the distrust of the people will be made to melt as ice under the influence of the sun, and the administration of the Emperor be rendered perfectly just and equitable; the same laws will be observed in all corners of the Empire, civilization will be promoted, and an incomparable step taken to secure the safety of the Empire. The people, too, will find no further grounds for suspicion. We have therefore heard the tidings above quoted with uncontrollable joy. Time alone can show whether or not it is true, but in the meantime we publish it for what it is worth.

ANTI-INFLATION.

(Kinji Hôron,)

In announcing the capitalization of the incomes of the nobles and gentry the Government have acted perfectly in accordance with the will of the people, and the pensions have been abolished exactly at the right moment—neither too soon not too late.

This bold step taken by the Government deserves all praise, and we, who devote our whole attention to the welfare of the people are exceedingly glad of it. Yet we are not wholly without anxiety regarding this business. The commentation of the perpetual pensions for terminable bonds is a good thing, but its merit lies, we are inclined to think, in the manner in which the Government carries out the work. Should this he done wrongly, not only will the measure be deprived of all merit, but it will being dire misfortune on the country. As the whole press has praised the Government for this measure, it is unnecessary for us to do so. We shall here try to point out some of the dangers to which it seems likely to give rise.

The circulation of money at this moment is very inadequate, and a corrupt cry has been raised for more paper money. The bonds will probably amount to 140 or 150 millions of yen, and the paper money at present in circulation may be set down at 90 millions. Thus the bonds will amount to about 50 millions more than the paper money now in circulation. The Government has decreed that these bonds may neither be bought nor sold nor pledged as securities. But this is perhaps only a temporary provision made in order that there may be no confusion while the bonds are being issued to the *Kuadzoku* and *Shidzoku*. When once the Government permits them to do what they like with the bonds their value will, in all probability, fall to no slight extent, for there are many enterprising men in these classes who will want money to carry out their schemes.

The corruptionists will very probably say that as the prices of the bonds have fallen because the *Kuadzoku* and *Shidzoku* cannot carry on any business without money, the government had better issue more paper money and buy up the bonds, as this would keep up a good circulation of money, and the business pursued by the *Kuadzoku* will greatly increase the national wealth. This would quell the murmuring of the people, increase the wealth of the nation, and all this great good would arise from the issue of more paper money.

* *Sô* officers by the Government, *Han* by the Department.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

This kind of talk comes from men who are entirely unacquainted with political economy, and if they are listened to we shall come to serious misfortune. In reality, they talk like this to advance their own interests. They may not indeed have so much power as to be able to set these schemes in motion, but it would be a serious thing were the Government to imagine that they reflected the general opinion of the people. Yet, strange as it may sound, we have recently heard that there are men in the very Cabinet itself who desire to see a further issue of paper money.

When any great object is to be achieved, certain hardships must be undergone, and if the *Kuadzoku* and *Shidzoku*, who are the burdens and dependents on the nation, desire to enter into business so as to earn their own living, they must be prepared to encounter a certain amount of hardship, and if their bonds are very much depreciated by the time they wish to sell them, it would only give them one of the lessons which business always teaches. Let them get their experience in this manner; it is unnecessary for any one to trouble himself about *their* misfortunes, for this would only tend to lessen still more the small amount of perseverance and energy which they now possess.

There are many precedents in the history of the world for increasing the currency by adding to the paper money in circulation, and we all know the evils it has produced. The paper money now in circulation has been issued from unavoidable causes, and to enable the Government to carry out its important reforms, such as the abolition of the *Han*, the establishment of the *Ken*, etc., and we cannot be too thankful that there is no difference between paper and specie.

Money gained without labour is but little valued; men make but foolish uses of such money, and thus it is with the issue of paper money. It may all look very grand at the moment, but it is all hollow, and has many evil results—men are led into dissipation and this is bad for the country. The sayings of the corruptionists must therefore not be listened to.

Representative Institutions.

(Tekka Shimbun.)

The constant increase in the number of newspapers is an undoubted sign of the advancement Japan is making in civilization. But it appears to us that though the editorial columns of the papers are often occupied by discussions of an interesting and even an important nature, the subjects treated to-day are forgotten to-morrow.

This state of the Press may correspond with the degree of advancement made by the nation in civilization, but, at all events, previous to the assembling of the *Chihōkwan Kwaiji* last year, the press clamoured unanimously for the institution of a Representative Assembly. Yet the question has passed away and disappeared as though it were a mere mania of the day, and not the remotest trace of it is to be found in any newspaper of recent date. Was last year the exactly suitable time for the institution of a Representative Assembly, and is this year unsuitable for the purpose? We firmly believe this Representative Assembly to be the most beneficial thing for the Government, and the true stepping-stone from which the rights of the people can be reached and obtained.

On reading this some may probably say:—"Why, every child knows this; we want no repetition of these old stories." But we fear people of this class have no idea of the real efficacy of a Representative Assembly. If they have, why do they express no further opinions on the subject? They are quite at liberty to do so. But if they scorn the subject by saying that "every child is acquainted with the fact," they only prove that they are content to be slaves and are ignorant of the happiness Heaven has in store for men, which is indeed grievous.

The institution of a Representative Assembly cannot be brought about by demanding it urgently one day and letting the whole question drop to-morrow. The people must demand it incessantly, and even when or if they obtain it, they must not imagine that it will attain to its full power in a moment. Had we a ruling power like that of Louis XIV of France, whose temper was extremely despotic, the liberties of the people would only be attained after a considerable lapse of time. We are differently situated, however. Our Government is of a mild nature and treats the people with marked benevolence. When the Government is oppressive, the antagonism of the people is passionate; but situated as we are, it takes a long time to arouse men to the Establishment of a Representive Assembly.

England stands foremost among the constitutional monarchies, but when the House of Commons was first established, it was nothing like what we now see of it. It possessed no power of enacting laws, and petitioned that this power should be granted to it. But the King and his ministers refused the request and all such concessions. Moreover it was not convoked every year, and when any one was found disputing the will of the Sovereign, he was arrested and even imprisoned. But owing to the combined wisdom and forbearance of its members, it has arrived at its present condition.

We may say that the House of Commons first attained real power when it acquired the control of the Public Purse. When the King wanted money, an Act had to be passed granting it, and finally the King became a person who approved of or rejected what was done by the House of Commons.*

Now, should our people urge their rights and liberties, without being animated by a real hatred of oppression, or being determined to obtain the control of the public purse, is is very doubtful whether they will ever obtain them

The duty of writers should not be confined to entertaining their readers, and they should give up new, trivial and diversified subjects, and stick tightly to this question of a House of Commons, for all expectation of obtaining our liberties without this institution is like looking for fish on the mountains. We must hammer and hammer at this matter until our end is accomplished.

National failings.

(Yoyōshadan.)

In all men there are two working forces, the mind and the body, and there are callings which are, and which are not, appropriate to given individuals: that is to say, one man is fitted to be a farmer and another an artizan; one can make clothes but cannot carve in wood; another has a retentive memory but no inventive genius, while another again has a poetic though no mathematical faculty. The moral dispositions also vary; one man addicts himself to wine, while another easily succumbs to the blandishments of the other sex, though both may be courteous in their behaviour.

Now a man may pursue such labour or intellectual occupation as is best suited to the bent of his mind. If skilful as a farmer he may disregard manufacturing industry; or, if possessed of the poetic faculty, he need not labour at mathematics. In morals, however, it is different. A man cannot plead that because he is not addicted to wine, he is justified in being licentious or covetous. He cannot compound for one fault by another virtue. His bad points must be corrected; the omission of one duty cannot be atoned for by the discharge of another, as may be the case in mental or bodily labour.

We have said above that certain callings are appropriate to certain individuals, and the same thing may be observed among nations and applied to their collective mind. Thus, our people are in general enterprising and forbearing, but they are careless. If we look to the condition of the country, we find the officials trying to carry out reforms, which are indeed doubtless necessary to the improvement of the country, but have no due relation to its financial condition; the farmers are wholly absorbed by the care of the work of the year, without thinking of what improvements might be gradually made by steps extending over coming years; tradesmen care nothing for the durability of their work, striving only to get it done out of hand in the shortest possible space of time; the students fix their eyes on the top of the ladder of learning, but pay no regard to the steps by which alone it can be reached; and superficial externals are arrived at while substantial reality is disregarded.

For this reason our people have made an excellent imitation of civilization; but it has no foundation and therefore no stability, and anyone who will give attentive consideration to the whole question will see that every man born in this country is subject to this want of thoroughness and stability.

So again with the grand divisions of the world, Asia is better than Africa, but the very best part of it will bear no comparison with Europe. The prevailing defect among orientals is their want of energy and perseverance, and so long as they are deficient in these qualities, they will never equal the European races. Men like Columbus the navigator, and Newton the philosopher are of course exceptional; but the whole average mind of the European is higher than ours.

Now we trust that our countrymen will not regard the failings of the orientals—the want of energy and perseverance—as excuses for the errors to which those failings lead, but will try to acquire those qualities. In this manner only can we reply to the reproaches now justly made to us. We give this advice earnestly to all young men.

* Very loose history, as usual.

The Bonin Islands.

(Chôya Shimbun.)

It is natural to every man to wish that his country may be powerful and extensive—a feeling which has animated men in all ages and all parts of the world.

At the same time we are of opinion that the expenditure of large sums of money in order to obtain a trifling possession which gives no prospect of compensation for that expenditure, cannot be regarded as a wise policy by anyone who is truly desirous for the welfare of a country.

The question of colonizing the Bonin Islands had lain dormant for some time, until attention was aroused to it last year by the visit of the officials of the Foreign, Home and Naval Departments in the *Meiji Maru*. Since that event, not only has there been much talk on the subject, but we hear that the Government has been deliberating on a scheme for sending officials and stationing a guard of the Imperial Marines there.

We deem it our duty to touch on the question whether this is for the interests of the country; but, before doing so, it may be well to give a brief statement of the events relating to the connection of Japan with these islands.

(Here follows a short historical sketch, which we omit because all the facts embodied in it have already been placed before the readers of this journal.)

The Government probably hopes to make this poor land productive and to protect the people living on the islands, but from what we have heard, the 'Father Island' is only five and a half *ri* in circumference, and the 'Mother Island' ten *ri*, the remaining islands being insignificant in size and rocky in their nature and thus utterly unfit for cultivation. Although large sums of money should be spent upon the islands, we fear they will yield no adequate equivalent, and therefore we hope the Government may drop the question for the present.

Some will ask: Should then these islands be abandoned and lost sight of altogether? We reply at once, by no means. It is well known to the world at large that we were the first discoverers of the islands, and once had settlements there under orderly government, so that there is no reason why we should abandon them. What we fear is that money which might be so much better employed in so many ways will be spent upon these insignificant places.

What is the real good of these islands? They make a handy place of call for whalers, and when our whale fisheries are in a more flourishing state, the possession of the islands may be advantageous to us. But all this lies in the future, and there is no object in sending a staff of officials there now or garrisoning the place. If two or three officials were sent there to look after affairs, this would amply suffice for the present; and, in regard to giving the islanders protection, it would be time to do this when our whale fisheries are better developed, and the expenditure can thus be better justified than it could at present.

The Chinese version of the present political situation may be worth quoting among the many others which abound. Well-informed natives, in communication with Tientsin and the capital, simply ridicule the idea of war. The pressure put upon Li Hung-chang, the urgent despatches from the Empresses and the various other scraps of gossip or information current among foreigners make these men laugh. "You none "of you know anything about it," say they. "Li Hung-chang "has been for weeks in a position to settle the affair and "surrender everything. But it would not be in keeping with the "Chinese habits, much less with Chinese dignity to give in "without very protracted negotiations. There will be no war! "At least, not this time, for the simple reason that we are not "prepared for it; but ten years hence we shall be, and then if "foreigners want to fight us they will find it a serious matter." "There is something in this view, as far as it goes; and therefore it certainly seems a pity to postpone the inevitable. But however that may be, the best Chinese advices say that the Government had decided, weeks ago, to surrender to Sir Thomas Wade; that all this fuss and interviewing is a simple pantomime; and that there neither is, nor ever has been, any chance whatever of a war. But there seems no doubt that foreigners were in real danger during the past week; and may still run some risk, as the Chinese national spirit is much excited against foreigners. The most preposterous statements about the English demands are being busily circulated by the literates and small officials; and our friends say that if Li gives in to Sir Thomas Wade, there will most unquestionably be an outbreak against him. Li, however, is not the man to scruple at shooting down a few thousands of ruffians. He has had violent threats addressed to him by the Guilds, and has taken precautions for his own safety and the peace of the place.—*Celestial Empire.*

HISTORY OF THE TOKUGAWA DYNASTY.

Chapter III.—*Continued.*

The Emperor congratulates Iyeyasu.

Messengers were at the same time sent to Hidetada and also to Hideyasu with news of the victorious issue of the campaign, and the eastern troops advanced to Kusatsu. To the Mikawa chief the emperor conveyed, by a special envoy, the Imperial congratulations upon the result of the arduous struggle.

Previously to this Hidetada, commander of the Eastern army that had been ordered to take the Nakasendo route, upon arriving at Komuro, in Shinano, endeavoured to persuade Sanada Masayuki to join his forces, and three separate times were proposals to this effect submitted to him, to be in each case refused. It was then determined to attack his stronghold Uyeda, but after three days operations the works were recognized as too strong to be taken without a regular seige, and Hidetada, not caring to incur that delay, resumed his march, leaving only a small detachment to observe the place. It was after quitting Uyeda that he met the messengers bringing the news of the victory at Sekigahara upon which he hastened to Kusatsu. The delay of three days before Uyeda was the cause of his not being present at the battle.

From Kusatsu, Iyeyasu and Hidetada marched their combined forces to Otsu, where the eastern leader received the homage of a crowd of barons and military commanders who pressed day after day to his court. Terumoto, and Masuda Nagamori too, hastened to proffer their submission, but Iyeyasu would make no definite answer to the entreaties of their envoys. The news of the victory at Sekigahara, upon reaching Ozaka, had thrown the town into a panic. Iyeyasu sent envoys to reassure Hideyori and his mother, and ordering Hidetada to proceed to the capital, himself entered Ozaka. Tranquillity now reigned far and near.

Chapter IV.

The abdication of Iyeyasu.

Mitsunari Yukinaga and Yekei are put to death and their heads, with that of Masaiye, are exposed.

In the 10th month Mitsunari Yukinaga and Yekei were made an example of and exected at Rokujô-gawara. Their heads, with the head of Masaiye, were exposed at Sanjô.

The submission of Môri Terumoto was now accepted. Out of his possessions six provinces were confiscated, and only two, Nagato and Suwô were left to him, while Nagamori was deprived of his domains and relegated to the monasteries of Kôya. The territory of Hideiye was also confiscated, but a certain doctor of his clan, spreading a false report of his lord's death, enabled him to seek safety in flight and gain the protection of the Shimadsu house.

Yoshitaka and Kiyomasa effect the pacification of Kiushiu.

The South Western provinces were now ordered to be reduced to complete submisson. Kuroda Yoshitaka and Katô Kiyomasa were entrusted with the task, and first of all established their lord's authority in the Western provinces. Yoshitaka then successively tranquillized Bungo, Buzen and Chikuzen, while Kiyomasa caused order to reign in Hizen. A combined attack was then arranged upon Chikugo; Nabeshima Nawoshige, meanwhile joining the eastern party, raised a body of troops and attacked Tachibana Muneshige, the lord of that province.

Muneshige had, on a previous occasion, overthrown Kiyôgoku Takatsugu at Otsu, after which success, hearing of the destruction of the Western army, he had retired to Ozaka, where he endeavoured to persuade Terumoto to join with him in defending the citadel against Iyeyasu. Terumoto refused, and the principal officers of Muneshige, alleging that their master had laboured sufficiently in the cause of their former lord Hideyoshi, resolved to proffer submission to the Eastern chief, and sending envoys to his camp for that purpose, disbanded.

Yoshitaka and Kiyomasa, on becoming aware of the attack on Muneshige, interposed with the view of bringing about a peaceful settlement, and inviting Tachibana Masutoki, the leader of the Chikugo troops to a conference, managed to attain their object.

Original from UNIVERSITY OF CALIFORNIA

In the 11th month Yoshitaka and Kiyomasa, at the head of the levies of Hizen, Higo, Chikuzen, Chikugo, Buzen and Bungo, approached the frontiers of Satsuma. Itô of the province of Hiuga, the hereditary enemy of the Satsuma house which was far too powerful for the weaker baron to think of attacking by himself, thought the present a good opportunity of wreaking his hatred upon his foe by following in the wake of the Eastern troops, and in consequence, after taking Miyasaki and Satohara, joined his forces to those of Yoshitaka and Kiyomasa. Iyeyasu, on hearing of this, forbade further fighting, and informed his general of the submission of Shimadsu. Thus the whole of the western provinces were brought under obedience.

Pacification of the North East Provinces.

Meanwhile the news of the victory at Sekigahara had travelled northwards, and excited the fears of Uyesugi Kagekatsu, who at once sent in his submission through Hideyasu. At the same time Sadake also proffered obedience, and the whole of the north eastern provinces, one after the other, acknowledged the sway of Iyeyasu. In the remaining districts and provinces those who had previously made overtures to Iyeyasu were some of them dead, some prisoners, and of others the submission had been accepted. In the 12th month Iyeyasu assembled his principal vassals, and after informing them of his intentions, divided the newly conquered lands among his followers, rewarding those who had signalised themselves in his service with great liberality. The eight provinces of the K'wantô he reserved as his special domain, and took up his residence in the citadel of Yedo as before. The lands of Yechizen, Owari, Ômi and Isé were apportioned among his relations and veteran followers; those of the remaining provinces were allotted to the clans who had attached themselves to his cause. These changes being effected, Hidetada was despatched to Court, and ordered to make a report to the Emperor of all that had been done. In this month Yoshitaka and Kiyomasa arrived at Yedo and had audience of Iyeyasu.

In the 6th year (of Keicho A.D. 1601) Iyeyasu and Hidetada went to Ozaka, and in the 3rd month took up their residence at the castle of Fushimi, which they caused to be repaired. In the fourth month Hidetada returned to Yedo, and was met at Shinagawa by Satake Yoshinobu, who, dreading punishment, had come to ask pardon for his offences. He was told to present himself at Fushimi and there seek the grace of Iyeyasu. In the 7th month Uyesugi Kagekatsu also showed himself at Fushimi and threw himself upon the clemency of the eastern chief.

Aidsu is bestowed upon Gamô Hideyuki.

In the 8th month Aidsu was confiscated and afterwards bestowed upon Gamô Hideyuki, while Yonezawa was allotted to Uyesugi. Hideyuki was at the same time entrusted with the administration of the region eastward of Aidsu.

The Imperial domains are settled.

In the autumn of this year lands were set apart to provide for the expense of the Imperial Court and the maintenance of the Imperial household. Itakura Katsushige was appointed Lieutenant-Governor (Shoshidai) of the capital, and lands were bestowed upon the *yashiro* (shrine) of Toyokuni, which had been erected in memory of Taikôsama. In the 11th month Iyeyasu returned to Yedo.

Iyeyasu is instructed in the art of government by Fujiwara Shyuku.

Both the Court and territorial nobles had long frequented the lectures of Fujiwara Shyuku, and Iyeyasu, on assuming with his wonted vigour the reins of Government, frequently resorted to the advice of the sage to enable him to devise means to assure the tranquillity of the Empire, and made one of his pupils Hayashi Nobukatsu, his private counsellor.

In the 1st month of the 7th year (Keichô A.D. 1602) Iyeyasu was advanced to the junior first rank. The territorial barons had previously desired to present themselves at Yedo, but Iyeyasu disclaimed the honour. Maida Toshinaga advised that it should be a law of the Empire that the barons should present themselves at Yedo from time to time, and set out from the capital, on his way eastwards, taking the Nakasendô route. Iyeyasu, on hearing of his approach, left Yedo for Kiyôto in order to avoid an interview, and charged Hidetada with the reception of his visitor. Hidetada accordingly met him at Itabashi and entertained him with great splendour. Toshinaga, overjoyed at his reception, begged his host's acceptance of a valuable sword, a horse and falcon, and a hundred pieces of gold. The next day the official reception took place, Hidetada occupying a position at the entrance of the palace, with the military commanders and principal retainers of the Tokugawa house ranged on either sides in due order of precedence. Toshinaga, on being introduced, was conducted to a lower seat, and, after refreshment had been offered, was presented with a hundred pieces of gold, a horse and falcon and a valuable sword. In the 3rd month Toshinaga ventured to show himself at Fushimi, whence, after an interview with Iyeyasu, he returned to his estates.

Shimadsu Tadatsune is granted audience of Iyeyasu at Fushimi.

In the 12th month Fukushima Masanori, wishing to visit his domains in Aki, took ship from Ozaka. On the voyage he met Shimadsu Tadatsune, the son of Yoshihiro, who was on his way to Fushimi and who persuaded him to turn back and seek audience with him of Iyeyasu at the castle.

After the defeat of the western army Hideiye had retired to Ozaka, and had sent his wife, a daughter of the Maida house, to seek the protection of Toshinaga. On being closely questioned by the latter, she confessed that her husband was still alive, of which fact Toshinaga immadiately sent word to Yedo. The retainer of the Ukita house, who had, at the beginning, spread the rumour of Hideiye's death, was then arrested and interrogated. He did not deny the charge, and upon the arrival of Tadatsune admitted that Hideiye was at that moment under his, Tadatsune's roof, and begged that clemency should be extended to the fugitive. To this prayer Iyeyasu accorded his consent, and in lieu of condemning Hideiye to death, banished him, with his son Hidenori, to the island of Hachijo. The next year Hideiye and his son went to their appointed place of exile.

In the winter of the same year the fief of Iwaki was bestowed upon Torii Tadamasa, as a reward for the loyal devotion of his father Mototada, who had been killed at Fushimi. With this act of generosity the bestowing of rewards and decreeing of punishments came to an end, and profound tranquillity reigned throughout the Empire. Among their other possessions the Môri house had held Iwami and that of Uyesugi the island of Sado—in both places white gold (gold alloyed with silver) was found.

Both territories were now confiscated and the administration of the mines was entrusted to Okubo Nagayasu. In this year their produce was very abundant. Never had the prosperity of the empire attained a higher point.

Iyeyasu is created Sei-i-tai-shôgun.

In the 2nd month of the year (of Keichô A.D. 1603) an Imperial rescript was issued by which Minamoto Iyeyasu was created Sei-i-tai-shôgun (Barbarian-quelling Generalissimo) and at the same time invested with the dignities of Udaijin, and Bettô of the Jyunna and Sôgaku In. In addition he was recognised as the chief of the Minamoto clan, and permitted to carry arms in the Imperial presence.[1]

In the 3rd month the barons of the Western provinces offered, without exception, their homage at Yedo.

In the 5th year (A.D. 1604) Tôdô Takatora advised that all the territorial nobles should be obliged to have residences at Yedo, and leave their families there as hostages for their good conduct. The head of the Sagara house was the first to obey this law, and his mother remained at Yedo as a pledge for his fidelity.

During the mourning for Toyotomi Hideyoshi, the military operations in Chôsen (Korea) had been suspended, and as they had not been resumed, the object of the expedition had not been obtained. Iyeyasu, abandoning his predecessor's policy, sent Sô Yoshitomo to Chôsen, with instructions to arrange a renewal of peaceful relations. The people of Chôsen, who had been long

1. Taira Kiyomori, a hero of the days of Yoritomo is one of the few instances of the bestowal of so honourable a privilege.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

disgusted at the violence of the Ming soldiery, were glad to avail themselves of the pretext thus afforded them to get rid of their unwelcome allies, and sent an embassy to Iyeyasu headed by Sombuniku. The embassy arrived at Tsushima and demanded an audience of Iyeyasu and the liberation of the prisoners taken during the war. Yoshitomo at once informed Iyeyasu of their demands, which were accorded, and written instructions were forwarded to Yoshitomo, enjoining him to accompany the embassy to the capital, and there to await the arrival of the Shôgun. The Lieutenant Governor of the capital, Itakura Katsushige, was at the same time directed to receive the ambassador and his suite, and lodge them in the temple of Daitoku.

In the spring of this year Matsudaira Yoshihiro was sent as special commissioner to Yezo, there to make known the ordinances of the Shôgun and enact regulations for the conduct of trade.

Thus the power of the Tokugawa house, overpassing the limits of the Empire, was acknowledged abroad. In the first month of the tenth year (of Keichô A.D., 1605), Iyeyasu visited the capital, and in the second month gave audience to the Chôsen Ambassador Sombuniku. Orders were then sent throughout the circuits of the Empire that enquiry should be made as to what Korean prisoners were within their limits, and in the end many hundreds were allowed to return to their country.

Iyeyasu, feeling old age coming upon him, now became anxious to disembarrass himself of the cares of government. He directed Yoshitomo that from that time all envoys should be conducted to Yedo, and added that, as the formal entry of the Udaishô would soon take place, it might be well that the Chôsen embassy should be detained to permit of their viewing so imposing a spectacle.

In the 3rd month Hidetada presented himself at Court. In the 4th Iyeyasu made a report to the Emperor, giving a history of his administration of the government, which His Majesty was graciously pleased to accept. Iyeyasu then retired into private life and was known among the people as the O Gosho.

Translator's Note.—Here the second volume of the original text ends—the third is not yet published.

YOKOHAMA RACE CLUB.

A special meeting of the members of the Race Club was held at the rooms of the Chamber of Commerce yesterday afternoon, Mr. Walter being in the chair and fifteen members present. The following seven new rules were proposed for the future management of the Course, which were accepted by those present, and passed after very little discussion.

1.—The outer circle of the Course, known as the training Course, shall be open to members of the Club throughout the year, except during the training season and when it may be necessary to close the Course for purposes of repair.

2.—The date of commencement of the training season will be notified through the Clerk of the Course by a written notice affixed at a conspicuous place in the Paddock, and notice will be given in the same manner at such times as it may be found necessary to close the Course for purposes of repair.

3.—The outer or training Course will be open daily from 5 a.m. to 8 a.m., and for one hour in the afternoon during the training season. Should the weather prevent morning training, it shall be in the discretion of the Clerk of the Course to keep the outer or training Course open in the afternoon for a longer time than one hour.

4.—During the last month of training, and from a date to be notified by the Clerk of the Course, a portion of the inner Course will be open from 5 a.m. to 8 a.m., weather permitting, on Wednesdays and Saturdays, or if the weather on those days should be unfavorable, on the first fine morning thereafter, Sundays excepted.

5.—The Clerk of the Course may, upon application to him in writing, give permission when practicable, during the last month's training, to have a portion of the inner Course opened for purpose of trials at other than the fixed hours. This, however, will apply only with regard to ponies strictly in training.

6.—Any member of the foreign community shall, upon an annual payment of $10, be entitled to make use of the outer circle or training course throughout the year for the purpose of exercise and recreation, except during the training season and on race days, and when repairs are being executed on the Course. Members of the community availing themselves of this Rule, will have to conform to the Race Club rules which govern the conduct of members generally.

The Clerk of the Course is empowered to draw up bye-laws having for their object the efficient working of these Rules. Such bye-laws to be subject to the approval of the Committee.

POSTAL NOTIFICATIONS.

We would call our readers' attention to the following Notices which have been received from the Postmaster General at Hongkong, the second of which is of great importance to the public generally :—

POST OFFICE NOTICE.

The Rates of Postage to and through the United Kingdom *viâ Marseilles* will in future be the same as those *viâ Brindisi*.

The Table of Charges of Letters (from ½ oz. to 50 oz.) for the United Kingdom viâ Brindisi, which was issued on the 3rd July, will now apply to either route indifferently. Copies can be had on application at the Post Office.

ALFRED LISTER,
Postmaster General.

General Post Office,
Hongkong, 12th August, 1876.

POST OFFICE NOTICE.

Most countries to which this Office forwards Correspondence having joined the General Postal Union or being probably about to do so, it is necessary that the following rules be strictly observed.

1.—No Letter or Packet, whether to be registered or unregistered, can be received for Postage if it contains gold or silver money, jewels, precious articles, or anything that, as a general rule, is liable to Customs duties.

2.—This Regulation prohibits the sending of Patterns of dutiable articles, unless the quantity sent be so small as to make the sample of no value.

3.—The limits of weight allowed are as follows:—

	Books and Papers.	*Patterns.*
To British Offices,.....	5 lb.	5 lb. if without intrinsic valuc.
To the Continent, &c.,..	2 lb.	8 oz.

4.—The following articles cannot be sent by Post at all: Glass, Liquids, Gunpowder, Matches, Candles, Soap, Indigo, Dye-stuffs, or whatever is dangerous to the Mails, or offensive or injurious to persons dealing with them.

PARCELS.—The public is reminded that, in China and Japan, there is no such thing as Parcel Post. Much trouble and disappointment is caused by persistent attempts to send small valuable trifles through the Post. Fans, Curios, Articles of Dress, Fancy Work, and similar presents are continually being refused, the senders having often spent more in Postage than would have paid the freight by steamer. No refund can be made on such parcels of the value of Stamps obliterated before the nature of the contents was discovered.

PATTERNS.—Some difficulty is experienced in obtaining a general understanding of *what is a Pattern*. It is a *bonâ fide* sample of goods which the sender has for sale, or of goods which he wishes to order. It is to consist of the smallest possible quantity compatible with shewing what the goods are, and must have no intrinsic value.

ALFRED LISTER,
Postmaster General.

General Post Office,
Hongkong, 14th August, 1875.

H. M. S. *Kestrel*, which arrived here on the 29th July from Hongkong, reported the discovery of a sunken rock in the Chusan Group, which is not marked on the Admiralty Charts The position of the rock in question is between Towtow Point on the island of Tai Shan, and Becher Island. The Harbour authorities at Ningpo received instructions to verify the discovery, and they have found the rock as stated. The fishermen in the locality have all along been aware of its existence, though they had not communicated the information to foreigners. The gunboat had a narrow escape, as the danger was only about thirty yards off when discovered.—*Celestial Empire.*

The Woosung Railway works are progressing satisfactorily, and without hindrance of any kind. The new station at the Shanghai terminus is rapidly approaching completion, and and that at Woosung is also well forward. It is hoped that arrangements will so far completed by the 1st prox., as to admit of the opening of the second section of the line on or about that date. The novelty of the, to them, new mode of locomotion, still continues to attract crowds of Chinese, many of whom come from long distances daily to enjoy the little excursion from Shanghai to Kongwan and back.—*S. C. & C. Gazette.*

Correspondence.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 31st August, 1876.

DEAR SIR,—Will you allow me to suggest to you that the discussion of the Bankruptcy Laws as at present existing in Japan, if undertaken by the Yokohama Press, might lead to a better state of things with regard to claims between foreigners and Japanese. At present it is quite impossible to get the least satisfaction from any native to whom we may, in the ordinary course of trade, extend our confidence, and as the Government have taken such decided measures with respect to the Press-laws, I am of opinion that if properly represented, they will cause matters to be modified as regard the present administration of the Bankruptcy Laws. A Japanese now simply becomes bankrupt when it suits him—he is liable to punishment, but he is permitted by the law to contract fresh debts *even on the day of his application for white-washing*. I can quote an instance of this in the case of a man at present holding a Government appointment at Yokoska, and who, some few months ago, was sentenced to two years imprisonment for what was called fraudulent bankruptcy. This man has never undergone the sentence that was imposed upon him, but, apparently, in lieu thereof, he is drawing a comfortable salary from the Government which sentenced him to imprisonment. Several instances of this kind have been brought to my knowledge, but other points are equally deserving of remark. In a case of a claim for some 500 *yen* when a Japanese was made bankrupt at my suit, the goods I had sold were still in his possession when my claim was presented. After waiting some 15 months, I was informed by my Consul that a dividend would be paid me if I attended at the *Soibansho* on a certain day. I attended, and was informed that the estate had only realized some 12 or 13 *yen*, and I was the fortunate recipient of 1 *yen*, 42 *sen*, 6 *rin*, for which sum I aired my heels at the Judicial Court of Kanagawa for 1¾ hours, and was then asked if I could attend the next day to sign a receipt, which request I was unable to comply with. I have today seen a claim for *yen* 150 which has been pending since October 1874, and the estate having been *administered*, the claimants received the sum of something less than fifty cents. The debtor is at present holding an official position in the North! I could quote several other instances, but they are all so much of the same character that it would be encroaching upon your space to do so. Surely this state of doings should be checked, and a foreigner should have some protection as regards debts due by natives. Our Consuls doubtless do all in their power in pressing these matters and obtaining what justice they can for us, but at the best it is very unsatisfactory to find that the "estate" of a man in whom you have had implicit confidence and regarded in the light of a well-to-do merchant, consists of three Japanese mats and a *shibatchi*, and that during the administration of the same, the bankrupt is luxuriating in enjoyments and creature comforts at the expence of the too confiding foreigner.

Yours obediently,

IKENIYE.

TO THE EDITOR OF THE "JAPAN WEEKLL MAIL."

Yokohama, 1st September, 1876.

DEAR SIR.—I have read with much pleasure the two accounts of the ascent of Fujiyama by W. H. Talbot and W. G. H., and, having made the same journey since, I have thought that a few additional notes would, with your kind permission, be perhaps acceptable to a few of your readers.

After spending three days at Hakone and in walking over the hills as a slight preparatory training, I, in company with a friend from H.M.S. *Modeste*, left that delightful retreat at 5.25 a.m. and crossing the Lake in seventy-five minutes, soon found ourselves in the narrow path leading to the top of the hill, with the long wet grass often far above our heads. Here let me observe—in contradiction to W. G. H.—that the route taken by that gentlemen and ourselves is certainly much shorter and easier than that by the Otometogi. The contrast in the grass between the Hakone and Gotemba sides of the hill also attracted our attention; on the one side, like that of the American prairies, and on the other fine and rich and excellently fitted for pasturage. It seemed to us that these beautiful green slopes wanted only the flocks of sheep grazing quietly around to make the scene complete.

At Gotemba we repaired to the tea-house usually frequented by foreigners, and let me add my testimony in its favour to that of W. G. H. It is certainly the pleasantest little wayside resting-place, kept by the nicest people, I have yet met in Japan. Last summer I spent a most enjoyable night in it and found, as on this occasion, the charges most moderate; quite different from the two-storied house at Subashiri. It would be absurd in me to try to depict the beauty of the road from this point to Subashiri after the capital description in your last issue, but let me endorse all that writer's account. The beautiful rills of clear water, the fine avenues of trees, the neat little country paths through the well cultivated fields, all reminded me strongly of the country in the south of England.

After a slight meal at Subashiri we started for Umagaishi,* covering the distance (of about 4½ miles) in one hour four minutes. This path is a most uninteresting one and ought always to be traversed on horseback, unless one is doing the ascent against time. My companion not having that object so much in view, rode. At Chujikiba, where we had a meal, a delay of forty-nine minutes was involved. At 6.35 p.m. we reached hut No. 5½, where our guide assured us good accomodation was to be found. This to our great satisfaction proved to be the case, and we enjoyed a fairish night's rest, disturbed by nocturnal visitors even at this altitude—9,150 feet above the level of the sea.

At 5 a.m. we were once more on the way, and between the 6th and 7th huts enjoyed a magnificent sunrise. Here again, I would correct W. G. H., is the "stiff pull" over the hardened lava, and we were glad to reach No. 7. Between Nos. 8 and 9 we experienced a smart shower of hail which came pattering around us. At 8 a.m. we arrived on the summit and, I must confess, I could not have gone many yards farther. Here we had a splendid view as there were comparatively few clouds. The cold was intense and we quickly invested ourselves with our warmest garments. We drank of the 'golden water' and found it so good that we brought some of it away with us in two bottles.

At 9.23 a.m. we commenced the descent, but did not reach the rest-house at the foot of the very steep part of the mountain till 10.16 a.m. I was extremely foot-sore in consequence of a rapid walk the previous day. Here again I was much annoyed at a useless delay. We started from the summit in our thick clothes, but on arriving so far on our way, found the difference in the temperature so great that I was fain to wait till our guide came up with my lighter clothing.

From the annexed note of time it will be seen that the actual walking time in the ascent from Shubashiri was 5 h. 41 min., and in the descent 2 h. 1 min. Let me observe by the way, that your advice about taking two watches was well founded, for mine stopped at the rest house and had we not compared beforehand, we must have gone wrong in the time. I should like to add, too, that I consider it quite feasible to make the descent to Subashiri in one hour and forty-five minutes, stoppages included.

We reached Hakone the same night, having walked to the summit and back in less than thirty-eight hours.

Law & Police.

IN H. B. M.'s CONSULAR COURT.

Before Russell Robertson Esq., Consul

Wednesday, August 30th, 1876.

Benjamin Evans, a sailor out of employment, was charged with having been drunk, and having assaulted a Japanese policeman yesterday forenoon.

Prisoner admitted having been drunk.

Jerry Mansbridge, police constable, sworn, deposed:—About ten o'clock yesterday morning a Japanese policeman brought prisoner to the Police Station, charging him with being drunk and assaulting a Japanese policeman and a *jinrikisha* coolie.

A Japanese policeman stated:—I was on my way to relieve another policeman from duty yesterday forenoon, and was passing No. 117 when I received several blows from behind on my shoulders and head. It was prisoner who attacked me without the slightest cause, and I defended myself as much as I could. Prisoner was at last taken in charge by another policeman. The *jinrikisha* man was also beaten by prisoner when he came to my help.

Prisoner could say nothing against this evidence, and was fined $2 and costs; in default of payment seven days' imprisonment with hard labour.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. Van Buren, Consul-General.

Friday, September 1st, 1876.

Patrick Carroll and Henry Johnson, sailors on board the U. S. S. *Tennessee*, were charged with being drunk and incapable.

Police-sergeant Loxton stated that the men were brought to the Police Station last night, both quite drunk.

They were fined $1 each and sent on board their ship.

Saturday, 2nd September, 1876.

Louis Gerard, Michael Thompson, Edmund Moldoun, and C. Desmond, unemployed sailors, were brought before his Honour, charged with having been drunk and incapable last night.

Desmond said he had been discharged from U. S. S. "*Kearsage*" a few days ago, and was living at the Temperance Hall. He had met some shipmates yesterday, and they all went and got drunk. He was going to Hongkong by next steamer.

Thompson and the others said they had got liquor at Livingstone's saloon.

His Honour recommended Gerard to ship to Hongkong, and discharged the others with warning.

IN THE ROYAL SWEDISH-NORWEGIAN CONSULAR COURT.

Before W. C. Van Oordt, Esq., Consul.

Thursday, 31st August, 1876.

This was a complaint from the Governor of Kanagawa against Mr. C. Johnson, a Norwegian, living at No. 82, Yokohama, who had, on the 15th instant, assaulted Katsuja Genyo, a Japanese bean-curd seller and a Japanese policeman.

C. Johnson, defendant, deposed:—When I came into the back premises of my house about four o'clock in the afternoon of the 15th instant, I found a Japanese *tofu* man playing with my Chinese boy, and some one threw a quantity of dirty water over me; I don't know who. I told the Japanese to clear out, but he gave me insolence in reply. I took hold of his buckets and threw them out of my premises. He struck me over the arm several times before I could get clear of him; then I, in return, struck him with the same pole over the head. He complained to a Japanese policeman, who came up to me and caught hold of me by the breast, breaking my watch chain, and pulling my watch out of my pocket so that it fell on the pavement and was broken.

Plaintiff stated:—On the 15th instant two Chinamen called me into No. 82, where they were throwing dirty water at each other. Mr. Johnson caught some of this as he happened to come in at the moment and he got angry. He ordered me out, and capsized my buckets, and struck me with my own pole. I brought a policeman, but Mr. Johnson attacked him, breaking his own watch chain in the tussle. I can bring no witness to confirm the truth of my statement.

Defendant said that this was all nonsense and quite incorrect; he was willing to bring forward the evidence of eye-witnesses to prove his own version.

His Honour dismissed the case saying that the charge of assault had not been proved.

MR. WALLACE ON THE DISTRIBUTION OF ANIMALS.*

(The Spectator.)

[FIRST NOTICE.]

To do a work of this kind justice in an ordinary review is almost impossible, and to exhibit in a satisfactory light the enormous labour which its author has undertaken cannot be accomplished, without supposing an amount of technical knowledge on the part of our readers which would be unreasonable.

But the conclusions to which Mr. Wallace's work points are so important, as bearing upon the recent teachings of biology, that we should like to give a general idea of the book. First of all, let us say that it is got up in a style which is worthy of the publishers, the type being clear and distinct; and it is wonderfully free, for a book of its kind, from printers' mistakes. The only matter for regret is that it has not been put in three volumes instead of two, and made uniform in size with Murray's issue of Mr. Darwin's books, of which it really forms a complement. The size of the volumes makes them rather unhandy and fatiguing to any one who goes straight through them, a task which we need scarcely say has to be done with much thought and patience.

There are many instances of important discoveries having been made simultaneously by two different and independent workers, and the usual result is that they quarrel bitterly for the credit. As far as we know, there has been only one exception to this, a case where each discoverer has attributed the praise to the other, and Mr. Wallace shares this unusual position with Mr. Darwin. We can now characterise the theory of the origin of species as a gigantic discovery, the working-out of which has established the law of evolution. In Mr. Darwin's great work on the changes which has taken place in *Animals and Plants under Domestication*, the proof of this discovery is based on a careful investigation of what has been effected by man himself. In the work now before us, further proof is advanced, from a careful observance of what has been done by the great factory of natural selection; and if Mr. Darwin and Mr. Wallace both hesitate to claim the greater honour in the discovery, it is to the outside reviewer a matter of absolute impossibility to determine who of these two naturalists have laboured the harder or the more honestly, and is the more free from points open to attack. It is equally difficult to determine which of the two works already named is the more important contribution to biology. Both authors are stamped with the same modesty, for Mr. Wallace, at the end of his preface, writes this remarkable sentence:—"It is, therefore, with some hesitation that I venture to express the hope that I have made some approach to the standard of excellence I have aimed at,—which was, that my book should bear a similar relation to the eleventh and twelfth chapters of the *Origin of Species*, as Mr. Darwin's *Animals and Plants under Domestication* does to the first chapter of that work. Should it be judged worthy of such a rank, my long and often wearisome labours will be well repaid." We can only say that we think his hope will be fully sustained by all competent judges.

The book is divided into four *parts*, the first volume being occupied by the first, second, and a portion of the third parts, and the second volume by the remainder of the third and the fourth part. Both volumes are illustrated by most useful maps, on which are depicted by different shadings, various districts, according to their elevation, and contour-lines giving ocean depth and regional divisions. These maps are necessarily on a small scale, and are, therefore, rather puzzling until the eye gets accustomed to them;

* *Geographical Distribution of Animals.* By Alfred Russel Wallace. London: Macmillan and Co.

Original from UNIVERSITY OF CALIFORNIA

and a real service would be rendered to science by by having these maps produced on a larger scale for educational purposes. Maps, as at present constructed, giving the results chiefly of mere political accidents, are far less worthy of study than those displaying the the great physical facts set forth by Mr. Wallace. Illustrations are also given which, though of no great merit as artistic compositions, are wonderfully true, and very valuable as affording a sort of bird's-eye view of the characters of the animal population of each district of the earth's surface as divided by Mr. Wallace. Not the least valuable part of the work, and what must have been by far the most laborious, are the tables of the distribution of animals, from which it may be seen at a glance where each is found; and reference to them is greatly facilitated by a most copious and accurate index, without which the value of the book would have been greatly diminished.

The author advises that persons not well acquainted with zoology should not read the book as it stands, but should take the fourth part before the third. We think this advice well intended, but it is really somewhat unnecessary, for the book must remain pretty much of a sealed treasure to such as are not already fairly well versed in natural history; and we venture to throw out the suggestion that some of the many writers who excel in condensing the works of others should take the *Origin of Species*, *Animals and Plants under Domestication*, and Mr. Wallace's new book, and make a small handbook out of them, for popular or even school instruction. In this way only can popular delusions on the subject of evolution be dispelled.

During all historic time the remarkable facts of the distribution of animals over the earth's surface have afforded a constant source of speculation. The story of the Noachian Deluge evidently has grown out of the necessity of explaining some local catastrophe which the limited knowledge of the sufferers imagined to be general; and of course, now its only interest is its antiquity. Even if it could be made to explain the preservation of animals, it would in no way help us to understand such facts as that while we have a kind of grouse peculiar to this country, there is no such animal as the echidna out of Australia and Tasmania, and yet that the vespertilio is found all over the world.

The first discovery, which led up to a further and more critical inquiry, was the result of geological labour, to the effect that the relative land and sea levels are not only not constant, but have changed and changed again, the changes bringing with them variations of climate, which must, again, have induced alterations in the animal population. This was followed by the discovery that everywhere the remains of animals are found which are now either wholly extinct, or have completely changed their habitats. Then came an expression of the suspicion, followed by an elaborate proof by Mr. Darwin, that what we call *species* of animals are not constant, but are liable to slow but certain variation. We may now say that Mr. Wallace's book is the copingstone of this great arch, for it is nothing short of a demonstration that the facts of animal distribution are the results of the action of two factors, chief of which is progressive development; and the second, the repeated variations in the relations of the land and sea.

Into the various theories which have been advanced to explain the alterations of these levels, we have no space here to enter, but we wish that Mr. Wallace had given them a fuller consideration. Speculations on the subject are to be met with in classic authors, for we find Nero's greatest victim writing the lines,—

> "Venient annis
> Sæcula seris, quibus Oceanus
> Vinculum rerum laxet, et ingens
> Pateat Tellus, Tiphusque novos
> Detegat orbes; nec sit terris
> Ultima Thule."

And in this country we do not think sufficient prominence has been given to the theory of the periodicity of such movements, as advanced so long ago as 1842 by J. Adhemar, though Mr. Croll has recently attracted attention to a doctrine somewhat similar.

In the first part of his book, Mr. Wallace deals with the principles and general phenomena of distribution, and first of all, he discusses the influence of barriers. The most important of these are deep seas, high mountains, and broad rivers. Islands far away from land almost always have very peculiar animals, found nowhere else; but the differences are sure to depend really more upon the depth of the intervening sea than upon mere distance, a fact which is extremely significant. Shallow straits, like the English Channel or the Straits of Malacca, are not found to have much effect, the animals being nearly or quite identical on their opposite shores. "A change of climate or a change of vegetation may form an equally effective barrier to migration. Many tropical and polar animals are pretty accurately limited by certain isothermal lines, and the limits of the great forests in most parts of the world strictly determine the ranges of many species." Besides these geographical barriers, many others exist, which have influences more localised, but quite as powerful. Thus the existence of the Tsetse fly in South Africa, and of another of similar habits, utterly prevent the existence of wild cattle and horses in the districts they inhabit, and thus serve as most effective barriers to the spread of these animals. On the other hand, the absence of enemies, as in the case of the great tortoises of the Galapagos and Mascarene Islands, and the wingless birds of New Zealand, has been the direct cause of the origin of these peculiar species:—

"Naturalists," says Mr. Wallace, "have now arrived at the conculsion that by some slow process of development or transmutation all animals have been produced from those which preceded them, and the old notion that every species was specially created as they now exist, at a particular time and in a particular spot, is abandoned, as opposed to many striking facts, and unsupported by any evidence. This modification of animal forms took place very slowly, so that the historical period of three or four thousand years has hardly produced any perceptible change in a single species. Even the time since the last glacial epoch, which on the very lowest estimate, must be from 50,000 to 100,000 years, has only served to modify a few of the higher animals into very slightly different species. The changes of the forms of animals appear to have accompanied, and perhaps to have depended on, changes of physical geography, of climate, or of vegetation; since it is evident that an animal which is well adapted to our condition of things will require to be slightly changed in constitution or habits, and therefore generally in form, structure, or colour, in order to be equally well adapted to a changed condition of surrounding circumstances."

The *a priori* difficulty of believing that such changes actually do take place in species is quite removed by a consideration of what actually takes place in individual animals every year. If two ptarmigan were presented as new and unknown birds to some species-manufacturer, one in its winter and the other in its summer plumage, he would certainly divide them; and we shall see by-and-by that changes no greater in extent than these have really originated new species, under altered conditions of life.

THE AMERICAN CENTENARY.

(The Spectator.)

The rhymed hymns to the American Centenary are all bad—Mr. Bayard Taylor's included though it has some fine lines—and the prose hymns published in English are none of them very good. It is natural, however, that they should be written, for the fact that a Republic on the great scale should have lasted a hundred years, should have grown into a first-class Power should have remained free in every sense of the word, should have attracted and absorbed millions of exiles from every country in the world, and should have so contented her populations that after waging a terrible and successful war in its defence, they should still regard her Constitution as semi-divine, is a most momentous one, and one to excite an enthusiasm which, however absurdly expressed, has in it a touch of reality and grace. We cannot feel the enthusiasm deeply ourselves, heartily friendly as we are to the Union, and we shall not, therefore, try to deepen a volume of sound already too loud; but we may endeavour to point out what seems to us the great value of the history of the United States, its extraordinary worth as a concrete argument against illusions on both sides. One of these illusions has long been recognised, whether in anger or in pleasure, but there are others which remain to be dispersed.

It is perfectly clear from the example of America, that the men who hold a special order of political society to be divinely decreed, who think that the government of a community by an individual is as "natural" as the government of little bees by a big bee, who imagine that the only strong form of architecture is the pyramid—forgetting that the plains are as unchangeable as the mountains—and who believe that society to be safe must be graduated by law, or customs having the force of law, are hopelessly in error. An immense community, not homogeneous in race, creed, or even language—though the latter difference tends always to disappear, and has had no practical importance—can organise itself on the plan known as universal suffrage, can make a strong yet not oppressive Government, and can establish fundamental laws upon a foundation as strong as any Founder has been able hitherto to lay. It is possible for a community without a King, or an aristocracy, or a priesthood to create a system under which ever-increasing masses shall live secure of order, of the means of happiness, and of perfect freedom of thought and speech. Power is as completely in the hands of the American masses now as it was a century ago, and they still contrive to secure social safety

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

for all citizens without the direct use of force, without an army large enough to have appreciable weight in national affairs. This is a very wonderful disillusion. It does not appear one to us now, because we are accustomed to it, but to our great-grandfathers, whose governing idea, in its mildest and most reasonable form, may be found dominating Alison's long volumes, it would have seemed like a Revelation, newly explaining the whole course of human history. Man, then, could be free, yet not anarchical,—then man was left to choose for himself the order which best suited him; that was the teaching which, to entire generations of men and whole schools of political philosophers, seemed impossible or monstrous.

This disillusion is a pleasant one, for it widens the area of man's capacities, and gives variety to his political speculations, whether they take the form of pamphlets or of working constitutions, but there are other disillusions to be obtained from American history which are not so agreeable. The political Utopians, for example, when judged by this great example, are all wrong. Many great minds formerly believed that the severest checks on man's progress were the ancient social formulas, that released from kings and priests and aristocracies, man would rise to unknown heights of happiness, of virtue, and of willingness to organise mutual help. He has not done so in America. The average American does not differ from the average Englishman in happiness, in virtue, or in individualism; or if he does, the difference it not to be carried wholly to the credit side of the account. He is perhaps a shade more kindly, a shade more tolerant, a shade more free in using what powers he may possess; but he is not more upright, not more self-sacrificing, and decidedly less cheerful and more anxious. He is quite as likely to be criminal, quite as fond of money, and quite as disposed to consider himself as the proper centre of the general system, the pivot, or "hub," as Boston says, round which a merciful universe ought to turn. As to a new and grander or happier society, there is as yet in the Union no trace of its development. As far as we can see, a New England State, Republican for a hundred years, socially differs little from an English county life, being quite as hard though there is less poverty of an extreme kind—quite as much marked by selfishness, and a trifle more sordid and impermeable to ideas. Of original experiments in life, or even of efforts towards them, only one, Mormonism, has succeeded on any large scale, and even that appears about either to fail, or to seek refuge in territory distant from the Republic. Two or three States have shown a disposition to relax the ancient law of marriage, and a doctrine not widely different from that once known in Europe as the Doctrine of Affinities seriously affects the opinion of many classes throughout the Union; but nothing approaching to a new philosophy of life has, as yet, been developed. Social organisation, in particular, has not achieved new successes. No State has tried any form of Christian of un-Christian socialism. No great brotherhood has shown us what "mutuality" on a great scale could achieve. No society can be said to have developed new force, or to have done more than, for instance, several monastic Orders achieved, or to have enabled both sexes labouring in common to obtain either a nobler, a more intellectual, or even a happier life. Individualism has proved as strong under a Republic as under a Monarchy, and the dreams of the Utopians are dissipated by the facts. Nothing stops any race holding any ideas from trying any social experiment in America, but though all white races have been free to try them, and three at least have tried them over and over again, none of them have been successful on such a scale as to afford a model or even a great experience to the world. So far as America shows, civilised men set down on an island in the Pacific, or in a valley of the Far West, and left free to work their will, would organise a society in all essentials wonderfully like that of Essex or Suabia, obeying the same impulses, and on great questions quite as strictly controlled.

With this illusion disappears another, which, we confess, is to ourselves a pleasant one. Freedom in America produces less intellectual progress than it ought to produce. It yields fair order, tolerable security, and much edible corn, but it does not yield any new growth of intellect. The philosophers who hold that progress is a result of the free conflict of minds, that if all men are allowed to think and express their thoughts, new ideas must speedily be developed, find a puzzle in the American Union. Nowhere can there be more liberty of thought or speech. There is no man of any race, or any creed, or any culture who, having in America thought out something, is not at liberty to say it as strongly as he can. The conflict of thoughts is endless. The roar of speeches is deafening. The activity of the Press rises to tumult, and is by no means limited, as some Englishmen fancy, to political subjects. We have read wilder things in American religious papers than anybody ever saw in the European papers of the same kind, and every philosophy, no matter what its apparent consequences, has absolute liberty to convert all the men and women it can. Yet the total result of all this movement is very little. One new creed has attained, under exceptional circumtances, a certain development which hereafter may make it worth while to study with as little of prejudice as may be the industrial effects of Mormonism, but no new faith, or doctrine, or philosophy has risen to obtain a strong hold upon large masses. A sort of religion of good behaviour, apart from all dogmas, is, we believe, professed among the German colonies of Ohio; but precisely the same religion, held in the same way, is professed in Hesse, and the masses of the American community, after a hundred years of free discussion, are in religion as like English Dissenters as ever they can be. Nowhere is piety display under more *borné* limitations, and nowhere is the usual more often confounded with the divine. So far from freedom proving favourable to originality of thought, there is more of it under the German military routine, or the English Philistine order, or the Russian despotic interference with utterance, than in the American Republic. No individual philosopher has risen to any visible height above European rivals. No community has in thoughtfulness or originality exceeded the thoughtful circle of a European capital. No book has seriously affected the judgment of mankind. There has been no intellectual produce anywhere in the Union equal to the mass of brain set free to produce, the very best that can be said being that in the New-England States, the average intelligence of the people is a little higher than average intelligence has ever been elsewhere, and even that would be denied by Scotchmen; while historians, who know what the Athenian freemen were in the intellectual domain during one century at least, would smile in pitying derision of the statement. Is it not just possible that the human intellect benefits a little by compression; that compulsion to think deeply is not bad for thought; that liberty of premature egress produces on thought the result it produces on water, namely, a prerogative of waste which creates not fertility, but morass? We do not say it is so, for we recognise that the proposition pushed to its extreme becomes absurd—that, for example, no dumb Luther can create belief in the right of private judgment—but the history of America certainly suggests that thought is none the worse because oppression compels it to carry weight, that is, to go into training. The time is as yet too short, but if in another century America has not added some great kingdom to the intellectual domain, another illusion will have been dispelled as potent as that which once bound all Europe to the belief that society could only be safely organised by ascending grades, that it was happiness enough for the broad, low layers to know how high was the topmost story which they had the painful privilege of supporting.

THE DEPRECIATION OF SILVER.

(The Economist.)

The report of Mr. Goschen's Committee on the depreciation of silver has been laid on the table and will doubtless appear immediately. And it is understood to contain a most full analysis of all the causes which have combined to produce this perplexing event. But in the meantime the fall of the rupee to 1s. 6½d. at the last bidding for Council bills, and of silver to 47d. per oz., have naturally caused the suggestion in various quarters of various hasty remedies which can be discussed before we get the report, because by the terms of their reference the Committee were debarred from considering remedies and told to confine themselves to causes.

The main evils of this depreciation are two. First, and most important, that the Government of India receives the whole of its revenue in silver—partly in land rents fixed for considerable periods, and partly in taxes which it is difficult to increase, and that this Government has also of necessity to find in London a very large amount in gold annually; so that they lose a sum which, taking the rupee at 1s. 8d., Sir Wm. Muir, the Indian Finance Minister, estimated to be of most serious magnitude, and which, now that the rupee has fallen to 1s. 6½d., will be considerably more. So grave a misfortune has seldom happened to any Government so suddenly and so completely from causes out of its control. Secondly, all private persons, such as the holders of rupee paper, who have to receive fixed sums in silver, lose, as is usual, when a currency becomes depreciated. Debtors gain and creditors lose in this instance as in all similar ones. The great peculiarity of the case is the position of the Indian Government, which has so great a burden so rapidly thrown upon it, and is so little able by additional taxation with equal rapidity to find means to bear it.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The remedies suggested are, first, that the Government of India should demonetise silver and substitute gold. But those who make this proposal cannot have considered what in practice it would involve. A Government which abolishes an old money must find a new one. It could not say, "Our law up to the present time has made the silver rupee legal tender, but we now change that, and make a gold coin legal tender, which gold coin you our subjects must find for yourselves." If the Indian Government did so, the losses to its subjects would be enormous. Every holder of the old coinage who wanted to pay a debt would have to sell silver, which is so rapidly going down, and buy gold, which in comparison is rapidly rising, and the loss would be severe. The only way in which such an operation can be effected, is that which the German Government has lately adopted. That Government bought and found the gold which was to form the new currency, and in so far as the operation is complete, has exchanged it for the old one. But no one could propose this to the Indian Government as a means of relieving itself from financial difficulty, for the cost which it would entail would be enormous. Even with all their resources they would have great difficulty in getting the immense sum required in gold, and they would hardly be able to sell the silver at any price. The present position of the Indian Exchequer is not good, but it is beyond comparison better than it would be if this expedient were tried.

Secondly, it is suggested that we should adopt a double standard for India both of gold and silver. But this does not meet the difficulty. The effect of a double standard is, at every change in the relative value of the two metals, to fill the country with the metal which is falling. France in this way, was during the cotton famine cleared of a large part of her silver, and gold was substituted for it. Bullion dealers sent the gold to buy the silver and made a profit of the transaction. The "bad money" always drives out the "good;" and the Indian Exchequer would gain nothing. The essence of the "double standard" is to create two legal tenders, and give the debtor the choice of paying in which he likes. The Indian ryot would, of course, pay in silver, just as now, and the land revenue would be as much impaired for the purposes for which it is wanted, by the depreciation of silver as it is at present.

Thirdly, it is suggested that the Indian Government should cease to coin rupees, and that, in consequence, though the value of uncoined silver fell, that of the coin would not fall—its supply being restricted. But the effect of such a measure would be to reduce the price of silver far below even its present low amount, because it would stop the greatest natural demand for it, by stopping additions to the silver currency of India. And then the difference in value between the rupee as a coin and the same quantity of the uncoined silver, would be much greater than it would be possible to maintain. Good rupees would be a profitable article of manufacture, and would be imported largely from abroad and illicitly manufactured in India. Many Governments have tried a similar expedient, and have, in the end, always been beaten, and obliged to keep the price of their legal tender coin near to the cost at which can be it produced. But in no case would the failure be so great as in that of India, because in none has the experiment ever been tried on a coin so important, and of so vast a circulation as the rupee.

The effect also would be that the difficulty of disposing of silver in London, and the consequent lowness of the price would become worse and worse. The natural cure for the depreciation of silver is that it should be diffused over the globe, and especially over the immense area in the East and elsewhere, which has a silver currency. If silver is depreciated 2 per cent. in all countries where it is the sole or main currency, 2 per cent. more silver must be required, and as the amount of silver in circulation in such countries is enormous, 2 per cent. upon it would be a very great demand, and take out of this market a very large quantity of silver. As we have shown on a former occasion, the laws of trade will infallibly create this demand, though the action is necessarily slow. But the effect of not coining the rupee, in so far as it is successful, would be to suspend them altogether, as far as India is concerned, because it is only by arresting the reduction in the exchange value of the rupee that this step can help the Indian Government, and that reduction is the means by which, as we showed, the new course of trade is created, and the increased quantity of rupees required to do the work of the Indian currency after that reduction constitutes the new demand for silver and the new use of it.

The example of the States, called the "Latin Union"—that is, of France, Italy, Belgium, Switzerland, and Greece—is appealed to as a precedent for this policy, since they have limited their coinage of silver, as we have often explained. But their circumstances are very different from those of India. In France, which is so much the greatest, and also in Italy, inconvertible paper is really the ruling currency; it is that which settles prices, and everything has to conform to that. And even so the expedient is only regarded as a momentary one; it is acknowledged that the Latin Union must soon either return to the double standard, and coin silver without limit, or must demonetise silver altogether. And if we did not coin rupees, the fall in the price of silver which it would cause would probably determine them to decide on its demonetisation, whereas it is still possible that they may return to the double standard, which would raise the price of silver more than anything else.

This possible effect on the Latin Union is, however, but a minor reason for not thinking of this, or any similar plan. The main reason is that the fall in silver will be greatly lessened if we allow the ordinary action of trade to spread it through the world, so that the depreciation may be everywhere alike, and affect prices everywhere where silver is the currency; that all plans which impede that action tend to keep the silver in this market, to enhance its depreciation here, and to prevent its diffusion which is the only cure.

HONGKONG AND SHANGHAI BANKING CORPORATION.

Minutes of the Ordinary Half-yearly Meeting of the above-named Corporation, held at the City Hall, Hong-Kong, at 3 p.m., on the 16th August, 1876.

Present:—Messrs. E. R. Belilios, (Chairman), A. Andre, J. F. Cordes, H. Hoppius, A. McIver, S. W. Pomeroy, F. D. Sassoon, Thos. Jackson, E. E. Sassoon, C. P. Chater, W. Kirby, R. S. Woonwalla, Mehta, W. K. Hughes, H. Kingsmill, H. Smith, Asger, A. Hancock, Hon. Ryrie, Messrs. J. T. Chater, E. Sharp. W. N. Middleton, E. Tobin, Just, Katz, H. N. Mody, H. H. Nelson, Bluhm, Anton, C. Cohen, C. Krebs, Wasserfall, and W. M. Morgan.

The notice convening the meeting and the report of the Directors for the half-year having been read,

The Chairman said—Gentleman; I am glad to be able to lay before you to-day such a satisfactory statement of account as the present one; the general working of the Institution has resulted favourably, and you will doubtless have noted with much satisfaction that we have commenced to rebuild the Reserve fund.—(Applause.) I hope that in the course of time it will again assume its former proportions.—(Applause.) The profits for the half-year are good and shew considerable earning power. The credit of the Bank is excellent, and we may congratulate ourselves on things going on so favorably. Our Marine Insurance fund amounts to $62,685.44, and we have not sustained any loss on this account during the half-year. You will observe that for the first time the Dividend is declared in Sterling. We have given the matter much attention and have adopted the plan of declaring a Dividend of so much Sterling per share instead of so much per cent. as being the fairest way for the shareholders generally. It is well known to you that when we established an office in London it was found expedient to make dividends payable there at the rate of 4/6 per Dollar. Since then all shares transferred from China to that office have been dealt with similarly, and in future the same rule will be adhered to with all shares that may be sent for registration. A number of shares have been transferred to the London Branch of this Bank in the course of the last twelve months, and even as recently as the last fortnight a certain quantity have gone forward to be placed on the register there. With the object therefore of equalizing the dividend as between Shareholders in the East and these in Europe and in order to prevent fluctuations in Exchange giving the one body of Shareholders an advantage over the other, the mode of paying dividends at 4s. 6d. has been now adopted, debiting Profit and Loss account with any deficiency arising therefrom. This I have no doubt will meet with your approval as it is a just and an equitable arrangement.—(Applause.) You are aware that the Bank has suffered through Mr. R. E. Love's transactions, the particulars of which are sufficiently known to the public, and for that item the Directors have set aside $25,000. The past half year has been profitable to Banking in the East, and I trust the current one will be equally or more so, and that our present prosperity may be of long duration.—(Applause.) This is all I have to say to you, but I shall be glad to answer any question which you may put to me with reference to the subject matter which is before us to-day (Applause).

Mr. Kingsmill said that with reference to this change in the mode of declaring the dividend—it being one pound sterling per

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

share instead of so many dollars, or so much per cent—he supposed that some arrangements had been made with the Stock Exchange in London in the matter. He observed that the par value of the shares was quoted at £28.2.6, whereas those of the other banks were quoted at £25.

The Chairman: Yes.

Mr. Kingsmill: May I ask if this new arrangement, which seems to be a very just and equitable one, has been considered at the Stock Exchange? Would it in any way affect the quotation at the exchange in London?

The Chairman: No, it cannot have any effect in that respect.

Mr. Kingsmill: Has the Committee been consulted there?

The Chairman: In the opinion of the Board it was a matter for the shareholders simply to consider.

Mr. Kingsmill: Inasmuch as there was an arrangement made by which our property appears quoted at £28 2s. 6d., I dare say our representatives will have been very careful of our interests. I happen to hold shares on both registers; therefore there are few who can speak so fairly as I on this subject. It would be very hard on the London shareholders that there should be transfers going on every day on the old basis, and any efforts on the part of the board to equalise these matters are very just, and I am glad to see they have carried this out.

The Chairman said the arrangement at the Stock Exchange was not disturbed in any way.

Mr. Kingsmill said he only asked the question as an excessive caution.

The Chairman then moved the adoption of the report and accounts which had been submitted to the meeting.

Mr. Kingsmill said he had very great pleasure in seconding the motion. Might he at the same time ask what was the reason for this Bank differing from others in the mode of distributing the dividend warrants. In this Bank the shareholders had to fetch the warrants, but in other banks they were sent round to them.

The Chairman said that a few years ago a warrant belonging to the Union Insurance Society was miscarried, and was presented for payment by another man; they thought the mode they had adopted was the safest one.

Mr. Kingsmill said it might be a safe mode, but it was a very inconvenient one to the shareholders.

The motion having been carried, the Chairman announced that the dividend would be payable from and after to-morrow.

Mr. Mody moved a vote of thanks to the Chairman, the Board of Directors and the present Chief Manager.

The motion was carried by acclamation, and the meeting separated.

Shipping Intelligence.

ARRIVALS.

Aug. 26, *Alaska*, American steamer, Howard, 4,011 from San Francisco Aug. 1, Mails and General, to P. M. S. S. Co.

Aug. 28, *Genrio Maru*, Japanese steamer, Hubbard, 600, from Foochow, General, to M. B. Co.

France	252	,,
Italy	114	,,
Total	1149 bales.	

Per Steamship *Hiroshima Maru* from Shanghai and ports.—

Treasure, value	$203,000

REPORTS.

The *Ambassador* reports: After leaving Cardiff had light winds into the N. E. trades, which were moderate. Crossed the equator May 23, in 26° 30' West, experienced some very severe weather in the vicinity of the Cape, losing part of the bulwarks, and had one of the boats stove in. Whilst running the Easting down in 41° South, had some heavy weather. A sea breaking on board June 29th, heeled the vessel over and shifted the cargo, carrying away some bulwark and smashing one of the life boats.—Passed St. Pauls July 11th and reached Anjer July 27th. Had light winds and calms through the Strait. Exchanged signals with the British ship *Solent* at anchor in Gaspar Strait. Met with light winds up the China sea, and nearly the whole time afterwards to port, being 32 days from Anjer. The second mate, Mr. Bartlett, died on the 22nd June, off the Cape.

The steamship *Wallace*, having discharged the machinery she had on board for the Yokoska dockyard, has returned to Yokohama from that place.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—During the current week an active business has again been done in *Cotton goods* and *Yarns*, and many contracts for future delivery have been reported. In *Yarns* the demand is almost exclusively for 16/24, especially medium qualities, whereas of other counts only good 28/32 are saleable in small lots. The business in 16/24 was, however, very extensive. Prices are about the same as before, though low 28/32 have further declined. The enquiry for *Shirtings* continues, and good makes of 9 lb. and 8¼ lb. have slightly advanced. Low qualities, especially 8¼ lb. and 7 lb., owing to a continued pressure from China to sell such goods here, have receded in price. Other articles do not require any particular comment.

Grey Shirtings:—

7 lbs.	38½ yds.	39 in.	per pce....	$1.65 to $2.10
8 lbs.	38½ yds.	44 in.	„ ...	2.00 to 2.50
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	1.95 to 2.55
9 lbs.	38½ „	44 in.	„ ...	2.35 to 2.90
T. Cloth 7lbs.	24 „	32 in.	„ ...	1.55 to 1.75
„ 6lbs.	24 „	32 in.	„ ...	1.15 to 1.25

White Shirtings:—

60 to 64 reed 40 yds. 35 in.	per pce.	2.30	to 2.50
Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb...	0.72½	to 0.95
Black Velvets	...	8.00	to 9.00
English Drills 15 lbs. 40 yds, 30 in.	... ...	2.70	to 2.90
Taffachelass 12 yds, 43 in....	*nom.*	2.00	to 2.20

Yarns.—

No. 16 to 24	...per picul...	$29.00	to 33.00
No. 28 to 32	...per picul...	$30.50	to 38.00
No. 38 to 42	...per picul...	$39.00	to 42.00
Reverse Twist ... 16-24 ...	„ ...	32.00	

Woollens.—Transactions in this staple have been on rather a small scale, with the exception of *Mousselines de Laine*, for which a good enquiry existed, though prices are lower again. Some demand has sprung up for *Blue Cloth*, but no transactions have taken place as offers have been too low.

Plain Orleans	40—42 yds. 32 in....	5.00	to 8.00
Figured Orleans	29—30 yds. 31 in....	4.25	to 5.00
Shimagoro	30 yds. 30 in....	4.25	to 5.50
Italian Cloth	—30 yds. 32 in....	0.27	to 0.35
Camlet Cords	29—30 yds. 32 in....	5.75	to 7.00
Camlets Asstd.	56—58 yds. 31 in....	16.50	to 17.50
Lastings, Japan...	22—30 yds. 32 in....	12.00	to 13.00
Plain Mousseline de Laine	—30 yds. 30 in....	0.16½	to 0.19

Figured Mousseline de Laine...	30 yds. 30 in...	0.23	to 0.27
Multicolored „ ...	30 yds. 30 in...	0.30	to 0.36½
Cloth, all wool plain or fancy..	48 in. to 52 in...	0.80	to 1.20
Presidents	54 in. to 56 in...	0.60	to 0.70
Pilots	54 in. to 56 in...	0.40	to 0.45
Union	54 in. to 56 in...	0.40	to 0.65
Blankets, scarlet & green 7 to 8 lbs....	per lb...	0.40	to 0.42

Sugar.—There has been some demand for *Formosa* kinds, of which sales have been made at $3.25. White Sugars are being held for higher prices.

Sugar:—Takao in bag	per picul...	$3.25	
„ in basket	„ ...	$3.10	
Taiwanfoo in bag...	„ ...	$3.10	
do. in basket...	„ ...	$2.95	
China No. 1 Ping-fah	„ ...	$7.60	
„ No. 2 Ching-pak	„ ...	$6.70	
„ No. 3 Ke-pak	„ ...	$6.00	

China No. 4 Kook-fah	per picul...	$5.35	
„ No. 5 Kong-fun	„ ...	$4.80	
„ No. 6 E-pak	„ ...	$3.80	
Swatow...	„ ...	$3.00	
Daitong	„ ...	$2.60	
Japan Rice	„ ...	$2.30	
Kerosene Oil	„ ...	$2.35	

Kerosene Oil.—The market has steadily improved and closed firm at $2.40 Latest quotations from New York are 22½ cents per gallon for Devoe's brand.

EXPORTS.

Silk.—By the latest telegrams, which advise a further advance in prices, it appears that best Hanks had reached in Lyons fr. 84 ($750) against fr. 42 in the early part of March, when the lowest point of the season was touched.

Here, what we have to report since last Saturday, is an advance of $20 to $30 for all Hanks, and a slight fall in the rate of exchange.

Since the 21st ultimo arrivals are 2,160 bales, settlements about 1,700 bales of Hanks, and 600 of Oshiu sorts.

Total settlements since the beginning of the season are fully 10,000 bales, and the stock, owing to the purchase of inferior silks made in this market by native manufacturers, is reduced to 600 or 700 bales.

The prices paid for sundry little parcels of native filatures are $850 to $960 (33/9 to 38/) or fr. 84 to 106.

Silk-worms' Eggs.—Arrivals commenced on the 30th August, and now amount to 10,000 cards. A few deliveries are reported, but no prices have as yet transpired.

		At Exchange 4/6½ in London.	*At Exchange 5.77 at 6 m.s. in Lyons.*	
Hanks.—Extra to No. 1	$830 to 850	33/0	to 33/9	92 to 94
„ Best No. 1 & 2	$810 to 820	32/3	to 32/8	90 to 91

„ M'dium to Good	$800 to 820	31/11	to 32/8	89 to 91

Tea.—The demand for Tea during the week was well supported, settlements reaching 4,700 piculs, the bulk of which was under $20 per picul. Fine Teas continue in small supply, and parcels of "good rich quality in the cup" very scarce.

Settlements for the season since 1st May to 31st August amount to 72,000 piculs, against 84,000 piculs, for a corresponding period last season.

Prices close rather unsteady, but the recent extraordinary demand having, apparently, died away, a return to former rates may be expected.

The *Lothair* has been recently placed on the berth for New York, and has received such support as to ensure fair despatch for her destination. Sailing freight to New York £1.17.6 per 40 cubic feet.

Common	$10.00	to 12.00	
Good Common	13.00	to 15.00

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)
"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

BILLIARD TABLES.

THURSTON & Co.,

CATHERINE STREET, STRAND, LONDON,
And at LIVERPOOL & MANCHESTER,

BILLIARD TABLE

AND

Billiard Room Furniture Manufacturers, Lamp Makers and Gas Fitters,

BY APPOINTMENT TO

H. M. THE QUEEN;

H.R.H. THE PRINCE OF WALES.

H. R. H. THE DUKE OF EDINBURGH, &c., &c.

Established 1814.

SOLE AGENTS FOR THE NEW BILLIARD BALL, CHEAPER AND MORE DURABLE THAN IVORY; DOES NOT CRACK OR CHIP.

MADRAS—Messrs. McDOWELL & Co.
CALCUTTA—Messrs. MACKENZIE, LYALL & Co.
BOMBAY—Messrs. GRINDLAY & Co.
SHANGHAI—Messrs. HALL & HOLTZ.

Yokohama, August 12, 1876. 52isn.

ENGLISH GOODS

(Viâ SUEZ CANAL,)

AT CHEAPEST RATES.

D. NICHOLSON & CO.,

SILK, WOOLLEN AND MANCHESTER WAREHOUSEMEN,

INDIA, COLONIAL AND FOREIGN OUTFITTERS

50 TO 53, ST. PAUL'S CHURCH YARD, CORNER OF CHEAPSIDE, LONDON,

Established 1843.

Invite attention to their Illustrated 160 page Catalogue and Outfitting List, 60 pages; sent post free, containing full particulars as to WOOLLEN, SILK and COTTON GOODS of every description. Contractors for Military and Police Clothing and Accoutrements.

PATTERNS FREE.

Ladies' Clothing, Linens, Hosiery, Gloves, Ribbons, Haberdashery, Jewellery, &c.

Household Furniture,	Boots and Shoes,
Musical Instruments,	Wines and Spirits,
Ironmongery,	Ales and Beers,
Fire-arms,	Preserved Provisions,
Agricultural Implements,	Stationery,
Cutlery,	Perfumery,
Carriages,	Books,
Saddlery and Harness,	Toys, &c., &c.,

Shipped at Lowest Export Prices.

Sole Agents for the "Wanzer" and the "Gresham" Sewing Machines for the City of London.

Foreign Produce disposed of for a Commission of 2½ per cent.

Price Lists can be had of Messrs. Wheatley & Co., Bombay, and at the Office of the *Englishman* Newspaper, Calcutta.

Terms—Not less than 25 per cent. to accompany indents and balances drawn for at 60 days' sight.

Parcels not exceeding fifty pounds in weight and 2 feet by 1 foot by 1 foot in size, and £20 in value, are conveyed from London to any Post Town in India and Ceylon at a uniform charge of 1s per lb.

Special advantages to Hotel Keepers and Regimental Messes.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fukey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 37.] YOKOHAMA, SATURDAY, SEPTEMBER 9, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 8th instant, at Niwa Yashiki, Nagatomachi, Tōkei, the wife of J. G. H. GODFREY, Esq., of a daughter.

Notes of the Week.

At a time of the year when every fine day is worth millions to the country, and a typhoon travelling up north-eastward from Nagasaki might throw the Empire into confusion, the reproach thrown upon English conversation that its staple consists of meteorological remarks may safely be braved. The early part of the week was extremely hot, and though the temperature fell noticeably after sun-down, the air was so still that the nights were unpleasantly warm. A welcome change occurred yesterday evening, and the thermometer fell below the range of the earlier part of the week, and there is an agreeable character about the air which is stirring gently to-day. If another week pass without a typhoon, the harvest can hardly fail to be brilliant, the taxes will come in without delay or discontent, rice will be cheap, the Finance Minister may exchange his couch of thorns for a bed of roses, the countenances of the Cabinet will shine as the sun, and there will be peace and contentment throughout the land.

> The fire will begin to burn the stick,
> The stick begin to beat the dog,
> The dog begin to bite, &c., &c.,

and so the Japanese Empire will enjoy a merry Christmas.

The Tenth Number of the proceedings of the Deutsche Gesellschaft für Natur and Völker-kunde Ostasiens has appeared during the week, and, if not quite so full and interesting as some of its predecessors, is still worthy of the Society. It opens with the records of proceedings from January to May of this year, and enumerates a goodly list of works and gifts presented to the library and museum. The first paper is an interesting continuation of Mr. Miyake's contribution upon Japanese Obstetrics, which well rewards study, but is too strictly professional for analysis in these columns. The second is by Dr. Wernich and is entitled 'Upon certain forms of Nervous Disorder among the Japanese.' Dr. Wernich has lost no time in bringing his medical knowledge to bear upon the diseases of Japan. Some months since we were indebted to his courtesy for a copy of an interesting contribution upon 'The Progress of Modern Medicine in Japan' made by him to the *Berliner Klinischen Wochenschrift*, which want of time has prevented our treating with due respect—we must beg him to absolve us from any imputation of discourtesy for the omission. And even now his paper under notice demands more attention that can easily be bestowed on it. We must content ourselves with drawing attention to it, and to the praiseworthy spirit which the medical men of Germany resident in this country have shewn in giving to the world the results of their experience and observation—a spirit we should be glad to see animating to a greater extent the medical men of other nationalities. The third paper is one upon the Chamois of northern China (Antilope caudata, A. W. Edwardsii) by Dr. O. von Mollendorf, giving a full description of the animal and measurements of one example. This antelope is prized by the Chinese more for the medicinal properties of its horns than the value of its flesh, although the writer says that it makes an excellent roast. Despairing housekeepers in Europe often long for a new animal with which to appease the murmurs of their lords, and why Asia or Africa—the latter particularly—should not furnish us with one, we have never yet been able to understand. The late Lord Derby tried to acclimatize the koodoo, one of the most magnificent antelopes of southern Africa, with this end in view, and the menagerie at Knowlsley some years ago contained several fine specimens of this animal. But, for all practical purposes, the experiment was unsuccessful, and we have never heard that it was renewed.—Dr. Martin follows with a full and careful analysis of the mineral waters of Atami, Ikao (in the Kumagaye *ken*), Netsu, Wasshi, Djisso, Gosa and Taki; of those of Shimamura (Kumagaye); of Shobu, Iwa, Kami, Otaki and Tami, in the Ashigara *ken*; of Komano in the Miye *ken*; of Idzu and Sagami in the Hakoné range. An addendum to this paper is made in the form of the following table of heights above the sea-level of the undermentioned places in this range.

Plateau between Atami and Yugawara ...meters	175.8
Atami Toge	579.4
Hakone (Kashiwaya's Tea-house)	700.6
Ashi no yu...	836.5
Futago yama, the highest point of Ashi no yu...	1,062.0
O Jinoku, near the sulphur baths	985.0
Kiga	323.0
Miya no shita	321.9
Doga shima	238.2
Miya no shita dake—the highest point at Miya no shita	853.4
Tonosawa	12.4

(The meter is equal to 3.2808 English feet.)

Herr Heinrich von Siebold follows with a paper—which he must permit us to tell him is far too short—upon *Harikiri*, an institution which has had far less attention bestowed on it than it deserves. Nor does Herr von Siebold satisfy us in this respect, though we are glad to see that he pays a tribute to the grandeur of some of the moral elements it contains. We refuse at present to regard it is a mere means of escape from inevitable punishment awarded by the state, or, in old times, by the sovereign princes of the daimiates. Doubtless this was sometimes, and even often, the motive for it. But we have a very strong belief that in numberless cases it was committed by men in proof of the purity of their motives and conduct, to clear their own name and the names of their families from unjust aspersion, and to vindicate themselves in the face of society against unmerited suspicion

or obloquy. And Herr Von Siebold, whose authority is high, bears out this view. He says:—

Eine auffallende Erscheinung im physischen Leben des Japaners ist der Begriff von Heroismus, Ritterlichkeit und Ehre, zu deren Documentirung und Vertheidigung namentlich die bevorzugten Staende und Beamten ein ganz apartes Mittel besitzen, *das weniger auf Vergeltung der Unbill an dem Beleidiger, als auf Demonstrirung der Reinheit des eigenen Character's hinzielt.*

There is a great deal of scepticism among foreigners regarding the moral elements of this act, the true value and quality of which can only be properly estimated by some European scholar who is thoroughly well acquainted with Japanese literature, with the Japanese character and history, and is versed in the moral philosophy of the Christian and heathen nations. No one less fully prepared ought to approach the question with the smallest dogmatism on either side of it, and we very much wish we could induce one or the other of perhaps—at the outside—half a dozen men so qualified, in or out of this country at the present moment, to examine the question. Until it is fairly well settled, no thoroughly good analysis and generalization of the national character of the Japanese is possible: while we are persuaded that with it as a key in our hands, we should be able to form a far sounder judgment than is now possible regarding the probable future of the nation. From the school of analysts who sneer at all the nobler forms of emotion as sentimentalism, and who are as incapable of feeling as of appreciating them, nothing approaching even to sense on this subject can be expected. Nor is any greater value to be attached, on the other hand, to the opinions of those dreamers whose small experience of history, human nature and human affairs has led them take views of the Japanese character which set at naught all rational estimates of the motives which have animated human beings in all ages of the world and among all nations. The old Stoics justified suicide on moral grounds and permitted the practice of it unreprehended. Christianity took far higher views. It insisted on the sanctity of human life, and superadded the doctrine of the resurrection of the body to that of the immortality of the soul. This surrounded the body with a safe-guard previously unknown, and struck a blow at suicide such as it had never before received. But it did more than this. It enforced, with a new and hitherto unknown power, the doctrine of resignation to the will of God under trials and dispensations of whatsoever hardship. The virtue of the Stoic was fortitude; that of the Christian is resignation. The one defied the storm; the other meekly bends his head to it, and never so much as dreams of escaping from its fury by an act of rebellion against a Being whom the deepest emotions of his heart have taught him to regard as a Heavenly Father. The body, hitherto despised by philosophy as the source of man's grovelling tendencies, the hindrance to his perception of eternal verities, and the cause of his disobedience to eternal laws, became, by one stroke of sublimely inspired genius, "the temple of the Holy Ghost," which it was deadly sacrilege to pollute, to profane or destroy. And it is curious to observe how, in the present obscuration of Christianity, the lawfulness of suicide is discussed, if not taught, by men of high intellectual and moral eminence. The doctrine of euthanasia has had eloquent defenders within the past few years, and though it may have made but few converts and had no practical result on society, the interval between the setting of the old Christianity and the rise of the new will assuredly witness some decline of the force of the prohibition against self-slaughter. Hopeful's monition and passionate outburst to Christian in the dungeon of Doubting Castle will be forgotten—only for a while, let us hope—and the canon "fixed by the Everlasting" will again gird the body with its old armour.

If we are at all right in our estimate of the moral forces which produced and perpetuated *Harikiri* down to recent times—the institution is now undoubtedly moribund—the spirit which dictated the act can only have retired from this special phase of activity, and must demonstrate its continued existence in other, and, it may be hoped, more noble forms. That it is a perversion of moral force of an extremely noble and elevated character, we are strongly disposed to think, as we have said above, and it wholly inconceivable that this force can be extinct. So late as the year 1868, a debate upon a motion to abolish *Harikiri* by law was held in an assembly then commonly called by Europeans the Parliament; but, if we remember rightly, the motion did not even find a seconder, so entirely were the members of opinion that the institution could not be dispensed with.

The sixth paper is upon Cremation in Japan, by Professor Doenitz. The practice seems to have been introduced about the year 698 of our era. A celebrated priest, Dosho by name, included among his last requests one that his body should be burned. His pupils carried the corpse to Kurihara and there obeyed this injunction of their master. But, while collecting the ashes, which they purposed dividing in order that each might have some memorial of their teacher, a violent wind arose, scattered his earthly remains, and thwarted the intentions of his disciples. Disappointed in this respect, they preferred a request to the Court that a temple then in course of building in Kiôto should be dedicated to his memory. The request was granted, and the temple exists to this day, a lasting memorial of the originator in Japan of the practice of cremation. The history of the practice follows, with particulars of the manner in which it is carried into effect. There are at this moment in Tôkiô, the writer states, five cremation grounds which are much used for the purposes to which they have been dedicated.—Dr. Hilgendorf contributes an excellent paper upon the Snakes of Japan, which are many and present several points of interest.—Dr. Lange continues his collection of Japanese proverbs, which seem to us rather feeble by the side of those of Europe. Sancho Panza would never have won an immortality with such a poor armoury. Compared with the proverbs of Spain, they remind us of Falstaff's contrast of the gilt two-pences and the full moon. Two minor papers by Herr Julian Witkowski, and a condensed meteorological table by Herr E. Knipping, giving some very valuable results, close the volume. The supplement contains a continuation of Herr C. Arendt's translation of the Chinese story 'The beautiful Maid of Pao.' Admitting all the fascination of the title, we confess, with sorrow and humiliation, that the history of the joys and sorrows of this maiden must ever remain to us a sealed book. Chinese stories must be read only by those who know not the meaning of the words dreariness and weariness.

It is gratifying to find that some of the foreigners who have resided in and retired from Japan are exhibiting their collections of curiosities to the public in Europe. We received by the last mail a catalogue of a collection of articles of Japanese art lent for exhibition by W. J. Alt, Esq., formerly of Nagasaki, to the Bethnal Green Branch Museum which has been instituted under the auspices of the Science and Art Department of the Committee of Council on Education. The catalogue comprises no less than 1,629 articles, all of which are more or less fully described; while introductory notices, giving a great deal of condensed and accurate information regarding them, are prefixed to some of the lists of articles of special interest. The collection is one of great variety, and embraces specimens of lacquer ware, wood and ivory carvings, household gods, *cloisonné* or enamel ware, bronzes, armour, swords, spears, long bows and arrows, pottery, dresses, silken materials and embroideries, screens, books and pictures, *netsukés* and coins. In a short introduction prefixed to the catalogue by the exhibitor, there are some valuable remarks regarding the character of Japanese art, and the beautiful taste it often displays. That it is exercising some influence upon our own cannot be questioned, and there is no reason why we should not benefit materially by hints from the artists of this country. Mr. Alt claims that the Japanese, like the Greeks, go to nature for their models. To some extent we think he is right, and in the following paragraph he shows a just appreciation of the different manner in which the Japanese and Europeans treat the arrangement of flowers.

Our idea of how to make a beautiful bouquet is to strip a variety of the finest blooms from their stems, put them on wires, arrange them regularly in a bunch jammed closely together with sprays of ferns and a few leaves interspersed, and finish off the whole with ornamental paper. Thus, nature is abused, and the senses are overpowered by a concentration of scents, and the arbitrary arrangement of colour. The Japanese take one or more branches or sprays of a plant, with all the leaves and flowers intact, and place them with careless taste in their appropriate bouquetholders: no one with true artistic feeling or love of nature would hesitate in preferring the latter mode.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

No one will doubt that he is right here, provided always room be left for the play of art in the service of nature. Shakspeare, who saw deeper into things than all other men before or since, touched this subject with incomparable skill and insight in the dialogue between Polixenes and Perdita. We have transcribed it once before, but its eternal truth and beauty must be our excuse for doing so again :—

Perd. I have heard it said
There is an art which.....shares
With great creating nature.
Pol. Say, there be;
Yet nature is made better by no mean,
But nature makes that mean: so, o'er that art
Which, you say, adds to nature, is an art
That nature makes.....
....That is an art
Which does mend nature,—change it rather: but
The art itself is nature.

That the Japanese go to nature for some of their models is perfectly true. But they are still greatly influenced by the base and extravagant conventionalities of Chinese art, which, in spite of its many merits in certain directions, is most impure. No one has ever yet seen a horse, a lion, a tiger, an elephant, a dog or a deer drawn properly by a Japanese artist, and we doubt if the very idea of pourtraying the higher forms of animal emotion has ever entered into the mind of the Japanese. Think of the immeasureable distance which exists between such a picture as 'The Shepherd's Chief Mourner' and any effort which could be made in this country in the same direction! It is almost the distance between zero and infinity. Nor do we fare much better when we come to the human figure, except perhaps in the small ivory and wood carvings known as toggles or *netsukés*, which are undoubtedly very clever and sometimes faithful to nature. We doubt, however, whether the Japanese students of art ever draw from the nude model: it is certain that they do not study anatomy: and all drawing of the human figure undertaken without these two forms of preparation has ever been, and must always be, bad. No one has ever yet seen a neck by a Japanese artist properly put on to the shoulders. In pictures intended to display the most vigorous action of the muscles, as in wrestling, fighting and such like movements, they are always wrongly drawn. We may admire Michael Angelo as much as we will—and of course he was one of the greatest of the great—but Leonardo was not the less in the right when he said of him that his exaggerated muscular markings made his men more like sacks of [illegible] than human figures. It is often very much the same with the Japanese artists. The rigid conventionality of Japanese art, too, draws a tight line round the mind of all the native artists, and their work is as much alike as the hand-writing of all well-educated Chinese, in which, although an expert may detect some slight variety, an exact imitation of certain forms is the most marked characteristic. Now this is fatal to all that luxuriance of diversity which is necessary to a great school of art. He who would put the Japanese right in this matter must have the following sentence from Leonardo's *Il Trattato della Pittura* incribed in large letters of gold in his lecture room :—

A painter should never imitate another, or he will be called the nephew, and not the son, of Nature. For since Nature gives things in endless profusion, he should rather have recourse to her than go second-hand to those who have learnt from her.

There are signs, however, that improvement in this respect is not far distant, even without taking into account the influence of the Italian professors, who, we are glad to hear, have arrived in this country and are about to enter upon their duties. Moderately careful observers of what is going on here may have remarked a noticeable improvement during the past eighteen months in the faces, outlines and proportions of the figures painted upon the silk scrolls used in the making of screens. The expression of the faces has decidedly improved; it is more natural and life-like, and betrays fewer traces of the supremely absurd face which is the conventional ideal of the Japanese. The shoulder, too, has at last come into being, and three years ago it was difficult to find in these paintings a shoulder from which an arm could by any possibility have sprung. The writer of these lines once took occasion to point out this defect to a dealer in such scrolls, who immediately recognized it and took measures to correct it by prevailing on the artists he employed to study from living models. In a few months there was a marked improvement in every figure, whether male or female, that came out of his shop.

While on this subject, a word may not be out of place upon the extraordinary aptitude of the Japanese common people for drawing. We very much doubt whether there is anything like it in any other part of the world. A coolie or *jinrikisha* man may be often seen to take a stick and draw on the ground—especially in the sand—the figure of a bird, a man or woman, a house, tree, or any familiar object, with remarkable spirit and accuracy of outline. Some good artists might surely be made out of such an abundance of raw material.

But of the ideal, as we understand it, and as the Greeks taught and displayed it, the Japanese seem to have little or no conception. How long it may take them to learn that all high art must come from high thought, we cannot know. The artist, in our sense of the term, whether painter, musician or sculptor—the honoured associate of princes, the pride of nations, the glory of humanity—has not yet appeared in this country.

If the opening of Japan to foreign trade had conferred upon the Japanese the sole boon of the kerosene lamp which is now so generally seen throughout the country, it would have amply justified itself. Let any traveller drive down from Odawara to Kanagawa, or such part of the distance as the time permit, between seven and ten o'clock in the evening, and he will have an excellent opportunity of seeing the advantage the Japanese have derived from this admirable little contrivance. In the towns it is seen in all the larger shops, sometimes to the number of five or six; and the light it diffuses, identified as light is with cheerfulness, activity of mind, entertainment and instruction, makes all the difference between an evening life which is, and one which is not, worth living. The smaller villages, where the people are in less easy circumstances, afford abundant materials for a contrast. The rooms of the houses are lighted with the poorest of candles at best, and more commonly with the *andon* of Japanese cottage life. This, as our resident readers need not to be informed, consists of a wooden frame-work from one to two feet in height, the sides of which are pannelled with thin paper. It supports a saucer of vegetable oil in which is laid a wick of cotton twist, a portion of which, protruding something like a quarter of an inch beyond the lip of the saucer, is lighted when the lamp is required. It does little more than make darkness visible, and gives no more light, perhaps not so much, as that dismal engine known to sick children in England thirty-five years ago which consisted of an open drum of perforated japanned metal into a socket in which a rushlight was placed. To pass a long winter evening from five until ten o'clock, lighted only by a flame of this kind, was the lot of ninety-nine out of every hundred Japanese before the advent of foreigners to this country. Now, the small hanging kerosene lamp is abundantly seen in the provinces, and it may reasonably be doubted whether there is any article whatever of foreign introduction with which the Japanese would so reluctantly part as with this lamp. If gold runs away for this purpose, let it do so. It is infinitely better that the Japanese people should enjoy their evenings than that they should have earthenware jars full of gold and silver concealed in their gardens. Useful commodities are active forms of wealth: gold and silver are of no use except as commanding these commodities, and in facilitating the exchanges of daily life. The people of this country are indifferent to a metallic currency at present, so that a coinage which would cost two or three millions of dollars for interest alone, apart from wear and tear, is not yet needed. A better form of copper money they certainly do want, and it is rapidly being supplied to them. A gold and silver currency they certainly do not yet want. It need not be inferred from this that a paper currency is absolutely to be preferred to a metallic one. Of course we mean nothing of the kind. A large part of the paper should be gradually redeemed, and a fair reserve always maintained against so much as is in circulation. But the country is at present perfectly well spared the great expense of a large metallic currency, and this

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is a cause for congratulation. If the paper were depreciated, it would be altogether another thing; but it constantly stands at a premium upon gold. What would not many governments give for the same condition of affairs!

It may reasonably be doubted whether any department of of any government in the world possesses a more perfectly organized statistical system, and a more perfect collection of its own statistics, than the foreign Inspectorate General of Customs of China. We have been indebted to the Department for copies of the various volumes it has issued from time to time for several years, and as each successive instalment reaches us, we are divided between something like envy at the magnificent trade of which it records the particulars, and admiration of the truly beautiful manner in which they are placed before the public. That they are absolutely without errors, the conditions imposed on human labour forbid us to believe. But they defy the most censorious critic, even in departments of knowledge which demand special qualifications for correcting the errors of the press. In vain does the reader search for an incorrect diphthong in the Latin names of diseases, or a slip in the scientific nomenclature of a botanical collection. We have before us the catalogue of the Chinese section of the Philadelphia Exhibition, and here, if anywhere, we might have expected to find an error or two. But in vain. It is studded with medical and other scientific terminology, yet not a single mistake or even typographical inconsistency or impropriety has occurred to us. Nothing can be more thorough, more clear, condensed, orderly and business-like, in the very best sense of the expression, than this volume. The genius of common-sense and practical wisdom seems to have presided at its origin and birth, and the real difficulty of the critic is to praise it enough without appearing to do so extravagantly.

We must leave to the press of China the task of analysing and generalizing the contents of these admirable volumes. The Exhibition Catalogue is full of varied interest, and even the dry statistics of the China trade are placed before the reader in so attractive a form that something of a new pleasure must be extracted from the task of reviewing them. There is, however, among the last series issued one volume which contains the Report of the Commission sent by China to ascertain the condition of Chinese coolies in Cuba, and this we shall take an early opportunity of examining with the object of placing before our readers some trustworthy accounts of the nature of the coolie trade prosecuted in the ports of Macao, Amoy, Swatow and Canton,—a trade the details of which are so fearful that they rival in horror the very worst accounts we have of the African slave trade.

The changes in the English Cabinet and in the heads of departments are interesting. Mr. D'Israeli passes to the Upper House as the Earl of Beaconsfield—a title which gave offence when chosen by him for the late Viscountess Beaconsfield, on account of its association with the name of Burke—and retires from the prodigious labours of the Premiership to the more quiet yet very responsible post of Privy Seal. The Earl of Derby becomes Premier: the greatest office—greatest in influence—which any sovereign in the world can confer on a subject being successively held by father and son, to the utter confusion of the wiseacres out of England who firmly believe that the English aristocracy is a hot-bed of vice and indolence, instead of what it really is, the most active, sensible and practical body of nobles of which the world has any record. The honour conferred on Mr. D'Israeli by his elevation to the peerage will be begrudged him by none, and the Upper House will derive additional lustre from his presence among its members. For more than forty years his vivid genius and splendid oratory have adorned the House of Commons, where his judgment as the leader of a great party has excited the unbounded praise and admiration even of his most bitter opponents. Never perhaps in the history of parliament was there such an exhibition of consummate skill, tact and wisely employed power as he exhibited in the passage through the Lower House of the Six Pound Franchise Bill, and though a regret may perhaps still be felt that his opponents did not carry the measure rather than the representatives of the Conservative party, the crisis was one demanding powers which were possessed perhaps by no man in England but himself. After the first effervescence of his youthful genius had subsided, he joined the ranks of the Tory party, of which he has been the undisputed leader since the death of his political chief, the late Earl of Derby. He has enriched English literature with many works which have taken an honoured place in this the most permanent of all the glories of England; he has inspired and guided a great party by his impassioned oratory and his statesmanlike sagacity and wisdom; his unblemished private life has been a fitting counterpart to his splendid public career; and perhaps more than any man of genius who ever sat in parliament he has illustrated the power of English parliamentary rules and traditions to subordinate the highest abilities to the every day work of free constitutional government.

As the height of Fusiyama is often enquired after and discussed at this season of the year, when the mountain is visited by so many tourists, we reproduce from our issue of the 19th October 1872 the following results of observations made in that year with instruments of trustworthy construction and sensitiveness by an officer of the battalion of Royal Marines then stationed here.

By Hutton's method	feet	13.070
By Wrigley's „	„	13 091
By Rankine's „	„	13.030
A mean of the three methods	„	13.064
Correction for distance of upper station below highest point	„	6
Correction for distance of lower station above sea-level	„	10
Total height	feet	13.080

Possibly some slight correction might have been made in this estimate had the observer had a hygrometer with him.

Maitre Corbeau, sur un arbre perché,
Tenait en son bec un fromage,
Maitre Renard, par l'odeur alléché,
Lui tient à peu près ce langage:
"He! boujour, monsieur du Corbeau,
Que vous êtes joli! que vous me semblez beau!
Sans mentir, si votre ramage,
Se rapporte a votre plumage,
Vous êtes le phénix des hôtes de ces bois."
A ces mots le Corbeau ne se sent pas de joie.
Et, pour montrer sa belle voix,
Il ouvre un large bec, laisse tomber.....
&c., &c., &c.

Whether the flatterer be fool or rogue matters little: the result is the same.

From the "Japan Mail Daily Advertiser."

Monday, 4th.

From the *Chôya Shimbun.*

It is expected that H.E. Sanjô and other high officials now in the North, will return to the capital about the middle of the month.

From the same.

An increase is to be made in the number of officials stationat the branch office of the *Naimusho*, Loochoo.

From the same.

In future a division of troops will be stationed at Marugame, in the province of Sanuki, and barracks for their accommodation are now being erected there.

From the *Hôchi Shimbun.*

Since the bankruptcy of Ono, the copper mine at Kawaguchi, the silver mine at Akitorizawa, and iron mine at Tamagawa in the province of Ugo, all of which belonged to him, have been in possession of the Mining Department, but are now offered for sale to any one who may wish to purchase them.

From the *Nichi Nichi Shimbun.*

The amount of duty taken at the Yokohama Custom House, from the 1st to the 31st of August, was *yen* 231.225.

From the same.

Mr. Miyamoto, and other officials, arrived at Nagasaki from Corea on the 31st ultimo.

From the *Akébono Shimbun.*

A meeting of *Sangi* and high Government officials was held at Yokohama on the 31st ultimo, but the object of the meeting has not transpired.

From the same.

The new Russian Legation, at Torano-mon uchi, Tôkiô, will be completed in a few days, when it will be opened for public inspection.

Tuesday, 5th.

Yesterday H. I. H. Prince Higashi Fushimi no Miya, H. I. H. Prince Arisugawa no Miya, H. E. Iwakura, and many of the Ministers and heads of the Government Departments, arrived at an early hour from Tôkiô, and after a short stay at Benten embarked on board the steamer *Sorio Maru* and proceeded to Yokoska to witness the launch of the *Jinkei Maru*, a vessel which has been built as a paddle-wheel steam yacht for His Majesty the Mikado. About half-past four, and after an inspection of the Arsenal, Prince Higashi Fushimi and the other visitors took their places in a temporary stand opposite to the *Jinkei Maru*, as she lay on the ways gaily and tastefully decorated with flags, evergreens and flowers. Just about five o'clock the last shore had been knocked away and the vessel glided into her native element without a hitch of any kind. The *Jinkei Maru* is of the following dimensions: Length between perpendiculars 260 feet; beam outside planking 31 feet; mean draught of water 13 feet 1½ inches. The engines for this vessel have been built entirely at the Arsenal, and are of 350 nominal and 1,400 indicated horse-power. When all is completed the *Jinkei Maru* will form an addition to the Imperial fleet which the Government will have every reason to be proud of. The band of the Imperial Marines was present, and the launch was witnessed by a large number of Naval Officers and thousand of spectators, among whom were many foreigners. The Imperial and official party returned to Yokohama in the *Sorio Maru*, soon after the launch was completed.

A cricket match was played yesterday between the "Settlement" and H. M. S. "*Modeste.*"

The former appeared first at the wickets, but the telegraph shortly indicated only 19 runs as the score of four of its best players. Kirkwood and Mollison, however, got set and played steadily for their respective scores. Cobden played in good style for 18, and the innings closed for 77. After tiffin the "*Modeste*" eleven forced the bowling of Fraser and Dodds. They did not, however, remain long, and their innings closed for only 32.

In the second innings of the "Settlement" Mollison and Hamilton put together their runs freely and in good form, Milne playing carefully for 16, thus showing himself a most useful acquisition to the eleven.

The "*Modeste*" in their second attempt got 54, Brooksbank alone arriving at double figures. The heat during the day was very great.

Below we append the score in full:—

SETTLEMENT.

1st Innings.		*2nd Innings.*

Friday, 8th.

THE TEMPERANCE HALL.

The entertainment given at the Temperance Hall yesterday evening was very varied in character. The men of the *Modeste* sang several glees, and if they would only learn that fully one half of the effect produced by music depends upon the well balanced contrast of loud and soft tones, arrived at by gradual increase and decrease, they would sing very well. For the most part their voices were in tune and they kept fair time; but they sang at one dead level of tone which made their performance resemble a flat sandy plain rather than the succession of mountain and valley, and that undulation of outline which is necessary for producing the effect of beauty in the mind. In one of their glee parties, too, there was a wandering voice which kept on jostling the others like a frisky young comet among an orderly body of planets. This erratic artist needs to have his orbit well defined, and strict adherence to it enforced. The discipline of the British sailor and the splendid absence in him of all sense of danger were exhibited finely in the last glee. There was apparently some mistake about the word of command, and those who understood it to be one thing did that one thing, while those who otherwise understood it did the other thing; and there was a steadiness about both parties, which, if it did not conduce to musical effect, spoke volumes for their *morale*. On the whole, however, the men sang extremely well—so well, indeed, that with a little instruction in the art of producing musical effects, they would far outstrip any glee parties we have ever heard, composed of the same material. Two songs of a comic and two of a sentimental character—the latter rendered perhaps a little too dismal to produce a sense of pleasure—were introduced during the evening, and two resident gentlemen gave the first scene in Sullivan's Cox and Box with admirable spirit and effect. The honours of the evening were carried off by means of two negro songs, sung in character with a good deal of humour, and if the merit of music is to be measured by the amount of applause it brings, there can be no difficulty in deciding which was the best performance of the night. The entertainment was fairly attended in spite of the heat, and the proceedings were brought to a close by a few words from the Rev. G. Cochrane regarding the financial position of the institution. Mr. Henderson was in his place as usual, moving and directing every thing with excellent tact and good feeling.

From the *Chôya Shimbun.*

Visitors were excluded from the sitting of the *Genrô-In* on the 5th instant, and the debate going on was conducted with closed doors.

The Government are about to dispatch some officials to Ishinomaki, in the province of Rikuzen, with the intention of making the port more commodious for shipping by dredging the harbour and building a pier, under foreign superintendence.

From the same.

Last Monday, about 300 discharged marines left Yokohama by the steamer *Taihei Maru* for Kobe.

Saturday, 9th.

It is reported that a telegram was received yesterday from Kobe announcing that a violent gale was blowing there, but we have no certain warranty of the fact.

Great improvements are going on at the ground belonging to the Nishi Honganji Temple, Tsukiji, Tôkiô. This temple was destroyed by fire some years ago, but preparations are now being made to rebuild it on its former extensive scale, as very large subscriptions have been raised for the purpose from members of this sect of Buddhists all over the country. Devotees, indeed, do more than subscribe money for this purpose, for, inspired by enthusiasm, many help unrewarded to drag heavy logs of timber to the site of the temple which are to be used in the reconstruction. It is rumoured, moreover, that a lofty edifice of foreign style will soon rear its head where the old temple stood of yore, and it is said that the Buddhists attend the services of the Christian missionaries with great diligence, and seem anxious to assimilate their modes of working as far as possible with foreign ways.

Complaints reach us from Tôkiô that when it is purposed to repair the streets and roads, but before such repairs are actually commenced, short posts or sticks are driven into the ground for the guidance, in some occult way, of the workmen about to be employed. No precautions are taken to guard the section of street so marked as to traffic by day, or to indicate by lanterns the position of such posts by night. The result is that several accidents have occurred to equestrians and *jinrikishas* travelling at dusk, the riders or drawers being naturally unaware of the dangerous obstruction in their path. Perhaps some day a Prince of the Blood shall have broken his neck or one of these unsuspected traps, a Cabinet Minister dislocated his collar bone, or a foreign diplomat sprained his ankle, and the police and local authorities may awake to the fact that their gross carelessness may have a result other than expected; but we are afraid that nothing will be done to remedy the evil so long as accidents are confined, as they have hitherto been, to less prominent members of the community.

THE RIGHT OVER THE RACE-COURSE.

IT is generally understood that the conclusion was arrived at, at a recent conference of the Foreign Ministers, that the Race-course was granted by the Japanese Government for the use and service of the foreign community collectively, and that the claim of any single body to exercise sole jurisdiction over it is an unwarranted usurpation of rights in which every member of the settlement has a share, conditional of course, upon his readiness to contribute his quota towards the rent of the ground and the expense of its maintenance. A question which involves the enjoyment and recreation of a large number of the foreign residents here, is one of important public interest, and thus the decision of the Ministers and the steps taken to elicit it have occupied a good deal of attention of late. Looking at the matter very dispassionately ourselves, and being anxious only that the utmost advantage to the whole community should accrue from the possession of the course, or from any decision pronounced upon the conditions of their tenure of it, we fail to see that the disruption of the Race Club, or perhaps rather the depriving of it of the powers it now posseses and holds in trust for the general benefit of the residents, will be of any tangible advantage, will abolish the evils at present complained of as peculiar to our local racing, or give us more open racing of a desirable kind. More than this. The upsetting of the Race Club seems to us much like the upsetting of a railway-train by placing a log across the lines, save that it cannot be visited with any punishment.

What will be the practical effect of such and such a course? This is the question which, as it seems to us, is the one to be resolved before entering on a campaign of this nature.

Now, it is obvious that some machinery must be constructed and set in motion to manage a property of this nature. Rent has to be paid, the course maintained in order, a racing stand and horse accommodation provided and kept in repair, and the thousand and one matters incidental to the proper regulation of such a property provided for and arranged. Who is to do this? What is every one's business is no one's business, and only disorder could and can ensue from the destruction of the only machinery we possess for managing the course. A number of analogies have been adduced in support of the position that every nationality may institute its own race-club, and act independently of all others. Of course it may; but what good can it do, and how can anything it might do be of the smallest benefit to the public at large? Is it to be supposed that if there were an English, an American, a German, French, Swiss and Italian race-club, there would or could be any harmony or common purpose among them? The idea is absurd. We should have a Babel of languages, and execrable racing. At the same time the charge brought against the old Club that it was English in any special and exclusive sense, seems to us idle. The owners of most of the racing stables are Britons, if not Englishmen; the English here outnumber the members of any other nationality, and, above all, as we gather from an article in the *Herald* on this subject, only one candidate for admission has been black-balled during the last ten years. A better proof could hardly be adduced that the Club is not over-fastidious—unless, indeed, it can be proved that men are deterred from having their names put up by the dread of non-election. The list of members, however, forbids this supposition.

The practical result, therefore, of the course adopted by the opponents of the Race Club, is to break up an existing machinery which, whether better or worse, is a working and fairly efficient one, and to give absolutely nothing in place of it. If there is to be any more racing, it must be conducted under the management of some body elected by a majority of the votes of the subscribers, and responsible to them and to public opinion. Is there any reasonably well grounded hope that any machinery which may hereafter be put together will be better than that just destroyed? And, under a larger franchise and a more democratic constitution, is there no fear that it may be much worse? Is it wiser to bear the ills we have, or to fly to others that we know not of? "Better the devil you know, than the devil you don't know," says an old proverb.

The chances are that the old machinery was at least as good as anything which is likely to replace it. The committee were elected from among ninety members, and could easily have been turned out of their places had they neglected or betrayed the interests of the main body of subscribers. A jackal here or there might have been bought, and we have an unshaken conviction that so long as the race-lotteries are tolerated there will be dirty work to do, men not above getting it done, and others not above doing it. But the others would look after themselves, and racing men are little prone to take human nature on trust.

All the facts then seem to point to the necessity, at all events the desirability, of having one Club, and managing it agreeably to the voting of the majority of the members. Society is not to be split up into impotent fragments because every man cannot have his own way. If municipal and free political institutions inculcate one lesson more than another which is applicable to social or corporate life in other forms, it is this; that minorities must submit to majorities until they can change places and themselves become majorities. We hardly know a better test than this of the capacity for corporate life in a community. Lions and bears have separate caves or lairs, and roam about alone in quest of tender young persons to devour in their own solitude. But man is social and gregarious, and his capacity for social and corporate life increases with his advance in real civilization. It is at times necessary to remain in a minority for the purpose of ultimately carrying reforms. Of course, if the opposing majority violates vital principles necessary to the very constitution and well-being of orderly society, men not only may but ought to resign any portion of power shared with such a majority. But, short of this, we hold that men elected to public offices should bear and forbear in order that the public good may be served, and not fly off at tangents on account of provocations which do not, after all, mean much more than apprehended defeat in a pastime. ABRAHAM LINCOLN'S advice was to keep on "pegging away," and men in minorities with a strong sense that they have right on their side, may well act upon it.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The odds are—we must be forgiven the phrase in virtue of its congruity—that the power over the course will revert to the old Club by the very force of circumstances. The course will not be abandoned; it must be managed by some corporate body; and who or what is this to be? The Club can hold itself together as a kind of passive nucleus, and when everything is in confusion its time will probably come again. The secret catch-phrase of the Jacobites, while James the Second was at St. Germains, was, "Box it about, it will come to my father," intimating that no reconstruction of the monarchy was possible without the return of the dethroned king. Fortunately for us all now, they were wrong; but if any forlorn persons are discovered in caves and the clefts of rocks whispering some mysterious phrases unintelligible to the outside world, they may be plausibly regarded as members of the Club waiting for the restoration of their corporate existence.

We shall not profess any particular regret—for we feel none—at the misadventure. Men may be dumb from indifference on certain questions, and yet not remain deaf; and it appears to us truly lamentable to think that any sport which professes to be regulated by a club of gentlemen should give rise to the kind of comment invariably bestowed upon racing in this place. That it is worse than racing anywhere else—community for community—may very well be doubted. That many men straight-forward enough in all the affairs of life pursue it here as elsewhere, and are most unfairly tarred with the brush which justly besmears others, we are quite persuaded. But the degradation of this fine sport has been steady throughout the world whenever it has passed into low hands, and this is an additional argument for tightening rather than relaxing the line which restrains those who regulate or engage in it.

It is presumed by many as a great indisputable axiom that there is some cleansing virtue in the admission into a given channel of a rush of dirty water. If this be true, we are immovably in error, and are so far behind the age as to believe that it only makes bad worse. We have not the slightest faith in the doctrine of the wisdom and virtue of the masses, and must leave the profession of it to those who profit most by the ignorance which accepts it.

THE BUTTERFLY.

(From the Japanese.)

I know a fair lady whose face is a treasure
That dazzles the eyes of all men with its ray,
But dreaming of naught but the passing day's pleasure,
She lives like a butterfly golden and gay.

In summer's full glory, when south winds are sighing,
And earth's slowest pulses with sweet passion start,
Amid the vast joy, in soft ecstasies dying,
It chooses a blossom and clings to its heart.

But when tempests gather, and dim the blue morning,
And mist-covered mountains frown over the plain,
It leaves the poor plant its bright hues were adorning,
And speeds with swift wing from the wrath of the rain.

Ah! light is the love that grows chill in dark weather,
It sings in the sunshine, but pines in the shade;
Unless we can wander with brave hearts together,
Go, find a new lover, my beautiful maid!

Kajin.

Correspondence.

TRAINING NOTES.

To the Editor of the "Japan Weekly Mail."

Dear Sir,—Notwithstanding the various troubles which have arisen in the sporting community as to the right of possession of the Race Course, training has once more commenced for the Autumn Meeting to be held on the 1st, 2nd and 3rd of November, and perhaps for the last time under the auspices of the Yokohama Race Club. It is needless for me to say anything on the subject of the matters in dispute, as they have been discussed elsewhere.

Anticipating the withdrawal from our turf of the "Blue and White" and "Russo-Mexican Stables," the Committee of the Shanghai Race Club have obligingly made four races open to Japan ponies *with an allowance of* 7 *lbs.*, and doubtless the owners of the above stables intend to take advantage of this concession. *Mohstotz*, *Lodi* and *Moscow* take daily exercise and have shewn up once at the course, but the Blue and White string can only be viewed from the stand by means of powerful field-glasses, taking their walks abroad in unfrequented hill paths. Owing to the withdrawal of those two popular stables, the training has hitherto assumed a most uninteresting air, in fact the "Tartan," "Yellow and Black" and the "Gold Tassel" stables are the only ones that have put in any appearance.

Mr. Morrison has come out stronger than usual, and has added two ponies of much merit to his string of last meeting, namely, *Wild Moor* and *Hereward*. The old ponies have gone through the summer very well, and although opinions are expressed that *Braemar* cannot stand another meeting, I think *Lintie* will be able to take his place should he be required to do so.

Mr. de Benter has increased his stable by *Ravenslee*, *Consolation* and *Uncas*, all very good ponies; but unfortunately the latter had a bad voyage over, and arrived here "much damaged by sea water, etc," and it is doubtful whether he will be fit to put in an appearance this meeting. The two representatives of the *Mongol* family look very well, but *South* is already reputed lame, which is rather early in the season for such rumour to gain ground.

Mr. Saville having purchased *Grasshopper* as stable companion of *Crusader*, ought to show to the front during the meeting more than once. *Little Fish* has been brought over by a new addition to our Race Club, and looks a fine powerful pony, his one fault being that already he has learnt where the gate is, and shows a decided tendency to stop thereat.

Bonito and *Grey Friar* have only once put in an appearance, but I hear they are to commence in earnest on Monday. There is at present a complete dearth of Japanese ponies, and although several very fast griffins are reported to be in Yedo, no one seems anxious to look after them. The retirement of the Doctor will greatly influence Japanese pony racing.

Up till now, the work has been very slow, and the attendance of members on the course early in the morning has been extremely limited. Next week I trust to be able to give your readers some interesting particulars of what is going on.

Yours, etc.,

TRITON.

Law & Police.

IN H. B. M.'s CONSULAR COURT.
Before RUSSELL ROBERTSON, Esq., Consul.
Tuesday, 5th September, 1876.
HIROKAWA MONOSUKE *vs.* G. K. DINSDALE.

The plaintiff in this case claims $82.50 for work done and materials supplied.

Defendant admitted indebtedness to the amount of $52.50, and was prepared to pay that sum.

Hirokawa Monosuke deposed: On the 15th May I made a contract with defendant to perform certain work for the sum of *yen* 107.50. Not only has this work been completed, but many other extra alterations &c., have been made, at the request of defendant. Defendant had offered *yen* 52 as payment in full; but I refused this as it would hardly suffice to pay the workmen.

To defendant: I mended the road three times after it was completed; I also constructed five cesspools, which are not mentioned in the contract. The drain worked perfectly well. My reason for only partly charging for extra work was, I thought that if I insisted upon payment of the rest you would be angry; and as it was merely a matter of 7 or 8 *yen*, I let it pass. I was to have planted some 300 trees. After eight were planted, I showed them to you: then you made other prosposals with regard to them, and other little matters which would give me a considerable deal of trouble. This was altogether apart from the contract. The account from the Kencho is correct.

G. K. Dinsdale, sworn, stated: My defence in this case is simple: I am perfectly willing to pay for work done, but as $30 worth of the work plaintiff agreed to perform remains undone, I dispute his claim to that extent. The balance $52.50 I have already tendered him, both direct and through H. M.'s Consul.

The plaintiff made, in May, two agreements to do certain work for $165, and it seems unnecessary that I should enlarge on them to any extent, as all the work stipulated for has been commenced though not satisfactorily carried out. I shall prove that it was expressely stipulated that all the work contracted for was to be of the best description, the sole exception perhaps being, that though all the paths were to be well made and good, those at the back of the house were to be less than the paths in front of the house in thickness, the latter being 6 in. thick. The only extra work the plaintiff has done to my knowledge is some bamboo fencing for which he has charged $2½, which is quite correct. I shall also prove that the work has not been properly performed, and that an expenditure of $30, at least, will be required to make it as it should be.

The plaintiff commenced the work fairly well, but it soon became apparent that he had undertaken more than he was in a position to perform. I heard complaints that he did not pay his men their wages regularly, and that he had even borrowed $20 from one of them on the plea that I had not paid the advances promised, and which I had paid. Materials, too, were not forthcoming as required. At last, a month after the agreed upon time for the work to be done in, it broke down altogether. I had paid the advances as due. The plaintiff then applied for money. I offered him $40, and being anxious to have the matter settled, subsequently $50, together with the option of abandoning the rest of the work receiving the amount in full payment, of receiving the balance when he had finished the work, or of myself completing it at his expense. These offers, which were in addition to the $2.50 for extra work, the plaintiff refused, at first saying he would finish the work after I had paid him the full amount, and later that the work was finished—the latter being apparently an afterthought. I declined to pay for the work in advance, as the plaintiff had already deceived me in another matter. A portion of the plaintiff's agreement was for trees. On the bulk of these being brought I objected to them as deficient both in size and quality. The plaintiff then promised to bring other trees to make up for the inferior quality of those brought, but he has not kept his promise. The plaintiff's account is correct in its total, allowing for deduction for incomplete work, but it is incorrect in detail. Sundry items are omitted yet the total is made to agree, which shows that the plaintiff is as careless in his accounts as with his work. Of the $30 work remaining to be done, $25 worth are vouched for by Mr. Smedley's report. The other $5 is on account of one tree and 27 *tsubos* of grass now dead, and which were at the plaintiff's risk.

Kondo Zenkichi, stated:—I am Mr. Dinsdale's boy. I remember this contract between defendant and plaintiff; I interpreted on the occasion. The contract was for $150; it was to be carried out according to plaintiffs' specification. The matter of the gate approach was not spoken of at the time of the contract, but some time afterwards. My opinion was that this was to be included in the $150 contract. Plaintiff agreed to perform the work according to specification. Everything was to be of the very best, with the exception of the paths at the back of the house. These are not so good as contracted for; the paths on the left hand side are inferior to those on the right.

Cross-examined by defendant.—You agreed to allow all the trees plaintiff brought to be planted; and plaintiff thanked you for the consideration. Plaintiff promised to make it better when you complained of the work. The drains constructed in the kitchen are not good: the water runs from one side to the other. Plaintiff was paid *yen* 52.50, I believe.

Plaintiff said:—All the last witness's statements are lies. That I was to do everything in the best style is also a fabrication. The first estimate I gave was $180, but I had to come down to $150 because defendant considered the former sum too high.

John Smedley, sworn, stated: I surveyed the work done, and consider it incomplete and inferior. I think a deduction of $25 is quite fair: that is for some stones for the gate approach, gravel for the walk, &c.

I did not survey the grass. I suppose wooden sides for the approach to the gate would cost $1.50, and stone ones, $5.00.

Defendant:—Plaintiff was not present at this survey; I had it made merely to confirm my own view of the inferiority of the work.

It was now explained to plaintiff what the above mentioned approach was, and he then stated it had been included in his measurements of the roads and also in the estimate.

Verdict for plaintiff for $57.50.

Wednesday, 6th September.

Charles Esdale was charged with having assaulted Alfred Cayeux, a steward, at the "Grand Hotel," on the 31st of August.

Prisoner pleaded guilty.

Alfred Cayeux, sworn, stated: On Thursday afternoon, as I was playing billiards in the "Grand Hotel," prisoner came to the side door of the billiard-room, calling to me to come and speak with him. I told him I would have nothing to do with him, and if he wished to speak to me he could come inside. He came up to me, asking what I meant by kicking Mrs. Ford's little boy. When I denied having done this, he called me a liar, and hit at me. I ran away, but he came after and struck me in the eye.

Cross-examined by prisoner: You did not kick me as I went out by the door, though you tried to. You first hit me in the face. I did not return your blows. I never tried to hinder you from leaving the hotel.

Had no witnesses to call.

Charles Esdale, sworn, deposed: Mrs. Ford, my sister, had told me that Cayeux had been annoying her greatly by spreading disparaging stories about her in the hotel, and ill-treating my nephew, so I went to have a quiet talk with him. He would not come out of the billiard room so I went in and asked him what he meant by kicking and abusing Mrs. Ford's boy. He denied ever having done so, and I struck him in the face and when he ran to the door I helped him out by aid of my foot. He came back and attacked me in return; we closed, as I did not want him to get the upper hand. He struck me with the butt of a billiard cue, but I got clear of him, and then he ran outside crying for police, but none were to be found. As I was leaving the hotel he came crying to me to stay inside till the police came, but he could not force me I admit having struck the first blow. I have no witnesses.

Fined $2 and costs.

IMPERIAL JAPANESE CUSTOMS *v.* Captain F. CRIGHTON.

This was a summons against defendant for neglecting to enter his ship, the *Gaucho*, within the prescribed time.

Mr. Dickins appeared for defendant; Mr. Lowder for the prosecution.

Mr. Dickins objected to the charge on account of its want of preciseness. He said it mentioned neither time nor place, and, indeed, was altogether too general.

Mr. Lowder stated that the circumstances of the case were quite familar to his learned friend; still he would cite them. The *Gaucho* arrived here on the afternoon of Thursday, the 31st. September, and is not yet entered.

Defendant pleaded not guilty.

Mr. Lowder, in opening the case said:—This charge is brought under the first rule of the Trade Regulations for British shipping in Japan. It is simply a test case, for there have been several disputes before this with regard to the point in question. I shall prove that the ship *did* arrive at the date given, that the vessel

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is within the limits of the port, and that the captain has not entered it. I call as witness,

Ariyake Shozo, second-class tide waiter: I know the *Gaucho*; she arrived here August 31st at half past one o'clock. I went on board to make enquiries. I could not see the captain at once, as he was taking a bath; but I saw him when finished. I told him I was from the Custom House. He asked what occasion there was for me to board her when he had only come from Shinagawa. I replied I believed it to be according to Regulations. He said the ship would most likely sail on the morrow; he was not certain, because it depended upon the owners. The captain entered the ship in the boarding-book. (Book produced and entry shown.) The captain entered it himself.

Cross-examined by Mr Dickins:—It is my duty to board ships and have them entered in this book. I knew that the *Gaucho* was within limits because she had entered within the line from the light-ship to the Tsurumi river. This limit is mentioned in my instructions. I have no opinion of my own on the subject. (Document produced.) That is a permit to go to Shinagawa to load rice; it bears the Customs' seal. I cannot speak as to the action taken by the Custom House; I merely followed out my instructions. I do not remember much about the *Irma*, though I have heard it spoken about. I did not visit the *Gaucho* a second time. Had the vessel been outside, it would not have been my duty to board her. I looked from the hatoba with a telescope as the *Gaucho* was coming in, and as she crossed the line I know she was well within limits. I could easily judge this from the hatoba.

Muraura Zoro, stated: I remember the *Gaucho*; I boarded her at one o'clock on the 2nd instant by order of the head tide-waiter. I went to remind the Captain that 48 hours were about up, and advise him to re-enter the ship. The Captain said he was very busy; he had no mate and was taking in provisions. He asked me to go to Mr. Kirby, the owner. I said I would not. I advised him to re-enter, because there was a penalty for neglecting to enter vessels within the time specified.

R. De Nully, sworn, deposed: I am employed by the Japanese Customs. I remember on the 2nd September I was instructed to call on Mr. Kirby and ask him to enter his vessel. In reply, he said he had given the Captain special instructions to keep outside the port-limits on his return from Shinagawa. He said she was only taking in provisions.

Mr. Lowder said this closed his case for the present if the case came under the Summary Procedure Rules, and if these rules were to be acted upon. On this point he wished to have the opinion of the Court.

His Honour assented to this, saying that if any evidence was sprung upon him by the defence he had the right to rebut it by counter evidence.

Mr. Lowder then summed up the evidence, contending that he had proved all he said at the beginning, and finally asking the Court to inflict the full penalty of $60 per day.

Mr. Dickins, in opening the case for the defence, said that the charge had not been proved, and therefore asked that the case be dismissed. It had not been proved that the vessel was inside the limits of the harbour; and this was really the issue of the charge. The only evidence brought forward to prove this was that of Ariyake, who no doubt believed what he stated. He said he could see from the hatoba that the vessel was within the limits, which he defined as extending in a straight line drawn between the light-ship and the Tsurumi-gawa. This, of course, was morally impossible. Anyone wishing to judge of the real position of the ship with regard to its distance inside or outside of the given line, must go on board the ship, and take the bearings of the two points. But it has not been proved that such are the limits. No agreement on this point has been arrived at between the Japanese Government and the treaty powers, so that although he had an answer to the case on its merits, he should request that it be dismissed, since it had not been proved that the ship was within the limits of the harbour.

This His Honour declined to do.

Mr. Dickins then continued: The Japanese Customs allowed the vessel to go to Shinagawa without clearing. The crew deserted so that the vessel was unable to leave within the 48 hours; and Mr. Kirby then offered to re-enter the ship under protest. This was refused. Afterwards, when he offered to enter without protest, he was again refused because he had not the necessary documents from the Consulate. The Consular people could not give him these because the ship had not been cleared.

Mr. Dickins now called as witness.

Benj. Orchard, master of the British ship "*Lothair*," who was sworn, deposed: I should say the *Gaucho* is 2½ miles from the English hatoba; but it is impossible to tell from there if the ship is outside of the line from the light-ship to the Tsurumi-river.

Edward Charles Kirby, sworn, stated: I am owner of the *Gaucho*, and Captain Crighton is master of her. She was loaded with rice at Shinagawa, I cannot say on whose account, nor do I know where it came from. The *Gaucho* went to Shinagawa about five weeks ago, and I know she was cleared at the Custom House before going there. She went there by permission of the Government. She did not clear at the Consulate, because the captain was informed that it was unnecessary.

My orders to the captain were, to anchor outside the harbour limits on his return to Yokohama; he says she is outside. According to the captain these limits are a line drawn from the light-ship to the Tsurumi-gawa. He took bearings of his position: these are marked on this chart; they were taken yesterday. After the ship came back here a Custom House officer called upon me, stating that the ship ought to be re-entered. That was on Saturday the 2nd instant. I replied that it was unnecessary to re-enter. He said he did not know anything about that, he was only speaking according to instructions. I went to the Consulate on Monday afternoon to ask advice as to what I should do, and Mr. Hall advised me to re-enter the vessel and pay the money under protest. I then went over to the Custom House and instructed Captain Scott to do this. He went, and then returned to inform me that they would not receive the money. I asked him to re-enter without protest. He informed me, after applying, that it could not be done without the necessary documents from the Consulate. I asked Mr. Hall for these but he could not give me them; he said the vessel already had a document to that effect, and the ship had not been cleared. I again called at the Consulate yesterday, wishing to enter the ship in consequence of having to discharge some cargo. Mr. White told me she could not be entered as she had not been cleared.

Mr. Dickins now enquired if the prosecution was going to call witnesses in reply, because, in that case he would not sum up till after the evidence for the prosecution.

Mr. Lowder objected, stating that he intended calling witnesses, and if Mr. Dickins was to sum up at all he must do so now.

The objection was overruled.

Mr. Lowder then called Capt. D. Scott, who was sworn and stated: I know the *Gaucho*. I went on purpose to Kanagawa, and, standing on the bridge which crosses the river there, saw distinctly that the *Gaucho* was within the limits of the port, that is to say within the line from the Tsurimi river to the light-ship. I judged her to be at least a mile and a half within. I have been to sea for forty years, am a master mariner, and can judge distances.

Cross-examined by Mr. Dickins: I took the bearings with my eye. I do not see that compasses were required; I did not use them. I know what a degree is—at least I should. I have heard Mr. Kirby's statement with regard to the *Gaucho's* clearance when she went to Shinagawa. It is usual to get a permit from the Custom House to go to Shinagawa. I have seen a notification in the office of the Lighthouse Department at Benten, defining the limits of the port by a line drawn from the light-ship to the Tsurumi river.

Re-examined by Mr. Lowder: When a ship leaves for a foreign port, a tide-waiter goes on board to see that the Customs and Consular papers are in order; at least such used to be the custom in 1869, when I was in command of a vessel myself.

Adjourned till 2 p.m.

Court re-assembled at 2 P.M.

Capt. Scott, recalled, to Mr. Lowder: I did not go a second time to the Custom House to re-enter without protest.

Cross-examined by Mr. Dickins: Mr. Kirby asked me to do so. I came over to the Consulate with him again, and saw Mr. White; it was then decided that I should not go back, because the Consular documents were not forthcoming. It did not occur to me to go to the ship here again.

Mr. Yanagiya, Superintendent of Customs, answering in Japanese at his own request: There has been application made to re-enter the *Gaucho* at the Custom House. On the 4th instant Captain Scott came to me with an entry for the *Gaucho* which I refused to receive, as he brought no documents from the Consulate to show that the vessel's papers were all in order there. The reasons I had for refusing were: because he did not have the Consular Port Clearance, because the captain of the vessel did not appear in person, because your Honour had just at that time written, complaining of my having allowed vessels to be entered without having gone through the necessary forms. Captain Scott did not come a second time to me. Yesterday Mr. E. B. Watson's clerk came and put in an application to allow some rice to be landed, but I refused

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Cross-examined by Mr. Dickins: To have received payment for the entry of a ship under protest would not have done any harm: it would have been an irregular proceeding, not provided for by the rules. Had I been aware that this protest had no meaning whatsoever, I might have granted it. But the reason given for refusing to grant the entry was the absence of the Consular certificate. No cargo can have been landed since the arrival of the *Guacho*. I think that there are no definitely fixed limits to the port. A line from the light-ship to the Tsurumi river is accepted as that limit. Were a ship to anchor outside of those limits, but within sufficient distance of Yokohama that provisions could be shipped, cargo landed, or any business whatever transacted, the Customs' authorities would consider themselves right in enforcing entry.

John White, sworn, stated: When Mr. Kirby called at 10 a.m. yesterday, the Consul was in Court; he called again, the Consul was still busy. He wanted to enter the *Guacho*. I referred to the Consul who instructed me to tell him that in order to enter the ship he must clear it first.

Cross-examined by Mr. Dickins: When Captain Crighton asked to clear for Shinagawa, I told him to go to the Customs.

Mr. Dickins in summing up, said: In the first place I must ask the Court to consider the hardship of this case if the view of the opposite party should prove the right one. The entry was refused when applied for, and the Customs had no cause for not allowing the payment under protest. Another reason for refusing to grant this entry was the absence of Consular papers; these my client could not obtain. According to Capt. Crighton the Consular certificate has been already deposited at the Custom House. Where could the ship clear to? Some cargo had to be discharged, some provisions taken in, and part of the crew to be engaged, so that he could not leave. The Customs authorities prevented my client from complying with the rules, and now they demand a fine of $60 per day for an infringement of these rules, in neglecting to enter his ship. The ship was allowed to go to Shinagawa to load rice, and had she been properly cleared at that time, this difficulty would probably never have occurred. As to the limits of the port, it is probable that the Captain anchored outside. But what are the limits? The Superintendent says there are no limits; how can it be proved then that the ship was inside the port limits? The usual limit appears to be the common anchorage, and it is easily seen that the *Guacho* is far outside of that. On these grounds he asked that the case be dismissed. Captain Scott would no doubt be most happy to give neutral evidence as he was in several ways connected with the Custom House and mercantile firms here. His method of taking bearings from the Kanagawa bridge is most unreliable and imperfect. Even if the Court should judge that the rules had been infringed, the ship could only be liable for the penalty of one day, as the owner both on Monday and Tuesday endeavoured to enter the ship.

Mr. Lowder, in reply said: My learned friend says that the infringement has not been proved. Now if any case has been proved, this one has. The Japanese authorities were very liberal in this matter, for when the *Guacho* arrived they sent a special messenger on board to warn the captain, who said he was busy and could not get ashore. Mr. Kirby told the messenger who was sent to him that he had ordered the captain to remain outside to save the fees. On the Monday he must have heard of the action being taken by us, for he attempted to enter the ship. The form for doing so is first to deposit the ship papers at the Consulate, then to produce the certificate which is granted in the Consulate at the Custom House; in clearing exactly the reverse. I can, in the same manner that my learned friend has taken to prove that the ship was within limits, because it is granted there were no limits, retort by saying he has not proved there were limits. He says the anchorage is the usual limit, and I contend that the vessel is in the anchorage, in communication with the shore, and wishing to discharge cargo. According to regulation the captain should have made entry. Captain Scott came in the name of Mr. Kirby, not in that of the captain, and the superintendant was not then aware that Mr. Kirby was the owner.

JUDGMENT.

About the 4th of August, the *Guacho* leaves for Shinagawa with the permission of the Custom House. She returns on the 31st of August. I hold the same view as Mr. Yanagiya with regard to the limits of the port; the vessel should have entered, as she was enjoying the hospitality of the port. As to the question of time I find that the ship neglected to enter for 24 hours from Saturday, at 1.30 p.m., till Monday, at 1.30 p.m.; I except Sunday.

Verdict in $60 and costs.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

Monday, 4th September, 1876.

Robert Killon, a seaman on board the U. S. S. "*Tennessee*," was charged with being drunk, importuning people in the street and refusing to pay a *jinrikisha* man.

Prisoner acknowledged having been under the influence of liquor, but said he did not remember having disturbed anyone. He was going along the street when a Japanese policeman arrested him.

Kato Masarushita, a Japanese constable, deposed: I saw prisoner come out of a Japanese liquor store in Benten Dori yesterday, and go staggering along the street, running against people and frightening them. Some ran out of his way and he pursued them, brandishing a little stick he had picked up somewhere. I do not believe he meant any harm, but I had to arrest him for annoying the Japanese passengers in this manner.

A *jinrikisha* man said he had pulled prisoner about from 10 o'clock Saturday morning till last night at five. He had only received 50 cents and a breakfast.

To prisoner: Your did not give me three *boos*, you gave me five 10-cent pieces and my breakfast yesterday morning.

Prisoner stated: I came on shore on Saturday morning and rode about in a *jinrikisha* from place to place till I was locked up last night. I paid the coolie seventy five cents. I do not recollect having meddled with anyone in the street. I was drunk.

Fined $3 or five days' imprisonment.

James Glesson was charged with being drunk and incapable.

Sergeant Loxton deposed:—I found prisoner lying in the street this morning, dead drunk.

Prisoner pleaded guilty. He said he belonged to the "*Tennessee*" and came on shore on Saturday; having met some shipmates they all went and got drunk. This was his first charge.

Discharged with warning.

Joseph McCloy, seaman on board the *Kearsage*, and Gustav Smith from the *Tennessee* were charged with drunkenness.

Sergeant Loxton stated: I found prisoners lying drunk in the street and brought them to the lock-up.

McCloy said he had gone up to see Yedo when he got leave from his ship, and had met a shipmate when he returned to Yokohama, with whom he had gone to his boarding-house. They had some drinks between them and then prisoner made for his ship. Does not remember anything further till he found himself in the station-house this morning. Had been before his Honour once before, about a year ago, when he was on board the *Saco*.

Deputy Marshal Elmer remarked that he had met Smith the evening before. He was staggering along the street evidently under the influence of liquor, but disturbing nobody. He was quiet, and seemed very good-natured.

Both were discharged, his Honour remarking that the Flag-ship would have anything but a pleasant name attached to it, if its men behaved themselves in so depraved a manner. He could not understand what pleasure the sailors who came on shore here could find in imbibing such poisonous liquors and frequenting such low haunts. They (the prisoners) had only taken enough to make themselves stupid, and he asked them to kill themselves altogether next time, (as very little more would suffice to accomplish it) rather than come bothering him with so many of their drunken squabbles. He was tired of them.

Wednesday, 6th September, 1876.

The people of the United States *in re* A. Christian *vs.* James Cook and James Cavanagh.

Messrs. P. A. Ramee and F. R. Wetmore were drawn as Assessors.

Mr. Dickins, the Counsel for defence, being unable to attend, the case was adjourned till to-day, at 10 a.m.

Thursday, 7th September, 1876.

The prisoners were charged with having, at Mi-saki, on the 31st of August, committed assault and battery on Abraham E. Christian, a pilot, with intent to kill

His Honour, before opening the case, said that Mr. F. R. Wetmore, who was drawn as an assessor yesterday, had pleaded pressure of busines and having just finished with a long case in which he had been assessor. He asked Mr. Dickins, who appeared as counsel for the prisoners, if he objected to Mr. C. P. Hall taking the place of Mr. Wetmore.

This was not objected to; and His Honour then proceeded to

Original from UNIVERSITY OF CALIFORNIA

swear the assessors appointed, Messrs. P. A. Ramee and C. P. Hall.

Edwin Wheeler, sworn, deposed:—I am a practising physician in Yokohama. I have examined the plaintiff Christian, and have found four contusions on his body; on his hip, arm, side and neck, apparently done by a blunt instrument, I should say seven or eight days ago, for they have a yellowish colour now.

Edmund Christian, sworn, stated:—I am a pilot and have been so for seven years. Mr. Cook, one of the accused, was my partner. I am 47 years old. I was at Misaki at 10 o'clock on the 31st August. Just after I had a wash, about half past ten, I went outside of my house and met Mr. Cook, who bade me good morning. He asked what I had been doing in Yokohama, and if I had collected a bill. I told him I had not done so. I had gone up past Sagami the night before. I had nothing to keep me in Yokohama. I said it was better to be there in Mi-saki than in Yokohama, doing nothing. After some talk about a man having deserted from his boat, I invited Cook and Cavanagh up-stairs. They went up. That was in the house in which I was living. I told my servant to bring in some Japanese *sake*, and we had a drink. Cook asked me if I wanted a settlement. I said "yes." I had written to him before asking him to square up our books, to see how we stood. He acknowledged having received the letter and said he was as anxious as I to have them put right. Cook then said that I claimed the boat and house. I denied this and nothing further was said. About half past one we all had dinner at my house, and were all friendly. A little after dinner Mr. Cook gave the servant a Yokohama Bank 85 note to go out and get changed. He brought the change back, and handed it to Mr. Cook. When he received the money, Cook ordered 10 cents worth of liquor, which we drank. About 4 o'clock the boy came with his clothes from my boat to go to Cook's, we all went down stairs and I handed Cook a dollar to give the boy, and I said I would charge this in the account. Mr. Cook put it in memorandum. They started along, and I followed to the ferry which crosses the creek. When we got up there Cook said "Let us have a drink before parting." We went in to a liquor store and had *sake* all round. After coming out, Cook said to Cavanagh, "We will not walk overland but take a boat. It will only cost a *boo*." They went back again to house with me and ordered a boat. The boat was ready and waiting. Cook proposed having more drink, and drew out money: I said I should pay, as he had no *satsu* to spare. I reminded him the boat was waiting, saying he would be late. He said "All right let us have another drink." I begged to be excused as my bath was ready; and it was growing late and I was tired. On that, Cook and Cavanagh walked off to the shore, and I went and had my bath. Whilst I was in the bath I heard them talking to each other. I got up and dried myself, and sat down on the raised part of the floor, on the Japanese mats. Cook came in and sat down on one side of me, and Cavanagh on the other. Cook caught hold of me, giving me great pain, I said "You are trying to injure me!" Cook turned round saying "You mean fight?" I said "No sir, but I won't allow any one to grip me like that. I walked upstairs, and taking my stick left the house. (stick shewn) As I passed by, Cook said "You've got a stick, have you?" I replied, "Yes! and I am entitled to carry it." I went down to the shore and sat down for five minutes. I heard them talking, and then stop suddenly. I thought of no danger, and imagined they had gone. As I returned to the house and whilst passing the corner of the one next to mine, I met Cook. I saw a knife in his hand. He said "What have you got to say against me? Those were his very words. I replied "nothing." He them made a feint with his left hand, striking me with the knife in his right, saying "Take that you———." He hit me on the left hip. I have the cut there now. I kept off and struck him with my fist saying "what do you mean?" I walked away to my house, and as I reached the door Cavanagh was standing just inside with his hand at his side, leaning against the doorpost. He cried "He could not do it? D—you take that," and struck at me with the knife and cut me in the left side. My servant sang out, "he has got a knife on him." I walked upstairs without speaking. Just as I reached the landing I saw Cavanagh following. He was coming up. I said "do not come up, this is my private house and I won't be disturbed again to-night." I took the stick with which we bar the door at night, and struck him on the head with it. He still persisted and I told him he get down; and struck him in the face. Again he persisted and I kicked him under the chin with my foot and he fell down stairs. After that I pulled the stairs up, and I discovered I was stabbed. Then, to avoid further attacks. I left by the window and crossing two roofs entered another house. I was bleeding more or less till next morning. I started for Yokohama at eleven and arrived at six in the morning. I came in a pilot boat. I went to the Consulate and them to Dr. Eldridge This is his certificate. After I escaped to the other house I heard them talking about me. I could not hear distinctly what they said.

Cross-examined by Mr. Dickins: I have been partner with Cook for 3 years. Cook never struck me before. I suppose I am still partner. I have had no conversation with him since the row. I saw Cavanagh some 8 years ago. He never had occassion to strike me before. The *sake* was brought in a tub, as 10 cents worth, but not full. They hold about 5 tumblers full. I was no merrier after the drinks than I am now. Cook and Cavanagh appeared to be slightly excited even from the first. There was no reason whatever for this attack, on my part it was without provocation. I was struck with a pocket knife. I had my bath down stairs in my own house. When I same out I sat down on the mats in the same room. I heard then talking down by the sea shore. They came and sat down on either side of me. Cook tried my strength by grasping my hand. I walked out down to the beach, leaving them in the house. The time we had the last drink was about six o'clock. Not twenty minutes after came the attack. The first time I hit Cavanagh the stick broke and I then hit him with the stump. I kicked him under the chin down stairs. The first time I knew I had been stabbed was when Cavanagh struck me and the blood began to flow. At that time Cook was about 22 paces from the house. I cannot say if he could have seen what passed. At the moment Cook struck me Cavanagh was leaving against my door. I was alone with Cook when he struck me. I was aware they were about the house until eight o'clock: I could hear them speaking though not distinctly. I will not swear that they walked outside till 8 o'clock. We drank out of tumblers. We had about five or six tumblers.

To Court: I could not have seen Cook when Cavanagh attacked me on the stairs; he might have been there.

Oyasu, a Japanese woman: I live at Misaki, my father's name is Ju. I live at his house. I know Christian very well. I know Cook and Cavanagh also. I saw some of the quarrel between them. By Christian's orders I got 10 cents worth of *sake*, and Christian and the others drank it. Then they had dinner made ready and took it about 1.30. Then they had more *sake*. It was bought at four different times, 40 cents worth altogether. About 4 o'clock the prisoners made out they would return to Mat-suwa and asked my father for a boat. They were both under the influence of liquor. They did not go. In the meanwhile Christians had a bath. After his bath he went out for a little. I asked if he wanted slippers, but he said "no—he was going to sleep when he came back." When he was coming back through the doorway Cook struck at Christian with a knife. I saw the knife distinctly. He struck him in the hip holding his left hand before his face. After Cook cut Christian he came inside the doorway where the bath was when Cavanagh pulled out a knife and made a swinging cut at him. When Christian returned from the beach and when Cook attacked him, Cook had one foot in the doorstep. After Cavanagh struck Christian my mother tried to get him upstairs. While Christian was going upstairs Cook ran outside and got a clothes stick, and mother and father tried to stop him coming in. He struck my father and mother. I was upstairs with Christian at that time and we pulled up the stairs because Cook was trying to ascend. I and Christian went by the window and reached another house: we did not want to have any more trouble. Cavanagh came half way upstairs with a knife in his hand. Christian kicked him down stairs; he struck him with a stick first, only once. He broke the stick. He did strike him with the remaining part. Christian had a great deal of blood on him and I wiped it off with a towel. We examined the wound when we got to the other house and when I offered to get medicines he refused to have them. He did not like them. I bound up the wound with a towel, and Christian left for Yokohama about eleven o'clock. Cavanagh and Cook stayed about the place for about an hour after the row. They were in my mother's house, and I could hear them ask in Japanese where Christian was. I could see them go upstairs and I know they looked all about, under the bed and everywhere. I did not see them after they came down stairs. It was a foreign bed-stead. We were in the house directly behind ours. I think Christian was a little under the influence of liquor, but he was not drunk.

Cross-examined Mr. Dickins: I am Christian's servant. I came up with Christian in the same boat to Yokohama. I have been staying at the Tennessee House No. 136 in the day time and sleep on board the pilot boat. Christian had slept at 172 Bluff for two nights. We have spoken together about this case but have not made any agreement about it. Christian stood near the water

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

when he went out of the house; he returned immediately. He wore pyjamas but no shirt. I bought 40 cents worth of *saké* for them, that would be about two *shō* and a half—say a quart and a half.

I was quite close to them when Cook struck Christian. I saw Christian strike Cook with his fist afterwards. Christian said nothing to Cook, that I heard. Cavanagh attacked Christian immediately afterwards. Cavanagh stood leaning against the door when the stairs were pulled up. I came back to the house about half past ten and let down the stairs again.

To Court: Cook and Cavanagh raised themselves up stairs by their hands. My mother saw them, and told me afterwards.

His Honour now read a certificate from Dr. Eldridge, who had examined Christian's wounds on his arrival in Yokohama. It mentioned four wounds, apparently done with a sharp instrument.

Court adjourned till 2 p.m.

Court re-assembled at two o'clock.

Oyoshi a Japanese woman, cautioned, stated: Christian came to Misaki about 10 o'clock on the 31st August; Cook and Cavanagh came about eleven. I saw the trouble. Christian had a bath, afterwards going down to the beach to cool himself. I saw Cook strike Christian, and Cavanagh do so afterwards at the entrance to the house. I do not exactly remember on which side Cavanagh stabbed Christian. I am a little deaf and did not exactly hear what was said. I saw Cook rush round the house with a clothes-pole, and attempt to mount the stair. I saw the wounds on Christian afterwards, and begged to bring medicines for him, but these he refused. I do not know if Cook and Cavanagh got upstairs afterwards; I was not in the house if they did.

Cross-examined by Mr. Dickins: I saw Christian strike Cavanagh first with the whole stick, and after it was broken with the stump.

Suzuki, cautioned: I live in Misaki. I saw the row amongst the pilots. After Christian left his bath he went down to the beach; when returning Cook struck him with a knife, which I saw. It cut him in the leg. Cavanagh was standing under the stairs, beside the bath tub, and cut Christian when he entered the door. Christian took up the stick which barred the door, and hit Cavanagh with it. It broke, Christian then ran upstairs, Cavanagh getting up half way after him. Christian knocked Cavanagh down stairs, but I cannot say if he kicked him or only pushed him down. Oyasu then pulled the stairs up, and ran off. Cavanagh ran out, and Cook came in with the big stick, and tried to go up stairs with it. I and my wife attempted to keep him down, begging him not to go upstairs and create more trouble. He struck us both. Cook and Cavanagh walked about outside for the space of half a Japanese hour. They went up stairs and looked round; they got up by climbing up the woodwork. The ceiling is about six or seven feet high.

Cross-examined by Mr. Dickins: I am husband of the last witness, father of Oyasu and in the service of Christian. I came to Yokohama yesterday, and I slept on board Christian's yacht. I did not see him last night, but once this morning.

To Court: I came to Yokohama by order of the Kencho.

Kiu, a *sendo*, stated: On the day of this trouble Christian called me out of his boat to go into Cook's. Christian gave me a dollar out of his pocket. I came on shore about four o'clock to go round to Misaki, and found Cook, Christian and Cavanagh drinking *saké* in Christian's house. I did not see any of the fight. I was in one of my relative's houses not far from Misaki ta four o'clock.

This closed the evidence for the prosecution.

James Cook, sworn: I am a pilot and partner of Christian. On the 31st I went across from to Misaki to see Christian. He had promised to take Cavanagh in the boat against my consent; and I was in want of a *sendo*. Cavanagh came with me. It was very hot and we went and had some *saké*. Afterwards we had dinner. I asked Christian if he intended taking Cavanagh in the boat with us; he said "No." Cavanagh then had a talk with him, I don't know what about. After dinner we had another cup of *saké*, talking in a friendly manner all the time. We then walked on towards the creek ferry, where we again had a drink. The latest hour I remember was six o'clock. I must have been greatly under the influence of the *saké* for I do not remember the time. When I regained my senses I was in a paddy-field. I do not remember having had angry words with Christian. I have a penknife. It was in the boat at the time. I do not remember Christian taking a bath, I did not see him in one. I did not see Cavanagh strike him. We had had no words and there was no reason why we should have attacked him. We have quarrelled several times, when we were under the influence of *saké*. Christian drank with us fairly. The Marshal has my knife. (Produced.) I never stabbed a man in my life; that is my knife.

James Cavanagh, sworn.—On Thursday Mr. Cook told me there was a pilot-cutter coming in. We crossed to Misaki, first looking at the time. We took 48 minutes to go over. We got to Misaki about 12 o'clock. We went into a *saké* shop and had a drink; then went to Christian's house. I had a conversation with Christian; we sat down by side each other on the stones. There was some talk about me going in Christian's boat. He denied he had said I was going in his boat. We had two cups of *saké* each, then had dinner. Afterwards we had more *saké*, then I went outside for a walk in order to give them an opportunity for private conversation. I returned and we had more *saké*. I now wanted to return became it was growing late. When we reach the creek we had another tub. Cook then proposed to return by boat, so we came back to order one. I began to hurry but Cook told me not to, and suggested more drink. We now reached Christian's house; but had no words. I followed Christian upstairs, and the first thing I knew was a crack with a Penang lawyer. I advanced and received another blow. I pulled out my knife in self-defence. I did not see Cook strike Christian, nor did I see the letter in his pyjamas.

To the Court: This is my second charge for drawing my knife in this country.

Mr. Dickins said this was all the evidence he had, and then summed up saying: The complainant in this case charges the prisoners with having stabbed him with a knife, with attempt to kill. This is extremely improbable as they had been very jolly together all the afternoon. It is not my part to prove that the attack was not made; if they have been guilty I ask that the charge be modified to that of a common assault. It is not necessary to remind the Court how *saké* affects people, and the three had been drinking all afternoon. The witnesses brought forward by the prosecution are in every way interested in the case, the first is the servant of the prosecutor, the second, the mother of this person and the third the latter's husband and in the service of the prosecutor. And it is quite evident that they had been drilled in their evidence; they were most ready to unburthen themselves, and most precise in regard to time and place.

Christian says he went to the beach for five minutes; the girl states he returned immediately to the house. In a case like this we must not put the greatest value upon gross discrepancies in the evidence but must pay more attention to the minor faults. And in several other items does her evidence disagree with that of the others. That Cook should have attacked Christian without the slightest provocation in the manner mentioned, is highly improbable, and there is no evidence to prove that he really did commit an assault. It cannot be denied that Christian has been attacked, since your Honour has the statement of Dr. Wheeler. But I trust that under all the circumstances of the case, the discrepancies in the evidence for the prosecution; the impossibility of determining who commenced what was a sort of general row, due to excessive drinking, the Court will give the prisoners the benefit of the doubt and absolve them from the accusation hanging over them.

The Court adjourned for consideration and returned to give the following.

VERDICT.

It is the opinion of the Court that the charge of assault with a blunt weapon, with intent to do grievous injury, is clearly proved. You are therefore sentenced to six months imprisonment; at the expiration of which term I shall recommend the Japanese Government to deport Cavanagh.

His Honour thanked the learned counsel Mr. Dickins. When a practising lawyer leaves his office to defend such a charge as this without hope of recognition, it is the least that can be done to offer him the thanks of the Court.

Friday, 8th September, 1876.

THE PEOPLE OF THE UNITED STATES *in re* J. M. HACKETT *versus* MICHAEL LAWTON.

This was a charge, against Lawton, of assault and battery on the person of John M. Hackett on the evening of the 6th instant in Homura Road.

Prisoner pleaded not guilty.

John M. Hackett, sworn, deposed: I am a paymaster's yeoman on board the U. S. S. *Yantic*. I recognise prisoner, though I never saw him before the night of the row. On that evening, between nine and ten o'clock, I was sitting in a *jinrikisha* talking to the man Williams, who was leaning over the *jinrikisha* at the time when prisoner came up and struck me in the face, knocking my

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

hat off. I got out and went over to a house on the other side of the road. I had never had hard words with prisoner before. I do not remember what I was talking to Williams about. Prisoner asked if I had called a woman in that locality out of her name; this woman had accosted me in the street shortly before. She lived at No. 106. Prisoner said she had gone into the house crying.

John Williams, sworn.—I am a seaman on board the U. S. S. *Kearsage*. I saw the row on the 6th instant. Prisoner and I and some of the *Kearsage* men were drinking in the "California Saloon," when a woman who belonged to the place came running in saying a man had insulted and struck her in the face. I went to the door and told Mr. Hackett, who was sitting in a *jinrikisha* that he had better clear out or there would be a row. Just then there was a rush of five or six men out of the house, and while I leant over Mr. Hackett one of them hit him in the face. I could not see prisoner when I turned round. I walked over as far as the "Shamrock" with Mr. Hackett, and as I did not return to the "California Saloon" I did not hear more of the matter.

To the Court.—I have talked once since then about this row with Mr. Hackett. He asked me if I had seen prisoner strike him. I said "No!" I am not aware that I said to the Marshal I had seen him do so. I was drunk when arrested to appear as witness, and do not know what I may have said.

Deputy Marshal Elmer, sworn stated.—The night before last and yesterday morning I had conversations with Williams. Yesterday I went to ask him what he knew about this affair. He said he saw prisoner run out when the girl came in crying, and strike Mr. Hackett.

Prisoner said he had been discharged from the *Tennessee*. He had nothing to say against this evidence except that he had done what any one else would when a lady is insulted.

His Honour said a female in distress was a very interesting creature and no doubt prisoner was a most gallant fellow, still he must sentence him to 10 days' imprisonment. Should Mr. White find an opportunity in the meanwhile to ship him off he would be allowed to go.

James Parks was charged with being drunk and incapable.

Prisoner pleaded guilty.

The evidence of police constable Hazzel was taken, who said he had found prisoner lying in the street opposite No. 126.

His Honour said: I sent you to the Temperance Hall yesterday, but it does not seem to agree with you. I will keep you out of temptation and in a better Hall. You shall be locked up till the next mail steamer leaves for San Francisco.

IN THE FRENCH CONSULAR COURT.

Before, EMILE KRAETZER Esq. *Consul.*

Thursday 7th Sept. 1876.

DENIAUD *vs.* COMPTOIR D'ESCOMPTE DE PARIS.

This was a claim for the sum of $1,307.80 the amount of a deposit made by Plaintiff on the 18th Jan. 1876, and $400 for damages accruing through the refusal of the Bank to refund the deposit before the expiration of the term for which it was originally deposited. The plaintiff appeared personally, and Mr. Vouillemont, manager of the Comptoir d'Escompte, defended the case for the Bank. Owing to the fact that the Consul had been unable to obtain assessors in this case, he was compelled to hear it unaided.

Mr. Vouillemont at some length defended his action in refusing to allow plaintiff to withdraw his deposit before legal expiry of the term, and put in a counter claim of 3,000 francs for damage done to the credit and reputation of the Bank by the action now brought against it by plaintiff.

Plaintiff pleaded that he had a perfect right to withdraw the sum he had deposited with the Bank, before the expiry of the full term, by forfeiting all interest on it, and that a clause which was printed on the deposit receipt justified him in such action. In 1873 he had so withdrawn a sum then deposited without any objection having been made, and therefore asked that the Bank should be compelled to return him the amount claimed for, on his consenting to forego all interest.

Judgment was reserved until to-morrow at 10 a.m.

On Friday, the 8th instant, the Consul gave judgment at some length, ruling that plaintiff had no right to withdraw the fixed deposit of $1,307.80 until the date of expiry of the term for which it had been deposited with the Bank, namely, the 19th January 1877, and condemned the plaintiff to pay costs. The damages claimed by defendant for injury done to the credit of the Comptoir by this action being brought by plaintiff were not allowed, as no loss or damage had been proved.

THE REPORT OF THE COMMITTEE ON DEPRECIATION OF SILVER.

(The Economist.)

The report of the Commons Committee on the depreci silver is a very able document. It appears to have been d by the chairman, Mr Goschen, and accepted, with compa minor amendments, by the Committee,—and it has the cl the precision, and the great information—no matter at wha acquired—for which Mr Goschen's writings on such subj remarkable. The Committee was excluded, by the term appointment, from investigating remedies *eo nomine*, but cribing precisely the events which have happened, and a as far as is possible, the causes of each of those events, th enormously facilitated the discussion of future policy. cases an accurate diagnosis of a disease must come bef cussion of remedies, and in a very complex case like thi preliminary is especially needful, or else we may find that been trying to cure disease A with medicine fit only for d and so have made things no better, or worse.

The most striking cause of the depreciation of silver, which the Committee treat of first, is the productiven new mines in America. And looked at in this relation, remarkable thing about it is its rapidity. In former cases the effect has been much slower. Adam Smith v nion that prices in England did not even *begin* to b affected by the American mines till 1570, though the ments of specie were made in 1502, and though th Potosi the most productive of all were discovered in even then the depreciation was slight, and continued t only at a slow rate for many years. When gold was dis our own time so extensively in California and in Aust persons thought it would at once affect generally pric did not. Even yet there is a controversy on the su though we believe that, especially since Mr Jevons's inv there can be little doubt that a rise in gold prices has b some extent, we should not like to state its extent pre should fear to exaggerate it.

But now, the new American mines were not much this country till last autumn, and the Committee tell effect on the price of silver has been this:—

			d	
1875 Yearly average			56⅝	
1876 Fluctuations in January between			56⅛	an
—	—	February —	54⅞	—
—	—	March —	54⅛	—
—	—	April —	54	—
—	—	May —	54	—
—	—	June —	52	—

and as we write it is 48d, showing a reduction of 10 p the average of 1875.

But we must observe that in this contrast we a paring the same things. This table is a comparison o silver with that of gold only; when we spoke of discoveries we spoke of the general prices of comm there is no evidence whatever that general prices in where prices are measured in silver have risen in any indeed, as we have understood, careful inquiry seems they have not sensibly risen at all. General prices h this case the same law as in former cases; they are l very slowly. Indeed it is evident that they must h had risen 20 per cent. over the whole of the countrie as their principal currency, or over any very large 20 per cent. more on the silver currency used wou wanted to circulate commodities at those prices, wh are few "economising expedients" in such countries been a very large amount indeed. But no such new The Committee say:—"It is, however, an impo "markable fact, to which it may be convenient to ca "once, that, though the increased production of "United States is a fact beyond question, no actu "the imports of silver from the United States to Gr "taken place since the year 1873, when the average "was still 59¼d per oz. Indeed, the amount of th "Great Britain from the United States for the y "3,092,000*l.*, is the smallest since the year 1869 "way, though the new currency laws of Germany "silver coinage, the sales of silver actually made "of April in the present year, do not appear to "6,000,000*l.*, distributed over several years."

Except a small amount of silver which goes from to China direct, all the silver which leaves Ameri

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and therefore it is plain that no such additional silver as would be required by very greatly raised prices over the large areas of the East, anywhere exists. General prices there have not risen in any such ratio as 20 per cent.: what has alone so varied is the relation of silver to gold in the London market, and in the markets guided by it.

But even this variation is most curious. Nothing like it happened when gold was discovered in Australia and California. It did not fall then in relation to silver at all as silver has now fallen in relation to it. The course of prices then was this:

	Per oz. d
In 1848 the average price of silver was	59¾
1849 — —	59½
1850 — —	60⅛
1851 — —	61
1852 — —	60¼
1853 — —	61¼
1854 — —	61⅛
1855 — —	61⅛
1856 — —	61⅛

—which is certainly wonderfully little in comparison with what we now see, though the discoveries of gold then were every way as remarkable—indeed, more remarkable than those of silver now. The difference is certainly not from any excessively quick supply now. As the Committee show, in 1875 the silver sent from America was less than in previous years, and for the first six months of 1876 the figures have been these:—

Import of Silver from United States.

	£
1874 (First six months)	2,046,925
1875 --	1,293,258
1876 --	1,293,851

—so that in fact, notwithstanding the great fall of silver in this market, owing in great part to the apprehension caused by the new mines, we have had from them no extra supply as yet at all.

The explanation is that the report of this new discovery came on a market where prices we previously falling and which was most perturbed and sensitive. The Committee tell us that—

	d	d
Between 1862 and 1866 the yearly average price was between	62 and 61	
Between 1867 and 1872 the yearly average price was between	61 and 60	
In 1873 the yearly average was	59¼	
— 1874 —	58⅞	
— 1875 —	56½	

—showing a considerable fall. And they analyse the causes which were in action weakening the temper of men's minds, and preparing them easily to allow of a still greater fall.

The first of these is the introduction of a gold currency into Germany in place of a silver one, of which the report gives a very clear and consecutive account, and to the details of which we shall return hereafter. This cause, as our readers know, has been one peculiarly perturbing, because it has been incalculable as well as powerful. Dealers in silver have never for several years known either what quantity of it the German Government was anxious to dispose of, or what price it would take for that quantity. Nothing depresses the tone of a market like uncertainty, and this subterranean political agency, if we may so describe it, has now for a considerable period been a cause of uncertainty, in incessant action, and of the first magnitude. And its action still continues, for the amount of the thaler silver currency, which will have to be demonetised is most uncertain, the estimates of it differing by many millions; and, therefore, we do not in the least know either what the German Government have in hand, or what they have to sell or when they will have to sell it. The silver market is, consequently, affected exactly as the Liverpool cotton market would be if there was an immense unknown quantity to arrive. Such a market always, as the phrase is, lives from hand-to-mouth sells as soon as it can, and the prices in it fall to an extent and with a rapidity which an observer acquainted only with the visible supply or the visible demand, would not be able at all to account for.

The second cause is the policy of the Latin Union to which we have so often drawn the attention of our readers. The States comprising it—France, Belgium, Italy, Switzerland, and Greece—in 1873 adhered strictly to the principle of the double standard of gold and silver,—that is they allowed anyone to bring to the Mint any quantity of either metal, and they coined it for him. In consequence at every change they were always coining the metal of lesser value, and that metal, when coined, was used to buy and take away the metal of higher value. In this way during the cotton famine France was half emptied of silver which was wanted for export to the East, and was filled with gold which was not so wanted. If these States had continued to adhere to this principle, the great effect on the general silver market produced by the German operations, would have been much diminished and rendered scarcely observable. As soon as silver began to fall it would have gone to France and been used there to buy gold which had risen. Thus silver would have been taken from the general market, and gold would have been brought to it till the former level of comparative values, or something like it, had been reached. But France and the rest of the Latin Union could not endure this. Partly from political, and partly from economical motives, they would not take the "cast off" German silver. They limited the amount of the silver which they would coin, and thus the silver market was at the same moment perturbed by two extra-commercial causes: one set of countries sold off silver as they had never before done, and so increased the supply; and another refused to take it in a way in which they had never before done, and thus diminished the demand.

Thirdly, there has been another cause, also not commercial, though of a very different kind, which has tended to diminish the demand for silver. This is the increase in the amount which the Home Government draws upon India, as to which the Committee tell us:—"The yearly amount payable by India for the disburse-"ments of the Home Government, has risen since the Indian "Mutiny from 5,000,000*l* to 15,000,000*l*, a difference of which the "magnitude will be appreciated when it is remembered that it is "considerably more than half of the total amount of silver "annually produced.

"That the full effect of this subtitution has only been recently "felt, as that effect was retarded by the construction of the "Indian railways, which involved an expenditure in India of "money raised in England, counterbalancing therefore an equal "amount of expenditure in England of money raised in India.

"That the amount of the disbursements which has just been "stated appears to represent the present normal expenditure of "the Home Government, and that, therefore, unless by some "marked change of policy, no diminution of that amount can be "looked for."

The effect of this increase of the *tribute*, for such economically it is, which India pays to England is peculiar, because the ordinary relation of the two countries commercially has been peculiar. Generally the existence of such a tribute makes no difference in the amount of the precious metals transmitted from one country to the other. Mr. Mill explains this very clearly. "Commerce," he says, "being supposed to be in a state of equilibrium when the "obligatory remittances begin, the first remittance is necessarily "made in money. This lowers prices in the remitting country, "and raises them in the receiving. The natural effect is that "more commodities are exported than before, and fewer imported, "and that, on the score of commerce alone, a balance of money "will be constantly due from the receiving to the paying country. "When the debt thus annually due to the tributary country "becomes equal to the annual tribute or other regular payment "due from it, no further transmisson of money takes place; the "equilibrium of exports and imports will no longer exist, but that "of payments will; the exchange will be at par, the two debts "will be set off against one another, and the tribute or remittance "will be virtually paid in goods."

But in the case of this increase of the tribute from India to England, the primary supposition of Mr Mill does not hold. The exchanges were not before in what he calls "equili-"brium"—that is, one which did not admit of a transmission either way of the precious metals. There was a constant export of silver from England to India—a sum of money constantly paid by the dominant to the dependent country. And in such case the effect of an increase of the sum due from the dependency almost always at first is, and perhaps may permanently continue to be, a diminution of the cash which the superior country has to transmit. This is one effectual mode of rectifying the balance; it is simplest, it is always the first taken. And it has been so here. From a most careful and valuable examination in the Committee's report, it appears that—

	£
Between 1868-9 and 1871-2, the annual average export of silver to India from England was	10,000,000
Ditto ditto 1872-3 and 1875-6	4,100,000
Diminution	5,900,000

But, on the other hand, the increase in the "tribute money," as we call it, is the Government drafts:—

	£
Between 1872-3 and 1875-6 the average of Government bills on India was	12,600,000
Ditto ditto 1868-9 and 1871-2 ...	7,400,000
Increase	5,200,000

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

—and the diminution in the demand for silver thus caused has been weighing on the silver market, making it constantly sensitive and tending more and more to reduce the price.

These, with some minor ones on which we cannot dwell, are the causes why the silver discoveries now have produced so much more sudden effect on the bullion market, that is on the relative value of silver to gold, than the gold discoveries did on the relation of gold to silver five and twenty years ago. And surprising as that difference is they are fully sufficient to account for it.

As to the discoveries themselves, the Committee speak with much caution. They very properly abstained from calling evidence from persons connected with the mines, as otherwise their report might have been made a "puffing machine," to raise the price of the shares in particular companies. They rely on the official documents which the American Government issued, the contents of which we have, we believe, laid before our readers from time to time.

They estimate the total yield of the United States :—

	£
Average annual yield from 1864 to 1867 ...	2,300,000
Yield in 1872	5,750,000
— 1874	6,400,000
— 1875 (perhaps)	6,400,000
— 1876 —	9,000,000

These figures are not very large, and would come to very little when distributed over all the countries of the world which use silver as their standard of value, and in comparison with gold the effect is less, because the yield of gold from the new mines is itself very large. "Mr. Whitehill, the State Mineralogist" for the State of Nevada, the Committee tells us, "states that, 'during the "'past two years (1873 and 1874) this mine has yielded bullion to "'the value of 5,000,000 dollars, the principal of it since last June. "'The yield for September was 562,000 dollars, and for October "'610,000 dollars. The daily yield of the ore is about 400 tons : "'about 44 per cent. of the value of the bullion is gold.'"

If in the end the supply of gold from these mines is increased on a sudden nearly equally with that of silver, the ultimate effects will not be at all like that which the recent state of prices has shown.

Now, from full information, we see the nature of the evil from which we are suffering. We are not suffering from a depreciation of silver as against commodities in the countries where silver is the standard value, for there is no supply sufficient to produce such a depreciation, nor time if there had been such a supply to diffuse it, and there is no such depreciation in fact. We are not suffering from a depreciation of silver as against gold caused by a sudden excess in the supply of silver, for the new supplies of silver have been only moderate, and none of them have come here. We are not suffering from a depreciation of silver as against gold caused by a diminution in the cost of production of silver, for there has been no time, or anything approaching to time, to say what the ultimate cost of production will be. No doubt certain mines of singular fertility have been discovered, but it is not silver produced in the best mine which determines the price of silver as a whole, any more than it is the corn grown on the best land which determines the price of corn as a whole ; that which does determine it is the cost of production in the worst mine which can maintain itself in working. The producer in the least favourable circumstances always fixes the price ; those in better circumstances take that price, and get an extra profit. And what that mine will be in the case of silver we cannot as yet tell ; the experience of years alone can determine it. All that we can now safely say is that, judging from all past similar events, it will not be any of the new mines now discovered, or any of fertility approaching to theirs, but some other far down in the scale ; some one which has been in some degree better than some others till now, and therefore will be able to maintain itself when those others are obliged to desist from working.

What we are suffering from is the apprehension of increased production of silver suddenly supervening on a market previously perturbed, upon which one Government had forced an extra supply from which a union of other Governments had refused to take, as usual, any supply, and in which another Government, by an increase of the tribute it requires from a silver importing country, has temporarily, if not permanently lessened the demand.

This explanation of the real malady at once disposes of a crowd of unreal remedies. No competent person can propose a demonetisation of silver in India, and a substitution of gold for it, just at a moment when the price of silver has been thrust down by so strong an apprehension caused by such peculiar circumstances. It would be to require the Indian Government to buy the largest sum of money ever bought in the dearest market for gold, and to dispose of the largest amount of silver in the cheapest market for silver, which ever existed. The present financial position of the Indian Government is no doubt impaired by this sudden depreciation of the metal in which it receives its revenue but the remedy for a minor deficit would bring in, in lieu of it, a deficit of the first magnitude : it would be nothing else but financial ruin.

Again, no one would propose to arrest coining silver in the East as a remedy for such a state of thing, for this would only disorder the silver market still further. It would add a new political difficulty to those previous political difficulties which have caused so much disturbance, and so make the existing confusion far worse than before. Nor can it be maintained that the Indian Government should now require the ryot, whose rent has been formerly fixed in silver, to pay either in gold itself, or in so much more silver as would purchase the same quantity of gold as that fixed rent would have purchased when the settlement was made. If silver in India had become depreciated as against commodities in general, it might have been possible to say to the ryot, "You are selling your commodities for more silver, and therefore it is but unfair to ask you to pay us—the Government—a proportionate amount more." Even then the ryot would have been probably discontented ; he would have said, "If prices had gone down the Government would never have let me off, and it is not fair that they should take the benefit of good times when they leave me the misfortune of hard times." Still, in this case if the depreciation of silver had been against commodities in general, it would have been, perhaps, substantially, though not intelligibly equitable, to adopt such a policy. But now that there is no such depreciation of silver as compared with commodities, such a scheme is not feasible. The ryot in India does not sell his produce one penny dearer than he did a year ago ; his income, as yet, is just what it was, and it must be so till a vast amount of silver has gone to India to raise the prices of daily life. Clearly, therefore, he must not be additionally taxed because the silver market is oppressive, and because certain Governments (the Indian Government being one of them) have perturbed it.

The real remedy, as we have shown several times, is to let the great natural forces of trade to operate unrestricted. The remedy for an enfeebled market is an access of demand, and in this case the laws of commerce, if not suspended or crippled by interference, will produce that demand. The necessary effect of depreciation of silver as against gold is to give a bounty on exports from India and the other silver-using countries to England. The English merchant can now buy many more rupees than he formerly could with the same number of sovereigns, and therefore can import from India, though prices at Calcutta are not at all events at which it would have paid him to operate if he had not this novel facility in getting rupees. Similarly, shippers to India can not afford to sell at the same price in rupees which they could formerly, for they will lose in bringing those rupees home. But the combined effect of this bounty on exports from India and this fine on imports into India, must sooner or later create a favourable balance of trade, and a consequent flow of silver to the East. A new demand of great magnitude will eventually relieve the silver market, if we only leave it alone.

It has been objected that as yet this process has not begun. But in this complexly organised world, it is never safe to say that a force, even of great magnitude, does not exist because its effect may be impeded. No doubt, as the first table we published at the end of this article shows, the exports from India to the East have in many instances not increased, though in some they have, but then table No. 2 shows why. The prices of those articles in England have gone down, and, therefore, though there is a large gain in comparison with last year, on the exchange, there must be a loss as compared with last year on the whole transaction. As to the diminution of profitableness of shipments to the East, hence there is, unhappily, no doubt. Every trade circular with the East records—every Chamber of Commerce interested in the East resounds with complaints that the Sooner or later this must cause a large diminution in imports —a diminution, no doubt, universally to be much regretted, nevertheless an evil necessary to be endured, because it is the appropriate remedy at the present time. We have spoken of India because that is the silver-using country which comes most easily to an Englishman's mouth ; but the same thing is true of China of the whole East, and of every other part of the world. To them all there must, ere long, be an export of silver, a time when the speculative part of the business will be as eager and animated this would have happened long ago, but even the present indisposition to begin new things, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ruin of so many of those who were most disposed to do so, cannot long delay it.

At what price silver will settle down nothing but experience can determine, but the two cardinal points in the matter are—first, that price will be determined by the cost in the *least* good mine which pays to keep at work; secondly, that the extra demand for silver to countries where it is the standard money will require a very large sum if the value of silver as against commodities is to be depreciated in all of them, because the efficiency of a metal as money depends on it. By whatever percentage you depreciate it you make it necessary by that very percentage, *cæteris paribus*, to have more of it. And as the quantity of silver now circulating is immense, even a small percentage on it comes to a good sum, so that ultimately mines of far inferior grade to those now so much talked of will continue to be worked, will settle the value of silver, regulate its price, and in all likelihood prevent any such depreciation of it as the peculiar perturbations of the present moment have led many to apprehend.

MEMOIR AND CORRESPONDENCE OF CAROLINE HERSCHEL.*

(Quarterly Journal of Science.)

Biographies, as a class, are not the most satisfactory of literary performances. Sometimes the author is led by natural affection or especial interest to overrate the importance of his hero. Sometimes, as in books of travel, the subject is used as a mere occasion for self-display on the part of the writer. From both these faults the work before us may be pronounced free. It brings before us a personage who is well worth knowing, and its authoress suppresses her own individuality in her theme.

Every student of that important question, the "heredity of genius," must be aware that the Herschel family affords a valuable affirmative instance. Two of its members, Sir William and Sir John, have taken a position in science on which it is quite needless to enlarge; and the present inheritor of the name may be following in the footsteps of his illustrious father and grandfather. But it is not so generally known that the father of Sir William Isaac was a meritorious musician, and his grandfather, Benjamin, an eminent landscape gardener; nor that the founder of the family, in company with his two brothers, left Moravia in the early part of the seventeenth century for the sake of his religion, and settled in the north of Germany. This latter fact, though it gives no evidence of extrordinary intellect, is yet a convincing proof of that fixity of purpose without which the most splendid intellect rarely leads to any tangible results. Nor is it widely known, even in cultivated circles, to what an extent Caroline Lucretia Herschel, the sister of Sir William, shared his genius, participated in his studies, and contributed to his glory. This general ignorance the work before us will remove. It has the additional merit of throwing much novel light upon the career and character of the great astronomer himself, of whom, as the authoress informs us in the preface, no good biography is in existence.

The career of Caroline Herschel, though prolonged to the unusual term of ninety-eight years, and bridging over the interval from the Seven Years' War to the Third French Revolution, offers little of a striking nature. It is throughout an example of "plain living and high thinking." She was born at Hanover in 1750, followed her brother to England in 1772, and took up her residence at Bath, where he was then established as a music-master. His professional avocations, however, were but the means to an end. Every spare moment was devoted to astronomical research and to to the improvement of the necessary instruments. In this arduous undertaking his sister rendered him the most essential service. How severe were his early struggles, and how great the difficulties with which he had to contend, may be learnt from this memoir. "My only reason," says Miss Herschel, in a note addressed to her nephew, the late Sir J. F. Herschel, "for saying so much of myself is to show with what miserable assistance your father made shift to obtain the means of exploring the heavens." It would be unfair to the author to quote the details of the steps by which Sir William Herschel attained recognition, and of the share of merit due to his noble and devoted sister. As we find truly remarked in the Preface, "great men and great causes have always some helper of whom the world knows little. Sometimes these helpers have been men, sometimes (more frequently, in our opinion) they have been women who have given themselves to help and to strengthen those called upon to be leaders and workers, inspiring them with courage, keeping faith in their own idea alive, in days of darkness,

'When all the world seems adverse to desert.'

"Of this noble company of unknown helpers Caroline Herschel was one."

Surely it is, then, but right that she should receive her due share of honour. In this volume the reader will learn how "it was owing to her thrift and care that he was not harassed by the rankling vexations of money matters, how she had been his helper and assistant when he was a leading musician; how she became his helper and assistant when he gave himself up to astronomy. By sheer force of will and devoted affection she learned enough of mathematics and of methods of calculation, which to those unlearned seem mysteries, to be able to commit to writing the results of his researches. She became his assistant in the workshop, she helped him to grind and polish his mirrors, she stood beside his telescope in the nights of midwinter, to write down his observations when the very ink was frozen in the bottle. She kept him alive by her care; thinking nothing of herself, she lived for him." So she stood by his side for fifty years, and when the musician of Bath had become Royal Astronomer, famed as the discoverer of Uranus and maker of the most powerful telescope then known, and had passed away full of years and glory, she returned to her native country to die. Even to Germany we almost grudge the honour of giving her a grave. Profoundly, however, as she felt her brother's loss, and deprived as she was of what had been the great purpose of her life, she survived him for nearly twenty-four years, still interested in astronomical research, and almost inclined to accompany her nephew on his well known expedition to South Africa. Her letters during this period are extremely interesting. On receipt of the Astronomical Society's medal she even says: "I felt more shocked than gratified by that singular distinction, for I know too well how dangerous it is for women to draw too much notice on themselves." In a letter to her nephew she uses these memorable words: "Whoever says too much of me says too little of your father."

Nevertheless we hold that very much may be justly said in her praise without in the least detracting from the reputation of her brother. She regretted frequently that, in the first bitterness of her bereavement, she had left England. But it is very clear that had she remained in this country she would have found no satisfaction in the present. She looked upon progress in science as so much detraction from her brother's fame, and even her nephew's researches might have become a source of estrangement had she remained with him. She died early in 1848, and, singularly enough, the funeral solemnities took place at the same garrison church in which she had been baptised, nearly a century before. Royal Hanoverian carriages took part in the procession, and the coffin was covered with palm branches sent from Herrenhausen by the Crown Princess.

One most valuable lesson may be gathered from this book. Caroline Herschel did not think it needful to attitudinise on a public platform and cry out to all the winds of heaven that she "might, could, or would" do great things if not restricted by "male jealousy from graduating honours." An idle plea this, everywhere—idlest of all in England, where so many of our mightiest minds have no connection with our national universities, whether as students or professors, and only take degrees when they confer instead of receiving honour by the acceptance.† She went to work, and found no obstacle, either from laws or from social prejudice. Men saw that she was genuine, and honoured her accordingly, just as, on the other hand, men worthy of the name laugh at the "shrieking sisterhood," knowing it to be a sham. So far from self entering into the mind of Miss Herschel, she even declarered, "I am nothing, I have done nothing; all I am, all I know, I owe to my brother. I am only the tool which he shaped to his use—a well-trained puppy-dog would have done as much." Such unconsciousness of its own claims and merits is often the companion of true genius. Great discoverers have said that any man, with patience and perseverence, might do all they have done. Not the less is it a mistaken estimate. Only a mind similar in its powers to that of her brother could have been trained to aid in researches like his. A lady who had discovered eight comets and effected the reduction of the places of 2,500 nebulæ, who was the worthy recipient of the gold medal of the Astronomical Society and of the Gold Medal for Science given by the King of Prussia, accompanied by a letter from Alexander Humboldt outweighing a score of degrees and

* By Mrs. John Herschel, London: John Murray.

† Many foreign critics misjudge English science on this very account. As in their own country the universities are the focus where all the greatest thinkers, the "bedeutendeste Maenner" are collected together, and whence scientific discoveries radiate out to the world, they expect the same in England; and finding nothing in Oxford or Cambridge like what emanates from Goettingen, or Heidelberg, or Bonn, they are led to think that we are, as a nation, producing nothing.

diplomas, might well have claimed an independent position in the scientific world. That she was content to merge her own glory in her brother's, and to live only for him, is a touching instance of the grand simplicity of her character. It is well that he was, at once intellectually and morally, not unworthy of such a self-sacrifice.

This memoir will, we are convinced, be found pleasant and profitable reading, not by astronomers merely, or even by students of science, but by a much wider public. It will be wholesome, in these days of noisy self-glorification, to be brought into communion with a mind so pure and elevated as that of Caroline Herschel.

A GERMAN OFFICER ON THE FRENCH ARMY.

(Pall Mall Gazette.)

A series of letters on the present condition of the French army, by a German officer who has lately visited the principal military stations in Farnce for the purpose of obtaining information on the subject, have been printed by the *Cologne Gazette*. The writer says that since last year extraordinary progress has been made in the reorganization of all the branches of the service, and that, although some time must yet pass before the 12,000,000 men who are to form the French army of the future can be made thoroughly effective, the best measures for achieving such a result have already been taken, and are being pursued with zeal and skill. The great defect of the French army in the late war—the want of an efficient reserve—is being rapidly and completely supplied. The half-pay officers of the line were at first somewhat unwilling to enter the new territorial army; but since it has become evident that these troops are under as strict a discipline as the regulars, and have nothing in common with the National Guard and the Mobiles, this feeling has disappeared, and the number of half-pay and staff officers who volunteer for territorial service is steadily increasing. The regulation, too, under which one-year volunteers are to serve as officers in the territorial army has now become very popular among the young men of the wealthier classes in France. These officers are not, as a rule, taken from the *jeunesse dorée* of the large towns, but from the young farmers, officials, merchants, and manufacturers. There will also probably be a sufficient supply of non-commissioned officers in three or four years, though at present the territorial army is very defective in this respect. Nearly all the gendarmes, Customs officials, foresters, foremen of workshops, &c., in the country have formerly served as non-commissioned officers in the line, such appointments being usually given to discharged corporals and sergeants. As for the private soldiers of the territorial army, they are on the whole of admirable physique, though the battalions from the northern and western departments and the mountain districts are far superior to those from the southern departments and the large towns. So far as the writer was able to ascertain, there has not been the slightest difficulty in obtaining recruits in any part of France; and all political parties, from the Ultramontanes and Orleanists to the Democratic Socialists, are agreed in approving of the formation of the territorial army. The clergy especially use all their influence in support of this institution, which they hope will ultimately prove the most effective champion of the Church; "the priests in France do more to induce the people to perform their military duties than can be done by all the magistrates and gendarmes in Prussia." There are very few mounted troops in the territorial army, the French having rightly concluded from the experiences of the last war that the landwehr cavalry is of very little use for combatant service. In the regular army the most important reforms which have been introduced by the present War Minister are the removal of inefficient officers and the provision for a more thorough training of the cadets. Large cadets' school have been formed, which, it is hoped, will by the year 1880 afford a sufficient supply of officers for the whole of the regular army, and much higher acquirements are required in order to obtain a commission than was the case formerly. The number of commissions given yearly to non-commissioned officers, too, is much smaller than it used to be. The experience of the last war has shown that such a system creates two distinct, and often hostile, classes among the officers, and that it is consequently prejudicial to the influence and authority which they ought to exercise over their men. As a rule, deserving non-commissioned officers are not now rewarded by a commission but by appointments in the arsenals, fortresses, military factories, railways, &c. One result of this change is, that many more young men of the better classes now enter the army as officers than formerly, though this is also partly due to the fact that the Legitimist families, which, under Louis Philippe and the Empire, almost entirely from the army, now often send their sons to be trained The military career, in a word, is becoming very popul among all classes.

In the French army as in that of Germany, it is difficult to retain good non-commissioned officers. old system of paid substitutes, many efficient soldi completed their service used to serve as substitute or twenty years in succession, thus earning a cap 6,000 to 10,000 francs, which set them up in bu they were finally discharged. This inducement to pr vice no longer exists; and in the present flourishing agriculture, industry, and trade, any industrious and young man can easily obtain much better wages than a non-commissioned officer. The consequence is th soldiers remain in the army any longer than they a to do. Old soldiers and corporals with three or f are now scarcely ever seen; both soldiers and non-c officers are almost beardless, as in the German period of service being so short, the work of all ra siderably increased. The drills are more frequen used to be, and the manœuvring is on a larger scale is kept in constant movement, as in Prussia. Th battalion of chasseurs begins at seven in the morni till dusk, with a brief interval for dinner; and the continuous work in shown is far greater disciplin ness than was to be seen in French troops before few years, when all the contingents raised since t will be liable to serve in case of war, there will lions of infantry of the line and chasseurs ready for 145 regiments of territorial infantry as a reserve posing it possible to bring the first battalion war stregth of 1,000 men, would constitute of upwards of a million infantry soldiers, not Zouaves, Turcos, and the foreign legion in Algeria large a force will ever be obtained is doubtful; but certain that, unless political circumstances intervene present impossible to foresee, France will, in some years, possess a movable field army of about 560,000 rifles, and 360,000 territorial infantry. Arms and all equipment will not be wanting, for French man labouring hard to supply all the wants of the a Chamber of Deputies is always ready to vote money The uniform is more comfortable than that of the Ge and the cloaks and boots are of better quality; the two excellent hot meals a day, and their barrack and healthy.

The French artillery, which proved so defective 1870, has, thanks to the efforts of Marshal Ma raised to a high standard of efficiency. The field a at its disposal 2,508 guns, while that of Austria has of Russia 2,304, and that of Germany 1,656. The n lery are tall and strong, and mostly recruited fro engineers, &c.; the guns are good, and are being great numbers; and the horses, though awkward appearance, are for the most part powerful and supply of horses for the army generally has greatly to the losses of the German war, but great numbers o has been procured of late from Holland, Belgium, and in France itself; horse-breeding, like other industrial pursuits, is rapidly extending. For poses a number of mules were brought last ye their proprietors having offered them for sale Government, lest they should fall into the hands and Alphonsists and be either confiscated or pai less bonds. The weakest arm of the French cavalry, and it is doubtful whether by the year so numerous and efficient as Marshal MacMahon be. There is a great want of experienced n officers, and it is even difficult to obtain cadets is expensive and not very popular. The same ever, are met with in the German cavalry. A branch of the army is the engineer corps, whic siderably augmented, and finds abundant occ structing the new outer fortifications of Paris, "the strongest fortress in the world," fortify the Vosges and the Ardennes, and making large at various favourable strategical points. With precaution for preventing an enemy from again country with such rapidity as the German France in 1870, Marshal MacMahon has also pr of mobilization which, when the reorganization completed four or five years hence, will enable to send 700,000 men completely equipped for ba of the frontier in twenty days.

Shipping Intelligence.

ARRIVALS.

Sep. 2, *Gadshill*, British steamer, Ranton, 1,240, from Hongkong, Aug. 27, General, to Jardine, Matheson & Co.

Sept. 2, *Sunda*, British steamer, Lee, 1,709, from Hongkong, Aug. 27, Mails and General, to P. & O. Co.

Sept. 4, *Tokai Maru*, Japanese steamer, Ward, 640, from Kobe, Sept. 1, Mails and General, to M. B. Co.

Sept. 5, *Sumida Maru*, Japanese steamer, Gorlach, 800, from Hakodate, Sept. 3, Mails and General, to M. B. Co.

Sept. 6, *Genkai Maru*, Japanese steamer, Connor, 1,917, from Kobe, Sept. 4, Mails and General, to M. B. Co.

Sept. 6, *Nagoya Maru*, Japanese steamer, Young, 1,917, from Shanghai and ports, Aug. 31, Mails and General, to B. M. Co.

Sept. 8, *Belgic*, British steamer, Metcalfe 2,627, from San Francisco, Aug. 16, Mails and General, to O & O. Co.

Sept. 8, *Ella Nicol*, British barque, Wilson, 475, from Kobe. Sept. 3, Ballast, to Walsh, Hall & Co.

DEPARTURES.

Sept. 2, *Hiogo Maru*, Japanese steamer, Vroom, 860, for Hakodate, Mails and General, despatched by M. B. Co.

Sept. 3, *Bengal*, British steamer, Douglas, 1,338, for Shanghai, Tea, despatched by Wilkin & Robison.

Sept. 4, *Taihei Maru*, Japanese steamer, Hubenet, 480, for Kobe, Mails and General, despatched by M. B. Co.

Sept. 6, *Tanais*, French steamer, Reynier, 1,010, for Hongkong. Mails and General, despatched by M. M. Co.

Sept. 6, *Hiroshima Maru*, Japanese steamer, Furber, 1,870, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Sept. 7, *Sumida Maru*, Japanese steamer, Gorlach, 896, for Shanghai and ports, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per Steamship *Gadshill*, from Hongkong.—J. M. Eca de Silva and wife.

Per steamship *Sunda* from Hongkong —2 Japanese in cabin, and 6 Chinese on deck.

Per steamship *Sumida Maru* from Hakodate.—Baron Von Gutr schried, and Mr. Gebauer.

Per Steamship *Tanais* for Hongkong.—Messrs. W. N. Bellons, Peremiah, W. Smith, Richd. Chapman, Cornelius Desmond, C. Droules, J. R. Jones, Don P. Varges Marati, Notsu, Washiwabara.

Per Steamship *Hiroshima Maru* for Shanghai and ports.—Mr. and Mrs. Kaibakuchi, Mr. and Mrs. Wurui, Mr. and Mrs. Roberts and children, Mr. and Mrs Tey and child, Revd Mr. and Mrs. Brewer, Mrs. Stout and 2 children, Mrs Hoching, Lieut. H. B. Mansfield, Lieut. Brocket, Commodore Furber, Messrs. Brandau, Mightom, Hy Silva. Hunt, F. B. Thurber, A. De Buys, Macomber, H. St. J. Browne, Cocking, Spooner, Mrs. Waters, Dr. Painter, U.S.N., and 28 Japanese in the cabin.

Per Steamship *Genkai Maru* from Kobe.—Messrs. Bramsden, Iseiburo, and Kusukabe, and 88 in the steerage.

Per Steamship *Nagoya Maru* from Shanghai and ports —Baron d'Anethan, Col Fukubara, Messrs. C. Sueder, J. Pitman, Bell, R Bourke, Otto Muiler, Molin, Woodruff, W. Jenkins, Iverson, Capt. C. V. Lloyd, and 22 Japanese in the cabin; and 194 in the steerage.

Per Steamship *Sumida Maru*, for Shanghai and ports.—Messrs Thatcher, Nakizana, Satow and one Japanese in the cabin. Hodges and 5imes second class and 55 in the steerage.

Per *Belgic*, from San Francisco.—For Yokohama—Revd. G. M. Meacham and Wife, Miss J. A. Moulton, Revd. E. C. Eby, Wife, Child and Infant, Miss A. Spaulding, Miss Alice Stanley, Professor Gluckmann, Dr. G. de Brezange, Dr. G. Wagener, Major J. H. New, Messrs. Wm. D. Spence, L. Calien, Wm. S Sach, Pietro Ricciardi, G. Mazzoldi, P. Mazzochi, B. Harrold, A. Forsari, Fukigara K Notimi, K. Hayami, G. Wasinomeyer, and 2 Japanese Steerage. For Hongkong—Senior Don Fermentero, and G. W. Boffy, and 240 Chinese Passengers.

CARGO.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

September 2, 1876. 26ins.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—There is little or no change to report in our market. Of *Yarns* supplies have come in, but as a great part had been previously sold to arrive, their appearance on the r had not any depressing effect. Exchange has declined, but though *Yarn* prices have not yet advan proportion they are very firm. The demand continues for medium and good 16 24, and best 28/32. *Sh* are in general unchanged, though low makes of 8¼ lb. and 7 lb. are rather difficult to sell. In *Velvets* a have been rather heavy and small sales are reported. Other cotton articles attract little attention.

Grey Shirtings:—

7 lbs.	38½ yds.	39 in.	per pce....	$1.62½ to $2.10
8 lbs.	38½ yds.	44 in.	„ ...	2.00 to 2.50
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	1.92½ to 2.55
9 lbs.	38½ „	44 in.	„ ...	2.35 to 2.90
T. Cloth 7lbs.	24 „	32 in.	„ ...	1.55 to 1.75
„ 6lbs.	24 „	32 in.	„ ...	1.15 to 1.25

White Shirtings:—

60 to 64 reed 40 yds. 35 in. per pce.	2.3(
Turkey Reds 24 yds. 30 in. 2—3 lb. per lb...	0.7
Black Velvets	8.0(
English Drills 15 lbs. 40 yds, 30 in.	2.7(
Taffachelass 12 yds, 43 in....	*nom.* 2.0(

Yarns.—

No. 16 to 24 ... ...per picul...	$29.00 to 33.00
No. 28 to 32 ... ...per picul...	$30.50 to 38.00
No. 38 to 42 ... ...per picul...	$39.00 to 4
Reverse Twist ... 16-24 ... „ ...	32.00

Woollens.—There is no great change to report since our last. The fall in exchange and its a downward tendency has somewhat interfered with transactions in this staple, which continue on a small scale at quotations given.

Plain Orleans	40—42 yds.	32 in....	5.00 to	8.00
Figured Orleans	29—30 yds.	31 in....	4.25 to	5.00
Shimagoro	30 yds.	30 in....	4.25 to	5.50
Italian Cloth	—30 yds.	32 in....	0.27 to	0.35
Camlet Cords	29—30 yds.	32 in....	5.75 to	7.00
Camlets Asstd.	56—58 yds.	31 in ...	16.50 to	17.50
Lastings, Japan...	22—30 yds.	32 in....	12.00 to	13.00
Plain Mousseline de Laine	—30 yds.	30 in....	0.16½ to	0.19

Figured Mousseline de Laine...	30 yds.	30 in...	0.2	
Multicolored „ ...	30 yds.	30 in...	0.3	
Cloth, all wool plain or fancy..	48 in. to	52 in...	0.8	
Presidents	54 in. to	56 in...	0.6	
Pilots	54 in. to	56 in...	0.4	
Union	54 in. to	56 in...	0.4	
Blankets, scarlet & green 7 to 8 lbs....	per lb...		0.4	

Sugar.—Since the issue of our last report there has been no change in prices to note. Sales *Formosa* and *Refined Sugars* are going on steadily.

Sugar:—Takao in bag ... ...per picul...	$3.25	China No. 4 Kook-fah ... ...per pi	
„ in basket ... ... „ ...	$3.50	„ No. 5 Kong-fun ... ... „	
Taiwanfoo in bag... ... ... „ ...	$3.10	„ No. 6 E-pak ... ... „	
do. in basket... ... ... „ ...	$2.95	Swatow... ... ... „	
China No. 1 Ping-fah ... ... „ ...	$7.50	Daitong ... ... „	
„ No. 2 Ching-pak ... ... „ ...	$6.70	Japan Rice ... ... „	
„ No. 3 Ke-pak ... ... „ ...	$6.00	Kerosene Oil ... ... „	

Kerosene Oil.—The market continues firm, with a fair demand at quotations.

EXPORTS.

Silk.—During the past week business has continued very active and prices have advanced $3(a rise to which the falling rates of exchange do by no means afford an adequate compensation. The quotations must be understood to apply to the prices which were ruling yesterday; this morning con purchases have been made at a further advance, the extent of which we are as yet unable to determine

Settlements since the 21st ultimo, which we estimate at 2,800 bales of Hanks and 900 of Os bring the total settlements since 1st July to 11,400 bales, against 2,500 last year for the corresponding Stock about 800 bales.

Sales of native filatures are reported at over $1,000.

Silk-worms' Eggs.—Under the impression that the failure of the European crops has bee by the failure of the European seed, the Japanese have been speculating wildly in cards, apparently to re-sell them at from $2.50 to $5. But never before were buyers and sellers separated by a wider they are at present. Arrivals since the opening of the season are 20,800 cards, and we have not a single tion to report.

		At Exchange 4/5 in London.	*At Exchange 5.62 at 6 m.s. in Lyons.*
Hanks.—Extra to No. 1...	$880 to 900	34/0 to 34/9	95 to 97

MISCELLANEOUS.

THE

CELESTIAL EMPIRE.

A Weekly Record of Commerce, Politics, Literature and Science.

THE wide scope of this periodical, embracing, as it does, information of the most varied nature on matters connected with China and the Chinese—their language, literature, customs and politics; local and foreign intelligence; a complete compendium of all the commercial news of the week, with the well-known Shanghai Statistics of Imports, and Export-tables of Produce; and summarising the literary gossing of every European mail, upon its arrival, from the best of the London and New York Papers—renders it peculiarly adapted alike for circulation at the Out-Ports and in Japan, and for transmission to one's friends at Home.

ITS LARGE CIRCULATION AT
THE OUTPORTS
RENDERS IT AN EXCELLENT MEDIUM FOR

ADVERTISEMENTS.

Subscription, Twelve Dollars per Annum.

THE SUBSCRIPTION FOR

"SHANGHAI COURIER AND CHINA GAZETTE"
IS NOW REDUCED
TO
Twenty Dollars per Annum,
WHICH MAKES IT THE CHEAPEST DAILY PAPER IN CHINA
AND
its increasing circulation renders its particularly well adapted for

ADVERTISEMENTS,

which are inserted on very reasonable terms.

Shanghai, 17th December, 1875. Dec. 27,-tf.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "ordered the dragoman Mahomet to inform the Fakey that I was "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published 1871, says—"I had with me a quantity of Holloway's Ointment. "gave some to the people, and nothing could exceed their gratitude "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 38.] YOKOHAMA, SATURDAY, SEPTEMBER 16, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The weather has broken up with strong local winds and heavy rains. The early part of the week was oppressively hot, and the high temperature during the gale of Wednesday night seemed to indicate the proximity of a typhoon. Yet, strangely enough, vessels which came in on the following day reported light winds outside, and a slightly agitated but still quiet sea. An usually large quantity of rain has fallen during the past sixty hours in this district; but it is said to have been wanted, as many of the wells were dried up. If the next six weeks are fine, the weight of grain to be carried early in November will be unusually large, and everything points to better times.

Under these circumstances, a request rumoured to have been made by China for the loan of a considerable quantity of rice, will afford an excellent opportunity for disposing of the surplus stocks of grain, which probably will be very large. Nothing can be more opportune than a demand which Japan will, in all probability, be in the best position to supply. But Chinese affairs must be in a bad way. The Government is pressed hard for money, the Kashgar army is unpaid and ill fed, there is at least as much rebellion as usual in the provinces, and a great scarcity of food in Chili, Shantung and Honan. Of course a loan of rice is but another from of a loan of money, as far as the Chinese are concerned. But it is quite otherwise with the Japanese. The removal of a large quantity of rice from the market will prevent prices falling to such a rate as discourages the farmer from extending the area of his cultivation, and thus Japan will derive benefit of two sorts from the demand of her neighbour.

In view of the telegram which announced yesterday that China had submitted to terms from England which are satisfactory to the offended power, it is only fair to suppose that the invitations issued by Li Hung-chang to the Foreign Representatives in China to the now celebrated "Breakfast at Chefoo," constituted a kind of warranty that the dispute with England had previously been adjusted between Sir Thomas Wade and the Viceroy of Chili. Otherwise nothing less could have been expected than some such scene as took place in the banqueting room of Fores palace, and the ghost of poor Margary would have taken Li's place and forced from him something answering to the cry of Macbeth's stricken conscience:—

> Blood hath been shed ere now, i' the olden time,
> Ere human statute purg'd the gentle weal;
> Aye, and since too, murders have been perform'd
> Too terrible for the ear: the times have been
> That, when the brains were out, the man would die,
> And there an end: but now, they rise again,
> With twenty mortal murders on their crowns,
> And push us from our stools: This is more strange
> Than such a murder is.

Audacity, however, never rose so completely to the sublime as whom the Viceroy drank to the Navy of England. With a very small variation on the text, Admiral Ryder might have replied. "Good master Mustard-seed, I know your patience "well. That same cowardly, giant-like ox-beef hath devoured "many a gentleman of your house: I promise you, my kin-"dred have made your eyes water ere now." However, all's well that ends well. and in view of the terrible events that were to have taken place, and all the talk of guns, and drums, and wounds (God save the mark!), the sovereign'st thing on earth for an inward national bruise has been found to be champagne. There ought to be a commemorative tablet put up in the room where the repast took place, with the following well known inscription "And there were present the Pickalilies, and the Jobalilies, and the Curiali, and the great Panjanjerum himself, with a little round button at his top. These all played at catch, as catch can, till the gunpowder ran out at the heels of their boots."

The principal conditions agreed upon between Sir Thomas Wade and Li Hung-chang, as reported by telegram, are as follows:—

An Envoy to be despatched to England with a suitable expression of regret for the murder of Mr. Margary.

An Indemnity to be paid to the family of Mr. Margary.

Four new ports to be opened to trade.

Two Consulates to be established in the interior, one in Szechuen, the other in Yunnan.

There may be other conditions, but, if so, they have not reached us.

We cannot conceal our feeling that these terms are extremely disappointing—presuming always that they are as we have given them. In the first place, the murder of Margary is not expiated, and his murderers are not punished. In the next place, we object utterly to the payment of any sum of money whatever for the life of an English officer murdered in the discharge of his duty. If it can be claimed that he had parents, wife, or children directly dependent upon him, some case might be made out for an indemnity. But even then, in our opinion, suitable provision should be made for them by the State in whose service he fell. His relatives ought not to owe their competency to his murder or his murderers. An impassable gulf should separate them, no gold should bridge it over, and every nation under the sun should know this. The delay which has occurred in securing these terms is unintelligible and vastly decreases their punitive character.

The four new ports opened to trade, and the establishment of the two consulates in the interior, will doubtless prove of some advantage, but infinitely less than so than the settlement of a fixed tariff under which foreign manufactures can be sent throughout the empire. All the consideration which this long delay implies is consideration for the Government, not for the people who are the victims of that Government, and who detest it.

All this may seem ungracious to those who have had the labour and anxiety of bringing these negotiations to a conclusion. But the conclusion itself is disappointing—we will not say humiliating—and there is nothing for it but to say so.

The notice published elsewhere, under the authority of H. B. M. Minister, regarding the period fixed by Japanese law prior to which recourse cannot be had against the surety or guarantor of a contract, deserves the attentive consideration of the mercantile community. The gist of the notice is that, in the event of the principal to a contract failing to carry out the obligations to which it commits him, the surety or guarantor cannot be sued to make good the obligation until thirty-six months have expired. Doubtless the law had its origin in some necessity or custom, of which trace might be found by any one who cares to look for it. But it is not easy to conceive one more absurd or unsuited to modern times, and the more active conditions of the present day seem to suggest, if not to demand, its immediate repeal. But so long as it exists on the statute book, it is well that foreigners should thoroughly understand its provisions.

We announced some little time back that Mr. Brunton, late of the Lighthouse Department, was about to publish in London a map of Japan on which he had bestowed much labour while still in this country. He has now found a formidable rival in Mr. E. Knipping, whose map we have recently had the advantage of inspecting. It has been compiled from English charts of the coast, from information contained in as many as sixty different Japanese maps, from personal travel and observation, and from all accessible published records of travellers in various parts of the Empire. The mountains, rivers and towns have been laid down with extreme care and all attainable accuracy, and the work is a monument of German patience and industry. The spelling followed is that of Dr. Hepburn's dictionary. The scale is as 1 to 1,110,000, or, say, 18 to 20 miles to an inch. The measurements are in metres.

The following extract from *The Athenæum* is worth attention. There can no question that the orientals are consummate masters of decorative art, and much as they have to learn from Europe in certain directions, as we attempted to show last week, Europe has much to learn from them in others. The fear that a bastard art of a very debased kind may arise in this country, is not without foundation, and the world is too much interested in the preservation of pure types to regard with indifference any measures which threaten their extinction. The European artist who will study the decorations of Shiba and Nikkô carefully and reverently, will not be in any haste to disturb, still less to uproot, the thought and feeling from which they have sprung. They are perhaps the ripest and richest fruits of a tree cultivated for many ages with the utmost solicitude and skill, and under conditions of society peculiarly favourable to its growth. He who meddles with them undertakes a heavy responsibility, and must beware lest he replace a virgin purity by any lower form of art-life.

The *Builder* says that the Japanese Government has applied to the Italian Government for three professors, to fill three chairs, of architectural drawing, ornamentation, and sculptural painting, in the Academy of Fine Arts recently founded. This bodes ill for the sole form of true decorative art remaining in existence, for with the design of Japan we must associate its somewhat degraded fellow of China. Indian art has been long ago given over to the "Department of Art," and is now in course of extinction. We trust the *Builder* has been misinformed. There is one curious portion of this subject about which it may be worth while to inquire. How is it that, when every artist or competent judge, not only here, but in France and Italy, will tell the Oriental authorities Anglo-Indian and Japanese, that they possessed the sole unadulterated and, nationally speaking, true manifestation of good decorative design yet these authorities put themselves in the road to ruin, and ensure their own complete annihilation? There must be a class of persons whom fate places in the way of the authorities, quacks and impudent pretenders, who tell them to try the nostrums of the Italian Government and the English Art Department.

The Bishop of Victoria, Hongkong, (the Right Rev. Dr. Burdon,) now on a visit to this part of his diocese, will preach in Christ Church both at morning and evening service tomorrow, the 17th instant.

There will be a collection after each service in aid of the funds of the Church.

From the "Japan Mail Daily Advertiser."

Monday, 11th.

The *Cathaya* left Yokoska dock on Thursday last and proceeded thence direct to Shinagawa to load rice, but the Customs' officials ordered her back to this port to get a clearance before loading. The vessel anchored here yesterday, and will have to wait until the Custom House opens at the usual hour to-day, and then obtain her clearance and return again to Shinagawa. Considering that Shinagawa is not an open port, and foreign vessels are only allowed to load rice there by a special concession on the part of the authorities, there seems to be a great deal of trouble and expense involved in carrying out a very simple undertaking.

From the *Hôchi Shimbun.*

The Railway Station at Kiôto not having been completed, as expected, on the 5th instant, the opening ceremony has been postponed.

From the same.

The circulation of the *Nichi Nichi Shimbun* has increased to such an extent, that the office of the paper is about to be removed to the commodious premises which were formerly occupied by the Yebisuya silk store, Owarichô, Tôkiô.

On the 7th instant H. M. the Mikado ordered H. H Arisugawa-no-miya, the *Gichô* of the *Genrô-In*, to compile a code of national laws, after comparing the foreign codes with the Japanese laws that have existed from ancient times to the present, and also with customs prevailing in various parts of the country. On this account the members of the *Genrô-In* met on the 8th instant, in order to comply at once with the Imperial order.

From the *Nichi Nichi Shimbun.*

Whenever any foreigners receive special permits to visit the Imperial palace gardens at Fukiage, they are admitted from the Hanzô gate.

Saturday, 16th.

The remarks made by the British Consul yesterday on the discharge of seamen from American men-of-war in this port, were somewhat misapprehended by our reporter. His Honour drew attention to the fact that seamen, either actually British subjects or professing to be such, are often discharged from American men-of-war without any provision being made against their eventually becoming chargeable upon the Consul or the community. The American Consulate has to deal with a similar grievance when the seaman is an American citizen. The evil has its rise, not in the unwillingness of the American Consulate to make such provision or accept such responsibility in respect of American citizens as their case may demand, but to the power possessed by the Commanders of American men-of-war of discharging sailors without the cognizance of their Consul.

A telegram has been received from China stating that the negotiations between Sir Thomas Wade and Li Hung-chang have been concluded in a manner satisfactory to England.

Her Majesty the Empress left Miyanoshita on the 13th instant and travelled that day as far as Odawara, where she staid for the night. The next day Her Majesty proceeded as far as Fujisawa, and from that town will make a trip to Inoshima.

From the *Chôya Shimbun.*

Mr. Ôyama, the Governor of Kagoshima *ken*, arrived at Tôkiô on the 13th instant, and his visit to the capital is ascribed to the discontent existing among the *samurai* of the above *ken*, on account of the capitalization of their incomes by the Government.

From the same.

Some time ago the Tôkiô *Fu* appointed certain officers to arrest or otherwise clear away all beggars infesting the streets of the capital, and these officers have done their work so effectually that sensible relief has been afforded to residents and visitors.

From the *Mainichi Shimbun.*

The train that left the Yokohama Station at 7.30 p.m. on the 13th instant ran over some obstruction between the 5th and the 6th *chome* of Takashima chô, which fact was made known on arriving at Kanagawa. An inspection of the line led to the discovery of the mutilated remains of a man of about thirty years of age.

From the *Hôchi Shimbun.*

It has been notified by the Governor of Tôkiô *Fu*, that a female school of midwifery is about to be attached to the *Fu* Hospital, and certificates will be granted to all those who pass the required examination.

There can be no doubt, we think, that the present organ in the Cathedral is very much too small for the building. From the eastern part of the nave it sounds feebly to a degree, and we have long wanted a new and more powerful instrument. But as organs are expensive luxuries, and to procure one from England would take much time and trouble, it strikes us that the difficulty might be met in another way. We believe that the organ in the church at Yokohama is very much too large, —indeed, almost inconveniently so; and it certainly seems that if an exchange could be brought about both parties to the transaction would reap the benefit. The instrument we have now, although too small for Trinity, would be ample for the requirements of Christ Church, and there are a good many year's work in it yet.—*Shanghai Courier.*

THE CURRENCY.

IN an article entitled The Prospects of Trade, in our issue of the 2nd instant, we pointed out the serious diminution of the profit which this country ought to have made upon its crop of silk this year, caused by the extraordinary rise in exchange which has occurred since the month of June. Then, as will be recollected, the dollar was worth only 3s. 10d. whereas the average cost of the coin with which the silk has been paid for may be fairly estimated at 4s. 4d.; or a rise of 13 per cent, which is so much out of the pockets of the Japanese. If silver had risen in Europe to the same extent, there would not be room for a word of just complaint. But, for reasons with which we are all familiar, it has not done so, and the country has had to pay a very high premium upon the coin for which it has exchanged its produce. Yet this is not all. The coin must, before many months elapse, resume its normal relation to the price of bar silver, and, during the interval, another 10 or perhaps 13 per cent of its value may slip away. It may be pleaded that the country has reaped an enormous profit on its silk harvest; that, under such an unusual pressure for money as the activity of the silk market displayed, the dollar must in any case have risen very much; and that much of the money paid for silk has been received back from the Japanese at at least as high a rate as it went into their hands. These contentions are all sound, and we are not supposing that the country is losing from 20 to 26 per cent upon the value of the money passing through its hands. But we do plead that its profit has been very seriously curtailed by the conditions of the currency in which its business has been conducted, and it seems well at this moment to enquire whether the foundations on which that currency rests are such as to permit the erection upon them of a solid structure of trade such as we must all be anxious to see in this country. It is only in times when institutions are strained by some exceptional conjuncture of circumstances that their inherent merits or demerits can be properly estimated. We are moving at this moment very rapidly and under very exceptional circumstances; and the question is whether we are doing so in accordance with sound principles, or whether, on the other hand, our loss by avoidable friction is not so great as almost to neutralize the advantage we derive from our increased speed.

Now, in order to test this, so far as we are able, let us enquire what has become of the large sums of money, amounting to something like eight or nine millions of dollars, which have been paid to the Japanese for silk and tea during the past two months. Part of them, of course, have come back to us for imports sold, but certainly only a small part. Where, then, is the balance? In order to answer this question we must first remember that these payments have been made almost entirely in Mexican dollars, a coin which has no circulation in the country, and is confined exclusively to the open ports. Had they been made in the currency of the country, the coin would have found its way by a thousand channels into the interior, there to represent, in the most convertible form, the wealth drawn from thence. But, being made in Mexican dollars which have no circulation in the country, these dollars must be heaped up in Yokohama, and must remain there until required for re-export. The silk and tea merchants have taken them to the native bankers and received paper in exchange for them, and this paper has again been sent into the interior. But in consequence of the great demand for paper, and the great superfluity of coin, the former has advanced to a premium of six and three

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

quarters per cent, or, otherwise stated, the latter has fallen to a proportionate discount. All the disbursements of the silk reeler and tea producer have been made at or about par. For every *yen* due for rent and taxes, or expended on tools, machinery, wages, food, etc., he has paid a full *yen*. But for every 100 *yen* worth of produce he is now only receiving 93.25 *yen*, and though he may have made a large profit on his produce, that profit is considerably curtailed by the premium which his agent has had to pay for the means of remittance. Here, again, as in the case of the high and declining dollars in which the Japanese have been paid for their silk at the port of shipment, this premium is a purely evanescent thing, and he who has paid it finds that something of it evaporates day by day. There will, of course, be a limit to this evaporation ; but the limit is not known, and meanwhile he may fairly object that his money is liable to any such contingency.

The mischief, therefore, seems to lie in the fact that the currency of the ports is not that of the country.

But the mischief, as it seems to us, will not stop here. These dollars will be largely held by the native banks, who, in their turn, will be anxious to put them to account. How can they do this ? The probability seems to be that they will lend them to the import dealers, who will be tempted to borrow them on account of the discount at which they stand. The purchases of imports made under these circumstances will be of a speculative nature, without the basis of a real demand for consumption, and the goods will be sent into the interior in the hope and expectation of finding a market. But this hope will be to a great extent delusive. The growth of the demand for our manufactures is slow, and cannot be artificially developed by any forcing process. Thus, it appears to us, there will probably be a very considerable lock-up of capital in unsaleable commodities, and this is a bad thing in a country so poor as Japan. It causes stagnation in the ordinary regular trade of the country, leads to forced realization at very low prices, and consequent disasters to men whom it is to our interest to see strong, solvent and confident.

There is one remedial measure which might be taken by Government to reduce the present plethora of the banks. It might issue its notes to the holders of the coin, giving paper dollar for silver dollar—at such rate, of course, as would induce the banker to part with his silver—and place the coin in its vaults. Nothing could be more legitimate than this operation, because for every dollar of currency issued, there would be a dollar of coin deposited in the Treasury. The transaction too, would be a profitable one. The Government paper stands at a heavy premium, so that the dollars could be purchased considerably below their value in sterling, and as the present discount on them will gradually disappear, they could be used again when, or if, circumstances demanded such a course, to buy up the paper now standing at a premium, but then, in all probability at a small discount. We are no advocates for Treasury operations in currency. Money should regulate itself, and will always do so when the currency is on a sound basis. But, until this is the case, there is no doubt, as has been amply proved in America, that the Treasury may superintend the money machinery of the country with great advantage to its trade.

We have pointed out what seems to us a partially remedial measure for some of the evils which at present beset the trade, or, perhaps rather, a mode by which they may be treated with advantage to the commercial classes and the Treasury alike. But it is clear that any such measures are temporary expedients, and that the currency in its present form demands a resort to them from time to time. This very fact seems to us declaratory of its imperfect or disorganized state. Money, as we have just said, should be allowed to regulate itself, which it will always do if the currency is on a sound foundation. How it can be so placed, we shall proceed to discuss in our next issue. It will be sufficient for the present that we have drawn attention to the very serious evils which attend the existing condition of affairs.

THE VALUE OF SILK.

THE circumstances which attended the last European crop were such that its result has been ascertained, as far as it can be ascertained before the reeling of cocoons is over, much later and in a more fragmentary manner than usual. With fresh and clearer facts before us we will now attempt to estimate the quantity of silk which each of the centres of production may supply to the manufacturers of Europe and the United States during the present season. Our data are chiefly, but not exclusively, derived from the *Moniteur des Soies*, the last number of which, dated 29th July, contains some valuable information on the Italian crop. We gather from it that the total weight of cocoons recorded in the thirty-four principal Italian markets is about one-third less than in 1875. We have taken due account, 1stly, of the reduced yield resulting from the generally inferior quality of the cocoons in Italy, France and Spain ; 2ndly, of the usual proportion of cocoons shipped from the Levant to Marseilles to be converted into fine silk ; 3rdly, of the effect of high prices upon the probable export from the far East, as estimated before the great rise took place. To complete our survey we should have to compare the stocks on the 1st July of 1875 and 1876. We know, indeed, that on that date the decrease in London was 10,000 bales ; but stocks on the Continent are so scattered that reliable statistics are nowhere to be found. We must therefore fall back upon the assumption of some of our correspondents that the total decrease was 20,000 bales, which may by analogy be divided into 10,000 bales of full sized and about as much of fine sized silks.

It so happened that when the first signs of a bad crop in Europe and of an impending scarcity of fine raws were made manifest, the price of silk was abnormally low. That doubly anomolous position of the article could not but attract the attention of capitalists at a moment when money was abundant and extraordinarily cheap. A speculative movement commenced in England and soon spread to France and Italy. Now the channels of the silk trade have to a considerable extent been altered, and it is satisfactory to hear, for the present at least, that speculation having taken the lead, manufacturers are buying silk no longer at what price they please but at what price they can.

Having made use of the expression "abnormal prices," we feel called upon to say what we understand by it. We call abnormal such value of the raw material as must, in the long run, discourage either its production if too low or its consumption if too high. It appears that fr. 6 per kilo. of cocoons on an average is the price below which silk growing ceases to be remunerative for a large class of producers in France and Italy. At the rate of fr. 6 the price of fr. 85 to 90 per kilo. for good raws 11/13 deniers will pay the silk reeler, and the relative value of best No. 1 and 2 Hanks will be about fr. 70 or 24/6, the parity of which at 4s. is $700 to 720. These, therefore, we call normal prices. At the beginning of March, when prices reached the lowest point of the season, best Hanks No. 1 and 2 were quoted fr. 42 or 14/9. In a telegram dated 4th instant they are quoted fr. 98 or 34/; which shows an advance of 133 per cent. Here the present quotation for the same class of silk is nearly $1,000, equal to 36/ or fr. 100.

An important element in the combination of a commercial venture is the time allowed for its realization. In the present instance, the limit of time seems to be determined by the European crop of 1877, which, as far as we can see, is the next great event likely to influence prices for better or for worse. If it were certain that the next crop will be as bad as the last, holders would of course be very safe. But if we consider that the disaster of this year has been caused by the inclemency of the weather; that there is no evidence that the supply of the indigenous and foreign seeds has been intrinsically worse in 1876 than in 1875; that the decrease in the production of seed in France and Italy is not to be measured by the decrease in the production of silk; that the export of silk-worms' eggs from Japan will probably be half a million cards in excess of last year; it may be infered that that the prospects of the next European crop are such as to render many holders anxious to realise their stocks at something like normal prices before the great trial comes off.

Those who take a much more cheerful of the future must assume that, notwithstanding an unusually large accumulation of supplies of Asiatic silks at home during the earlier part of the season, a period of six or seven months is sufficient to overcome the resistance of consumers and bring back the prices of 1868-69. It may be that the world is now as rich as it was eight years ago; but surely its tastes and fashions have undergone a mighty change. Dressmakers also are a power, and that power, every body knows why, is dead against silk. It is reported, indeed, that there is an increasing demand for black silks of superior quality; their manufacture requires the best materials, which are now the scarcest, and there is no saying how high the best organzines will go. But Japan supplies but a very small percentage of materials for such organzines.

We ought to say that the manner in which we have divided the probable supply of silk for this season into full and fine sized silks, is an extremely crude one. It is only in a relative sense that Japan silks may, as a whole, be classed as fine silks, and we are afraid that the comparative usefulness and value of the several discriptions and grades have been overlooked by shippers.

Those among our readers who endorse our views on normal prices and the prospect of the next European crop, will determine for themselves the limit beyond which prices become dangerously high. We will not dogmatize on this subject, and we must conclude in congratulating the trade of this port on having re-enlisted in its cause a certain body of capitalists who are sure to exercise a steadying influence on the value of silk.

THE JAPANESE LAW OF SURETY.

Her Majesty's Minister thinks it may be useful to British subjects to be made acquainted with the Japanese law in respect to the liability of guarantors to contracts in cases where the principal has disappeared, and he accordingly authorises the publication of the annexed despatches which have been received on this subject from the Japanese Authorities.

AUGUSTUS H. MOUNSEY.

H. B. M.'s Legation,
Yedo, September 15th, 1876.

TÔKIYÔ JUDICIAL COURT,
April 26th, 1876.

SIR,—I have the honor to acknowledge receipt of your letter of the 24th Inst., making enquiry as to the rule by which, when a Defendant has disappeared and cannot be traced, steps are to be taken against his sureties, guarantors, &c., after the lapse of thirty-six months. That is an established principle binding on all Japanese Courts. I beg to state the principle with more particularity for your information.

Whenever a Defendant has been lost trace of before the bringing of the suit, (the Plaintiff) shall wait thirty-six months; whenever the Defendant has been lost trace of after the bringing of the suit, (the Plaintiff) shall wait six months; and then should the whereabouts of the Defendant be still unknown, proceedings may be taken against his heir. In case there is no heir, or in case the heir has not means (to meet the claim) the suit may be again instituted at once against his sureties, guarantors, &c.

I state this in reply to your letter.

I have, &c.

(Signed) MATSUOKA YASUKATSU,
President.

RUSSELL ROBERTSON, ESQ.,
&c., &c., &c.

August 29, 1876.

SIR,—I beg to acknowledge the receipt of your further communication of the 3rd instant, on the subject of the law relating to the liability that should attach to a guarantor in the event of the principal to a contract having absconded.

I communicated the same to the Judicial Department, from which I have now received a reply to the following effect.

It is stated in your despatch that, according to the reply given by Matsuoka Hanji to the English Consul at Kanagawa, "by the Japanese law, whenever a defendant "has been lost trace ofbefore the bringing of the suit, the "plaintiff shall wait thirty-six months; and whenever the "defendant has been lost trace of after the beinging of the "suit, the plaintiff shall wait six months, &c." This is in effect our customary law. The mode however of dealing with a person of whom trace has been lost before the bringing of the suit has been made Statute law by Noti-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

fications No. 6 and 102 of the year 1875, which were recently forwarded to you by me, and by the inclosed Notification No. 195 of 1873,—three in all. If these be carefully perused, it will plainly appear that unless thirty-six months have elapsed since trace of the defendant has been lost, the guarantor cannot be sued to make repayment. Consequently, the reply of Matsuoka Hanji to your Consul perfectly describes the actual course of procedure at the present moment in our Courts, and the purport of that reply was thus quite correct.

I have, etc.,

(Signed) SAMESHIMA NAÖNOBU,
Vice-Minister for Foreign Affairs and Acting-Minister for Foreign Affairs.

SIR HARRY S. PARKES, K.C.B.,
&c., &c., &c.

Notification No. 195 of June 8, 1876.

In cases when there has been a deficit after the bankruptcy of the principal in a loan either of money or grain, —or when the principal has absconded or died, leaving no heirs behind him,—if it be stated in the bonds that repayment shall be made by the *uke'nin* (guarantor) or *shönin* (attestor), or if a party appear on the documents as guarantor, a decision has been given for such repayment; but if a party appear on the documents as attestor, such repayment, has not been ordered. After the 1st of August, however, the following altered rules will be observed in regard to parties who shall have appended their seals to the bonds given in regard to loans.

Clause I.—In the case of those bonds given for loans of money or grain, in the text of which it is clearly laid down that in the event of the principal not repaying the sums due, such repayment shall be effected by the guarantor or attestor, the said guarantor or attestor shall be ordered to make good any deficit, if such exist, after the principal has been declared bankrupt. And if they too should not be able to effect repayment, the said guarantor or attestor shall likewise be declared bankrupt for that purpose, after which, should there still be a deficit, repayment shall be made as soon as the means, not only of the principal guarantor, or attestor, but also of the heirs of such principal, guarantor, or attestor shall allow thereof.

Clause II.—In the event of the principal debtor either absconding or dying, leaving no heirs behind, the guarantor or attestor shall, in cases when it is clearly laid down in the bond that they shall make repayment in the stead of the principal, be ordered to make such repayment; and if they be unable to do so, they shall be adjudged bankrupt, and if, after this, there should still be a deficit, then the repayment of such deficit shall be made as soon as the means, not only of such guarantor or attestor, but also of the heirs of such guarantor or attestor shall allow thereof.

Clause III.—If the title guarantor or attestor be all that exist and no mention be made in the bond of making repayment in the stead of the principal, then such guarantor or attestor need not effect repayment.

Clause IV.—In the event of there being a deficit after (the principal) has been adjudged bankrupt, the court shall put an endorsement, in the form shown below, upon the back of the original Bond, to the effect that such deficit shall be made good as soon as the party's means shall allow thereof,—and shall affix its seal thereto, and give it back to the creditor.

Notification No. 6 of January 1875.

When a debtor in a civil case absconds, it has hitherto been the practice not to receive a suit until a period of thirty-six months has elapsed after his disappearance. It is hereby notified that from the 1st March next this law is amended as follows.

1.—If before the term of the agreement has elapsed the creditor becomes aware of the absconding of the debtor, he should report to the Court as soon as the term is completed.

2.—If the creditor should not become aware of the debtor's having absconded until the term of the agreement has elapsed, or if the creditor does not learn his disappearance until the limit for bringing an action is about to come to an end, and the credit or having laid a complaint before the Court and obtained its sanction, address himself to the debtor, he is to return to the Court the above plaint with the sanction endorsed upon it.

3.—Under the circumstances described in the above clauses, the Court will in the first place receive the plaint, and order the local officers of the absconder to ascertain the date on which he absconded. The date on which he left his house and disappeared will be inscribed on the security presented by the the creditor, and the plaint will be returned with an endorsement that it is to be presented a second time against the debtor's heirs with the endorsed security, as soon as the debtor makes his appearance, or when thirty-six months have elapsed.

4.—The time from the creditor's receipt of the endorsed security above mentioned until the discovery of the debtor or the termination of the period of thirty-six months is not to be included in the time in which by Notification No. 362 of November 1873, suits must be presented.

Notification No. 102 of June 1876.

REGULATIONS FOR THE REIMBURSEMENT OF MONEY OR GRAIN BY GUARANTORS OR ATTESTORS.

1.—If the borrower of money or grain fails to repay, he is to be adjudged bankrupt and payment made; if there is stil a deficit, his securities will be ordered to pay and of they fail to do so they will be adjudged bankrupt. If there is still a deficit, not only the debtor and his securities, but their heirs will be responsible for the whole amount as soon as they become possesssed of property.

2.—If a debtor dies or absconds without leaving heirs, the guarantor or attestor will be adjudged to pay, and if they fail to do so will be adjudged bankrupt. If there is still a deficit not only the guarantor or attestor himself but his heirs, in case they become again possessed of property, will be liable until the whole is paid.

3.—After adjudging him bankrupt if there is a deficit, the court will make on the contract an endorsement under its seal for the payment of the whole sum in case of his becoming again possessed of property, in the following form, which is to be delivered to the creditor.

SPIRIT OF THE JAPANESE PRESS.

CENTRALIZATION OR LOCALIZATION.

("Hochi Shimbun" of August 28, 1876.)

Since there descended upon our heads the Notification regarding the abolition or amalgamation of the various *ken*, the public writers have all entered the arena of discussion, and, taking the above as their text, have started the explanations and expressed their ideas, and, with their chattering tongues have seemed like insects giving vent in concert to their buzzing upon a calm evening. Some talk of the profit or disadvantage of the measure, others of its utility or otherwise,—some seem to condemn it, others to praise it. But they do not appear to have decided how its profit or disadvantage lies. We ourselves, upon the first receipt of the news that this abolition and amalgamation were to take place had already mapped out in our brains the style of effect that this measure is likely to produce amongst our people. But the time had then not yet come for us to give distinct expressions to our views.

Now, this measure of abolition and amalgation *has not originated from the progress made in civilization by our people, nor has it sprung up in consequence of development of facilities for transport.* We are also of opinion that it has not been brought about owing to the fact of the condition of the local districts having become better than of yore. Thus, then, the abolition and amalgamation have not been found necessarily owing to the unavoidable influence of external circumstances; but it is in consequence of endeavours to cut down expenses at a period when our country and homes have much work on hand, that various schemes have been set on foot, and that attention has in the end been fixed on the abolition and amalgamation of the *ken*,—with the probable intention of diminishing their expenses and paying these in to the Home Department, to be applied in other profitable directions. If this be the object of that abolition and amalgamation, we cannot but rejoice exceedingly.

Now, the conversion of useless expenses into profitable ones is the most important measure of Finance and must be styled a good scheme on the part of statesmen. If our statesmen fix their

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

eyes steadily upon this object, we on our part must long for the future completion of a plan that seems to us to be worthy of praise. But, nevertheless, *we do not long to see the sums disbursed in the local districts taken therefrom merely to be expended on behalf of the Central Government.* For, just consider;—the present measure of abolition and amalgamation is not owing to *the advanced condition of the local districts rendering such a course necessary*, but has merely arisen from the design on the part of the Central Government to remove useless expenses and to convert them into profitable ones. Seeing, then, that the works to be set on foot in the local districts are, at the present time, by no means small in number, does it not stand to reason that the sums hitherto disbursed upon useless measures in the local districts should again be applied to profitable expenses for those same local districts?

In our opinion, to name one instance, judicial courts are greatly desired by the populace in the local distincts, but in some places this desire cannot be satisfied. At the present moment, within the limits of the various districts, Superior Courts have been established, and in addition to these there exists the High Court of Justice, so that, it is unnecessary to state, very few innocent people are punished. But still, in case of appeals when the proceedings of any Court are deemed wrong, the trouble that is thereby entailed upon the people can hardly be described. Up to the present, there was in every *Kencho* a Department for hearing plaints, but the judicial officers there could certainly not be compared to real officers of justice. Even supposing the *Kenrei* and the *Sanji* to be charged with the additional duties of judicial matters, they nevertheless were at the outset only executive officers, and the desire that they should perform both tasks cannot but be styled unreasonable action on the part of those so desiring it. Thus, then, in judicial matters, owing to the fact that there did not exist in every *ken* offices for that special service and officials to undertake charge of it, there arose a difference as to the prosperity or otherwise of the people therein, which is the present state of affairs in the local districts.

Amongst the disbursements, then, that will be diminished in consequence of the abolition and amalgamation of the *ken*, there are to be found judicial expenses, *i.e.* those of the *ken* offices for hearing plaints. Now these should of course be devoted to the establishment of Courts in those local districts. Nor should these alone be applied to the said purpose, but the sums disbursed on other useless objects should likewise be devoted thereto. For if not, the division or amalgamation of the local districts cannot, on the contrary, escape the accusation of having merely taken away useful expenses,—in which case, if we argue the point only upon judicial grounds, it will result that even greater expenses than those hitherto in existence will be entailed upon the said districts. This does not merely affect judicial matters in particular, but large outlay will further be necessary in order to place facilities within easy reach of the people. Now, such taking away of profitable expenses only to increase useless expenditure is an action of which our Government certainly ought not to be guilty. And we certainly should not be pleased if it were done.

In concluding our observations hereon, we must say a word to the people and the intelligent men of the local districts. The present condition of our local districts cannot but be regretted. Since the abolition of the *Han* their appearance has day by day become more desolate, both development of produce and industries having greatly diminished from what they were in former times. If matters should go on in the same way, what will be the final result? Unless energetic measures be now set on foot, when can there be laid the foundation for the good self-government of the districts? The division and amalgamation of those districts is the source from which springs the pure spirit of self-government. At this moment, if we do not arouse the gallant spirit of self-exertion, and cast aside the careless habit of merely bowing down to the opinions of the Government and not paying attention to the affairs of the Constitution, we shall lose all power of helping ourselves or ruling ourselves, and thereby assisting the affairs of state. Some persons have argued that the Central Government should import a portion of their powers to the Local Governments, and that the latter, again, should give a portion of their's to the *ken*, *ku*, town, and village assemblies. But, even supposing that the Central Government should be caused to impart a portion of their powers to the Local Governments, and the latter to give a portion of their's to the town, village, *ku*, or *ken* assemblies, how could they retain those powers, unless they possessed the pure spirit of self-help and self-government? It would thus appear as if there were in the local districts, a disposition to render still more prevalent the pure spirit of self-help and an inclination towards self-government. It is a long time since we have observed in those districts any such disposition. This is just the moment to stir up the pure spirit of self-government. Will not the advocates of "People's Rights" mark this opportunity to establish a National Assembly, and thereby to lay the foundation of People's Rights, and to assist and fix firmly local self-government? Unless the principal line to the net be drawn in, we certainly cannot obtain a particaption in the powers of Government;—and if our wise and intelligent men be not overcome by drowsiness they cannot but bestir themselves.

THE SAME.

Ósaka Nippó of September 1. 1876.

We regret very much that the order for the abolition of fourteen *ken* should have been issued before sufficient time had elapsed to allow of the views we published the other day spreading over the country. It is too late now for us to agitate in the matter; all we can do is to see of what nature is the outlook for the future. And in the prosecution of this enquiry there is one point upon which it behoves us not to be silent, namely, the development of the local distribution of power. According to some politicians the result of the creation of such large *ken* as these will be that a jealous feeling will arise in the minds of the local officials at the centralization of power in the Cabinet at Tókiô. This view, it need scarcely be said, is erroneous, but an examination into the results which are likely to be caused by the local Governments being entrusted with but small powers, and all matters in the jursdiction of an extensive district being referred for decision to the Central Government—shews that there is ground for apprehending inconvenience, and also discloses the existence of circumstances which explain the origin of such mistaken views.

At the present time politicians give rash utterance to thoughtless views on the subject of the abolition and extension of the *ken*, and scarcely a day passes without the number of such agitators increasing. Some argue that the new system will tend to diminish the pressure of public business; others again say that although there may be those who think that there will be a reduction in national expenditure, yet that forming conjectures for the future from a consideration of the past, the conclusion to be reached is that there will be no diminution in public business, no reduction in expenditure or in the number of public officials, and that the state of things will be the same as under the Tokugawa régime,—with this difference, that the people living in out of the way places will labour under the disadvantage of being at a great distance from the offices of their respective *ken*. What important change we are asked, will thus take place?

In our opinion the operation of this new system, by which several small *ken* are merged into large *ken*, will bring no advantages with it unless the powers of the local authorities are extended. If the powers suited to a certain locality are extended, then even though the inhabitants suffer some inconvenience in making application to the Head Office, if suits and legal processes and all business of whatsoever sort or nature can be settled on the spot,—matters can be arranged without the trouble of repeated journeys to and fro; and therefore if we compare this mode of procedure with that under which the Head Office is within easy reach of the various parts of the district under its jurisdiction, but in all matters the action and decision of the Central Government have to be awaited, the first system is decidedly preferable.

To argue the question more minutely, let us take a district whose circumference is forty *ri*, and in which there is one small office which hears and decides all matters appertaining to that district. We will suppose that a person living in the most remote part of this district brings a case before this small office, to do which he has to cross mountains and ford rivers. The officers of this small office decide this case on the spot according to the laws of the country, and the applicant is saved a repetition of his tedious journey.

Now let us take another case. We will suppose there is a small district with a circumference of only ten *ri*, which possesses quite a formidable head quarters of local administration, which, however, is devoid of proper authority, and cannot decide the affairs of the people in its jurisdiction without the consent of the Central Government to which it is subordinate. The effect of such an arrangement as this is that the inhabitants of this small district, however trifling the application they wish to make, however slight the redress they seek, must in each case apply through the local bureau to the Central Government, whose decision, whatever length of time elapses, must be received before the matter reaches a termination.

In respect of the happiness and comfort of their inhabitants, to which of these two districts should the palm be given? Who would not prefer the district in which, large as it is, public business

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is transacted with promptitude? Therefore in the creation of large *ken*, provided the authority befitting the various localities is developed, even if abolition and extension do take place, we do not regard them as disastrous. Even politicians perhaps will agree with us here. Should it so happen that large districts, such as in our first example, should be created with offices constituted in the manner treated of in our second example, why in that case we could do nothing. We can only pray that local governments may never come to this.

On studying what we have written above it may appear to some that we wish to inculcate the doctrine that local administrations should be invested with absolute powers, and should be free from all control of the Central Government, but such is not the principle of local distribution of power. In all matters there are local interests and there are national interests, the two classes of things are distinct, and the number of cases which must be referred to the Supreme Government cannot therefore be regarded as small. Thus much all can ascertain for themselves by self-enquiry. Nor has there from times past ever been any lack of explanation, on the part of politicians, concerning the nature of these two classes of things and the distinction which exists between them. We think it needless at the present moment to wander into matters foreign to our subject, and to plunge into a deep discussion regarding the difference between Local and Central Government.

There is, however, one thing which we must say to our countrymen. It is this. We have confined ourselves in the foregoing remarks to pointing out the advantages which a local distribution of power gives to the transaction of public business and to the regulation of affairs, but the actual results of such a system do not stop here. For instance there is no country in the world in which the distribution of power is so thoroughly carried out as in England. We have not the time to enumerate the numberless instances in which, thanks to a harmonious development of the distribution of power in England, the administration of that country has been attended with profit, and her warfare conducted with success. We should, indeed, like to give some account of these were it only a very curtailed one, but it hardly agrees with the subject in hand, and we should unduly prolong this article, and perhaps fail of securing the object for which it was written. We think it necessary to mention the fact that this system *has* been attended with great results, in order that our countrymen may not restrict their attention to what is only one part of the question of the local distribution of power.

The Same.

("Hôchi Shimbun" of August 29th 1876.)

In the Hamamatsu *ken*,—it may perhaps be in consequence of the people having noticed the report mentioned in our issue of the 14th inst., to the effect that that *ken* was shortly to be abolished and incorporated with another,—this news has been circulated not only in the town itself, but also in the neighbouring villages, and there has been much talk about its abolition. Two persons, named Kanêhara Shôtarô and Kondô Yahei, of the post-town of Hamamatsu in the department of Fuchi, have accordingly been appointed the general representatives of the council of small merchants, and on the 15th, 16th and 17th,—three days in all,—meetings were held in a temple. The people say that if the report in question be true, the condition of Hamamatsu will of course decline, so that it will eventually be impossible to escape death by starvation; that the town, which was burned down the year before last, was only restored to its original state by September last year; and also that since last month schools are in course of construction in the town; so that, if the *ken* be abolished, no benefit will have resulted therefrom. A petition has in consequence been forwarded to the *Kencho*, begging that the *ken* may be retained. Shôtarô and Yahei both arrived at for Yedo on the 26th instant, as town representatives, and have sent in a petition to the Home Department, stating that if the *ken* be retained as heretofore, a sum of 30,000 *yen* shall be paid to the Government yearly, commencing from the present year.

As, however, the alteration is one concerning the general physical division of our whole country, we do not think that consent will be given.

Imprisonment Pending Appeal.

(Chôya Shimbun.)

Mr. Motoki, the editor of the *Saifû Shimbun*, was sentenced on the 23rd of February last, at the Tôkiô *Saibansho*, to undergo imprisonment for the term of two years and a half for violating the thirteenth clause of the Press-laws in an article which contended that should the Government become corrupt and oppressive a hundred years hence—meaning thereby at any future time—it should be overthrown.

Mr. Motoki, however, appealed to the *Daishin-in* against this judgment, on the plea that the article in question referred solely to the future, and, if it was an offence, it was one against the twelfth and not the thirteenth clause of the Press-laws. After the lapse of six months, during which he was confined in prison, a judgment was pronounced by the *Daishin-in* to the following effect:—"As the article in question does not incite the people to the commission of any crime, but to the overthrow of the Government, and as the Government a hundred years hence will hold the same relations to the Mikado as does the present Government, the writing constitutes an offence against the 13th article of the code. The judgment of the *Saibansho* is therefore confirmed, and Mr. Motoki is ordered to complete his term of three years imprisonment.

We have gone carefully over the whole case, that is, the decision of the *Saibansho*, Mr. Motoki's argument against it, and the final decision of the *Daishin-in*, and would offer the following remarks.

The *Daishin-in*, having been established by the Imperial decree of April 1875, must be composed of impartial men who would not act unjustly, and therefore Mr. Motoki was very likely wrong in view of the fact that judgment has gone against him. But, being slow of apprehension, we do not very clearly see the reasons for this decision. Were we to go deeply into the case, we might be carried too far, and find ourselves charged with endeavour to prove a guilty person innocent, so that we shall be silent upon this part of the question.

There is something, however, about which we cannot maintain silence. The sense of the word 'appeal' is this, that, whether with better or worse reason, a man may go for justice to a higher court, in case he is not satisfied with the decision of the court below. Now, when an appeal is pending from the editor of a newspaper, he is put into the same prison with ordinary criminals there to await the decision of the *Daishin-in*. In the present case it took the *Daishin-in* six months to render its decision, and the term for which Mr. Motoki was condemned to imprisonment was three years. If the decision of the *Saibansho* had been reversed on appeal, how would Mr. Motoki have been compensated for this six months of imprisonment? We do not say that the delay in rendering this judgment is due to any want of industry in the *Daishin-in*, for it pursued its work even during the hottest time of the season. It may have arisen from the multitude of the appeals and the paucity of officials to deal with them. But we think that some consideration at all events should be given to those who are undergoing the hardships of prison life.

Were it asked, for what purpose was the *Daishin-in* established, the reply would be, "In order that no man should be unjustly punished." It cannot accord with the will of our Emperor that a man should be detained for a long time in prison unjustly; nor that any one should say "I am unjustly condemned, but the delay attendant upon an appeal to the *Daishin-in* is so great, that it is useless for me to appeal."

Ought, then, the period to be fixed, say at ten or twenty days, within which the *Daishin-in* should render judgment? This could not be, because there are many difficult cases to adjust, and a great stress of business. Ought, then, the number of officials to be unlimited? Not so, again, for there must of course be a limit to the number of officials in every department. Should men, then, give up appealing altogether? No: this would be barbarous. What, then, should be done? We think that, pending an appeal, a man should be handed over to the care of the district authorities or his relatives, and not committed to prison until found guilty by the *Daishin-in*. Men like the editors of papers might be confined to their own houses with perfect safety. Some may argue that this is just and reasonable, but that it is not done in Europe. Our reply is, that as there are many differences between ourselves and the Europeans, there is no great harm in adding one more to them.

District and Superior Courts.

("Nichi Nichi Shimbun" of September 14th, 1876.)

Notification No. 114.

It is hereby notified that the system of *Fu* and *Ken* Courts is now altered, and that District Courts are established, the jurisdiction of the same being determined as shown below.

(Signed) Iwakura Tomomi,
Udaijin.

September 13th 1876.

1. Tôkiô Court; .....Tôkiô *Fu*, Chiba *ken*.
2. Kiôto Court; .....Kiôto *Fu*, Shiga *ken*.
3. Ôsaka Court; .....Ôsaka *Fu*, Sakai *ken*, and Wakayama *ken*.
4. Yokohama Court; .....Kanagawa *ken*.
5. Hakodaté Court; .....Hok'kaidô,, viz., that portion hitherto under this Court's jurisdiction.
6. Kôbé Court; .....Hiôgo *ken*, Okayama *ken*.
7. Niigata Court; .....Niigata *ken*.
8. Nagasaki Court; .....Nagasaki *ken*, Fukuôka *ken*.
9. Tochigi Court; .....Tochigi *ken*, Ibaragi *ken*.
10. Urawa Court; .....Gumba *ken*, Saitama *ken*.
11. Aômori Court; .....Aomori *ken*, Akita *ken*.
12. Ichinoseki Court; .....Iwaté *ken*, Miyagi *ken*.
13. Yonézawa Court; .....Yamagata *ken*, Fukushima *ken*.
14. Shidzuoka Court; .....Shidzuôka *ken*, Yamanashi *ken*.
15. Matsumoto Court; .....Nagano *ken*, Gifu *ken*.
16. Kanazawa Court; .....Ishikawa *ken*.
17. Nagoya Court; .....Aichi *ken*, Miyé *ken*.
18. Matsuyé Court; .....Shimané *ken*.
19. Matsuyama Court; .....Ehime *ken*.
20. Kôchi Court; .....Kôchi *ken*.
21. Iwakuni Court; .....Yamaguchi *ken*, Hiroshima *ken*.
22. Kumamoto Court; .....Kumamoto *ken*, Oida *ken*.
23. Kagoshima Court; .....Kagoshima *ken*.

Notification No. 115.

It is hereby notified that in connection with the alteration of the system of *Fu* and *Ken* Courts, and the establishment of District Courts, the jurisdictions of the several Superior Courts are determined as shown below.

(Signed) Iwakura Tomomi,
Udaijin.

September 13th 1876.

1. Tôkiô Superior Court; ....Tôkiô, Yokohama, Tochigi, Urawa, Aichi, Shidzuôka, Niigata, and Matsumoto Courts.
2. Ôsaka Superior Court; .....Kiôto, Ôsaka, Kôbé, Kanazawa, Matsuyama, Kôchi, Matsuyé, and Iwakuni Courts.
3. Miyagi Superior Court; .....Aômori, Ichinoseki, Yonézawa, and Hakodaté Courts.
4. Nagasaki Superior Court; ....Nagasaki, Kumamoto, and Kagoshima Courts.

Woolwich Infancy.

("Hôchi Shimbun" of September 13, 1876.)

At the Rifle Manufactory of the War Department, at Hagi in the Yamaguchi Ken, Mr. Morikawa Shigenobu, a *Chiu-i* of the War Department, has hitherto resided and exerted himself in the work, so that a large member of rifles have been made. He has now come up to Yedo for the purpose of conveying the rifles hither, and Mr. Netsu Arata, *Chiu-i*, has been ordered to take his place at the manufactory.

It is indeed a matter over which we should rejoice, that rifles, cannon, cartridges, etc. have all been made in our own land of Japan, so that we seem not to be behind either Europe or America. After this, we desire that there should not, even for a single day, be a foreigner in the employ of our Government.

Law-Reform.

("Hôchi Shimbun" of September 11, 1876.)

In connection with the National Constitution which is now to be established, the following Imperial Message was, on the 7th instant, delivered to Arisugawa no Miya, President of the *Genrô-In*:—

"It is Our wish to consider extensively the laws of all foreign "countries with reference to our national constitution, and "thereby to determine our constitutional law. Do you, therefore, "prepare a draft for this purpose, and submit it to Us. We will "then make Our choice."

On the following day, the 8th instant, the President made the above known to all the members of the *Genrô-In*, and we hear that four of the latter, viz. Hosokawa, Fukuba, Yanagiwara, and Nakajima, were appointed to form a committee of investigation.

This has lately given rise to various reports on all sides in the streets.

Correspondence.

TRAINING NOTES.

To the Editor of the "Japan Weekly Mail."

Yokohama, September 16th, 1876.

Dear Sir.—The operations of the sporting world during the past week have not been very animated, so there is little to tell your readers. For the first two or three days the same stables as those mentioned in my last were the only representatives, but on Wednesday, notwithstanding the freely circulated report to the contrary, the Mystery stable appeared in full strength, and the owner notified the requirement of nine stalls in the paddock, permission for three bettoes to ride, etc. Of this more anon. Mr. Nicolas appeared once, and was as welcome as usual. All looked forward to a daily vision of the familiar figure and the charm of the "nightingale-like whistle" which regulates the training of his ponies. Alas! his unexpected departure for Shanghai has caused a vacancy in our little circle, and cast a feeling of dullness over the whole aspect of things at the Race Course. We can but hope that he will speedily return with a strong re-inforcement for the Russo—Mexican stable, to disperse the now pending gloom with his ever-ready pleasantries.

The Tartans are all in regular hard work, which they apparently can stand very well. *Lintie* looks fully able to uphold the high opinion that was formed of him last meeting. *Tallapoosa* and *Hereward* take very kindly to their work, but in my opinion the former will never do wonders here; his style is not suited to this course. *Wild Moor* is a fine, strongly built pony with good action—one of the old school—and shows that Mr. Morrison's interests are well represented in Shanghai. Mr. de Benter's lot have somewhat improved in appearance. *North Mongolian* attracts much attention and I think may come out in the place of his stable companion *South*, who is still too lame to put in an appearance. Of *Ravenslee* and *Consolation* we shall know more when the galloping commences; at present they show signs of being very lazy. *Uncas* will certainly not be fit to run this meeting. Mr. Pringle still perseveres with *Black Rod*, who is as lame as ever, and *Sirius* who has been transferred to his stable. *Grasshopper* has decidedly fallen off under Mr. Savile's management, and is not, in my opinion, half the pony he was last meeting. Being now comfortably stabled under the guardian eye of the Hon. Secretary of the late Yokohama Society for the prevention of of cruelty to animals, he, together with *Drift* and *Crusader*, ought to speedily improve.

As before stated the Mystery Stable have begun work. *Dibs* is in splendid form. I don't think there is any China pony here to beat him for three quarters of a mile. The two new ponies *Niboo* and *Satz* have apparently been kept through the summer on the *green spectale* plan of feeding, and through they are both fine looking ponies, they certainly want more flesh. The Japanese representative of this stable, *Oyama*, is in fine form, and being a young pony has grown some two or three inches since last meeting. This, however, will not prevent his winning. *Little Fish* has got over his liking for the gate, and the remains of *Picayune* may sometimes be seen in the environs of the course.

Mr. John Peel's *Grey Friar* and *Bonito* are both in good fettle, especially the former, which would be a dangerous opposer to the Tartan's best, if he could be got out of his obstinate, or nervous, habit of standing still when mounted. Many ponies get into this way through that popular folly of throwing a blanket over their heads at the smallest sign of fractiousness; this only excites their nervousness, whereas a few days of firm, but gentle treatment on the part of the rider at mounting, would have the desired effect of curing the ponies of what is too often mis-called vice. By the next steamer from Shanghai two new ponies are expected for this stable, and I am sure every one will wish the owner the success he so fully deserves. The *Judge* has commenced work, but his stable companion *Minister* is still a little lame, and is very much fancied by certain owners who I think greatly overrate his powers.

Original from UNIVERSITY OF CALIFORNIA

Of native ponies there is still a great dearth. The dealers say that they can find no purchasers, and on the other hand stable owners complain that they can find no ponies. The fact is that some few years ago a very foolish habit of advancing money to brokers came into vogue, and men went up country with advances to bring down some wonderfully "*Hi-hi-mama*." In some few cases they returned; in many others they forgot the obligation they were under to the too-confiding foreigner, and *stayed away*. The few ponies that were brought down in this manner frequently found their way to the hammer, and in some instances realized as much as *ten to thirteen dollars* each! The brokers now can get no more advances, and consequently the *bonâ fide* dealers do not know where to take their ponies. I don't think there are many to be had, but some of those offered at Kamakura for sale were well worthy of attention. A very fast griffin, belonging a high officer in the Admiralty Department, is said to have come up from Satsuma and in my next I hope to be able to tell you all about him.

Yours truly,

TRITON.

THE MITSU BISHI COMPANY.

To the Editor of the "Japan Weekly Mail."

The "Grand Hotel,"

Yokohama, 14th September, 1876.

Dear Sir,—May I ask your kind indulgence in allowing me to make public, through the columns of your influential journal, the following circumstances:—

On the morning of Wednesday, the 6th current, between 10 and 11 o'clock, I applied at the office of the Mitsu Bishi Steam-ship Company, Shanghai, for a passage ticket for Yokohama. I was informed by the clerk in charge, after that gentleman had consulted with the Agent, that the hour had passed for their issue at the office, but on application to the Purser on board the *Tokio Maru* I could obtain a ticket, on payment of a penalty of 10 per cent. advance on the ordinary rate for the passage. This I found I had to submit to.

I made my application more than one hour before the advertised time, noon, for the sailing of the ship, considering, as is the case with other Steam-ship Companies, that I should be in ample time.

Perhaps the enlightened Agents of the Company will, after the present hot weather has passed, exert themselves sufficiently to take measures, whereby the public can be informed, how many hours, days or weeks notice they require from intending passengers to clear themselves from the extortion to which I have referred.

I believe, although a stranger in the East, that the information would be much valued, as other passengers by the *Tokio Maru* complain of being victimised in the same manner as myself.

I remain, Dear Sir,

Yours truly,

BETA.

An eclipse of the sun will take place to-morrow, and there will also be a new moon. It will be curious to see whether these events are followed by any change of weather.

If the age of "lying bulletins" has gone by, and we may depend on the truth of a tranquillising Simla telegram, Lord Lytton's health is not in a condition that need excite apprehensions of his premature departure from India. He is not robust and never was; it is whispered that he is never likely to be; it is admitted that he is a sufferer from indigestion, and the viands needed to whet his appetite are not of a kind to produce robustness even on the hills. Meanwhile, says the telegraphist, he works night and day, and when his mastery of Indian subjects is complete, we may expect to hear the voice of the ruler a little more frequently than before. He certainly cannot be accused of any undue haste to show his hand publicly in conducting the state chariot, and people were begining to think that for a King of men we had got a dyspeptic poet who would leave hard work for others and content himself with scattering at intervals a few flowers of rhetoric. But thought will probably soon lead to action, and if we may judge from the one or two things he has already been known to do, we may predict that his rule will be very different from the quiet commonplace administration of his predecessor. With less caution and more sentiment than Lord Northbrook, we trust he will be found possessed of administrative as well as poetical genius.

Law & Police.

IN H. B. M.'s CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

Monday, September 11th, 1876.

This was a charge against Oxen Oxenson, Charles Dodge, and Edward Lawrence, seamen on board the British ship *Ambassador*, for being absent without leave.

C. Prehn, sworn, stated: I am the master of the *Ambassador*. At half past ten yesterday morning my able seaman came up and asked for leave to go on shore. I told them I could not yet spare them, as I wanted to get the ship put in order, but as soon as the cargo was discharged I should give them both money and leave. They said they did not want money, and again pressed me for leave. Dodge and Oxenson said they would rather have three weeks' in jail than stay on board. The mate went forward and sent all the sampans away. Dodge said "you had better not play with my temper or it will be worse for you." The mate saw the three prisoners leave the ship in a sampan about twenty-five minutes to eleven in the forenoon. Oxenson returned about five o'clock drunk, and the others did not come on board till this morning at four. The men have had no liberty since the ship came in twelve days ago; they never asked for it till yesterday.

Prisoners admitted the charge, and were ordered each to forfeit two days' pay.

Wednesday, September 13th, 1876.

F. A. Cope *v.* F. W. Marks.

This was a claim for the amount of an I.O.U. said to have been granted in return for a receipted account with a balance of $10; this sum being the value of a piece of cloth bought by plaintiff at auction, January 14th, 1875.

F. A. Cope, sworn, deposed:—My claim is for an auction account on a piece of cloth purchased by Mr. Marks, January 14th, 1875. This account was sent in due course to Mr. Marks, and after being presented for payment several times was at length retained, and I received this I. O. U. instead. This I. O. U. I presented many times last year and also after Mr. Marks's return from India. On the 8th August this year, wishing for certain reasons to close transactions, I wrote to Mr. Marks, the press copy of which letter I am prepared to produce. The money was not sent to me and I enclosed this envelope with the I. O. U. and requested Mr. Marks to pay the amount. Mr. Litchfield wrote back saying Mr. Marks was not at the office and he would retain the I. O. U. for Mr. Marks inspection as it was neither dated nor endorsed. Mr. Marks then wrote to me declaring that the I. O. U. was a forgery, and I admit that the answer I sent to this note was not worded in the most polite way possible, for I was very angry and annoyed at this statement. The I O.U. sent me by Mr. Marks represented a receipted account.

Cross-examined by Mr. Marks: This I. O. U. is for the amount of an auction sale on a piece of cloth bought in January 1875; I really cannot be expected to recollect what sort of cloth it was. I sent in the I.O.U. first in April or May, 1875, and at least thirty times between that date and August this year have I given it to my boy to present to you for settlement. I did not send it with the chit-book; I am not in the habit of sending bills with the chit-book. I probably did send in an account in March, 1875. (Account produced by Mr. Marks.) That is in the writing of the firm. (An I. O. U. shown.) I never to the best of my recollection saw that before. (In this account there was mentioned January 7th, 1875. By F. W. M.'s I. O. U.—$10,00.)

His Honour compared the two I. O. Us, the one produced by Mr. Cope and the other by Mr. Marks, and declared that he could no see difference in the signatures, though Mr. Marks alleged the one to be false.

Mr. Marks now asked that the case be dismissed on the ground that Mr. Cope was sueing for the amount of an I. O. U. for which credit had already been given. His Honour declined to do so.

Cross-examination was continued:—All the answers received to my applications for payment of this money were *miyonichi*, and *by-and-bye*. I sent repeatedly, and you were sick for sometime, till I received this note from Mr. Litchfield.

H. W. Litchfield, sworn, in to Mr. Marks:—Your friend Mr. Strachan was in the office at the time this I. O. U. was brought in, March 1874. I cannot say whether you gave the I. O. U. to Mr. Strachan. In my belief that the one now brought forward by you is the I. O. U. you gave to Mr. Cope.

F. W. Marks, said I gave an I.O.U: to Mr. Strachan in payment of my subscription to the Race Club: I presume that Mr. Strachan must have taken it to Mr. Cope's Auction Room and endorsed it in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

payment for some cloth he had bought. This is the only explanation I can give of its having Mr. Strachan endorsement, and I distinctly state that the I. O. U. has been paid and I have received credit for the amount.

Mr. Litchfield, continuing: I have been with you since January 1874. You were in fairly good health from April 1875, till about August, when you were seriously ill. You only attended the office when pressing business required, and I have looked after your affairs in the office since April 1875, with the exception of one fortnight. All letters entering the office have passed through my hands; some I open if they do not appear to be altogether private, in which case I send then up to you unopened. I know Mr. Cope's writing and never saw the I. O. U. till it was presented in August. On the 8th of August you received this letter from Mr. Cope and we had some talk about it. Two or three days prior to this you had entered into negociations with Mr. Cope for the purchase of some harness, which was sent to your house for trial on the ponies. It did not fit and was returned by the man who brought it. In the evening this letter came from Mr. Cope, accusing you of having changed a pair of reins. I know you called in the betto and in consequence of his answers to your questions you returned the letter. Immediately after this affair, this I. O. U. was presented; I saw it then for the first time. I was surprised it should have been sent in as you had not had any transactions with Mitchell, Cope & Co. for a long period, and I refused to settle it before consulting you. I know your handwriting and signature, and I do not think this is your signature. Mr. Cope says he found my letter lying on his desk, opened. I sent it in an envelope and with the chit-book. Mr. Cope came to me on some private business some time ago, and you gave me express orders not to give him credit either for work or costs. This business was performed, and Mr. Cope did not then object to your earning your fee. Nothing was said about an I.O.U. for $10.

To Mr. Cope: The business I transacted with you personally. I sometimes send bills away from the office when I am busy, but I invariably open them before doing so.

Mr. Marks said nothing further need be said; all the facts in the case had been brought to light and further remarks would be superfluous.

His Honour then said: The opinion I form in this case is: that I decidedly consider it a strange coincidence that two I.O.Us. of the same date and for the same amount should be in existence. I hold that the account in question has been paid and that the I. O. U. had not been given up at that time. As to defendant's allegation that this I. O. U. is a forgery, that of course, I do not think for a moment to be the case. Verdict for defendant.

Wednesday, September 13th.

A motion was brought before the Court in the case of "the Japanese Government *versus* W. H. Smith and his Trustee in Liquidation A. J. Wilkin" for the recovery of certain land, to substitute another defendant, viz.: Mr. Dohmen.

Mr. Ness appeared on behalf of Mr. Wilkin; Mr. Hill represented the Japanese Government.

Mr. Ness argued that the motion was in every way quite fair; it merely asked that Mr. Dohmen, to whom the land in question had been mortgaged and who was therefore the actual owner, should be allowed to defend the case brought before the Court by the Japanese authorities in which his own property was at stake.

Mr. Hill opposed the motion on the grounds that this was not a case of interpleading. The property in question is a leasehold under certain conditions; before those were complied with the Japanese government could not be made a party to the transfer. On the noting of such transfer all back rents were to be paid to the Kencho; the present action is for the forfeiture of the lots under the conditions of the lease. No doubt any transfers between the recorded holder of the land and any other person might be perfectly valid and legal, but before the form had been gone through at the Kencho the Japanese government could not be supposed to have any privity in the transaction.

Judgment reserved.

Friday, 15th September, 1876.

Judgement in the motion which was brought before the Court on Wednesday, the 13th instant, to substitute Mr. Dohmen in place of Mr. Wilkin, as defendant in this case, was given yesterday morning, as follows:—

I decline to make an order in the terms of the motion, but as there appears to have been a partial transfer of lots 63 and 66 to Mr. Dohmen, I make and order under Rule 37 of the Council, that Mr. Dohmen be joined as defendant so f lots are concerned, the pleadings to be amended ac Costs in this motion to be costs in the cause.

(signed) RUSSELL ROBEI

Thursday, September 14th, 1876.

John Cavanagh, a discharged seaman from U.S.S. "., was brought before His Honour on a charge of drunken

Police-sergeant Loxton, sworn, stated: Yesterday I for by Mr. Benson of the *Kencho*. I went and was ask charge of prisoner who had been intoxicated ever sin come from his ship. Prisoner himself begged to be loc he said he could not escape from liquor.

Prisoner said he was a native of Liverpool; his fat Englishman, his mother Irish. He had gone over to A joined the U.S. navy at San Francisco, but soon got tir was discharged with several other men when the " arrived in Yokohama lately. He could not help hin had got such a hold upon him.

Sentenced to 24 hours' imprisonment, afterwards to off by the first steamer.

His Honour said: I think it well to observe ho the discharged seamen from the American men- cast on shore here and, happening to be Englishmen, on the hands of the British Consulate. I believe the dozen such at present loating about the settlement are the bane of the American navy, who have been dis their misdeeds and who are not recognised by the U. Authorities because they claim to be Englishmen. T on shore with little or no wages, and a number of have haunted the settlement for some considerable tin

---

IN THE U. S. CONSULAR-GENERAL COU

Before H. W. Denison, Esq., Vice Consul-G

Monday, September 11th, 1876.

James Sullivan was charged with having smuggled the U. S. jail on Sunday afternoon, the 10th instant.

Prisoner pleaded not guilty.

Deputy Marshal Elmer, sworn, stated: About a q yesterday evening as I was turning the corner at T prisoner jump out of a *jinrikisha*, and the *jinrikis* packet to a string by which it was pulled up into the of the jail. As I approached them I noticed the c prisoner's attention to me; then he got into the *jin* and rode off. I met him again just behind the Germ in answer to my inquiries he said they were newspa been passing into the jail. I went to the jail, and, prisoners into their cells, commenced a search for the the same time telling the prisoner Hamilton that He replied: "It is no use hiding it, I see, so here it i nothing in it by this time," and he handed me this wh (produced.) When I asked who drank it, he sai them had had a drink out of it. I now went wi Hazzel to arrest prisoner. We found him sitting q on a bench in the "Shamrock" saloon. I told hi covered the contents of the package, and that I shoul and bring him before the Consul. He refused to come, up, took off his coat and hat and said "I'll make it h the man who arrests me." A lot of sailers came in a would not have prisoner arrested; but I pressed again to come with me. He caught hold of a bottle However, with the assistance of constable Hazzel, outside and had the manacles put on him, he swearing under the process. We had to tie his leg *sha* before we got to the station, and he has been the whole night. Mr. Hackett was with me when bottle being smuggled into the jail.

J. Hackett, sworn, deposed:—Deputy Marshal H were coming down the street when we saw priso alongside a *jinrikisha* man. He was first immed the jail-windows and then he passed over t side of the street. He was looking up at in the jail, though I could see no one there. asked me to look at something being hoisted up, but see anything.

G. Hamilton, sworn. Yesterday, I can not say at heard my name called from the street, and on lookin three foreigners, one of them Sullivan. They held u

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and indicated to me that it was intended for me, so I lowered a line and hoisted the package in. I found it to be a bottle of whiskey; we uncorked it and some of my fellow prisoners finished the contents. Mr. Elmer afterwards came and, locking all the prisoners up, asked for the package. I told him all about it. Perhaps had I know it to have been whiskey I would not have taken it. I drank the liquor more in order to do away with the bottle than for the stuff itself.

Prisoner had no questions to ask. When sworn he stated :—I came on shore from the U.S.S. *Yantic* yesterday and went drinking with some friends in the "Shamrock." We were talking about sending whiskey into the jail, and I bought a bottle and had it wrapped up in paper. We started for the jail in a *jinrikisha*: there must have been four of us at least. Before I had got out of the *jinrikisha* I saw Hamilton at the window, and I beckoned to him to pass down a line for the package I had. I met Mr. Elmer shortly afterward when I told him I had only passed some papers into the jail. Later in the evening Mr. Elmer again came to me, whilst I was sitting with some mates in the "Shamrock" and said he wanted me. There was a row, and I was laid on my back, kicked, and handcuffed. I do not know the other men who were with me at the jail.

Police-constable Hazzel, sworn:—Last night Mr. Elmer came and asked me to asked me to assist him in arresting a man who had smuggled whiskey into the jail. I went with him, and when we found the man Mr. Elmer told him what we wanted, but the prisoner made a noise and jumped on the counter. I pulled him off, and managed to fix the irons on him; we got him to the station by fastening his legs down in a *jinrikisha*.

Prisoner said he was aware he had no right to smuggle anything into the jail.

Sentenced to one month's imprisonment with hard labour and $10 fine or twenty days' imprisonment in default. Hamilton to be put into close confinement for three days, and the other prisoners' liberty to be restricted.

Sullivan grumbled about paying the fine, saying he had lost a gold stud in the row yesterday.

Tuesday, 12th September, 1876.

Edward Moody, a seaman on board the U. S. S. *Yantic*, was charged with having hired a jinrikisha and afterwards refusing to pay for it.

Prisoner was discharged upon paying the coolie the fifty cents asked for.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before P. F. KEMPERMANN, Esq., Acting-Consul.

Thursday, Sept. 14th, 1876.

Assessors, Mr. E. HAGENS and Mr. H. FRANCKE.

E. BATAVUS *vs.* H. W. HOHNHOLZ & Co.

This was a claim for $350, with interest and costs, due on a bill of exchange issued by defendants in favour of plaintiff, and payable on demand, which had been protested for non-payment.

Mr. Kirkwook appeared for plaintiff; Mr. Graham, who acts per procuration during the absence of Mr. Hohnholz, for defendants.

Defendants stated their inability to take up the protested bill, and were ordered to pay at once $350, and with 5 per cent. annual interest and costs.

IN THE KANAGAWA SAIBANSHO.

Before ISINAI KANSUI, Esq., Vice-President.

Saturday, 16th September, 1876.

F. ESCOMBE *vs.* ITO SHIMPEI.

Plaintiff, who had in March 1874 obtained a judgment in the Tôkiô *Saibansho* against defendant for the balance of an account for goods sold and delivered, now asked for a satisfactory settlement; or if such could not be obtained, that defendant should be punished for felony, having, according to his own statement, obtained the goods after having been declared bankrupt at the instance of other creditors.

At the request of the Court, plaintiff stated his case, as follows: In March 1874 defendant came to me, saying he had contracted with the Government for the building of some houses at Ichigai and elsewhere, and asked if I could supply him with materials, for which he would pay me as he got the money from the Government. The goods were supplied and the first two or three instalments paid regularly, but when the balance was not forthcoming I took him to the *Saibansho*. Judgment was obtained against him, and he was ordered to pay when he acquired property again. I have not seen nor heard from him since then. In March this year, being about to leave the country and wishing if possible to regain some of this money, I asked, through my Consul, to be confronted with Ito Shimpei. In due course the answer reached me; I was requested to attend at the Tôkiô *Saibansho* on the 25th of that month. I went there accordingly, and was told by the interpreter that Ito Shimpei had been released from custody on the 25th of May, upon payment of a certain fine and on account of sickness. I communicated this fact to my Consul, and was subsequently informed that the case had been transferred to this Court. The Consul then received a letter from one of the judges who had tried my case. The following is an extract :—

"When the above was investigated at Old Saibansho, Ito Shimpei had previously become bankrupt on account of other creditors and that he was willing to settle the matter after he had acquired property again, since at that time his assets amounted to nothing at all. The plaintiff said that the goods which he originally sold to the defendant were sold to a Government office and that as it was a perfect fraud to take goods which had been delivered without paying money for them, he wished to have the defendant punished, but the matter being from the first one of buying and selling on credit, the defendant did not appear to have received the goods fraudulently, and the plaintiff was therefore told to wait till the defendant had acquired property again and then demand payment.

(The above extract was read at request of the Court.)

I got a judgment against him for the amount claimed and if he cannot settle that, I ask to have him punished for felony. I have no guarantee for the money; I know the goods were given over to the Government and used in Government buildings, but where has the money gone? I have not received a cent from him. He has never come to me either to say he was making money again or on any other business. I have had to pay for the goods to those from whom I bought them in England, and now that I am leaving the country I think it very hard that I cannot have him punished. The judgment from the Tokio *Saibansho* ordered him to pay the money. The banto who was with me when these transactions were carried on is not with me now. My object in bringing him again before the Court is, 1stly: to ascertain whether it is possible to get satisfaction for my claim; and 2ndly: if he is not able to make any arrangement, to endeavour to have him punished on the strength of his own statement, that previously to taking the goods he had become a bankrupt.

To the Court: I have not a copy of the original complaint; I have no papers from the Tokio *Saibansho*. I obtained judgment against him. I have no guarantee for the money. I know the goods were given over to the Government and used in Government buildings, so that he must have received the money; but where has it gone to? He did not give me more than a small part of the total amount. The banto I had then is not with me now. I do not know where he may be found, It was only on seing this letter from the judge to Mr. Dohmen in April that I was aware he had been a bankrupt at the time of the transactions with me, or I should have tried to get him punished before now. I did not receive the judgment in a written form; it may have been sent to the Consul, but I am not aware that it has been so.

The Vice-President said :—As we have not received all the documents necessary to carry on this case from the Tokio *Saibansho*, the Court will adjourn till the 22nd instant at 10 a.m., by which time the papers will be to hand, and the defendant ordered to appear.

Sweetly it was said of a good old housekeeper, *I had rather want meat than want guests*; especially if they be courtly guests: for, never trust me, if one of their good legs made in a house be not worth all the good cheer a man can make them. He that would have fine guests, let him have a fine wife.—*Ben Jonson.*

What is history? It is truth alive and actual—truth embodied—truth clothed in our kindred clay. It is knowledge, not afloat on the mist-bounded sea—the shoreless abyss of speculation—but knowledge coasting it in sight of the familiar land-marks of time and place;—knowledge anchored to this human heart, and coming ashore on this our every-day existence. It is the maxim of the book made interesting—the lesson of the pulpit or the desk made simple and delightful, by being read anew in living men. It is the grace made lovelier, and the attainment made more hopeful, by its exhibition in beings of like passions with ourselves.—*Dr. J. Hamilton.*

The foundations of learning are—Seeing much, suffering much, studying much.—*Catherall.*

MR. MARGARY'S JOURNEY.*

(The Times.)

Augustus Raymond Margary was one of those young men of whom England may well be proud. Selected to perform a most responsible and perilous duty, he accomplished it with great success, and after he had traversed vast regions hitherto untrodden by Europeans he fell a victim to treachery. That catastrophe however lamentable, was but an accident which by no way detracts from the merit of the previous achievement. In his 21st year Mr. Margary was successful in a competition for a Student Interpretership in China. That was in the year 1867, and the succeeding six years were spent in China to such profit that he had thoroughly mastered the language and made himself familiar with the habits and customs of the country. It is well known that the importance of opening an overland route for British commerce between India and China by way of Burmah has long been discussed in British India. In 1868 a Mission, under Major Sladen, crossed the Burmese frontier and reached the city of Momien in the Chinese Provinces of Yunnan. It returned, however, having failed to penetrate beyond that point in consequence of the disturbed state of the Province, in which a civil war was raging between the Chinese authorities and the Mahomedan rebels. In 1874 the struggle ended in the overthrow of the Mahomedans, who were exterminated after the Chinese fashion, and the authority of the Emperor was restored up to the Burmese frontier. This afforded a favourable opportunity for renewing the attempt and a Mission under Colonel Browne was despatched by the Indian authorities with instructions to cross South-Western China from Bhamo to Shanghai, promises of safe conduct with the necessary passports having been previously obtained from the Peking Government. At the same time, as the Mission would need an interpreter, and to make it clear to the Mandarins along the route that Colonel Browne and his company belonged to the nation so well known at the capital and the eastern ports, the British Minister at Peking was instructed to send an officer across China to meet the Mission and act as their interpreter and guide. Hence arose Mr. Margary's appointment, and to it we are indebted for this most interesting book.

After this long and perilous journey was determined by the authorities, doubt arose as to its expediency. It seemed that, after all, the shortest way, and certainly the safest for the person principally concerned, would be to send the interpreter by sea to Burmah, there to join the Mission, and this change of views was communicated to Mr. Margary; but by the time the message reached him he was already away in the interior of China, far on his route to Bhamo, and he very wisely resolved to persevere. Besides, though the way by sea would have been both shorter and safer, one great advantage for Colonel Browne's Mission would have been lost, which has been already mentioned. The Mandarins along the route would not have greeted Mr. Margary as an old friend who had recently traversed their country under Imperial protection had they beheld him for the first time in company with Colonel Browne and acting as his interpreter. That they would have thus greeted him we think is evident from their general behaviour as recorded in this book. We, believe, therefore, that it was a wise act on the part of Mr. Wade to despatch Mr. Margary by the overland route, and the comparative ease with which he accomplished that part of his mission is a further proof of the wisdom of the choice. Political memories are proverbially short, and we shall therefore not be surprised if our readers have forgotten that our relations with China in 1874, were not on the best footing. It was supposed, in short, that a fresh war was impending between the two countries, as a new generation had arisen on whom the lessons taught their fathers fifteen years before had been thrown away. This might have been considered a bar to such a journey as that proposed for Mr. Margary; but he seems never to have regarded it in that light. On the contrary, he wrote of it "as a magnificent opportunity for distinguishing himself," and, though his health was any thing but good, he set off on a journey which lasted months with admirable resolution and self-reliance. It added to the embarrassments of his start that his mission was to be kept a profound secret. He had to make all his preparations, and to arrange for drawing money in the interior, and then set off with a cook, a messenger, and a writer, and to slip a way unknown to any one except the officials. As for his travelling, it was by no means plain sailing, except at the very beginning. The first 500 miles were up the Yangtze in the splendid American steamers which monopolize the traffic on that river. After that he proceeded up the river in a wretched narrow boat of the country; at a latter period he was carried hundreds of miles in a litter b over the most wretched roads; and, last of all, whe near his journey's end he put himself and his ba ponies, and thus arrived at Bhamo, on the Burmese fro had been reckoned that he would be three month road, but as he left Shanghai on the 23rd of Au did not reach Bhamo till the 17th of January, he five months in making his journey. When we add tha part of the time he was prostrated by fever and dysente reduced that he could scarce sit upright, and that two occasions, he had collisions with the people which, the Imperial protection, might have cut his adventuro tion short, we rather wonder that he succeeded in re Busmese frontier at all, than he should have been t longer on his way than he expected. It is much, howe credit of the Chinese people and to the Mandarins th whole, they received him with kindness and cordiality. not the good people in China or in any other nation strife and trouble. A very small leaven of wickedness to throw the whole mass into fermentation, and thus i in an outlying province, only recently restored after a guinary struggle to the Emperor's authority, Marga death from a lawless band in the very city which he h passed through charmed with the kindness of the Nothing is stronger than its weakest part, and it is pr the authorities of Peking in such matters as the murder ler have as little power to restrain a mob in Yun King of Scotland in the 16th century to control the on the West Coast, or the rievers and the robbers on border.

The method of Margary's travelling was pretty muc On arriving either in his boat or his sedan chair a place for the night, he called on the chief authorities him with more or less civility—sometimes with a g sometimes with very little. Having inspected his cre passed him on, with an official to vouch for him station, where the same formalities were observed. I the people, though curious and inquisitive, were c behaved. Thus, on one occasion at a place called the country, when the crowd round his sedan chai very uncomfortably, and he remonstrated with wh be the oldest inhabitant, that worthy replied that excuse the people as they "had never seen such a th before," to which Mr. Margary adds, "I found my where the object of intense excitement." Many of were very well informed as to English history, equa Yeh in this respect. At Loshan, on the Yangtze, h who was much occupied with a book written by one man who was sent over to record his impressions o tries, and who said, referring to England, "Ah, must be a fine place." Mr. Margary borrowed having read it says, "What do you thing was the s of all others which most struck our Celestial crit appearance of Piccadilly at night, with its double r rising and falling with the inequalities of that nobl It reminded him of a golden dragon! And this sight in all Europe!" But here let us add that if note of admiration is meant for contempt of the Ch we entirely disagree with him, for we think Piccad a wonderful and splendid sight, and we can fan shippers being greatly struck by it. At any shows how closely the critic observed the foreig sent out to describe.

It was fortunate for Mr. Margary that travelling by boat with a train of servants, to whom were oc lesser Mandarins sent to accompany him, he wa stores with which to entertain authorities of th which we passed, and to make them present sherry, soda water, and above all things, cigar manufacture he found immensely appreciated by and on one occasion he won the heart of an officia a cup of coffee, a beverage which he up to that tasted. It was on the 27th of October that Mr. the end of his boat journey, at the great city o That was a turning point in his travels. Here h here he shook off his dysentery and fever; h journey in a sedan chair, and here he found little the authorities, came into collision with a bruta to be smuggled out of the city. It transpired aft mob wreaked their vengeance on the boatmen w the "foreign devil" into the town, and partly

* "The Journey of Augustus Raymond Margary, from Shanghai to Bhamo and back to Manwyne"—London, Macmillan & Co., 1876.

boat, for which the authorities at Peking promised that the wrong-doers should be severely punished, a promise which we hope they have kept. Thus Mr. Margary journeyed on till he reached Yunnan-fu in the province of Yunnan, the border province of Burmah. This was on the 29th of November. He felt himself much benefited by the change from boat to sedan chair and horseback, and found "the people charming and the Mandarins extremely civil," so that he had "quite a triumphal progress." The curiosity of the towns-people was still boundless, and all he did was "under the silent gaze of eyes fixed to innumerable crannies in the rickety walls and windows." Another evil was the incessant smoke in his sleeping rooms, for the weather was now cold, and he was in a great coal country, but chimneys seemed to have been forgotten in the fire-places. His health was, however, now excellent, and he had fine opportunities for sporting. Everywhere the exterminating nature of the recent war showed itself in the proverty of all classes, and in the shrunken skeletons of great cities through which he passed. As for the roads, they were execrable, "the merest goatpaths," rendered still worse by the way which they had been broken up by the rebels. Yunnan-fu is the capital of the province, but another of its greatest cities is Ta-li-fu, renowned as the head-quarters of the rebels and the scene of their final defeat. There was evidently much reluctance on the part of the authorities to let him into this city, and they tried to persuade Margary to take another route to the Burmese frontier; but he insisted on having his way, and entered Ta-li-fu on the 17th of December. There it lay before him, with its white walls and pagodas and its glorious lake. Once within its walls he was received with great courtesy by the Tartar General, an enormously tall man, who asked him innumerable questions as to England and Burmah, and invited him on his return to come and stay with him in the city. Leaving Ta-li-fu on the 18th of December he spent Christmas day on the road, ordering his cook to make him the "thunderingest" dinner out of tinned meats and the few materials at his command. On this part of the journey he had a narrow escape, for while stalking some animals in the grass, which he at first thought were deer and then leopards, they turned out to be tigers. But they generously trotted off without attacking the sportsman, who was pursuing them with two short charges in a fowling piece. Thus he passed on through a fine sporting country till he came to Manwyne, where he made the acquaintance of "a furious ex-brigand who attacked our last expedition in 1867, and has been rewardly lately for his services against the rebels with a military command over all this country. To my surprise he prostrated himself and paid me the highest honours. I had a most successful interview." This is the man whose name Mr. Margary spells "Li-Hsies-Tai," the official who, under other forms of spelling, was originally accused of having been mainly instrumental in his death. Whatever may have been his conduct afterwards, he then took the greatest care of the traveller. "He told the townsmen and the chieftain of the savage Shans," says Margary, "that I had come protected by an Imperial edict, and that they had better take care of me." So he stayed a few days in Manwyne shooting ducks and admiring the "wonderful turbans of black crape which the women wore, towering up in concentric folds higher than the bearskin of a guardsman, and expanding to more than a foot in front." On the 17th of January he writes—"Now I am over the savage hills, and have wrung the hands of my countrymen again. It was so delightful to come down from the hills to the Burmese plain and see the semi-Indian civilization all around. Colonel Browne and a string of distinguished officers gave me a hearty welcome, with congratulations on my splendid journey." No wonder they were glad to see him, for the Indian authorities thought he was lost, and telegraphed for another interpreter who was sent by sea, so that there were now two instead of one.

The progress of the expedition was delayed by various difficulties for another month. On the 15th of February it began to move, but the end was soon to come. Rumours met them on the Chinese border that the Kakhyens, wild hill tribes, were mustering to oppose them. Of these reports Margary made light. He had come safe through that very country, he was known to the Mandarins, he would go on ahead to Manwyne and clear the way for the expedition. On the 19th of February he went across the frontier with his Chinese secretary and servants, reaching Seray in safety, to which place the mission followed him. That was on the 21st of February. On the 22nd the storm broke, the camp was surrounded by armed bands while letters from Burmese agents in Manwyne told that, on the previous day Mr. Margary had been brutally murdered in that city. On this the Mission, who were only saved by the staunchness of their Burmese escort, fought their way back across the frontier. At Bhamo they made every enquiry as to Mr. Margary's death, but without much success. The most trustworthy account was that he had been seen walking about Manwyne with Chinese on the morning of the 21st, and that he had left the town to visit a hot spring at the invitation of some Chinese, who, as soon as they were outside the town, knocked him off his pony and speared him. So ended the second British Mission from Burmah to China. Mr. Margary's death, as is well known roused the greatest suspicions as to the treachery of the Chinese authorities in general, and of Li-sich-tai in particular. The result was Mr. Grosvenor's Mission, which following in Mr. Margary's footsteps, has traversed the south-western districts of China, and held a solemn inquiry at Manwyne as to the circumstances which attended his death. The result of the inquiry has not as yet been made public, though it was reported that Li-sich-tai has been degraded and disgraced. This, if true, in itself would not prove much, as Peking is always provided with a scapegoat to conceal the weakness of the Central Government. It is quite possible that Li-sich-tai having once passed on the traveller, may have fancied that he had fulfilled the Imperial mandate and then washed his hands of him for the future. It is, however, quite as possible that the Mandarin may have been powerless to restrain the wild tribes nominally under his authority, and that thus Margary met his death; but whatever be the cause, the 21st of February, 1875, deprived England of a very able public servant. It is sad to think that having virtually accomplished his mission he should have been cut off in so sudden and mysterious a manner.

MR. WALLACE ON THE DISTRIBUTION OF ANIMALS.*

[SECOND NOTICE.]

(The Spectator.)

Granting the facts, now completely established by geologists, that the surface of the earth has been through all time, and is still undergoing a series of changes, and that there is a constant tendency for all living things to adapt themselves to their surroundings by the simple process of those which are unfit being killed off, we come almost inevitably to Mr. Wallace's further conclusions. His merit is in working out the details:—

"Animals," he says, "multiply so rapidly, that we may consider them as continually trying to extend their range, and thus any new land raised above the sea by geological causes becomes immediately peopled by a crowd of competing inhabitants, the strongest and best adapted of which alone succeed in maintaining their position."

No better illustration of this could be taken than that afforded by insects, whose rate of increase is familiar to every one. Their two chief functions are, to afford food for other animals, and to be the means of fertilising flowers. A new field where they would be free from those who prey upon them would place them under different circumstances, and would free them from the necessity of being provided with the means for escape which they generally possess, either in the shape of wings or some kind of mimicry. If we take some isolated spot, as Kerguelen Island or Madeira, as a new habitat for them, without in the meantime considering what geological change produced it, we find at once that in their new home the insects whose wings are deficient or absent would not be destroyed, as they would be in their old home. That insects are occasionally born without wings, in every class of them, if not established by actual observation, is quite certain to be the case by analogous monstrosities met with elsewhere. We find, further, that in the new locality not only would the wingless insects be protected in a negative way by the absence of their former destroyers, but that they would have a positive advantage due to a local peculiarity. Mr. Darwin long ago connected the occurrence of wingless insects in such places as Madeira with the frequency and violence of the gales which occur there, and he came to the conclusion that the winged individuals were blown out to sea and drowned, whilst those which had no wings were protected by their deprivation. The report of the Transit expedition to Kerguelen Island completely establishes this discovery, for moths, flies, and beetles were there found to be quite incapable of flight, though many had stumps or abbreviated wings, showing that their progenitors were formerly fully provided.

If further proof were needed, Mr. Wallace's careful compilation of facts fully affords it. In Madeira no less than twenty-two genera of insects, which are usually, or sometimes winged in Europe, have only wingless species; and even the same species

* *Geographical Distribution of Animals.* By Alfred Russel Wallace. London: Macmillan and Co.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

which is winged in Europe becomes in at least three cases wingless in Maderia, without any other preceptible change having taken place. But this is not the most curious fact, for when any new factor makes a change in one direction, it is quite sure not to limit its influence to that one method. The same climatic influence which deprives some insects of their wings increases the size of the wings of others, for Mr. Wollaston has pointed out that those species which have wings in Maderia have them larger than the same species in Europe. The meaning of this is plain, for the insects may obtain a victory over the destroying tendency of the wind, either by avoiding all struggle with it, or by struggling victoriously. The European insects have wings which in Maderia are either too strong or not strong enough, and the struggle for existence may be successfully made in two ways, either by ceasing to have wings at all, or by having them stronger.

"If we keep in mind," says Mr. Wallace, "the facts that the minor features of the earth's surface are everywhere slowly changing, that the forms and structure and habits of all living things are also slowly changing, while the great features of the earth, the continents and oceans and loftiest mountains ranges, only change after very long intervals, and with extreme slowness, we must see that the present distribution of animals upon the several parts of the earth's surface is the final product of all these wonderful revolutions in organic and inorganic nature. The greatest and most radical difference in the productions of any part of the globe must be dependent on isolation by the most effectual and most permanent barriers. That ocean which has remained broadest and deepest from the most remote geological epoch will separate countries the productions of which most widely and radically differ, while the most recently-depressed seas, or the last-formed mountain ranges, will separate countries the productions of which are almost or quite identical. It will be evident, therefore, that the study of the distribution of animals and plants may add greatly to our knowledge of the past history of our globe. It may reveal to us, in a manner which no other evidence can, which are the oldest and most permanent features of the earth's surface, and which the newest. It may indicate the existence of islands or continents now sunk beneath the ocean; and which have left no record of their existence, save the animal and vegetable productions which have migrated to adjacent lands."

Even the habits of certain animals may be made to tell the story of previous conditions of the earth's surface in a way which at first sight is surprising, and would be certainly disputed, if the conclusions drawn from them were not fully supported by other facts. Thus the migrations of birds probably means that they were originally permanent inhabitants of the countries to which they migrate for the purpose of breeding, and that they were slowly driven elsewhere during the winter by very gradual changes in the climate. Any one who has petted birds must have been struck with their intense conservatism, and with the persistence they display in the retention of any little habit they may have acquired. Thus a pet canary will be distressed for weeks if the perch on which he has been accustomed to sleep is removed. If he sleeps out of his cage, he will visit the old spot night after night and refuse to be comforted. The same spirit is displayed in the unvarying routes by which certain migratory birds take in travelling from one place to the other. Thus the nightingales cross from Europe to Africa by three routes only,—one at Gibraltar, another by Sicily and Malta, and another by Greece and Cyprus. They are, therefore, always in sight of land, crossing always in moonlight, and when the wind is steadily east or west. If we look at the soundings of the Mediterranean, and the geological facts displayed by them, we find that not a very great while ago those three routes were tracts of dry land; and the conclusions are inevitable that the present sea-levels have been altered slowly since the birds began to migrate, and that the customary routes have been maintained by the shortening of the life of individual birds permitting of no recollection of the growing differences. What changes in the nightingale have been effected by the new necessities we do not yet know, but we may be certain that an increased power of flight must have been developed by the drowning of those unable to cross the increasing expanse of water.

The tendency to migration would be slowly developed, and would depend, first, upon the changes effected in the foliage. Thus if a bird depends upon some particular caterpillar for its food, it will follow that insect; and if the caterpillar depends in its turn upon some particular leaf, the insect will follow the leaf. Let us suppose, then, that a rise in the sea-level of Western Europe lowered the temperature of our own country by covering a large part of it with water, and thereby increased the severity and length of the winter, so that some plant or other could bear foliage for only four months, instead of six; and that as a result, some particular insect could deposit its eggs with any prospect of their coming to a maturity during this abbreviated period only,—then it would follow as a necessity that the bird feeding on this caterpillar would follow it further south in its migration. If in succeeding epochs of winter these changes became more and more material, the limits of the birds' wanderings would be enlarged, and so the present migrations would be and undoubtedly were established. We have no space to follow Mr. Wallace further through the mass of information which he has placed in his two volumes. We can only say, in conclusion, that if there still be any left who have lingering doubts concerning the "origin of species," let them read this book.

The following is an ingenious chess problem contributed to the *Hartford Times* by Mr. C. H. Waterbury, and as the game has lately come much into vogue in Yokohama, we publish it for the benefit of such of our readers as are chess-players. The solution will be given next week.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—There is little change to note in our import market, but a genuine demand continues to exist for *Cotton goods* and *Yarns*. Exchange has further declined, but prices, though perhaps in some instances slightly dearer, have not yet, by far, sufficiently advanced to make good the difference caused by the drop of the rate for remittances. We quote as follows, viz:—

Grey Shirtings:—						
7 lbs.	38½ yds.	39 in.	per pce.	$1.60	to	$2.10
8 lbs.	38½ yds.	44 in.	„	2.00	to	2.60
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„	1.90	to	2.60
9 lbs	38½ „	44 in.	„	2.37½	to	2.92½
T. Cloth 7lbs.	24 „	32 in.	„	1.50	to	1.72½
„ 6lbs.	24 „	32 in.	„	1.15	to	1.25

White Shirtings:—						
60 to 64 reed 40 yds. 35 in.	per pce.			2.30	to	2.50
Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb...			0.70	to	0.90
Black Velvets				8.00	to	9.00
English Drills 15 lbs. 40 yds, 30 in.				2.65	to	2.85
Taffachelass	12 yds, 43 in....			*nom.* 2.00	to	2.25

Yarns.—

No 16 to 24	per picul..	$29.50	to	33.00		
No. 28 to 32	per picul..	$30.50	to	38.00		
No. 38 to 42	per picul...	$39.00	to	41.50		
Reverse Twist 16-24	„	$32.00				

Woollens.—The demand for this staple has increased during the last three days of the current week, and *Plain Mousseline de Laines* have been enquired for at prices showing a slight advance, which, however, does not compensate for the fall in exchange of fully 8 per cent. during the past week. *Pilots, Unions* and *Presidents* are also in demand, but the prices offered have been too low to lead to transactions. *Plain* and *Figured Lustres* are very dull again, and in *Blankets* there is nothing doing.

Plain Orleans	40—42 yds.	32 in.	5.00	to	8.00	
Figured Orleans	29—30 yds.	31 in.	4.25	to	5.00	
Shimagoro	30 yds.	30 in.	4.25	to	5.50	
Italian Cloth	—30 yds	32 in.	0.27	to	0.35	
Camlet Cords	29—30 yds.	32 in.	5.75	to	7.00	
Camlets Asstd.	56—58 yds.	31 in.	16.50	to	17.50	
Lastings, Japan	22—30 yds.	32 in.	12.00	to	13.00	
Plain Mousseline de Laine	—30 yds.	30 in.	0.16½	to	0.19	

Figured Mousseline de Laine	30 yds.	30 in.	0.23	to	0.27	
Multicolored „	30 yds.	30 in.	0.30	to	0.36½	
Cloth, all wool plain or fancy	48 in. to 52 in.		0.80	to	1.20	
Presidents	54 in. to 56 in.		0.60	to	0.70	
Pilots	54 in. to 56 in.		0.40	to	0.45	
Union	54 in. to 56 in.		0.40	to	0.65	
Blankets, scarlet & green 7 to 8 lbs.	per lb...		0.40	to	0.42	

Sugar.—The Sugar market is entirely without change, and quotations are as follows :—

Sugar:—Takao in bag	per picul..	$3.25				
„ in basket	„	$3.50				
Taiwanfoo in bag	„	$3.10				
do. in basket	„	$2.95				
China No 1 Ping-fah	„	$7.50				
„ No. 2 Ching-pak	„	$6.70				
„ No. 3 Ke-pak	„	$6.00				

China No. 4 Kook-fah	per picul...	$5.35				
„ No. 5 Kong-fun	„	$4.80				
„ No. 6 E-pak	„	$3.80				
Swatow	„	$3.00				
Daitong	„	$2.60				
Japan Rice	„	$2.30				
Kerosene Oil		$3.50	to	$3.60		

Kerosene Oil.—The market continues very firm. Sales have been made at $3.25, and gradually upwards to $3.60 in small quantities, and there are eager buyers at the latter rate.

EXPORTS.

Silk.—Our fortnightly report, dated 12th instant, was to the following effect:—

Since the 22nd ultimo we have to report large transactions and a considerable advance in prices, induced for the most part by the telegaphic advices received since the 8th instant. Of the three weeks under review the first passed without any marked change in the market; towards the beginning of this month exchange commenced to give way, and has since then been steadily declining. However, a comparison of the present with previous quotations shows on advance in cost of nearly 15 per cent. for Hanks. For the middle and full sized Oshius, which are also in good demand, the advance is of course much less, and the prices offered by foreign buyers for all Taysam sorts are too low to divert them from native consumption.

The market closes firm, with an upward tendency for all fine sized Silks.

Settlements are 3,200 bales of Hanks, and 1,300 of Oshius and other sorts, making a total of 12,200 bales since the 11th July. The total export to date is 9,690 bales, against 2,102 last year for the corresponding period. The stock is estimated at 800 bales.

Stimulated by high prices silk-growers are making the most of their bivoltini breeds; a fourth crop is now going on in some of the Hanks districts, and every thing tends to confirm the opinion that the export of this season may reach 18,000, perhaps 20,000 bales, against an average of 13,000 since 1870.

A few sales of native filatures are reported at from $900 to $1,050.

Silk-worms' Eggs.—Under the impression that the failure of the European crops has been chiefly caused by the failure of the indigenous or reproduced seeds, the Japanese dealers have been rashly speculating in cards. They apparently expect to re-sell them at from $2 to $4, failing which, some of them, it is said, are prepared to ship for their own account. Total arrivals since the opening of the season are 45,000 cards, but we have as yet no transactions to report.

	At Exchange 4/3¾ in London.		*At Exchange 5.45 at 6 m.s. in Lyons.*			*At Exchange 4/3¾ in London.*		*At Exchange 5.45 at 6 m.s. in Lyons.*		
Hanks.—Extra to No. 1	$970 to 980	36/8	to 36/6	101 to 102	Oshiu—Best	$900 to 950	34/3	to 35/9	94 to 99	
„ Best No. 1 & 2	$940 to 960	35/5	to 36/2	98 to 100	Medium to Good	$830 to 880	31/6	to 33/3	87 to 92	
„ Good No. 2	$910 to 930	34/3	to 35/1	95 to 97	Hamatski.—No. 1 & 2	$750 to 780	28/7	to 29/8	79 to 82	
„ Medium No. 2½	$880 to 900	33/3	to 34/0	92 to 94	„ No. 3 & 4	$700 to 740	26/9	to 28/2	74 to 78	
„ C'mon. No. 3	$850	32/3		89	Kakeda.—Best	$960 to 980	36/2	to 36/9	100 to 102	
„ Inferior No 4 & 5					„ M'dium to Good	$900	34/0		94	

Since the above was written deliveries are about 700 piculs, exchange has fallen to 4/1½, and prices have further advanced. For Hanks prices are now ranging from $880 for No. 3, to $1,050 for Extra and No. 1. Best Oshius have reached $1,025, best Hamatski $820, and it is reported that $1,200 have been paid for best native filature.

Total arrivals of Silk-worms' eggs are 72,000 cards, but no settlements are as yet reported.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)
"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The week has been quiet and singularly bare of news. The China papers contained no mention of the settlement of the dispute between London and Peking, but this could hardly have been expected. The news could barely have reached Shanghai before Friday, or we should have had it here earlier than Saturday, which was not the case.

The commercial movement of the week has been interesting, exchange falling steadily, and, as a natural consequence, imported goods and silk rising, the latter, however, far more than the former.

Our short note of last week on the subject of the Japanese Law of Surety as embodied in certain documents published by H. B. M's Minister for the information of the foreign residents in Japan, hardly drew sufficient attention to the most prominent and objectionable feature of that law, which is, that no steps can be taken against a surety for thirty-six months in the case of the *principal having absconded*. It is not easy to conceive any provision attached to a law of surety more certainly calculated to defeat the object of that law. It opens a wide door to conspiracy to defraud; it tends to decrease, if not to destroy, the sense of responsibility which a surety ought to feel; and pretends to offer a security which may easily turn out to be the most hollow of shams. It is not easy to say positively of any given law that it is the worst law in existence, but it would be very hard to find one worse than this.

Can any good reason be given why the Bund should be allowed to remain in its present unfinished condition, which is very ugly and slovenly? It only requires stone posts placed at the customary intervals and united by chains to be a very handsome esplanade—though the miserable wooden buildings on the French hatoba are a grievous eye-sore. At present the large underssed stones which lie along the edge of the Bund facing the water, are really a disgrace to the local Board of Works. If they are intended to protect the top coping, they might surely be properly laid so as to give a finish to the sea-wall, and nothing would be necessary beyond this but the posts and chains suggested. It is hardly asking too much of the *Kuréi* to take a walk or drive along the Bund in order to inspect its present appearance and condition. If treated in some such manner as we have proposed, it would greatly ornament the settlement.

In view of the fact that two excellent maps of Japan are in course of publication by two gentlemen who have been long resident here, and who have brought personal knowledge and experience of the country to aid their professional skill, the following extract from a home paper may not be considered uninteresting, while it is curious to mark how effectually and frequently the use of photography is now brought to the aid of science, art and practical usefulness.

M. Dagron's process of photographic reduction has been successfully applied to the production of maps. It is stated that in this way the complete official map of France has recently been brought into a form that can be easily carried in a pocket book: and, indeed, maps of all the various countries of Europe are arranged now to be carried on a cartridge belt, along with the magnifying apparatus, or "telemeter," by means of which all the details of the original map are greatly enlarged, and can be easily studied. In darkness, the light of a match, or even the glowing of a cigar, it is stated, suffices to enable one to find, very readily, any place or point on the map.

From the "Japan Mail Daily Advertiser."

Monday, 18th.

The *Nichi Nichi Shimbun* says that when the Mitsu Bishi Company's steamer *Tokio Maru* arrived at Shimonoseki during her last trip from Shanghai to Yokohama, a large number of people were waiting to take their passage by her, but the steamer was then rather crowded by Nagasaki passengers, and could only accommodate a few of those who wished to travel by her. Owing to this fact, and the hurriedness of the steamer's departure from Shimonoseki, the baggage of some of those who obtained a passage was left behind, while that of some who were not allowed a passage was brought on to Yokohama, all of which caused much confusion and complaint. The editor thinks that more time should be allowed to passengers at Shimonoseki to see that their baggage is all in order.

From the *Chóya Shimbun.*

Mr. Takahashi, the editor of the *Chugai Hiôron*, was summoned to the *Saibansho* on the 15th inst, and examined concerning a certain statement published in the ninth number of his journal. Mr. Takaha, the editor of the *Kinji Hiôron*, was also examined at the same time about a statement made in the fourth number of his publication.

From the same.

The new building for the Paper Money Department *(Shiheirio)* was completed yesterday, and the machinery which has been placed in it was tried for the first time.

From the *Akébono Shimbun.*

A man named Saito, a resident of Tôkiô, was sentenced to hard labour for life in May last by the *Saibansho*, but appealed against this judgment to the *Daishin-in*, and the sentence has now been reversed and the appellant set of liberty.

From the same.

It was expected that the National Exhibition at Uyéno would have been opened during March next year, but we now hear that for certain reasons the opening will be deferred until next July.

From the *Hóchi Shimbun.*

About the end of this year or the begining of next three vessels of the Imperial Navy, the *Riujo-kan*, *Nisshin-kan*, and *Tzukuba-kan* will proceed to England, in order to convey officers and crew for the Japanese men-of-war now in course of construction there.

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

From the same.

It is said that Mr. Boissonade, the French legal adviser of the *Shihosho*, attends every Friday at the residence of H. I. H. Arisugawa no Miya, the president of the *Genrô-In*, to give instruction in French criminal law to His Highness and other members of the *Genrô-In*.

Tuesday, 19th.

It appears on enquiry that very little damage was done on shore by the storm on Sunday last, which was confined to trifling injury to plaster, but the upsetting of Messrs. Domoney & Co.'s boat at the mouth of the creek was not the only accident afloat. The American ship *Imperial* sustained some injury while lying lashed alongside of the *Tiptree*, and in attempting to cast of from the hulk she got foul of the moorings, and it was a considerable before she got clear again.

The P. & O. steamer *Malacca* reports having been caught in a typhoon on Saturday last, and the probability is that the next mails from the southern ports will bring news of severe and destructive weather.

The case of a summons against J. M. Bachelder for arrears of ground rent by the *Chusakan* of the Tôkiô *Fu*, which was to have been heard in the U. S. Consular-General Court this morning, was adjourned till the 21st instant at 10.30 a.m.

Her Majesty the Empress left Yokohama for Tôkio by the 1.37 train on the 16th instant, and after a brief stoppage at the Shimbashi station, proceeded with her suite in carriages to the Akasaka palace.

From the *Hôchi Shimbun*.

Mr. Takase, the editor of the *Kôfu Shimbun*, was summoned to the *Kenchô* on the 13th instant, and examined concerning certain articles which had been published in his journal.

From the same.

Mr. Hirao, an official of the *Ôkurashô*, recently made some disturbance at the gate of the British Legation when under the influence of *saké*, and for this offence was, on the 15th instant, sentenced to close imprisonment for 40 days. The offence was classed as a similar one to entering the gate of the Mikado's palace without permission.

From the same.

Mr. Oüchi, the editor of the *Meikio Shinshi*, who was placed in charge of the ward officials pending the result of an action for libel brought against him by a priest of the Tôfukuji temple, has been released from all restraint, as the prosecutor has withdrawn the charge made.

From the same.

The Government has already made presents to the families the soldiers who died during the late expedition to Formosa, and have how presented the sum of thirty *yen* to the families of such persons as were engaged as porters, etc, to the forces, and who lost their lives on that occasion.

From the same.

Any one desirous of engaging the services of the military bands for any entertainment, can do so on application to the proper authorities, but the number of performers cannot be reduced below twenty.

Wednesday, 20th.

The Mitsu Bishi Company's steamer *Nevada* left Shanghai on the 14th instant, and her arrival here may therefore be looked for on the evening of the 21st, or at daylight on the 22nd instant.

The summer weather was broken at Kobe on the 13th instant by a severe but steady gale from the southward, accompanied by rain. The sea rose very high and damaged the drains to some extent, but the injury done by the gale generally was of a very trifling description.

The *Hiôgo News* reports that Mr. Morioka, late of the Shikama *ken*, has succeeded Mr. Kanda as *Ken-rei* of Hiôgo, the latter having received an appointment in the *Genro-In*.

From the *Nichi Nichi Shimbun*.

An Imperial palace is to be built at Miyanoshita, a[illegible]ready some six thousand *tzubos* of land have been purchased for the purpose.

From the *Chôya Shimbun*.

The road between Yorodzuya bashi and Uyéno, Tôkiô, is to be lighted by gas, a row of lamps being erected on either side.

From the same.

His Majesty the Mikado has subscribed 3,000 *yen* from his private purse for the purpose repairing the temples at Nikko.

From the *Hôchi Shimbun*.

The publication of another newspaper, to be called the *Sakura Shimbun*, is announced.

From the same.

Officials who have to leave their posts and travel in the country on Government business, will be allowed a rest of three days when they return from their journey, in case the distance travelled reaches or exceeds 200 *ri*, two days for a journey of under 200 *ri* but exceeding 50 *ri*, and one day for a journey under 50 *ri* but exceeding 25 *ri*.

From the *Akebono Shimbun*.

New postal cards will shortly be issued, of larger size that those now in use.

From the *Eiri Shimbun*.

The late rains have caused a freshet in the Tonegawa, so that ferry boats are for the time unable to ply for hire.

Thursday, 21st.

From the *Hôchi Shimbun*.

A telegraph between Yonezawa and Yamagata, in the province of Uzen, has been completed and the line will shortly be opened.

From the same.

It has recently been ascertained that the timber growing at Amage-yama, in the province of Idzu, is most suitable for ship building, and, in consequence, the wood-cutters are now busily occupied in cutting down the trees to supply the dockyard at Yokoska.

From the *Mainichi Shimbun*.

The number of Silk-worm's egg cards which had arrived at Yokohama up to the 18th instant amounted to 109,045, of which only 7,980 had been sold to foreigners.

From the same.

The M. B. Co.'s steamer *Hcian Maru*, and the *Shidzuoka Maru*, belonging to the Kaisai-gaisha, tried their relative speed on a run together to Yokohama from Yokka-itchi, in Isé, which resulted in favour of the former by one hour.

From the *Nichi Nichi Shimbun*.

The Loochooans who were recently attached to the Judicial Department at Tôkiô in order to make themselves acquainted with its proceedings, are about to return to their homes.

From the same.

Ex *Sangi* Soyeshima has requested and obtained permission of the Government to visit China, and will leave very shortly for that country.

From the *Chôya Shimbun*.

Certain military officials have been appointed to inspect the troops stationed in various parts of the country, one of them being His Highness Fushimi no Miya.

From the same.

Another party of officials belonging to the Bureau of Industry will proceed to Shanghai in the *Tôkiô Maru*, for the purpose of purchasing sheep.

Friday, 22nd.

In the U. S. Consular-General Court yesterday the case of the *Chusakan* of the Tokio *Fu v.* J. M. Batchelder was again adjourned until Thursday, the 28th instant.

A meeting of the creditors of the estate of W. H. Smith was held at the British Consulate yesterday afternoon, when a composition of eight cents in the dollar was accepted by the majority.

From the *Nichi Nichi Shimbun.*

The priests of the Shinshu sect of Buddhists are very zealous in behalf of the tenets of their faith, and four of their number, of some note and experience, are about to visit various parts of the country to preach and endeavour to make converts to their doctrine.

From the same.

Mr. Miyamoto arrived safely at Yokohama in the *Asama Kan* from Corea on the morning of the 20th instant, and brought with him Corean coins and various samples of the products of the country.

From the same.

The recent rains have caused freshets in all the rivers in the district. The Tonegawa rose thirteen feet, and at Giotoku the embankment was destroyed, but fortunately no great damage done.

From the *Hôchi Shimbun.*

The *Genro-In*, at the request of the Government, recently appointed a committee, consisting of Messrs. Tzuda, Kusuda, Mitzumoto and Sasaki, to draw up Rules of Procedure for the National Law Courts.

From the same.

An order has come from the Japanese now at the Philadelphia Exhibition to send out more *mirin* (a kind of *saké*), soy and porcelain, as all three are in great demand by visitors to the exhibition.

From the same.

Some five thousand *yen* of Japanese *satzu* are to be sent to Loochoo for circulation there.

From the same.

Certain changes are to be made in the salaries paid to officials below the seventh class in various departments.

From the same.

Mr. Kuroda, a *Sangi*, has recently been inspecting the Kurile Islands, whence he returned to Sapporo in Yezo, and is expected back at Tôkiô shortly.

From the *Mainichi Shimbun.*

The water of the Sagami-gawa rose some 10 feet on account of the late rain, and on the 17th instant flooded the Atzugi-machi and swept away five or six houses.

From the *Akébono Shimbun.*

As market reports have not been received from Osaka for the last three days, some interruption of the telegraph line is supposed to have taken place.

Saturday, 23rd.

The case of F. Escombe *v.* Ito Shimpei was to have been heard yesterday morning at the Kanagawa *Saibansho*, but the defendant being unable to appear on account of sickness, the case was adjourned *sine die.*

From the *Shidzuoka Shimbun.*

About 150 houses in the neighbourhood of Kanaya were flooded by the rising of Oye-gawa on the 19th instant.

From the *Nichi Nichi Shimbun.*

Owing to the late rains the Kidzugawa and Adjikawa at Osaka rose ten feet, but fortunately no damage was done.

From the same.

Mr. Nakabayashi, the late editor of this newspaper, was summoned to the *Saibansho* on the 22nd instant, and Mr. Takahashi, the editor of the *Chugai Hiôron*, was also summoned there yesterday.

From the *Meikiô Shinshi.*

For several years past some American missionaries have been in the habit of visiting the Kanô mountains, in the province of Kadzusa, and although they have generously provided the poor people with comforts and necessaries of life, and diligently preached their gospel to them, they have not yet succeeded in making a single convert, neither does there seem any chance that their efforts in this respect will ever be crowned with success.

From the *Hôchi Shimbun.*

The telegraph line along the Tôkaidô was damaged in several places by the storms which took place on or about the 17th instant, but by the 20th all necessary repairs had been completed as far as Kobe.

From the same.

A large quantity of copper has been sent from the mines at Akita to the Mining Department at Tôkiô, which will, in all probability, be forwarded to the Osaka Mint for coinage.

From the same.

A grand parade of the Imperial troops will take place in the presence of His Majesty the Mikado at Narashino, in the province of Shimôsa, some time next month.

It is a fact which may be worth a remark in passing, that the Chinese credit Fêng Tao-t' ai with having paid the man who committed suicide on the railway, for the self-immolation. It is perfectly possible that somebody may have paid the poor wretch, and there is reason to belive that Fêng had been informed that such an event could be turned to account. Our late Chief Judge, Sir Edmund Hornby, whose impartiality in all cases in which Chinese were interested became at length proverbial, laid it down as good law that when a man who is engaged in doing what is illegal kills another accidentally, he becomes liable to punishment. In the present instance the railway figures as the illegal instrument, and consequently the case is clear! But as things stand now, it is equally clear that the instrument was being used with the full knowledge and sanction of Her Majesty's Minister; how, therefore, the Minister himself could have instituted or permitted the prosecution appears to us to involve a very nice dilemma. If David Banks was in the act of breaking the Treaty when the accident resulted, he might be considered liable to arrest; but how would it be if that act were sanctioned by the Minister? Did Sir Thomas Wade sanction a breach of the Treaty? Either it was legal or it was illegal. If the former, the man could hardly have been prosecuted; if the latter, how could Sir Thomas Wade prosecute him?—*Shanghai Courier.*

THE CURRENCY.

WE drew attention in our last issue to the diminution of profit sustained by the Japanese this year on their sales of produce, caused by the extremely high rate of exchange which ruled during the period when those sales were most active; and we pointed out that this diminution of profit was mainly due to the fact that these sales are, as matters now stand, necessarily made against Mexican dollars, a coin of limited supply, and therefore liable to serious fluctuation in case of any extraordinary demand for it. So great has this demand been this year, that although the coin is considerably less valuable, owing to its inferior fineness, than a similar weight of standard bar silver, it has risen as much as 3d. per ounce above the value of bar silver—a clear proof that the demand for it has been greater than the supply. We proceeded to show that these Mexican dollars, many millions of which have gone into the hands of the Japanese, do not enter into the metallic currency of the country, because their circulation is entirely restricted to the ports in which alone they are a legal tender. Not one of them finds its way into the pocket of the silk or tea producer. And not only this. The producer has to pay a heavy premium upon the paper in which the proceeds of the sales of his produce are remitted to him. The paper currency in which such remittances have been made, stood last week at six and three quarters premium, and it is obvious that for every 100 dollars worth of silk or tea which he has reeled or grown, he only receives 93.25 dollars in currency, so long as this premium lasts. It is probable that the enhanced value of the currency here will lead to something of a similar result in the interior. But his engagements for the most part assume the shape of stipulated sums, and he thus gets no return in value for the premium he has paid on the paper which comes into his hands. In other words, he has to pay away, say 100 dollars, but has only 93.25 dollars to do it with. It is nothing to the point that he only sent down silk costing him 50 dollars, which, owing to the extraordinary rise in the market, has been sold for 100. The point is that instead of getting 100 dollars for it, as he should, he only gets 93.25. With a fact like this staring us in the face, it is idle to say that there is nothing wrong, and it would be the height of indolence and helplessness to allow it to remain so without investigation and some attempt at correction. If such a premium on exchange were necessary to remit the money ten thousand miles, there would be nothing very extraordinary or extravagant in it. But the producer lives within a hundred miles of his market, a letter from here reaches him in thirty hours, and a telegram in thirty minutes; and our plea is that this enormous premium on his remittance is out of all reasonable relation to the conditions of his case, and could only co-exist with, and be caused by, an entirely unsound condition of the currency.

We went on to show that this premium might legitimately be diminished by an increased issue of Government paper—the Government taking into the Treasury one silver dollar for every dollar of fresh currency so issued. On any other basis, any such increased issue of paper would be obviously unsound, and highly to be deprecated. But, on so sound a basis as this, it would not only be legitimate but advantageous—not only to the Treasury, as we showed last week, but to the country. For, what does this premium indicate? The premium or discount at which a paper currency stands is at once the proof and the measure of its adequacy for the mercantile operations of a country. When it is at a discount, the amount of that discount is the measure of the over-supply of currency; when at a premium, it is the measure of the inadequacy of the currency to the demands made upon it. The paper has so much more work to perform, and it can only do this by rising to a premium and thus representing more value than normally belongs to it. We particularly stated that we are no advocates for Treasury operations in currency as a principle or practice. The cure for all these evils is a currency which requires no such operations or interference, and which regulates itself. But until we have one in Japan, we may legitimately resort, and may even at times be compelled to resort, to regulative expedients, provided always they do not violate first principles.

Having shewn how the present condition of affairs militates against the interest of the Japanese, we would draw attention to the fact that, under a different and opposite combination of circumstances, it equally militates against the interests of foreigners. Dollars are now at a heavy discount upon currency, for the sole reason that there is an excessive supply of them, and this supply is heaped up within a square mile which not one of them will leave except to be re-exported. But what happens if, under the converse of the case, they become very scarce? They rise to a premium among the native merchants—a premium, be it remembered, which does not advance their value in sterling—and the foreign merchant gets so much the fewer of them for his imports; precisely as he paid fewer of them to the native merchants, when, under the presure of excessive demand, they advanced in sterling value. It is exactly the converse of the other case; and just as the Japanese suffer when Mexican dollars are in over-supply, so foreigners suffer when they are abnormally scarce. It was intelligible enough that, in the early days of foreign intercourse, the Mexican dollar should have been chosen as the most convenient coin for the foundation of our trade. But now that Japan has a Mint equal to all the demands which may be made on it, not only for the domestic and foreign trade, but for still larger purposes, why are we to continue transacting our business in a coin which is not the currency of the country, never travels a mile beyond the open ports, and the supply of which runs, or may run, short just at the moment when it is all important that it should be abundant? There can be no good reason for this, and it involves an anomaly to which the attention both of the Japanese and foreigners cannot be too soon or too carefully directed.

What, then, appears to be the true, and, indeed, the only remedy for this anomalous condition of affairs, which, we imagine, all will readily acknowledge to be such? We think it will be found—

First; in the adoption of a silver standard or unit; and

Second; in a resumption of specie payments, or, in other words, a convertible currency.

As regards the first point, we have, as our readers must be well aware, always strongly opposed the creation of a gold standard or unit in this country; our main reason being that so long as silver is and remains the great medium of exchange throughout the East, Japan is only placing herself in an entirely false position in adopting a gold standard. We do not say that no plausible reasons could be, or were, adduced for adopting a gold unit. Doubtless the FINANCE MINISTER of the time thought that what England and America had done, could not be wrong; and his successor has been fortified in that belief by the example of Germany and Holland. And if Japan were an European country, they might have done well in thus deciding. But it is an Oriental country, and—in all probability—will remain so. Many curious

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

things are and may be done in countries despotically governed, but it might have been better to realize once for all that Japan, whatever else it may do in the future, is obstinately a geographical fixture. And this ought undoubtedly to have been the guiding and determining fact. But it was not so. It was supposed that what two leading commercial nations had already done, and what one commercial and another very sagacious nation were about to do, could not be very wrong. And doubtless all these nations have done very rightly in their positions as European nations. But Japan was, we fear, too much influenced by the desire to do what England and America had done because she wished to place herself on some imaginary footing with England and America. If we could only imagine these islands peopled by a race endowed with the shrewd practical sense of the English, we know very well what the decision in this case would have been. In their blunt way they would have said: "Let other nations do anything else they like or choose. Every tub on its own bottom. It is clear that our interest lies in adopting the standard of the continent with which we are most identified geographically, and whither we may send or whence we may draw supplies as circumstances may dictate. Chinese commerce demands an enormous supply of coin, and this is now furnished by Mexico or the South American Republics. Before long, *we* will supply it, and shall find our advantage in doing so. If we coin gold till doomsday, the Chinese will never take it except for the melting-pot, and what good is that to us? We will take lessons from the other side of the world which promise us any solid advantages. But we will not imitate England or any other country for imitation's sake, and are not going to leave the dictates of solid common sense with the sole result of making ourselves poor and ridiculous."

And what, as a matter of fact, has come of all this gold standard and gold coining? Three fourths of the gold have been melted, and the expense of minting it has been lost to the country for ever. The theoretical arguments for a silver standard were very strong, but they were rejected. The actual working of the question has cogently and amply confirmed them. Will the Government persist in its error? Instead of taking sound advice, it fell, as usual, into the hands of quacks, and all its coinage has run away. Its plight is that against which the Pedlar warned Dame Eleanor Spearing.

> "You may go to surgical chaps, if you choose,
> Who will blow up your tubes like copper flues,
> Or cut your tonsils right away,
> As you'd shell out your almonds for Christmas-day,
> And after all a matter of doubt,
> Whether you ever would hear the shout
> Of the little blackguards that bawl about,
> There you go with your tonsils out!

But it is only right to say that before any agreement could be arrived at by the Representatives of the Foreign Powers to accept the Japanese metallic currency as a basis for the trade carried on by their subjects or citizens, ample guarantees would have to be given for the purity and weight of such currency. At one time this was assured, and if the system had been adhered to which produced the assurance, or one equally good substituted for it, there would have been no difficulty in getting the coin accepted in China and the Straits Settlements. But it is idle to hope for any thing of this kind so long as the Mint is under the direction of a Japanese master. On this point there must not be the smallest shadow of a doubt.

And why should Japanese pride be so grievously wounded by the employment of a foreign Mint-master? Is it not wounded by the fact that no one will *now* take the coin? Is it nothing that Shanghai, Hongkong, Foochow, Singapore and Penang will not look at it? This seems to us a wound infinitely harder to bear—one into which no balm can be poured. For it, there is no Gilead, and neither poppy nor mandragora can soothe its eternal ache.

The other admits of far more lenitive treatment. It may not be agreeable—though really it need not be very disagreeable—to have a foreign Mint-master at Osaka. Unless the FINANCE MINISTER is a Haman—and we are very sure he is not—why should it irk him so much that Mordecai sits at the gate? Is it nothing that, through him, confidence will be produced throughout Asia in the coin of the Japanese Government? Is it nothing that that coin should raise the credit and reputation of the nation, and be, so to speak, a conquering coin? Though it do not now bear the image and superscription of Cæsar, it may do so years hence, and as no coin can leave this country and remain in circulation abroad except to its direct and indirect advantage, Japan will profit by the export of its specie, which will then be a manufactured article in demand among the oriental nations. Is not this an object worth sacrificing something for? Would it not be a truer patriotism to prefer the manifest advantage of the country to a feeling of pride eternally incompatible with that advantage?

But we have trespassed so long on the patience of our readers, that we must leave the subject of a convertible currency, or a return to specie payments, until next week.

THE RACE-CLUB.

THE correspondence relating to the Race Course which has been published this week presents two or three points of interest for the consideration of the community

In view of the important events which occurred shortly after the signing of the Convention of 1866, it is not greatly to be wondered at that the title-deed for the Course which that Convention promised should be executed by the Japanese Government, never went further than a draft. This draft was indeed approved both by the Japanese authorities and the Foreign Representatives, but the Revolution broke out, and there was then little time or disposition to think about less important questions. Nor, perhaps, need the delay be very much regretted. The interval has permitted a fair trial of the general principles of management which were doubtless embodied in the draft, and slight modifications of them have been found necessary, as indeed Mr. BRENNWALD states. The Consuls do well in expressing a wish that their control should be limited to seeing that the annual rent is paid, and that no buildings are erected on or about the Course other than those which legitmately appertain to a Race-Course. With the management of the Race Club, present or future, they have, and should have, in their collective capacity, nothing whatever to do.

The letter signed by all the Foreign Representatives but Sir HARRY PARKES entirely ignores the fact that when the ground was obtained by the Foreign Representatives, the community signified its wish that the management of the Course should be entrusted to the Race Club. Now there must obviously be some machinery to manage a property of this kind, making and enforcing rules and regulations necessary to ensure the proper use and maintenance of the Course for the purposes for which it was granted. This machinery is represented at present by the Race Club, which is the creation of the will of the community, and which, until destroyed or set aside by that will, represents the community to which the ground was granted. And hence, as it appears to us, its rules, elections, exclusions and expulsions are the acts

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of a body regularly constituted, holding direct from, and only displaceable by, the community. It is quite open to the Residents to assemble and revoke the powers given to the present Race Club; but, until they do so, the Club is in possession of the right to manage the Course in such a manner as seems to it best calculated to subserve the purpose for which that Course was granted. Thus, the community is bound by the Club rules until the revocation of the powers granted to the Club, and the omission to state this destroys any value which the letter signed by the majority of the Ministers might have had.

For, what is "the community"? If the word is to mean anything at all, it must mean a body capable, either of itself, or by its representatives, of exercising some will and taking some action. It is not a disunited congeries of human atoms incapable of corporate volition and action; and hence, when the ground was granted, the community assembled in its collective capacity and endowed the Race Club with the powers which that Club now holds. If the people find their Government oppressive, let them by all means destroy the creature of their will; but meantime there is no doubt that the powers it wields are the powers granted to the community and delegated by it to its representatives. What are the obligations, implied until disregarded and then enforced, of citizenship? Surely, not alone the payment of taxes, but also the observance of the laws; and outlawry implies that the protection of the state and privileges of citizenship are denied to one who breaks those laws and evades the punishment due to his act. As it seems to us, the position adverted to is somewhat analogous to this, and it is idle to talk of a community unless some definite collective sense is attached to the word. We contend, therefore, that the payment of a share of the rent is in no sense sufficient qualification for the use of the Course. Admission to the Club and observance of its rules are the conditions imposed by the community, through its appointed representatives. upon those who desire to use the Course. Whether the Club has been more or less just and scrupulous in fulfilling its trust; whether its management has been better or worse; and whether the powers delegated to it are larger than those with which it ought to have been entrusted, are matters open to discussion in the proper place. But they do not concern us here. Our sole question is to determine whether the payment of the stipulated share of rent is alone, and of itself, adequate to confer the right of using the Course, and it seems to us very clear that it is not. But it is equally clear that if the community wills that it should be so, it can enforce that will by taking the necessary steps to do so.

The great thing now seems to be, to get a title- and a trust-deed. As the Consuls desire a very strict and narrow limitation of their powers, it is clear that the title-deed will require careful preparation, but the experience of ten years ought to furnish data enough for the necessary guidance.

And we venture to add one word in conclusion regarding a movement said to be in progress for subverting the authority of the Club prior to the Autumn Meeting. Is this very wise or desirable? There are many elements in a society like this in order to control which something must at times be suffered. The position is not agreeable, but it is one which will be accepted with moderate resignation by all who acknowledge that improvement comes rather by the infusion of new and better elements, than by the regeneration of individuals who have formed part and parcel of any given society. We very sincerely deprecate any movement of an aggressive character, and trust that any reasonable modifications of the powers of the Club which it seems wise to make, will be carried by the constitutional means which it is in the power of the opposition to employ. It should not be forgotten that the Club has been the guardian and maintainer of the Course for ten years. To it we owe the fact that the ground and buildings have been maintained and the rent paid. Is there no danger that if we destroy it, the whole institution will come to the ground? It is well to face even an extreme possibility in such matters, and our local history is not without examples of men being led out into the wilderness and there perishing miserably.

SPIRIT OF THE JAPANESE PRESS.

Publicity the True Cure for Corruption.

(Mōzō Zasshi.)

In the fourth number of your issue you published some remarks I addressed to you on the fifteenth clause of the Press- and Libel-laws, and I now give you my views on the sixteenth clause, which I hope you will also publish.

Man is born with natural instincts which prompt him to avoid evil and follow the path of virtue. But nature is also weak, and various bad passions take possession of the human heart, and so hold their sway there, that men follow the promptings of evil desires rather than reason, and finally the pure and natural heart is destroyed and with it disappear all feelings of shame. Under such circumstances one would suppose that all men would eventually become thieves or murderers, and we are led to enquire how it is that they do not alienate themselves altogether from virtue. It is because the criminal laws which exist in all well governed communities deter men from the commission of grave offences, and the rules of society, with the fear of so offending them that social ostracism will be the result, prevent men from falling into dissipated habits. The former prevent the commission of great crimes and the latter of more venial social ones, so that these are like the two wheels of a cart, which, to be useful, must run together.

Now the criminal laws in no way affect the conduct of the officials under an absolute Government, whose disposition to corruptness and venality is only checked by fear of offending against the rules of society, and that, necessarily, only in a partial degree. It would therefore appear that entire freedom of expression should be allowed the people to denounce the failings of officials, so that such might be effectually checked. But our Government has, on the contrary, enacted laws of great severity, depriving the press thereby of the power of commenting on the conduct or faults of officials, and has left but one course to the public whereby to express any disapprobation which they may feel, namely by memorials presented to the *Genrō-In*.

But a memorialist will find that he can obtain no reply from the *Genrō-In*, be the complaint contained in his memorial reasonable and well founded or the contrary; and failing to do so, should he desire to publish the contents of it in a newspaper for the information of the public, he will further find that he is forbidden to do so by the sixteenth article of the Press- and Libel-laws, which says "that memorials and petitions may not be published without the "sanction of the *In, Shō, Shi* and *Chō.*" But these offices, being the source of oppression of the masses, are not likely to encourage the presentation of a memorial advocating the overthrow of oppression. Moreover, the subject matter of such memorials as the Government would allow the publication of, might appear beforehand in the form of newspaper articles, without incurring the danger of violating the Press- and Libel-laws, and therefore no one would take the trouble of embodying the same in a memorial.

Now it is very clear that the sixteenth article, quoted above, has not been issued by the Government with the expectation of inducing the people to apply for permission to publish in newspapers the memorials containing their grievances, but rather to cause them to abandon all ideas of doing so, for other articles of the Press- and Libel-laws decidedly forbid the too free expression of public feeling in newspapers on liberty or kindred subjects; and such matter as does not violate the Press- and Libel-laws could be made public in the papers without the form or trouble of drawing up a memorial and presenting it to Government.

If the members of the *Genrō-In* are just and capable enough to be trusted to accept worthy memorials and petitions only, and reject all unworthy ones, then we cannot see why their free publication should be prohibited. But should a memorialist in a fit of anger because

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

his memorial was rightly rejected by the *Genrô-In*, hasten to publish the same in a newspaper with the hope of exciting popular feeling in his behalf, he would undoubtedly fail, as sensible people would never allow themselves to be led away by his advocacy of a bad cause, although some few fools might be excited by it. There need, therefore, be no fear that even the publication of such would tend to destroy the tranquillity of the nation.

If the members of the *Genrô-In* are free from injustice, then the sixteenth article of the Press- and Libel-laws should be abolished, otherwise its retention would demonstrate even to a child that the *Genrô-In* was not free from the taint of injustice.

The fear of committing an offence against the rules of society is the only check against excesses of any kind on the part of officials, but as their conduct may not be publicly criticised, nor memorials concerning their evil actions be published in the papers, there is no reason why they should acknowledge even social restraints. They may have special reasons for doing so, but of that the public cannot judge.

TZUKI-OKA.

The Necessity for Branch Courts.

(Nichi Nichi Shimbun.)

When we are told that the Government has decided that the number of *Saibansho* in the country is to be reduced to twenty-three, it would seem to denote a reduction of offices possessing judicial power. But it appears to us that it will tend to an extension of such offices. And why so? Because when a *Saibansho* has jurisdiction over so extensive a district as the new division of the country involves, branch courts become necessary, and offices possessing judicial power will be increased. Were it otherwise, and should matters remain as they at present exist, any one living at a distance from the court would have to spend much time and money in order to bring forward his case. As it is our law that he who loses his case has to pay the expenses of the suit, this might not seem very serious; in other words, the suitor who is in the right need not be very solicitous about the costs of the suit. But this is only one side of the question. Although a man may gain his case he may spend so much time in doing so that he derives no benefit from it, and what promised to be a real gain becomes only a nominal one. Should this state of affairs exist for a long time, none but the wealthy could bring a case into court. For these reasons we hold that supplementary courts will be necessary, and that centres of judicial power will be increased. Tôkiô was the first place where a branch *Saibansho* existed, and here all civil cases were decided which did not involve more than the sum of thirty *yen*, and all criminal cases not involving more than thirty days' hard labour.

As the number of *Saibansho* has been decided upon, we think there should be in every district a branch court in which the same rules of procedure should exist as in the branch court of the Tôkiô *Fu*, and provincial courts with the same power as that possessed by the *Kenchô*, having jurisdiction over two or three district courts. The twenty-three courts just instituted should be possessed of the same power as the superior courts now possess, and should try both civil and criminal cases. Thus the twenty-three *Saibansho* would be courts of appeal, and the superior courts now in existence would become the supreme courts of appeal and be endowed with the full powers at present possessed by the *Daishin-in*.

Were the judicial machinery thus adjusted, it would be very advantageous to the country; and would not this tend to the diffusion of judicial powers although the number of *Saibansho* has been lessened? When the present superior courts become the courts of ultimate appeal, it would seem as if the *Daishin-in* would become unnecessary. But we are of opinion that the *Daishin-in* is necessary to have jurisdiction over all the other courts. At the same time should it be found unnecessary after practical trial of the new system, it should be abolished. We trust that no impediment will be raised to necessary reforms solely for the sake of maintaining the *Daishin-in*.

Our plan may be faulty in places, but if its main object is apprehended, nothing but benefit can arise from such action as may be taken in following it out.

Political Heresy.

Four members of the *Jijo-sha* (Self-help Society) of the Mioto *ken* (in the province of Awa in Kiusiu) were arrested, brought to Tôkiô and thrown into prison in the early part of this year. On the 4th instant, the *Daishin-in* pronounced a judgment on their case, based on certain evidence, to the effect that they should undergo two years' imprisonment, while their accomplices were condemned to one year. So long as they were in prison, we were uncertain what the length of their confinement would be; but now that the judgment of the *Daishin-in* has been pronounced, it is clear that they will be released in a year or two and we cannot but rejoice at this settlement of the case.

When one of the members of our staff was at Ôsaka last year, he went to Awa, and there had an opportunity of meeting these men. But he remained there so short a time that he failed to learn all the circumstances of their case or the views they held. From what he gathered, however, he came to the conclusion that their views were sound. But after his return to Ôsaka, certain officials from the *Naimusho* went to Awa and arrested them. He then tried to discover the cause of this arrest, but failed to do so. It was rumoured that they had committed an offence by sending to the various members of the *Jijo-sha* a letter to the effect that "the Emperor is the holder of an office and is endowed with a certain amount of power, while the officials are the servants of the people." On hearing of their arrest, we sympathised deeply with them, and hoped they might be shortly released. But to our extreme surprise they were brought to Tôkiô, and placed in the prison of the *Daishin-in*. They came to Tôkiô with fearless minds, ready to submit to any punishments which might be inflicted upon them. The member of our staff above referred to, who had met them at Awa, was very anxious about them, and not only he but all of us were much relieved when we heard of the decision of the *Daishin-in*. There have been not a few who have been condemned to a life-long imprisonment for having opposed the Government. More than this, indeed. Many have thus lost their lives, and the fact that these four men have only been condemned to two years' imprisonment is indeed a happy thing.

At the same time we must well consider whether it was their intention to injure the Government, or whether they were animated by a desire for the welfare of the country. If the former, our sympathy with them is thrown away; if the latter, we cannot but sincerely deplore their hard fate. We are ourselves unable to decide this. But if their offence simply consisted in the promulgation of the words we have given above, the steps taken by the Government, far from causing us any satisfaction, appear to us most deplorable.

Religious Equality.

(Kinji Hiôron.)

An interesting religious question has of late been much discussed, and as our own views upon it coincide very closely with those generally entertained outside, we will make them public.

The Shintôists claim the privilege of deifying great and illustrious men, and of awarding them various ranks as gods. In this it differs in an important respect from many other religions, and, for this reason, exercises a special influence in our political system. It is contended that from this time these illustrious personages should be honoured as great men, but not as gods; and, were this change made, Shintô would become like any other religion; that is, the duties of its devotees would be confined to preaching and teaching its doctrines, and leading the people in the ways of virtue. Moreover, were the connection severed between this faith and politics, and should strife arise at some future time between our native faith and the foreign religions which are now taking root in Japan, the Government would be beyond the danger of injury from it.

We understand that certain members of the Government hold these views, and it is important that this change should be made before all other religions are tolerated.

The past history of the world proves that all religious wars have arisen out of the identification of governments with certain forms of religion. The general opinion of the people of this country is that religion should be free, and this being so, the Government should dissever its connection with any special religion.

Now, in Japan, whether a man were virtuous or otherwise, so long as he could be claimed to be illustrious, the permission was granted to deify him. Nor is this all. The Government actually determines the respective ranks of the gods!

This custom has prevailed from time immemorial, and therefore we do not mean to urge its abolition upon the Government. We must remember that similar customs existed among the Greeks and other nations. But we must also consider that under an advancing civilization all such customs have been abolished. And now, as regards ourselves, it seems as if they were not only dangerous but shameful in the face of the world. Nothing can be more evident than that they should be abolished when a country is on the road to civilization.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Now, the foreign religions are daily making progress in this country, and the foreign missionaries constantly preach before large congregations of Japanese. We have heard that there are some 200,000 native converts to Christianity,* including the adherents of the Romish and Greek Churches, and the Protestant sects, and the notifications put forth over the country prohibiting the acceptance of Christianity have been withdrawn. Yet the Government has not yet issued a notification making all religions free in Japan. Preachers of Buddhism and Shintô have been appointed by the Government; but, as yet, no priest of any other religion has been ordained to preach to the people, and when one sect receives a special appointment and another does not, religion cannot be said to be free, despite all appearances. There is much discussion on all these subjects, and we hope no trouble will arise before they are all settled.

Should the Government desire to tolerate all religions (and to favour none), steps to that effect should be taken at once, and when this is done, the Government must free itself absolutely from all connection with religion, and must take from Shintô the privilege of deifying men, so that all religious strife may be avoided.

BAIL.

Chôya Shimbun.

Some time back we stated that steps ought to be taken to prevent men from being locked up previous to their trial, and we think there are few who would not agree with our view of the question. But in removing evils of this nature, some plan must be determined on to effect the purpose they formerly served, and in the few following words we shall endeavour to show how this may be done.

As we said before, we do not think that men awaiting trial should be altogether set at liberty; but we contend that they ought not to be exposed to the hardships of prison life. It may be urged that if the prisons were enlarged and the prison regulations reformed, these hardships would be diminished, and this is doubtless true. But it is insufficient, and we want a mode by which the number of men confined in prison and awaiting trial may be decreased.

Now, the remedy we propose is not one of our own invention. Nor is it a novelty, for it has existed from the most remote times in all civilized countries. It is the permission to men to go at large on giving bail. Its merits have often been discussed, and we trust the practice will soon be admitted into this country, for the following reasons.

Since the practice of giving bail existed in Europe and America, the number of men committed to prison to await subsequent trial has largely decreased. Had the practice not existed, any man labouring under suspicion might be immediately arrested, however really innocent, and thrown into prison, and though under such circumstances a minute of time might be worth a thousand dollars to him, he could do nothing. Moreover, if he were subsequently found innocent of the charge laid against him, he would obtain no compensation for the hardships he would have endured in prison.

Thinking over this, it seems as if the custom of bail should be introduced as soon as possible, so that the friends or relatives of an accused man may give security for his appearance on the day of trial, and his time may remain his own meanwhile. In this way the number of persons imprisoned would be decreased, and an end be put to the evils of which we have spoken.

We now entreat the officials of the Judicial Department to give this question their consideration, and allow bail to be given as soon as possible. If, in addition to this, they would make the prisons more spacious, and reform the prison regulations, many evils connected with our criminal system would disappear.

* This is an enormous exaggeration. These are probably a thousand convents: possibly two thousand.

We understand that matters are very much quieter now, in the districts of Anhwei where the anti-missionary riots lately occurred. Both the priests about whose fate anxiety was felt after the Ningkwo massacre have now come down. The second arrived two days ago. He had taken refuge in the Magistrate's yamên, where he stayed some weeks, and was eventually escorted out of the district by the soldiers. The Viceroy has issued a satisfactory proclamation, which has had a good effect.
—*Shanghai Courier.*

THE RACE COURSE.

The undersigned publishes for general information the subjoined correspondence on the subject of the Race Course.

C. BRENNWALD,
Senior Consul.

Yokohama, 3rd July, 1876.

SIR.—The attention of the Consuls has been drawn by the *Gonrei* of this Port to the fact, that no title deed for the Race Course has been executed, notwithstanding that Clause XI. of the convention of December 29th, 1866, provides for the issue of such title deed.

A draft of the title deed proposed to be executed in 1869, the year in which the Race Course would appear to have been placed at the disposal of the Foreign Community, has been received from the *Gonrei*. A copy of this draft title deed, also copies of a memorial on the subject of the Race Course addressed to the Consuls and my reply thereto, are herewith enclosed for the information of the Foreign Representatives.

The preamble of the draft title deed must necessarily undergo some alterations to suit existing circumstances, and it is of importance that the Consuls trust should be clearly defined.

I think, too, that I am expressing the general feeling of my colleagues in stating, that to whatever body or association, be it the Yokohama Race Club or any other, the control or management of the Race Course may be assigned, the Consuls would prefer to have nothing to do with the rules and regulations such body or association may elect to govern itself by.

I would suggest that the control by the Consuls be limited to seeing that the annual rental is paid, and that no buildings are erected on or about the Course, other than those that legitimately appertain to a Race Course.

It may perhaps, however, be as well to make provision for an appeal to the Consuls in cases where individual members or sections of the community may have cause of complaint, real or fancied, against the managing body, though, as may be judged from the copy of the memorial enclosed, the Consuls would without doubt in such case be appealed to, in the absence of any particular direction to that effect.

So far as this particular memorial is concerned, it is satisfactory to find that the Committee of the Race Club have anticipated the suggestions embodied in the reply thereto, inasmuch as I observe from a notice in the papers that at the General Meeting of the Club to be held on the 6th proximo, it would be moved that the public generally be admitted to the use of the outer or training course, subject to certain restrictions, and on such annual payment as may be fixed. It will also be moved in addition that the ballot in respect to admission of members rest in the Club generally and not in the hands of the Committee. This, if agreed upon, will relieve the Committee of a duty which at any time may assume an unpleasant shape, be personally distasteful, and expose individual members of the Committee to much hostile criticism.

It is probable even if these propositions are carried that the memorialists may still be dissatisfied, and may press the question of the right of the Race Club to govern the Course in the matter of racing,—in other words whether the use of the Course for purely racing purposes is to be confined to and governed by members of the Club.

The Race Club will naturally wish to continue in their occupancy of the Course which they have now held for close on ten years. Whether the Club (a copy of their rules is unclosed) is to be allowed to continue to control the course, or whether it is better to arrange for some different form of control, is a matter which is respectfully submitted to the Foreign Representatives for their consideration.

I have the honor to be, Sir,
Your most obedient Servant,
(Signed) C. BRENNWALD,
Swiss Consul-General and Senior Consul.

Sir HARRY S. PARKES, K.C.B.,
Doyen of the Foreign Representatives,
Tôkiô.

H. B. M.'s Legation,
Yedo, September 9th, 1876.

SIR,

In accordance with a request conveyed to me this morning from my colleagues the other Foreign Representatives, I have the honour to forward to you the enclosed letter as the reply which they have agreed to make to your despatch of the 3rd of July last relative to the Race Course. In that despatch you bring to the notice of the Foreign Representatives that no title deed has yet been granted for the Race Course as provided by the XIth Article of the Agreement concluded between the Foreign Representatives and the Japanese Government on the 29th December, 1866, and you inform me that the Foreign Community is now divided as to the manner in which the said Race Course should be managed and controlled.

In forwarding to you the enclosed reply from my colleagues, I think it desirable to add, on my own part, that while there cannot be a doubt that the Race Course was obtained for the use of the Foreign Community generally (this being distinctly stated in the above-mentioned agreement), the circumstances under which it was placed at the disposal of the community in 1867 should, I think, be borne in mind in judging of the difference which appears to have arisen as to the management of the Course.

As soon as the ground was obtained from the Japanese Government the Foreign Representatives in Japan, of whom I was one, instructed the Consuls at Yokohama to learn the wishes of the community as to the management of the Course, and at a public meeting which was held for this purpose an association was formed which received the name of "The Race Club," and which was open to members of the Foreign Community under such restrictions as the meeting thought it desirable to impose. The Consuls reported that the commmunity wished the management of the Race Course to be entrusted to this Club, and accordingly the Foreign Representatives provided, among other things, in the draft title deed which they then prepared, that the Consuls should assign the Race Course to the said Club as representing the community of Yokohama.

I was surpised to learn from your despatch of the 3rd July that this draft title deed, which had been approved both by the Foreign Representatives and the Japanese Government, has remained until now, unexecuted, in the hands of the Local Authorities of Kanagawa. This inadvertence, which I shall readily join my colleagues in rectifying, is doubtless attributable to the disturbed state of affairs which occurred in 1867. The old draft provided that the rules and regulations made by the Race Club should be subject to the approval of the Consuls, but I observe that you recommend that this provision should not be retained in the title deed which it now devolves upon the Foreign Representatives to obtain from the Japanese Government.

It is less surprising to me to hear that the arrangements made by the community in 1867 for the management of the Course, should be found, after nine years experience, to need some revision, and that a different form of management to that which was at first chosen is now desired by a section of the community. In my opinion it rests with the latter to determine what that form shall be, and whether the control of the Race Course shall be vested in one or more associations by whatever name they may be called. It is clear, however, that the Course must be subject to some rules or regulations, or, otherwise, the objects for which it was obtained cannot be secured; and it is equally clear that as the rent of the Course, and other necessary charges have to be provided, the Course should only be used by those persons who contribute to those charges in such manner as the Foreign Community, by itself, or by its representatives shall determine.

I have the honor to be, Sir,
Your most obedient,
humble Servant,
(Signed) HARRY S. PARKES.

C. BRENNWALD, Esq.,
Swiss Consul-General and Senior Consul,
Kanagawa.

Le champ de courses de Yokohama ayant été concédé à toute la communauté étrangère, il est certain que tous les membres de cette communauté ont le droit d'en user, individuellement ou collectivement, à condition de contribuer, pour leur part, au payement de la rente foncière.

Les Représentants étrangers soussignés s'aboucheront avec le Gouvernement Japonais, à l'effet de faire délivrer un "title deed" sur cette base.

Les Consuls sont priés de porter ce qui précède à la connaissance des intéressés parmi la communauté étrangère de Yokohama.

Correspondence.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—I read in your issue of the 16th instant, in your article headed "The Currency," the following:—"Then (in June) as will be recollected, the dollar was worth only 3s. 10s. whereas the average cost of the coin with which the silk has been paid for may be fairly estimated at 4s. 4d.; or a rise of 13 per cent, which is so much out of the pockets of the Japanese. If silver had risen in Europe to the same extent, there would not be reason for a word of just complaint. But, for reasons with which we are all familiar it has not done so," etc.

As some of your readers might be led astray by your statement, I request you to extend me your courtesy so far as to publish the following in your next issue.

The closing quotations for the Mail of the 4th July were, as you note, 3s. 10d. for 6 months' sight Bank Bills. What was at the same time the value of silver on the London market? The *Economist* of the 8th July gives it at 46¾d. per ounce, and out of 70 lakhs of Telegraphic Indian Council Transfers, only 53.00.000 (53 lakhs) were allotted in full at 1s. 6½d. the Government withdrawing the amount subscribed at a lower figure.

Six weeks later, or on the 24th August, the price of bar silver was 54d. per ounce, and Telegraphic Transfers from the Governmant on India were allotted at 1s. 8¼d. per Rupee, or a rise of 15½ per cent. on the price of silver, and 9½ per cent. on Telegraphic Transfers on India. You will thus see that your statement is incorrect. The rise experienced here has accorded with the rise in Europe. For the English mail of the 15th August the rate for Bank paper was 4s. 4½d. or a rise corresponding exactly with the prices ruling in Europe for bar silver.

I am, Sir,
Your obedient Servant,
X.

Yokohama, 21st September, 1876.

[Our correspondent has clearly convicted us of an error, though we ought in justice to ourselves to say that we did not write without making enquiries on the subject which ought to have guarded us against it. It is now obvious that silver fell to what we did not hesitate at the time to call "something of a panic-price," and though no one could then have anticipated the extraordinary rise which has taken place here in consequence of the failure of the silk crops of France and Italy, we claim to have been generally correct in such views of the silver market as have been expressed in these columns. The late rise in London recently telegraphed shows a recovery of a very remarkable kind and is good evidence of the needlessly low price to which silver fell here.

But our error affects our argument only very slightly, for this reason;—that the Mexican dollar, as we have stated elsewhere, has risen from 1½d. below the price of bar silver—about its nominal value—to 3d. above bar silver, a fact which shows

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

that we have been at a great disadvantage in transacting all our business in this coin, and that the Japanese have been serious sufferers from the same cause, as we contended last week. Speaking generally, we are clearly right in our main ground; but the percentage of loss or disadvantage experienced by the Japanese is somewhat less than we were led to infer.—ED. *J.W.M.*]

TRAINING NOTES.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 23rd September, 1876.

DEAR SIR,—The avidity with which my notes have been devoured, and the immense consequent increase in the circulation of your valuable journal, are sufficient inducements for me to continue a correspondence which must be as interesting to your readers as it is profitable to the pocket of your humble servant. It would occupy too much space were I to tell of the magnificent strings of carriages which crowd the paddock at earliest dawn, or to enumerate the quantity of temperance beverages consumed matutinally by the patronizers of the turf; neither can I attempt to describe the bewitching costumes of the large assemblage of the fair sex who congregate in masses to witness the one hour's training graciously permitted by the Committee of the Yokohama Race Club from 4 to 5 p.m. daily. No, Sir, these things are beyond the scope of my humble pen, but doubtless will be graphically described hereafter, either by one of our local poets, or by some one gifted with a sufficiently facile pen.

The principal event of the week is the announcement—which I believe is perfectly authentic—that positively the Russo-Mexican Stable will not run at the coming meeting. It is much to be regretted that the four ponies in this stable should thus be withdrawn from any cause whatever. "They have "their exits and their entrances," and the owners cannot expect everything their own way. Their ill-luck last meeting can only be attributed to bad condition,—I was going to say bad-training, but Mr. Nicholas must be allowed the palm in that respect, as regards Japanese ponies—and notwithstanding the good fettle that *Typhoon* appears in, I think he would find *Mohstotz* a very different, and more dangerous, antagonist than he was last meeting.

Among the various *on dits* I hear that the opposition Race Club has been started with a formidable list of members, and that it is their intention to try and obtain immediate possession of the course "on behalf of the Community." I think, under the circumstances, that the Committee of the existing Race Club should not longer delay issuing the programme for the coming meeting. There is not much time to spare if the meeting is to take place on the advertised days.

Of Japanese ponies there is still a scarcity, not one griffin having yet been seen on the course. Mr. John Peel has, however, become possessed of a very promising animal, who has been for some time past well known at Yedo. He was to have appeared this morning, but the weather proving unfavourable his debut was adjourned, *sine die*. By the *Nevada* the two expected China griffins arrived for this stable, so that notwithstanding the want of native element, there will be sufficient China ponies here to produce some interesting sport.

Of the doings of the various stables during the past week there is nothing much to say; the weather has not been very favorable and the work consequently has been slow. The "Tartans" were promised a gallop this morning which did not come off. All these ponies are looking very well, and strange to say there have not yet been any of the accustomed "breaks-down" that generally happen in this stable at about this period of the training.

The "Mongols" are carefully looked after, but nothing can be said of the additions to this stud till the quick work begins. *Ravenslee* is certainly not an active pony, if one may judge by his trotting powers, while *Consolation* is still far too large.

The "Mystery" string is very regular in attendance, and turn out in strong force, presenting a more sportsmanlike appearance than any other stable. *Dibs* justly attracts much attention and admiration, for it is seldom that an old pony appears such a perfect picture. Great hopes are entertained for *Favori* and *Gladiateur*, but the trainer ought to know by this time that it is a hopeless task to patch up a once lamed China pony. Not the least worthy of notice in this string is a big grey pony, said by some to be the ex-leader of the Odawara coach. What his origin may really be I do not pretend to say, but I think him a far better pony than either *Satz* or *Nibookin*.

Grasshopper has, just as I predicted, much improved in appearance, and only wants a little care and a few more "full feeds" to bring him into his old form. *Crusader* is being taken great care of, and will doubtless carry off his accustomed one race at the meeting. Mr. Pringle has taken *Black Thorn* out of training *pro tem.*, so that we are minus one new stable. *Little Fish* must not be overlooked. He is at present under the hands of a new jock on the Yokohama turf, but who has, I believe, already made his mark in Shanghai, and may be looked upon as an acquisition to our scanty number of riders.

Yours truly,

TRITON.

P.S.—This being my first season as a sporting correspondent, I trust your readers—and especially the owners of the various animals named—will kindly overlook any slight inaccuracies.

Law & Police

IN H. B. M's CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Monday, 18th September, 1876.

John Cavanagh was again brought before His Honour on a charge of drunkenness.

Police-sergeant Loxton, sworn, stated that prisoner had been brought dead drunk to the station on Friday night by a Japanese policeman.

Prisoner in defence said he had struggled hard against temptation all Friday, but in the evening he was overcome by the persuasions of a friend, and took a glass or two; but if His Honour would let him off this time he would behave like a gentleman whilst he remained in the settlement.

Sentenced to 14 days' imprisonment; should the steamer by which he intended to ship leave on Tuesday, he would be sent on board.

Wednesday, September 20, 1876.

LEON JACQUET *vs.* T. WALLACE.

This was a claim for $15, the value of goods bought at auction, but not delivered by defendant, and $10 damages for consequent loss of market; in all $25.

Plaintiff did not make an appearance, and his Honour therefore dismissed the case, at the same time reminding defendant that if plaintiff could show good cause for his non-attendance to-day, he had it in his power to renew the claim at any future time; so that, in a manner, this dismissal partook of the nature of an adjournment.

Friday, September 22nd, 1876.

John McKay, a seaman late of the U. S. S. *Kearsarge*, was charged with being drunk.

Police-sergeant Loxton, sworn, stated:—Yesterday evening, about 8 o'clock, prisoner was brought to the station by a Japanese constable, charged with drunkenness and sleeping in the house of a Japanese in Honmura. Prisoner was taken to the American Consulate this morning because he had told us he was born in Boston; but this morning he told the American Consul that he came from Glasgow. So I brought him here.

Oka Kamichiro, police constable, said: Prisoner lay in a house in Honmura yesterday afternoon between 3 and 4 p.m. and again at 7 p.m. The proprietor of the house reported this to me saying he could not get rid of the man. I therefore had him taken in a *jinrikisha*, though he was not disorderly, to the station.

Prisoner acknowledged having been drunk for the last three weeks.

Sentenced to seven days' imprisonment.

A correspondent mentions that Li Hung-chang has given a prize of Tls. 200 to be run for at the Chefoo races, and suggests that it should make the meeting an unusually successful one. The desire to possess a cup having historical association with the present conference, should produce an unusual number of competitors.—*S. C. & C. Gazette.*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

THE CHEFOO CONFERENCES.

(From the Chefoo Correspondent of the N-C. Herald & S. C. Gazette.)

It is almost impossible to adequately ascertain the actual value of the events which are taking place here. Although apparently they seem to have no connexion, either with the subjects supposed to be under the consideration of the Plenipotentiaries of Great Britain and China, or with each other, it would be unreasonable to separate them from a certain relation to the principal event round which they are grouped, or to exclaim that they have no practical utility beyond an isolated purpose dependent on those who initiate or take part in them. Without assigning, therefore, to the occurrences happening at Chefoo, any importance beyond that they each contribute to the completion of the surroundings of the diplomatic conferences now being held here, it may be as well to describe what is happening, and to leave for wiser heads to discover whatever profound meaning it contains. The general interest manifested regarding what each and every one is doing, or going to do, seems unabated; and it is not from any lack of social intercommunication that mutual unburdening of state secrets has not been as prevalent as is desired. Abundant opportunity of this sort has been afforded for His Excellency Li Hung-chang and other eminent personages to gratify their wishes for giving their opinions on the world in general, and one spot of it in particular; but hitherto barren results are all that have been gathered in, so far as the uninitiated public is concerned.

The miniature review of Chinese troops, which was hastily got up by the native military authorities, to allow some of the foreign distinguished visitors to recreate themselves amidst the dulness of Chefoo, was speedily followed by a display of naval power, for the special benefit of the Chinese Imperial Commissioner. The German Commodore, Count Montz, invited His Excellency Li Hung-chang to inspect the magnificent frigate *Vineta*, under his command, and to witness the skill and warlike science evinced in the splendid armament and highly disciplined crew of the choicest specimen of the German Navy at present in Eastern waters. On Saturday, the 26th August, the inner bay of Chefoo seemed especially alive with excitement, and from an early hour everything betokened the approaching move ment which was to complete the scene. His Excellency Li Hung-chang embarked in his own steam-launch, and with other boats containing his numerous suite proceeded to the *Vineta*, where he was received with all the honour due to his exalted rank and to his special position as representative of the Emperor of China. The yards were manned, the guns thundered out a salute, and all that could interest the Chinese visitor was shown and explained to him with every attention. His Excellency's questions on the minute details of armaments, projectiles, weapons of war, and other elements of destruction, showed that he highly appreciated the scientific attainments of the German officers who made the different qualities of these terrible things apparent to him. Every one seemed struck with the information His Excellency possessed on these and kindred subjects, and the ease and self-possession with which he reviewed the compact body of armed men who were paraded in his honour. A similar demonstration of manning yards and salutes accompanied his departure; and the Imperial envoy was quickly again on *terra firma*, to discuss with his intimate friends the exhibition he had beheld.

Meanwhile, on the northern horizon a small dark spot appeared, which increasing in magnitude betokened a steamer approaching Chefoo, and it speedily magnified itself into the well-known *Vigilant*, the yacht of Vice-Admiral A. P. Ryder, which, amidst the echoes of the morning's war-like sounds, glided swiftly into the inner harbour, and swung to her moorings. Where has she come from? She has been to Ta-lian-wan Bay, to take over the British Naval Commander-in-chief to visit the detached squadron anchored in that spacious roadstead, so memorable for having been the rendezvous of the British troops during the war of 1860, and has returned from thence. On board the *Vigilant*, the Commander-in-chief brought with him Rear-Admiral Rowley Lambert, C.B., the Admiral commanding the detached squadron; and the two Admirals quietly landed together and went to visit Sir Thomas Wade, and also called on the other Ministers at present resident here. Speculation or imagination, or whatever faculty of the human mind it may be called, was actively employed that Saturday afternoon to discover why such an unexpected visitor had thus suddenly appeared on the Chefoo scene, to add by his presence to the general impression, and to remined them tacitly that he represented a force of some two thousand British tars, and a hundred British cannon, which he held at the disposal of his Commander-in-chief and of Her Majesty's Minister, should they be required to give additional solemnity to the British Plenipotentiary's visit to Chefoo, or to impart greater vigour to His Excellency's negotiations with the representative of the Emperor of China.

The week ended much the same as it had begun, with the apparent advantage to the cause of Great Britain, that it was receiving increased strength from having passed through the interval without even a whisper of its importance or its success being depreciated by the delay. And on the side of the Chinese, what is occurring? Are they satisfied with the progress or otherwise of their week's work of reconstructing the political world of China? It would, indeed, be difficult to measure the success of their endeavours to satisfy the demands which the treachery and culpability of their Government have rendered necessary on the part of Great Britain. They make no sign of exculpation or repentance, and to judge by the hauteur and bearing of every one connected with Li Hung-chang's mission, one might imagine that their visit here was either of congratulation to Sir Thomas Wade, or to confer a favour on the British nation, rather than that of negotiators sent to express sorrow for crimes committed under the authority of their Sovereign, and to implore condonation for their country's misdeeds.

Still, it is not all *couleur de rose* with the chief spokesman of the Middle Kingdom. On his arrival here, he betook himself to the heights above Chefoo, that he might at least enjoy a material elevation to compensate for the forced descension from his pinnacle at Pau-ting-foo, to which his Imperial master has subjected him; but the giddy heights of the Yu-kwang-miau have not altogether soothed his ruffled existence, and segregated him from the influences of care and peril which are the natural concomitants of exaltation. Rumour says that a stranger (Chinese) suddenly appeared in the courtyard of the Viceroyal yamên, and demanded immediate audience of Li Hung-chang. The purport of this intrusion was ostensibly to acquaint the *Tai-tze* of a vision; but the Governor-General, whose mind is strictly practical on such spiritual manifestations, resented the arrival of the unwelcome visitor, and reproaching his guard for permitting his entrance, consigned him to bondage, with the determination of making him suffer the penalty of death inflicted by the code of Chinese laws on unlawful disturbers of a Viceregal sanctuary. The Taotai of Chefoo and others dissuaded Li Hung-chang from carrying out the extreme punishment of the law, by representing to him grave reasons for his moderation in this instance; and the unfortunate Chinese, whether victim of his own hallucinations, or the emissary of evil, languished in prison for some days and then was liberated. But withal, the incident has distubed the peace of Temple Hill, and Li Hung-chang on Sunday left his mountain abode, and took up his quarters in the spacious block of buildings on the plain at the rear of Chefoo, known as the Swatow Guild. There he is certainly safe from a repetition of unbidden visitors, and his own guards can watch the portals of his dwelling with greater care than they could conjoin the chain of outposts which encircled the temple where he passed the first week of his life at Chefoo. Moreover, he will be within easier reach of those who require to see him, and whenever he has to visit Sir Thomas Wade he will have less ground to pass over: and he will not be so vividly reminded of the vicissitudes of political life which his descents and ascents between the temple and the British Minister's bungalow have represented. Possibly his change of domicile to a more humble situation may emblematise the necessity which other circumstances have evoked, for a corresponding alteration in his views of the questions at issue, and which he is charged to settle. Under any circumstances, the change of residence is suggestive of other possibilities being at hand. It was succeeded by a remarkable circumstance.

The first occasion of Li Hung-chang visiting an ironclad presented itself by his coming here simultaneously with H.M.S. *Audacious*. When Sir Thomas Wade and Admiral Ryder visited the Governor-General, His Chinese Excellency expressed his desire to see the British flagship, and naturally his request was assented to. On Monday, the 28th August, therefore, Li Hung-chang proceeded to the outer anchorage for the purpose of officially returning the visit of the Commander-in Chief, and to gratify his curiosity of seeing the floating tower of strength over which the time honored ensign of St. George—

> "The flag that's braved a thousand years,
> The battle and the breeze,"

was spreading to the wind its crimson cross and white folds, with the jack and its multiple of crosses knit together on the same ground, typical of the union and determination of the British Sovereign and people to lift high the banner of united England,

Scotland, and Ireland, wherever "Dieu et mon droit" requires its presence.

As the line of boats conveying Li Hung-chang neared the *Audacious*, the boatswain's shrill pipes called away aloft the topmen, and ere the Viceroy ascended the steps leading to the deck, the yards were manned; and on his stepping on board, Vice-Admiral Ryder, surrounded by his officers, and with Her Majesty's Minister Sir Thomas Wade and the personnel of the British legation standing close by,—Rear-Admiral Rowley Lambert and his flag-lieutenant, and some officers from the detached squadron, being also present—received his distinguished guest with the usual guard and music attendant on such occasions. After a few moments gaze at the unwonted scene, Li Hung-chang was conducted to the Admiral's cabin, where, the usual presentations having taken place, and some preliminary questions relative to the size of the noble vessel answered through the interpretation of the Chinese Secretary of Her Majesty's legation, the Governor-General was taken, in compliance with his request, to see the propelling machinery and lower compartments, and then went on deck to pass before the ranks of the crew who massed on each side to be seen and admired by the Chinese statesman. After a short promenade, which sufficed to give an outline of the picture he was to see, the reality was filled in by a visit to the battery, where the big guns were slumbering in peace. Here began the spectacle which it had been Li Hung-chang's real desire to witness. General quarters, monster artillery, revolving, retiring, receiving their terrific charges, running out through the portholes, then the supposed aim at the enemy, the fire, the closing of port screens protecting loading gunners from inimical bullets, the reloading, and repeated manœuvres of working the guns, as in action, presented a vivid scene, which after all was but a feeble image of the reality of stern war, but which was sufficient to afford an idea of what fighting meant should it be required to protect a friend or to destroy a foe. And then the scene rapidly changes, and the bugle sounds "prepare to ram," and the great guns are bound up, and the gunners lay down on deck, to parry the shock; and then the delivery of the passing iron shower into the sides of the enemy, and electricity lending its aid to discharge the cannon, and the "cease firing," and the tars falling back to their stations!

Amidst the din and moving of monster guns, and stalwart sailors, there sat the Governor-General, deeply interested, closely watching every motion of all that was going on round him, asking questions, requesting explanations, receiving information, and fanning himself and thinking!!! What was he thinking about? What a study was his countenance. How little in it to afford a clue of the heart of which sacred science says it is the image. It would be indeed a shocking temerity to endeavour to unravel secret impressions on the mind of that elevated Chinaman, caused by the sight of such perfection in the art of destruction of human life. Some persons feel regret at penetrating into mysteries which afterwards leave but miserable recollections; and how many have exclaimed, "If ignorance is bliss t'were folly to be wise." But of all the paradoxes, problems, or puzzles, of which the Chinese mind constitutes a solitary and unique specimen, nothing more hopeless can be conceived than the attempt to fathom it, or to judge of its vibrations by the ordinary standard of European probabilities. It is like the Gordian knot, only with this difference that it is to be hoped that no sword will be drawn to solve it, and so perchance there may be more discretion used in abandoning a forlorn hope than continuing a profitless investigation. Whatever Li Hung-chang thought of the battery of the *Audacious*, worked by the energy of British tars, may be reserved for another time. There can be no doubt of his feelings of pleasure and contentment when he was permitted to press the spring on deck by which the electric spark flashed to the united broadside of big guns, and by the action of his own thumb he fired them off! It was truly the "mens conscia sibi," not precisely "recti," but of physical power of some sort apparently emanating from himself which produced the thundering roar of the united explosion of the gun charges. Here was all the difference. Whatever indifference was possible at other actions, it became impossible when beholding the effect of his own work. Li Hung-chang permitted himself to appear delighted, and it must be a subject of congratulation that he could so unbend his iron frame as to allow the spontaneous motions of the mind it imprisons, to manifest themselves thus freely.

His visit was now brought to a close, and as he steered away from the iron ship, its guns boomed out a parting salute in his honor, and its yards were again manned to remind him that his reception was completed by this emblem of watchfulness. It is needless following him to his home, except with good wishes that the 28th of August may be remembered by him hereafter.

This narrative of what there occurred would be incomplete, if it omitted to record that Sir Thomas Wade, shortly after Li Hung-chang's departure, took leave of H.M.S. *Audacious*, under the salute due to his dignity as representative of the British Sovereign, and with the accompanying manning of yards in his honor. Thus ended another phase in the Chefoo conferences. May its effect be as propitious as was the weather on the day of its occurrence.

29th August.

GERMANY.

(Saturday Review.)

During the recent critical period in European affairs Prince Bismarck has been reposing at Kissingen. He has, it may be supposed, wished the world to understand that the Eastern question did not very much trouble him. The Berlin Memorandum was no doubt issued from Berlin, and was a part of the grand arrangement for regulating European politics which he specially invented. But although in a matter where Russia and Austria were specially concerned, it was proper to afford them such benefits as the alliance could afford to all the parties to it, and the conclusions to which the allies came were announced as the conclusions of all, it was not necessary for Prince Bismarck to play any conspicuous part in the projected settlement. Whatever faults may have marked the Berlin Memorandum, they were not the faults which the enemies of Prince Bismarck see in his compositions. It may be safely said that the Memorandum was not at all in his style. Its reticences, its incoherences, its waverings between assumptions, threats, and hopes were far away from the manner in which he does any business which he really takes in hand. The Memorandum bore all possible traces of what Mr. Disraeli calls a happy compromise. It balanced to and fro between the views of Russia and of Austria, and when this ineffective document faded away into non-existence before the refusal of Lord Derby to countenance it, Prince Bismarck evidently saw no occasion to conceive that he had sustained a personal defeat. The German press, indeed, has been almost unanimous in declaring that it was a very good thing that the policy of the alliance should be thrown temporarily into abeyance, and that Germany had to thank England for an opportunity of keeping as clear of the Eastern question as possible. Russia has lately gone somewhat down, and England somewhat up, in the opinion of Germany, and there has been more plain writing about Russia than at any time since Russia rendered Germany the immense service of keeping the ring while the struggles with Austria and France were fought out. Germany has not the slightest wish to see Russia become stronger and greater in Europe and guards the freedom of the Danube with vigilant jealousy. That the peace of Europe should not be broken was the main object of Prince Bismarck's policy in creating the alliance of the three Emperors, or at least that it should not be broken unless he had reasons for wishing it to be disturbed. It was quite, therefore, in accordance with his views that every means should be taken to prevent the Turkish insurrection giving rise to a general war. Directly Germany could not do much to prevent this. It could however do something by abstaining from magnifying the importance of the murder of the German Consul at Salonica, and by putting Court pressure on Roumania so as to keep the excited subjects of Prince Charles from hazarding a war. But indirectly Germany could do much to favour intervention and to localize the war. She allowed it to be known that, in spite of the Berlin Memorandum, it desired events to move on as quietly as possible; and Prince Bismarck helped to create the state of things he wished by treating the crisis as scarcely to be called a crisis at all, and by retiring to the peaceful shades of Kissingen as if nothing of any importance was going on.

A war over the spoils of Turkey would be highly inconvenient to Germany, who must either see others getting advantages which she got none, or must ask for compensations which would scarcely be conceded to her unless demanded at the point of the sword. A war of any kind would, indeed, be highly distasteful to Germany just now. Lord Derby said that he doubted whether the financial position of Russia would permit her to go to war; and if for the purpose he had wished to go further in the same strain of undiplomatic frankness, he might have said much the same of Germany. The credit of the German Government is indeed as good as that of any Continental Government, and deserves

as the political financiers of Germany are proverbially honest, thrifty, and even penurious. But Germany as a country is embarrassed. It has suffered from the general depression of trade which has totally overshadowed so large a part of the world. It is by no means a country of great resources, and its commerce is as yet far behind the commerce of England and France. Old as it is historically, it is in one way a young country, because wars and bad government for centuries retarded its growth. The depression under which it has recently been labouring has not been purely a commercial depression. It has been in a great measure caused by a social change which has for a time taken the people off its balance. The elation caused by the Austrian and French wars has done something to upset the German mind; but it is a mistake to find the origin of a social change in a single cause. The remark is frequently made by foreigners that the Germans have been much spoilt by their successes, have lost their simplicity and contentment, and have become insolent, dissatisfied, and idle. A contrast is drawn between the vitiated habits of the conquerors and the improved habits of the conquered, and it is said that the war has done Frenchmen as much good as it has done Germans harm. It is quite fair that this contrast should be drawn. The war did do France good and the Germans harm. The French set themselves to repair their losses with an energy, a patience, and an amount of good sense which was in the highest degree creditable to them. The Germans, as has been said, were undoubtedly spoilt by the war. The milliards seemed like the pieces of gold in a fairy tale. As soon as they were touched, they turned to dust, and no one was the better for them. But it is not true that it was the war alone that produced a change for the worse in Germany. If we take the last decade of German history as a whole, it has been marked, not only by two great wars, but by a great social convulsion. Germany has been rapidly modernized. From his cradle to his grave, the German used to be the slave of his Government. His religion, his mode of life, of marrying, of occupying himself, were all settled for him. He was a waif of mediævalism in the centre of Europe. Lately he has been pushed forward with very little preparation into the midst of the modern world. The Government has relaxed its hold on him; trade has been forced; railways have provided him with locomotion; he is no longer a prisoner in the little State in which he may happen to have been born. The State no longer places him under the tutelage of any form of religion, and he may follow his own fancies as he will, so long as he does not declare himself too prominently against the policy of Prince Bismarck. In short, he has had liberty, according to the humble notions of liberty entertained by Germans, suddenly given him, and, like a large portion of the human race, he has made a bad use of the sudden gift.

We learn from the Prussian Correspondent of the *Times* that the chief German Commissioner at the Philadelphia Exhibition has been surveying the works of his countrymen in comparison with the products of other nations, and has been delivering himself in the most candid manner on the deficiencies which he finds in German manufactures. He does not mince matters, and seems even to have found some satisfaction in telling his countrymen that during his investigations three things had especially struck his observant mind. He discovered that the main aim of German manufacturers had been to produce something cheap and nasty. He noticed that German workmanship was especially characterized by a want of skill and taste. Lastly, he became painfully aware of the inveterate servility of the German mind, which fawns on its heroes in every conceivable way, and repeats the image of Prince Bismarck or the Red Prince on every article, from bronzes to soap. The best sign for the future of Germany is that the chief German papers appear to own that this severe critic is right. Painful experience has probably convinced enlightened contributors to those organs that their trousers are very perishable and very ugly, and that they cannot wash their hands without taking off the edge of Prince Bismarck's hallowed nose. But there can be little doubt that the explanation of this sad state of things which the Prussian Correspondent suggests is the true one. Germans wear dreadful materials, and select vile patterns, and stamp princes on their soap, because they really belong to a new country, to a country only just starting into life, where people are absorbed in the first unhappy details of the process of getting on, and, if they cannot rival their betters in having the real article, insist on having at least something that very bad judges would consider to look like it. In English colonies, and in many an English provincial town, shoddy and sham silks are freely worn, and even in the metropolis we are wearied to death of seeing the Sovereign always associated with endless window-blinds. In certain stages of society vulgarity will, and must, reign triumphant. It is the maid-of-all-work with which modern progress starts when it first begins to keep house. To the end of time, probably, there will always be some place or some social circle in which what is cheap and nasty will be eagerly bought, where what is thought most acceptable in colour and design will pain an eye like that of the Philadelphian Commissioner, and where the images of good or great men and women will be freely used for the purposes of puffing. The immense military successes of Germany and the learning of its educated men have made Europe ask more from Germany than can as yet be fairly expected. The Germans have got in them the stuff out of which civilized nations are formed; but at present they are not forward enough to rival nations which, like England and France and Italy, have an old civilization. They have many a bitter lesson to learn, and must work hard to develope all the arts of peace before they can be what the Philadelphia Commissioner would like to see them. They must have time and patience and rest, and the hero of their soap can give them no better assistance towards approaching their ideal than by staying sometimes with ostentatious quiet at Kissingen, and keeping them out of unnecessary wars.

REFORM IN THE UNITED STATES.

(Pall Mall Gazette.)

The issues which at present divide the Republican and Democratic parties in the United States are by no means clear to European observers. Both the Cincinnati and the St. Louis platforms are full of fair promises wrapped up in generalities on which a party or an administration can afterwards, as it may find it convenient, put any construction it pleases, positive or negative, strict or loose. The character of the candidates nominated upon the competing "ticket" do not throw much light upon the meaning of their respective pledges. Mr. Tilden and Mr. Hayes are both, it is said, "hard-money" men, and they have both certainly carried their respective States, the most important in the Union, upon "hard-money" principles. But very little, if anything, is actually known as to the measures for getting back to "hard-money," which either Mr, Tilden or Mr. Hayes would enforce, if one or the other had the power, in the Treasury department at Washington. A "hard-money" man whose zeal expends itself in warfare upon the "rag baby," and who neither takes nor suggests any steps leading directly to a resumption of specie payments, is not likely to win the confidence of practical men. Mr. Tilden's association with Mr. Hendrick is also hurtful to his influence with the commercial classes, and there are men of still more suspicious character among the party managers on the other side, who are trying, whether with any chance of success or not we do not venture to say, to make a tool of Mr. Hayes. Therefore though it is in a certain sense satisfactory that the Conventions of both parties have declared for "hard-money," there is no reason to be enthusiastic as yet over the manner in which that political issue has been defined. On the first branch of "reform," the adoption of a sound financial policy, the people of the United States must pronounce their wishes more clearly, and demand more distinct utterances from their leaders.

The second branch of "reform," as it is understood in the United States, is also adopted, at least formally, both by the Republican and theDemocratic candidates. Mr. Tilden has no difficulty in denouncing a system that has been worked for the past fifteen years by the opposite party, but he has given as yet no indication of the particular measures by which he proposes to carry into effect the admirable principles laid down in the St. Louis platform. It is true that Mr. Tilden's friends extol him as an implacable enemy of those dishonest combinations which have warped the politics of the Union, and they point to his cleansing of the Augean stable of the "Canal Ring," in the State of New York. But it is obvious that a campaign, conceivably instituted for local or personal objects, against a single "Ring," does not necessarily imply such a resolute animosity to all combinations of the kind as would be needed to enforce a thorough revolution in the public service, the only effectual measure for the extirpation of "Ring," and "Ring politicians." On the other hand, when we look to Mr. Hayes's letter, explaining the interpretation which he puts upon the pledges and protests of the Cincinnati platform, we do find what has hitherto been wanting in the declarations of the Democratic leaders. The *New York Nation*, the organ of the Republican Reformers, and the *New York World*, the organ of those Democrats who approach the Republican Reformers most nearly, take very different views of Mr. Hayes's manifesto. The former journal says: "His language with regard to Civil Service reform and the currency is certainly as strong and frank as any one could desire." But

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the Democratic organ asserts that "there is not one hearty outspoken word in the letter from beginning to end." We are rather disposed to agree with the *World* as to the currency question, and with the *Nation* as to Civil Service reform. Let us examine what Mr. Hayes actually says on the latter subject. The fifth resolution of the Cincinnati platform, which gives the Republican candidate his text, affirms that "the invariable rule for appointments should have reference to the honesty, fidelity, and capacity of appointees, giving to the party in power those places where harmony and vigour of administration require its policy to be represented, but permitting all others to be filled by persons selected with sole reference to efficiency of the public service and the right of citizens to share in the honour of rendering faithful service to their country." This, as we have said, may mean anything or nothing, according to its practical interpretation, and Mr. Hayes interprets it, we think, in the genuine "Reform" sense. He points out that the maxim, "To the victors belong the spoils," in compliance with which public patronage has been bestowed rather with a view to party services, past or future, than to "real qualifications for office," was on its first introduction during General Jackson's administration an innovation on the theory and practice of the original Constitution of the United States. The system introduced by Jackson has, however, since been modified, not for the better. "At first," Governor Hayes observes, "the President, either directly or through the heads of departments, made all the appointments, but gradually the appointing power in many cases passed into the control of members of Congress. The offices in these cases have become, not merely rewards for party services, but rewards for services to party leaders." Thus, General Grant's least creditable appointments were not, in truth, his own, but those of the "Senatorial Ring" at Washington. The evils of this arrangement are open and notorious. "It destroys," says Mr. Hayes, "the independence of the separate departments of the Government. It tends directly to extravagance and official incapacity. It is a temptation to dishonesty. It hinders and impairs that careful supervision and strict accountability by which alone faithful and efficient public servants can be secured. It obstructs the prompt removal and sure punishment of the unworthy. In every way it degrades the Civil Service and the character of the Government. It is felt, I am confident, by a large majority of the members of Congress to be an intolerable burden and an unwarrantable hindrance to the proper discharge of their legitimate duties." The inevitable conclusion is that a system so demoralizing ought to be abolished root and branch, and from this conclusion Mr Hayes does not shrink. He affirms his wish to return to "the principles and practices of the founders of the Government," to set aside considerations of party service in all public appointments, promotions, and removals, and to establish the rule that every public servant "should be secure in his tenure as long as his personal character remains untarnished and the performance of his duties satisfactory." This is simply a reversion of the established principle of the English Constitution adopted by the founders of the Union, that public office should be held "during good behaviour," and not, save in some rare cases, "during pleasure." Though the principle is not in legal strictness applied over the whole area of the public service in this country, it is firmly rooted in our practice, and the Minister who presumed to infringe it would have to reckon with an angry Parliament.

In order to carry out the policy he has affirmed with regard to Civil Service reform, Mr. Hayes declares emphatically, and without reference to the silence of the Cincinnati platform, against a second presidential term. His "inflexible purpose" on this point is justified by the plain and, we think, very cogent argument, that the reorganization of the Civil Service on "sound and stable principles can be best accomplished by an Executive who is under no temptation to use the patronage of his office to promote his own re-election." It may be said that to risk this misuse is a lesser evil than to compel an able men to retire from power at the end of four years' service. At the same time, we can hardly feel surprised if reformers in the United States feel more keenly the mischiefs of misused patronage than the possible embarrassment of losing a strong man's guidance through the stringent operation of a hard-and-fast rule. If any of them have been hesitating whether to choose the former risk or the latter, their resolution has probably been steadied by the extraordinary proceedings of General Grant. Since Mr. Hayes's letter has been published, the President, stung by its sharp references to Civil Service scandals, and by its emphatic repudiation of a Second Term, has by his words and acts endeavoured to show his contempt for the policy of his successor. His spoken rebukes of Mr. Hayes's "bad taste" might be passed over with a smile, so his unsparing ejection from office of Mr. Bristow's subo in the work of reform—a stroke of policy which will possi valuable aid to the Democrats in the coming campaign.

THE NEW SULTAN OF TURKEY.

(The Times.)

The incident of a man suddenly called to the absolute ment of a great Empire being found utterly incapable of more remarkable in itself than in its bearings on the qu despotic Government, and on the crisis of the Turkish The domestic affairs of the Porte are so little known to t world, and what is known has been so little subjected to that during the many unquiet weeks of thickening rumou preceded the late tragic events, and for many days apparently happy succession of Murad V., nothing transpired that could diminish confidence in the man b be the right solution of the difficulty. That he had acc the late Sultan in his European tour because, as was sa not safe to leave him behind, and that he had been kept under jealous surveillance, without the opportunity of a held to show qualities ready to reveal themselves. he was young and capable of improvement. He was a hands. Perhaps in these anticipations there was the mistake of trusting to mere negative qualities, or, wha the same things, to the entire absence of information as t good or bad. From the day that the new Sultan was amid general rejoicing he has been a cipher. Lat has been so much mystery about him that it be a tenable opinion that he has ceased to exist, exist altogether, to survive in a form fit for the disch rational functions. It is stated that his Ministers no decision from him, or even a word to show that he u the matter to be decided on. Overpowered either wi mense and novel responsibility, or with stimulants and with all these, he has sunk into a lethargy and a ment from which there can be no recovery. He is said to b capable of giving formal sanction to the decisions of his C which has, consequently, to dispense with it. Even exaggeration in this account of the unhappy man, the st must be bad which allows all this to be said and preve diction. The old rule which declares it the same whe appears not or exists not must obtain in this every outward token, Turkey has no Sovereign, and nations have now to deal, not with the Successor phet and the occupant of a great historic throne, but able and, it is to be hoped, honest politicians. This n be a matter of comparative indifference, for it is n that Sovereigns are equally and uniformly able, or authors of the policy to which their names are given. might be of less importance in other countries, or at becomes very important indeed when the very qu agitates the world is the bond of unity and the princ hesion to hold together many nationalities and religi over various and widely-spread regions in Europ Africa.

The Mahomedan Law of Succession aims to prev state of things now before us. With considerable natural feelings and to common sense, it attempts t the successor to the throne shall be immediately exercise of his high functions, and able to dispen guardians than the ordinary advisers and Ministers That there is something to be said for such a rule our own history testifies. The Minorities, such Richard II., Henry VI., Edward V., and Edward VI in troubles and in scandals, through which a Constitu more easily steer its way than a Despotic Gover England has not been wrecked altogether in one of times it has fallen on is the best proof of its capa government in the sense of observing and making be said of the Turkish Empire, as of the political dominant creed, that it distrusts itself. It depen more than the system, and requires a perpetual i men as able to preserve the Empire as the origina successive conquerors were to create it. One migh be always on the eve of such a disruption as that whi ly followed the death of the Macedonian conqueror. four hundred years Turkey has not made the le fusing and uniting the discordant elements and ins prised in her nominal unity. From the most anci

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

humanity, she has derived the art of hounding on one race to destroy another, of seeking temporary ease by the mutual destruction of tribes whom she equally fears, and of creating solitudes where she cannot make peace. The Circassians planted in Bulgaria, the robber tribes of Asia Minor brought to the front of Europeans Turkey, and the swarthy hosts now on their way from the Upper Nile to the Danube, constitute a fit comment on the policy which finds itself compelled to excuse half the population from the defence of the common Empire. Turkey has to defend itself against its neighbours by means of hordes summoned from the very confines of civilization. When the Empire has not grown, in the sense of political growth, a single day in four centuries, of course it depends on the Sultan of the day. The value of that dependence we now see. The poor imbecile now in nominal possession cannot see about him a single member of his family able to bear the burden. It is true that an incompetent man is no judge of competency, for he lacks the true measure alike for himself and for others. But his despairing and simply instinctive judgment finds some corroboration in the silence which reigns around him, for not a word has been said as to the greater competency of any other Prince of the Blood Royal. Indeed, for anything that appears to the contrary, the whole family shows the results of an education expressly devised to stifle ambition and to suppress powers. A Sultan has no encouragement to educate Princes, and has every inducement to keep down the dangerous stock and prevent eminence in individuals. He bears neither a brother nor a too evident, and therefore too certain, successor near his Throne. Such is the continual difficulty entailed by the want of a Constitutional Government, and by the consequent reliance on the actual Sultan. That difficulty has now reached its very climax, and it is not too much to say that Turkey must either submit to a Government which shall in some form represent its people, or abandon itself to the inevitable process of disintegration and dismemberment, already far advanced, and only interrupted by European intervention.

The importance as well as the simplicity of the crisis can hardly be over-estimated. It is the sacred blood which is the centre of unity, and in order to sustain this transcendental character, everything continues to be done, to prevent any other form or element of political coherence. Turkey is the Turkey of the Successor of the Prophet, and that by natural descent from his immediate successors, or it is nothing at all. That succession at an end, the unity has no longer the religious character which is its only moral force. One may well ask, then, how it is that the world watches with so little curiosity the choice, or rather the fortuitous discovery, of the man who is to emerge from the Seraglio to the government of a great Empire. If that, indeed, be the only chance, one might expect the advent of this deliverer to be watched and waited for as the ship-wrecked wait for dawn or for the passing sail. All that we can say is that the anxiety, where it ought most to be felt, is hardly equal to the occasion. On the certain and rapidly approaching failure of the present experimental Sultan, another, it seems to be thought, will be found of an equally speculative value, and it appears to be deemed a matter of no great moment how many blanks will have to be drawn before the prize presents itself. Such a process cannot be continued without some loss of *prestige* at every successive step of abortive selection. That the statesmen now holding the reins of this vast and incongruous Empire under unexampled difficulties show some vigour, promptitude, and versatility may be admitted; but, while they are showing unusual activity, the dynasty, which is the very palladium of the Empire, is exhibited in its most passive and most degenerate state. A Cabinet governs because a Sultan cannot be found; and Turkey holds together for the moment, and even makes head against its foes, because mercifully relieved from the mischievous influence of a legitimate Sovereign. This cannot be for the preservation and integrity of the Empire. It is not compatible with the Asiatic character, which is really predominant in Turkey, and without which it must soon cease to be Turkey at all.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—An active demand for *Yarns* and good makes of *Grey Shirtings* continues; prices are firmer, and in most instances slightly dearer, but the further progress in the decline of exchange makes values for imports worse than they were a week ago. Inferior qualities of 7 lbs, and 8¼ lbs. *Shirtings* form an exception to the general tendency of the market, as they have declined in price and are difficult of sale. *White Shirtings* and *Drills* are quiet. All other articles are firm at the following quotations.

Grey Shirtings:—					
7 lbs.	38½ yds.	39 in.	per pce....	$1 55	to $2.10
8 lbs.	38½ yds.	44 in.	„ ...	2 00	to 2 60
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ ...	1 85	to 2 60
9 lbs.	38½ „	44 in.	„ ...	2.40	to 2.95
T. Cloth 7lbs.	24 „	32 in.	„ ...	1 50	to 1.75
„ 6lbs.	24 „	32 in.	„ ...	1.17½	to 1.27½

White Shirtings:—				
60 to 64 reed 40 yds. 35 in.	per pce.	2.20	to	2.40
Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb...	0.70	to	0.90
Black Velvets	...	8.00	to	9.00
English Drills 15 lbs. 40 yds, 30 in.	... ...	2.65	to	2.85
Taffachelass 12 yds, 43 in....	*nom.*	2.00	to	2.40

Yarns.—

No. 16 to 24	per picul..	$29 50	to	33.25
No. 28 to 32	per picul..	$30 50	to	38 00
No. 38 to 42	per picul...	$39.00	to	41.50
Reverse Twist ... ... 16-24 ...	„ ...	$33.00		

Woollens.—We have no great change to report since our last. Exchange continues its downward tendency, holders have assumed a firmer tone, and there is less doing in consequence.

Plain Orleans	40—42 yds. 32 in....	5 00	to	8 00
Figured Orleans	29—30 yds. 31 in....	4 25	to	5.00
Shimagoro	30 yds. 30 in....	4.25	to	5.50
Italian Cloth	—30 yds. 32 in....	0 27	to	0.35
Camlet Cords	29—30 yds. 32 in....	5.75	to	7 00
Camlets Asstd.	56—58 yds. 31 in ...	16 50	to	17 50
Lastings, Japan	22—30 yds. 32 in....	12 00	to	13.00
Plain Mousseline de Laine	—30 yds. 30 in ...	0.16½	to	0.19

Figured Mousseline de Laine...	30 yds. 30 in...	0.23	to	0.27
Multicolored „ ...	30 yds. 30 in...	0.30	to	0.36½
Cloth, all wool plain or fancy...	48 in. to 52 in...	0.80	to	1.20
Presidents	54 in. to 56 in...	0.60	to	0.70
Pilots	54 in. to 56 in...	0.40	to	0.45
Union	54 in. to 56 in...	0.40	to	0.65
Blankets, scarlet & green 7 to 8 lbs....	per lb...	0.40	to	0.42

Sugar.—There has been but a poor business done during the past week both in *Formosa* and *Fine* Sugars; the unfavourable weather having been, doubtless, a partial cause of the inactivity of the market.

Sugar:—Takao in bag	per picul...	$3 20		
„ in basket	„ ...	$3 00		
Taiwanfoo in bag...	„ ...	$3 10		
do. in basket...	„ ...	$2.90		
China No 1 Ping-fah	„ ...	$7.50		
„ No. 2 Ching-pak	„ ...	$6 65		
„ No. 3 Ke-pak	„ ..	$6.00		

China No. 4 Kook-fah	per picul...	$5.30		
„ No. 5 Kong-fun	„ ...	$4.70		
„ No. 6 E-pak	„ ...	$3.80		
Swatow...	„ ...	$2.95		
Daitong	„ ...	$2.60		
Japan Rice		$2.30	to	$2.35
Kerosene Oil		$3.50		

Kerosene Oil.—There are no sellers at quotations of $3.50. The Tôkiô ring is demoralized, through time sellers being unable to fulfil their engagements.

EXPORTS.

Silk.—Recent telegrams have induced a further advance in prices. Exchange has continued declining, and the present quotations show an advance in cost of about 5 per cent. on Hanks, and 8 per cent. on Oshiu sorts since the 12th instant.

Settlements since that date are 1,300 bales of Hanks, 130 of Oshius, and 50 of filatures, making since the 1st July a total of 13,700 bales against a total export of 13,591 for the last season.

Stock 600 to 800 bales.

The shipments during the period under review have been 3,005 bales, which bring the total export since the 1st July to 12,695 bales, against 3,095 last year for the corresponding period.

Filature Silks are much inquired for at daily advancing rates.

Silk-worms' Eggs.—Total arrivals are 175,000. A few deliveries have been effected under contracts made at the beginning of the season, but no sales are yet reported.

	At Exchange 3/11½ in London.	*At Exchange 5 at 6 m.s. in Lyons.*		
Hanks.—Extra to No. 1...	$1100 to 1125	37/10	to 38/10	104 to 107
„ Best No. 1 & 2...	$1080 to 1090	37/	to 37/6	103 to 104
„ Good No. 2 ...	$1060 to 1070	36/6	to 36/10	101 to 102
„ Medium No. 2½ ...	$1030 to 1050	35/6	to 35/2	98 to 200
„ C'mon. No. 3 } „ Inferior No 4 & 5 }	$ 980 to 1020	33/10	to 35/2	93 to 97

	At Exchange 3/11½ in London.	*At Exchange 5 at 6 m.s. in Lyons.*		
Oshiu—Best to Extra...	$1080 to 1100	37/	to 37/10	103 to 104
Medium to Good.	$1000 to 1060	34/6	to 36/6	95 to 101
Hamatski.—No. 1 & 2...	$ 840 to 860	29/2	to 29/10	81 to 83
„ No. 3 & 4 ...	$ 800 to 820	27/10	to 28/6	77 to 79
Kakeda.—Best nom. ...	$1150 to 1200	39/6	to 41/2	109 to 114
„ M'dium to Good	$1050 to 1100	36/2	to 37/10	100 to 104
Sodai.—Nominal.....	$ 900	31/2		87

Tea.—The business done during the week has been small, settlements amounting to 1,700 piculs only. Arrivals have been very light, as dealers are holding for higher rates and have, in a measure, succeeded.

Common	$10.00	to	15.00
Good Common	16.00	to	18.00
Medium	19 00	to	21.00
Good Medium	22.00	to	24.00

Fine	$28.00	to	32.00
Finest	35.00	to	40.00
Choice	Nominal, very scarce.		

EXCHANGE AND BULLION.

Exchange.—In the early part of the week there was a large business doing at largely reduced rates on last quotations, but since the departure of the French mail business has been quieter, and although rates are again easier there is but little Private Paper offering.

Rates close as follows:—

Sterling—Bank 6 months' sight	3s. 10½d.
„ Bank Bills on demand	3s 9½d.
„ Private 6 months' sight	3s. 11d.
On Paris—Bank Sight	4.75
„ Bank 6 months' sight	4.85
„ Private 6 ms. sight	4.95
On Hongkong—Bank sight	2 % disct.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 40.] YOKOHAMA, SATURDAY, SEPTEMBER 30, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The position taken by the Bluff land-renters sadly wants support, for certainly it has not a leg of its own to stand upon. We very much wish it were otherwise, for the ground-rents are undoubtedly grievously high, and we are all in the same boat. We fear that we could only get a reduction on them at the expense of worse roads and less efficient police service, and are quite sure that if there is any falling off in these respects there will be a terrible outcry. Whether we should be very wise in urging a change which might bring "Diana's foresters, gentlemen of the shade, minions of the moon," round us again, is a serious question. Let any one who has had a silver tea-pot stolen, the cherished travelling companion of years, which he valued as Shylock his turquoise, and he will soon cry out against any reduction of the police force.

But still we think that a good letter to the *Gon Roi*, stating all the circumstances of the case, and calling his attention to the indisputable fact that we all feel these ground rents to be very oppressive under a condition of affairs which has changed very much for the worse during the last ten years, might be of some service. We are not sanguine about it, and we do not think we have any real claim beyond that of men who certainly have good cause to groan under the bargains they themselves made. But we must not place ourselves in a wrong position by pleading issues which the Japanese can dispose of in ten words. If we make any claims on the ground of injustice, we shall turn away an ear which might willingly listen to a tale of distress—for this is what it comes to. We may fairly urge that our ground-rents are too high, and they certainly are so. But we must not cherish any delusions about the nature of the bargain to which we were willing and conscious parties. We did not foresee the troubles we were bringing upon ourselves, but we signed with our eyes open and can blame no one that things have gone against us. On our showing, we have a case for consideration; on that urged at the meeting we doubt if we have the shadow of a case.

We hope the sportsmen will forgive us a most unwilling neglect of their question this week—the only question which can possibly interest them on the first of October. Our sole plea for the omission is that though it certainly presses most on that special day, there is another which just now claims precedence of it, and on that we have bestowed so much time that we have none left for a far more agreeable though, it must be admitted, less serious one. It seems to us a thousand pities that the final solution of the question was not arrived at before the game season opened. It really is a very serious one, inasmuch as, come what may, foreigners will go out shooting, because they make a wide distinction between a *malum prohibitum*—not even *prohibitum* by their own authorities—and a *malum in se*. The most severely rigorous man in this settlement, if a sportsman, will go out—we will not say to-morrow—but certainly on Monday, and "take his chance," as he calls it. He knows that there is only some little hitch between the Japanese and the Foreign Representatives which keeps the question open; he knows that, generally speaking, the Japanese police have behaved with great moderation; and he sees no reason why he should abstain from celebrating his first of October here as elsewhere. We are not entirely with him—though certainly from no want of ardour for his pursuit—but are not so much against him as to protest against his line of action.

Meanwhile, however, two or three points are abundantly clear. In the first place, all the true sportsmen are willing to pay a good round sum for a gun license, provided they can secure a fair equivalent for it. One form of this they would get in the restrictions a costly license would put upon the operations of the "cocky-olly-bird" shooters—the creatures who go about with green hats, gaiters, a gun, a great bag with tassels, and a horn—that horn, ye Heavenly Powers! These men habitually go into copses and enclosures and shoot sparrows or pigeons on the roofs or thatch of houses, and are perhaps the most exasperating objects a sportsman can meet with on his tramp. But one other form of equivalent is also wanted, viz., a close season, not only for the field, but, what is far more important, for the market. The number of birds shot is comparatively small; it is the open market after the end of February that does the mischief.

In regard to the cost of the license, $50 has been named. We think it too heavy, but should have no objection to the sum if the license extended over two years, a return of $25 being claimable in the case of the holder leaving the country with a year of his license unexpired. Yet, again, is it quite fair to those exasperating creatures with the horns that they should be prohibited from going out? Must not their existence be recognized as a form of evil which has to be tolerated? May they not subserve some useful purpose in this inscrutable order of things? May mankind possibly have a tendency to reversion, from which these survivals are intended to warn and guard us? Is it a justifiable eclecticism which seeks to extinguish their unconscious betrayal of a dying bias towards arboreal habits? Yet they really violate very important obligations in the field, and if there are other good reasons for making the cost of the license $50—provided always that it extends over two years—we really should be very much resigned to their misfortunes. But we should like to see the whole question settled, and are entirely with the Japanese in all that concerns dangers to their people during harvest time. We are not afraid of the real sportsmen on this head, because they know their work and keep cool whatever gets up. But we all remember the picture of the "rockets in his mind" which Mr. Briggs saw when he went into the field for the first time rather late in life, and a pheasant went off with a whirr-r-r-r at his feet. Under a panic like this no one within a radius of sixty yards is safe from the contents of Mr. Briggs's gun.

Original from UNIVERSITY OF CALIFORNIA

It is very gratifying to find that the native press displays an interest in affairs external to the Japanese Empire, and in this view we have published the translation of an article from the *Nichi Nichi Shimbun*, which takes us roundly to task for our views in regard to the settlement of the dispute between England and China. The writer of the article may be excused for placing our knowledge of the European and China question below his own, in view of the fact that he apparently places England and Japan on precisely the same footing. This undoubtedly is a concession and a compliment for which, in the name of our countrymen, we should gratefully express our thanks to the writer, because, usually, the orientals are profoundly convinced that they are our superiors. Good manners forbid our expressing any views on this delicate subject, and as it is certain that men see in affairs, both divine and human, what they bring to the consideration of them, it is quite possible that our sense of the inequality of the two Powers lies in the poverty of our own apprehension—as the writer indeed shows. Our insular pride has blinded us, and we are pleased, though somewhat humiliated, to have the scales taken from our eyes. We shall endeavour for the future to walk more modestly, and to remember that it is not for England to show discontent at results with which Dai Nippon has expressed herself satisfied.

Mr. Wagner's concert comprised two or three interesting and suggestive features. The first thing which occured to us was wonder how any one could have written that *cavatina* from Mercandante's *Il Bravo* and imagined that there was any music in it. It shows what strange fancies exist on this subject. It would be difficult to find a much worse song, and all Mr. Jaquemot could do for it was of no other avail than to show that he has much improved in his singing. If he will take pains and practice he will do very well. His voice improves year by year.

Of Beethoven's *Largo e Mesto* from the Sonata *op.* 10 it is not easy to write with any discretion, for it is impossible to love and be wise. But we can imagine that if some exalted creature from a world where everything was pure, holy and happy, could visit our fallen star, and, piercing through the thin crust of appearance and the thoughtless content of the few, could realize all the agony of human life, his compassion, tenderness and love, if poured out in music, would take the form of this truly sublime movement. It must have been written early in Beethoven's life, but we know nothing finer even from him. Surely "sorrow and love flow mingled down" in this wonderful outpouring of human emotion—sorrow vaster than Lear's—love "passing the love of women." But it must be played in the time in which it was written, or it becomes unintelligible gabble. The poor music of our modern hymnology may bear this treatment—indeed it would else hardly hang together. But there must be no irreverent step in the presence which the inner eye may discern behind music like that of which we write. Let us keep our musical profanities—for so the fashion of the day has willed it—within the walls of our churches. Do not let us degrade our concert rooms with them.

Henry Smart's duet "When the wind bloweth in from the sea" is as perfect as anything in its own line can be, and it was charmingly sung by Messrs. Townley and Jaquemot—so well, indeed, as to call for a hearty encore. Graceful in outline and most delicately coloured, this little song presented a perfect specimen of the English school of music—one which, at its best, has serious claims on the world's admiration, though not perhaps on its worship.

Mr. Wagner is an accomplished flautist, and plays in addition the violin and concertina, the flute, however, being his special instrument. His tone is good, he is rarely at fault in his intonation, and his execution is admirable.

The second part of the concert was closed with a trio of Hummel's, a writer who was very near being a great genius, and who certainly was a profound and admirable musician. It was extremely well played and made a very agreeable termination to the concert, which Mr. Wagner has this evening announced his intention of repeating with some variations of the programme. We trust that the weather, which was much against him yesterday, will be more gracious on the next occasion.

We had occasion a short time back to show the objections which existed to a multiplication of weak newspapers in a community, and we should like to illustrate this position.

Not two months ago we were told that war could not be avoided in China and we had the customary comments suggested by such a prospect to a person as profoundly ignorant of the condition of the question at issue as a human being being could well be. When authentic news was recently published of the settlement of the China question we were advised to accept it with due caution, although it contained specific terms and was actually the transcription of a telegram received from Shanghai, and since entirely confirmed. Now we have a war between Turkey and Russia announced, while nothing but "a difficulty" actually existed, and news of its arrangement from a most trustworthy source reached us during the course of to-day. Now, lest we should be at all misunderstood, we must frankly say that no very great blame can attach to these mistakes, into which any one may easily be led. But it is a very serious evil to a community that for the want of strong newspapers which can afford to pay for news, it should be misled by a number of weak ones out of all proportion to its size. Considering the commercial value of news to commercial men, the evil of the present condition of affairs must be too clear to need comment.

From the "Japan Mail Daily Advertiser."

Monday, 25th.

From the *Nichi Nichi Shimbun.*

The Emperor will shortly visit Kiôto, making the journey to Osaka by sea. The Empress Dowager will also proceed to the western capital, but will travel overland.

From the *Chôya Shimbun.*

The officers of the Army, Navy and Kaitakushi Departments who accompanied the late Embassy to Corea, received a special acknowledgement of their services on the 22nd instant.

From the same.

The office of the Tôkiô *Fu* is to be lighted with gas.

From the same.

Prince Tayasu, one of the three princes of the Tokugawa family, died on the 22nd instant at six p.m.

From the same.

Mr. Nakabayashi, the editor of the *Nichi Nichi Shimbun*, Mr. Sudzukida, the editor of the *Yomiuri Shimbun*, and Mr. Mayeshima, the editor of the *Eiri Shimbun*, have all been sentenced to pay a fine of twenty *yen* for having violated the the 4th article of the Laws of Libel, in having published the particulars of a placard which some one had affixed to the Idzumi-bashi at Tôkiô, to the effect that "the officials of the *Saibansho* act partially with the guilty and punish the innocent."

From the same.

Mr. Takashi, the editor of the *Chugai Hiôron*, has been sentenced by the *Saibansho* to three months' imprisonment for having violated the 12th clause of the Press-laws, by the publication of an article headed "Arms are necessary to revive the decadence of a nation."

From the same.

A person residing at Shimidzu machi, Honjo, Tôkiô, has manufactured some foreign-styled ink, which is to be brought into the market within a few days.

From the *Akébono Shimbun.*

The dress uniform of the Imperial family is to be changed, and a new one designed of a more gorgeous description.

From the *Osaka Nippô.*

An extensive manufactory for small arms is to be erected within the grounds of the arsenal at Osaka, and already 4,800,000 bricks have been purchased for the purpose at a cost of 27,000 *yen.*

Tuesday, 26th.

The Agent of the Great Northern Telegraph Company yesterday informed us that on the 27th instant a steamer will leave Khabarovka (in Siberia) for the western stations; messages may be forwarded by this steamer and, it is supposed, will reach Europe quicker than if sent by the southern route. It should be understood from this intimation that communication by wire is open to Khabarovka, whence messages sent will be forwarded by steamer up the Amoor, passing those places where the telegraph line has been destroyed by floods, and, it is expected, reaching some western station where telegraphic communication with Europe is complete.

The latest telegrams received by the company from Europe are dated the 16th instant.

This morning we received information from the Agent that the cable between Shanghai and Amoy is repaired, and thus the line to Hongkong is again open.

From the *Hôchi Shimbun.*

The Government will shortly issue paper money of the value of 5 *sen.*

From the same.

Some disease having broken out among the horses in the Imperial stables, they have been sent to the Army Department, in order to be under the care of a French veterinary surgeon.

From the same.

Her Majesty the Empress left the Imperial Palace at 8.20 yesterday morning, to visit the Female Normal College.

From the same.

Mr. Terashima, the Minister of Foreign Affairs, arrived at Tôkiô yesterday afternoon from the North.

From the same.

The Okurasho has bought 700,000 United States Trade Dollars, on account of the low rate at which they could be purchased.

From the same.

The following are the amounts of the rewards granted to the various officials who went to Corea:—Mr. Kuroda 2,000 *yen*; officials above the seventh rank 120 *yen* each, and officials below the 7th rank 40 *yen* each.

From the *Chôya Shimbun.*

Some foreigners have given an order to a Japanese sword-maker for a large number of walking sticks with swords inside them.

From the *Kôko Shinpô.*

The people of the Kagoshima *ken* are purchasing arms for some unknown purpose, and all males between the ages of fifteen and fifty are forbidden to leave the *ken* of their own free-will.

From the *Nichi Nichi Shimbun.*

As the *Nevada* still flies the American flag though she is chartered to the Mitzu Bishi Co., officials visited her on arrival at Yokohama a few days ago, to examine whether the Japanese passengers had passports for travelling in a "foreign" ship. Among 332 passengers on board, there were two who did not possess passports, and consequently they were arrested and taken to the *Kencho.*

From the same.

Mr. Fukushima, the Japanese Vice Consul at Amoy, returned to Japan on the 23rd instant by the Mitsu Bishi steamer.

From the *Akébono Shimbun.*

The *Ehimé Shimbun* will very soon be published at Matzuyama in the Ehimé *ken*; ten copies will be issued monthly and the subscription be only 16 *sen* per month.

From the same.

A new building for the office of the Tôkiô *Fu* is to be erected.

From the same.

A Choshiu man has requested permission to visit Corea and remain there three years, as he is desirous of studying the language of that country.

From the *Saikai Shimbun.*

A man named Matzumoto, of Nagasaki, having discovered a Chinaman smuggling rice, reported the fact to the Custom House and was rewarded with 14 *yen* for the information given.

Wednesday, 27th.

From the *Nichi Nichi Shimbun.*

It is said that the Government will hereafter enact some law, by which any person who becomes bankrupt will be deprived of certain portions of the rights possessed by the people in general.

From the *Hôchi Shimbun.*

Mr. Zeisho, the governor of Sakai *ken*, has been granted an addition to his salary of 50 *yen* per month, for having discharged his duties with great ability for the past few years.

From the same.

The price of eggs has greatly risen this year on account of the intense heat of the summer and the wet season that followed it. In Osaka eggs of small size cost two *sen* each.

From the same.

With the exception of Mr. Ito, most of the officials who proceeded to the north have become more or less indisposed, which circumstance have may been caused by the change of climate. They are all expected back at the capital on the 8th of next month.

From the *Akébono Shimbun.*

A certain Hirano, of Nagasaki, who is manufacturing printing types at Tzukiji, has rented a piece of land comprising 8,000 *tzubos* on the Ishikawajima, and has requested permission of Government to erect an iron foundry there, which has been granted.

Thursday, 28th.

Mr. Kawamura the Vice-Minister of the Navy Department paid a visit on Tuesday to H. I. G. M.'s S. *Vineta*, when the customary salute was fired.

In the U. S. Consular-General Court the hearing of the summons against J. M. Bachelder by the Tôkiô *Fu* was postponed till the 7th proximo, by mutual consent of plaintiffs and defendant.

The *Great Republic* arrived in port yesterday, and the following is Capt. Cobb's report of the typhoon the vessel met with:—On the 24th instant, the vessel being about 250 miles East of Cape King, with the wind-blowing hard from the E. S. E., I deemed it advisable to lay to, as she was evidently running into a cyclone. The ship behaved well until the wind hauled to the westward, bringing the sea on the quarter, when a heavy sea coming up, struck the vessel on the starboard quarter, smashing all the wood work of the paddle box, and forcing in the front of the saloon. A considerable quantity of water found its way down in to the after hold, which damaged a portion of the cargo that was stowed under the deck.

On arrival in port yesterday the saloon passengers presented the following testimonial to Captain Cobb.

P. M. S.S. Co.'s *Great Republic*,
September 27th, 1876.

Captain Cobb,

Dear Sir.—We the undersigned saloon passengers cannot leave the ship without tendering you our best thanks and due appreciation of your great anxiety, ability, and praiseworthy conduct during the severe typhoon on the night of the 24th and 25th instant, when the vessel was in such imminent danger, and for your general courtesy and consideration throughout the voyage. Wishing you health and every prosperity,

We remain,
Yours very truly,

Friday, 29*th*.

A meeting of Bluff land renters was held at the Chamber of Commerce rooms yesterday afternoon, and was well attended.

Mr. Dickins was voted into the chair, and explained at some length the object of the meeting and the grievances which Bluff land renters laboured under. He suggested that a committee should be appointed by the meeting to enquire into the causes of the depreciation of value of Bluff lots and to suggest such remedies as were fair to all parties. Mr. Dickins, for his own part, thought that it was mainly attributable to the fact that the Japanese authorities pushed fresh land upon the market before the old allotments had been disposed of. He had no wish that any apparently aggressive attitude towards the authorities should be assumed, but he considered that they had not treated the holders of Bluff lots fairly in this respect. He showed also that the ground-rents were out of all proportion to the value of the land.

Mr. McDonald then proposed, and Mr. von Hemert seconded: "That this meeting is of opinion that the ground rent on the Bluff is excessive, and that the time has now come for the revision of the system under which Bluff lands are held." Also, "that a committee be appointed by this meeting, consisting of members of the various nationalities, to investigate the matter, collect information, and report to an adjourned meeting, with full suggestions, as demanded."

Carried unanimously.

Mr. Beato proposed and Mr. McDonald seconded that the committee should consist of seven persons, and nominated the following gentlemen, viz.: Mr. Dickins, Mr. Boyle, Mr. von Hemert, Mr. Rickett, Mr. Piquet, Dr. Hepburn and one German to be elected by the aforesaid members. Carried.

The meeting then adjourned with the usual vote of thanks to the Chairman.

The *Nichi Nichi Shimbun* announces that the Kaitakushi Department has established dockyards at Mororan, in the island of Yezo, where vessels of foreign form of construction can be built. Those who wish to speculate in such shipbuilding but who are short of funds, can obtain an advance from the above Department to enable them to carry out their designs. These facilities are offered specially to advance the employment of a better class of vessels than the ordinary Japanese junks, and we earnestly wish the Kaitakushi success in their efforts thus to improve the coast navigation.

From the *Akébono Shimbun*.

A room is set apart in the Tôkiô Hospital where medicines are dispensed to the poor free of charge.

From the *Hôchi Shimbun*.

All officials under the seventh rank who are diligent in the performance of their special duties will be rewarded at the end of the year by an amount representing one third of their monthly salaries, and, in accordance with previous edicts, those officials who throughout the year do not miss a single day in attendance at their office, will be specially rewarded.

From the same.

An armour plated battery is about to be erected between Yokohama and Yokosuka.

From the same.

The opening of the National Exhibition at Uyéno, which, it was expected, would take place on the 15th of March next year, has been finally postponed until the 30th of November, 1877.

From the same.

Mr. Mayeshima, the Post-master General, has been appointed to the position of *Shôya* in the *Naimushô*, but will still continue to hold his present office.

From the same.

The announcement of the issue of the supposed Game-laws by the *Nichi Nichi Shimbun* was a mistake, for details have not yet been decided upon.

From the *Mainichi Shimbun*.

In Akita *ken* coal oil has recently been discovered. Seven wells in all have been started, of an average depth of 120 yards, from which nine *koku* of oil are obtained daily.

From the *Nichi Nichi Shimbun*.

At Urawa, in Sakitama *ken*, a newspaper to be called *Sakitama Shimbun* is about to be published.

From the *Osaka Nippô*.

The steamer *Kinko Maru* left Otzu, on lake Biwa, on the 12th instant in the morning, and about noon came into collision with a steamer coming from Imatzu, with the unfortunate result that the latter commenced to sink. All her passengers were transferred to the *Kinko Maru* without delay, so that, fortunately, no lives were lost. The accident occurred about the midddle of the lake.

Saturday, 30*th*.

The *Hôchi Shimbun* says that very recently the *Kenrei* of Kanagawa was ordered to buy up the property situated in the Moto-machi (better known as Honmura) for the purpose of enlarging the foreign settlement, but his attempt to carry out the orders received have met with great opposition from the native owners of the property in question, who have forwarded petitions to the Government through the *Kenrei*, praying that they might be left in undisputed possession of their holdings. Replies to these petitions have not yet been received.

From the *Hôchi Shimbun*.

The Judicial Department is about enact certain special laws to be enforced in Loochoo.

From the same.

We have heard from a person who has just been released from the new prison at Ichigaya on the termination of his sentence, that the ventilation of the building is all that could be wished, and many hardships which were endured in the old prison an unknown in the new one. A welcome innovation has been made in according those confined the privilege of seeing and conversing with their friends who call, in the presence of the prison officials.

From the same.

The Government has given up all idea of trying to raise the wreck of the "*Nil*" on account of the great expense involved, and the wreck, as it lies, has been handed over to a Dutch subject, who will see what he can do with it.

From the *Osaka Nippô*.

Mr. Yorodzuya, the editor of this paper, has been sentenced to imprisonment for one year, for having violated the 13th article of the Press-laws in publishing a communication from a correspondent under the heading "the Government is the property of the people and not that of the rulers." Mr. Yorodzuya had also rendered himself liable to a further term of six months' imprisonment for having published, in violation of the 14th article of the Press-laws, another contributed article entitled "The present officials, like singing girls, only know how to flatter their superiors," but this latter sentence was remitted in consideration of his undergoing the former one.

From the *Nichi Nichi Shimbun*.

Mr. Otowa, the editor of the *Aichi Shimbun*, was summoned to the *Saibansho* on the 25th instant.

From the *Chôya Shimbun*.

The Government has decided that all ships, excepting only vessels of war, whether belonging to or borrowed by any Government Department for the time being, must, on entrance to any port open to foreign commerce, pay port dues according to Notification No. 163 of the *Daijokuan*, issued in November 1875.

From the same.

The funeral procession of the Tokugawa Prince Tayasu was very imposing. It was headed by a large number of police, and bearers of banners and flowers. The coffin, preceded by two high priests in a carriage, was borne by fifty coolies, after which came fifty carriages containing relations and friends, the whole being followed by one hundred and sixty *jinrikishas* conveying retainers of the Tokugawa family, and about one hundred more retainers on foot.

THE CURRENCY.

III

WE trust we have made clear to our readers in the two foregoing articles on this subject, the following points :—

1*st*.—That the Japanese have suffered a serious diminution of the profit which their trade with us this year might and ought to have given them ; that this fact is attributable to the unsuitable nature of the currency in which that trade has been prosecuted ; and that the same cause, under an opposite, but quite possible, combination of circumstances, will have a similar detrimental effect upon the interests of foreigners.

2*nd*.—That as the Mexican dollar is not current in this country ; that as it will certainly not be made so in view of the fact that the Japanese have a Mint of their own of ample power to produce coin enough for all the wants of their and our trade ; and that this dollar is liable to serious fluctuation over and above that which attaches to the value of the metal of which it is made ; it is an unsuitable coin for the commercial purposes of the country.

3*rd*.—That the commercial transactions of the open ports should be carried on in a coin which is the currency of the country, and that this coin should be a Japanese dollar, coined under sufficient guarantees that it will be of a fixed weight and fineness, and produced in quantities large enough for the purposes of the foreign trade.

We shall now attempt to show that the monetary system of this country requires to be placed upon a new footing; and shall endeavour, with such facts as we possess, to show how this can be done, what dangers attend the change, and what precautions may be taken to guard against them.

In regard to the first point, the main monetary system of this country is an inconvertible paper currency, and in order to show the evils attendant upon, and inseparable from, such a currency, we shall give the following opinions of men whose reputations are sufficient guarantees for the value the world has agreed to place on their views.

Before doing so, however, we should warn our readers, and our Japanese readers especially, that there is no sphere of human thought and activity which has been more thickly beset than this by quacks and impostors. In no other direction have men advanced specious, and yet utterly unsound, theories, with so much confidence, so much success of persuasion, and so much consequent mischief. The semi-scientific visionary may, like the philosopher in Rasselas, persuade his few dupes that he possesses, and they may acquire, the art of traversing the air with wings. But no bones are broken save their own; and, in other similar cases, the mischief worked by ignorant faith or designing knavery is confined to a small circumference. Not so, however, with the ignorant but successful currency schemer. He invades every house in an empire, casts sand instead of oil upon the wheels of industry, puts enmity between every creditor and his debtor, plunders the poor, plays into the hands of the rich oppressor, and raises hopes which have no real basis of existence, but the collapse of which only makes the pangs of poverty more bitter and unbearable. That we have not overstated these evils, the following quotations will fully prove. We will first take the English economists and statesmen.

John Stuart Mill says :—

> "To the increase of inconvertible paper (if permitted by law), there is no check. The issuers may add to it indefinitely, lowering its value and raising prices in proportion ; they may, in other words, depreciate the currency without limit. Such a power, in whomsoever vested, is an intolerable evil."

Again :—

> "The substitution of paper for metallic currency is a national gain ; any further increase of paper beyond this is but a form of robbery."—*(Vol: 2, Book III, Chap. 13. Political Economy.)*

Professor W. Stanley Jevons says :—

> "The issue of an inconvertible money * * * has often been recommended as a convenient means of making a forced loan from the people, when the finances of the government are in a desperate condition. It is true that money may be thus easily abstracted from the people, and the government debts are effectually lessened. At the same time, however, every private debtor is enabled to take a forced contribution from his creditor. A government should, indeed, be in a desperate position, which ventures thus to break all social contracts and relations which it was created to preserve."*—"*Money*," *page* 236.

Professor Bonamy Price says :—

> "An inconvertible note is tainted with the worst vice which a currency can possess—unsteadiness of value. * * * * The debasement of the tool of exchange is an annoying and mischievous nuisance, thrust into a region from which it should be rigorously excluded, the exchanging of the necessaries and enjoyments required by civilization. It is thrust in for a motive absolutely unconnected with the sole purpose for which any currency exists and passes into universal use. * * * The change in the nature of the currency tells on every price in every shop or store—for price is only the quantity of currency computed to be equal to the value of the goods.
>
> * * * Every sale on credit is converted into gambling, and what but pure harm can come from adding an inevitable element of gambling to every shop-keeper's accounts, to every bill which moves the operations of commerce, to every purchase of a house or farm which covenants for the payment of a rent of so many dollars or pounds for a number of years, to every man who lives by the interest of the national debt of the country ?† * * * * * As long as an inconvertible currency lasts, it never ceases to harass trade and every commercial dealing between man and man. The harm is renewed day after day, week after week, year after year. A bad, unsound, untrustworthy currency persecutes society at every turn and and brings loss on all but gamblers. It poisons every sale as the days roll on, every exchange ; and what is human life but making and exchanging ?
>
> The moral which these facts teach is clear. Overwhelming necessity may excuse the original imposition of so easy but so vicious a tax, but the pressure once over, *not an hour should be lost by any legislature which has any knowledge of the nature and working of money, to arrest the plague and sweep away inconvertible paper.*
>
> * * * An inconvertible currency is incapable of being defended. It may have had an excusable origin in an overwhelming political situation, and if maintained for a brief time only may do comparatively small harm. But its continuance is loaded with ever repeated calamity to a country. In England, no man of the smallest eminence comes forward to defend such a currency ; its radical and incurable badness is the settled conviction of the English people. *(Currency and Banking.)*

Sir R. Peel :—

> "In the debate of 1869 on currency said that the "excess of commercial speculation which led to such evils was the consequence of an over issue of paper currency, and this was a fact not to be disputed."

Lord Grenville

> "In the same debate, declared that "an irredeemable paper currency was, under any circumstances, a greater evil than good ; that, he hoped it would be recorded of him as his decided conviction, that in proportion to the danger under which the country laboured, he would almost say,

* This of course applies equally if the *new money* is issued in the form of loans on the plea of stimulating industry, or indeed on any plea.—Ed. *J. W. M.*

† He might have said, "to every man who lives by a *fixed income*," no matter from what source derived.—Ed. *J. W. M.*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

in proportion to the extent of that danger, was the impolicy and desperate madness of such a measure as they were now considering how to rescind * * * He could show how the miseries of 1816 followed on the issues of the preceding year "and how they" led to a fearful depreciation, and, without any fault of individuals, by the mere force of the system, involved the whole kingdom in one general desolation. Not only its trade and commerce, but its agriculture, its landed interest, even classes the most remote from connection with, or even knowledge of the paper system, found themselves suddenly consigned to total and inexplicable ruin. If their lordships could see at their bar, not merely the victims of commercial failure, but those numerous persons of all ages, sexes, and classes, who had unconsciously suffered without even understanding how or whence the evil fell upon them, such a spectacle would fill their lordships with horror, and he sincerely believed that not only would no voice be raised for the maintenance of such a system in commerce, but not even in war."

Mr. Walter Bagehot says :—

"Inconvertible paper issued by Government is sure to be issued in great quantities, as the American currency soon was; it is sure to be depreciated as against coin; it is sure to disturb values and to derange markets; it is certain to defraud the lender; it is certain to give the borrower more than he ought to have."

We will now turn to the American authorities.

Pelatiah Webster says :—

"We have sufferred more from this cause than from every other cause or calamity. It has killed more men, pervaded and corrupted the choicest interests of our country more, and done more injustice, than even the arms and artifices of our enemy."

Daniel Webster says :—

"A disordered currency is one of the greatest political evils. It undermines the virtues necessary for the support of the social system, and encourages propensities destructive to its happiness. It wars against industry, frugality, and economy, and it fosters the evil spirits of extravagance and speculation. Of all the contrivances for cheating the labouring classes of mankind, none has been more effectual than that which deludes them with paper money. This is the most effectual of inventions to fertilise the rich man's field by the sweat of the poor man's brow.

Ordinary tyranny, oppression, excessive taxation, these bear lightly on the happiness and the means of the community compared with fraudulent currencies and the robberies committed by depreciated paper. Our own history has recorded for our instruction enough, and more than enough, of the demoralising tendency, the injustice and the intolerable oppression on the virtuous and well disposed of a degraded paper currency."

Professor Perry says :—

"The distress and consternation into which a country falls when its measure of value is disturbed and destroyed is past all powers of description."

Professor Sumner says :—

"An irredeemable paper currency is a national calamity of the first magnitude, of which one may indeed find greater or less examples, but of which the least is a peremptory warning to statesmen and financiers. It is like a disease in the blood, undermining the constitution and spreading decay through all the arteries of business. A young and vigorous nation, with a sound political system, may stand it far better than an old one, with feudal traditions; but in its measure and according to circumstances it is pernicious if not fatal. It is not like an acute disease; it is like an invalid state with occasional fever.

We shall now pass on to enumerate certain specific evils caused by inconvertible issues.

1.—Damage to national credit.

"In the case of America there was a further evil. Being a new country she ought in her times of financial want to borrow of old countries, but the old countries were frightened by the probable issue of unlimited inconvertible paper and they would not lend a shilling. The Northern States raised no loans in Lombard St., and could raise none because of their vicious paper money."—*(Bagehot.)*

Daniel Webster said upon one occasion, that Alexander Hamilton had "*raised the credit of the United States from the dead.*" This striking remark was caused in a great measure by the success of Hamilton's scheme for returning to specie payments.

2.—The temptation to over-issue, and to pass prescribed limits.

J. S. Mill says on this subject :—

"The temptation to over-issue, in certain financial emergencies, is so strong, that nothing is admissible which can tend, in however slight a degree, to weaken the barriers that restrain it."

Henry Dunning Macleod says :—

"There is no instance in any country in which any persons, public or private, having been invested with the power of issuing notes unlimited in amount and denomination, have not abused it, and produced such calamities as to make men almost curse the very power itself."

Professor Jevons says :—

"Russia has had a depreciated currency for more than a hundred years, and the history of it may be read in M. Wolowsky's work on the finances of Russia. *Repeated limits* were placed to its issue by imperial edict, but the next war always led to further issues."

Professor Perry says :—

"There never has been a government yet, of the many which have issued irredeemable paper, which had the wisdom, and the firmness to resist *for any great length of time* the temptation to emit large quantities."

Again :—

"There never was a government yet, of all those which have attempted the issue of inconvertible paper, which had prudence and firmness enough to resist, *for any great length of time*, the temptation to issue such paper in excess."

EXAMPLES.

In 1867 the United States passed a National Banking law authorising the issue of $300,000,000 of inconvertible paper. On July of 1870 $54,000,000 more was authorised, and at the present moment the existence of the inflationist party in the U. S. sufficiently proves that the danger of further issues is not over.

Austria groans beneath successive issues, as do Russia, and Italy. So late as 1865 there was a *Cours forcé* of paper in the last named country.

Professor Sumner says :—

"Whatever strength a nation has is weakened by issuing legal tender notes. One might as well say that it is necessary to open the veins of a weak man who has a heavy physical task to perform. All history shows that paper money with a forced circulation is not a temporary resource. It cannot be taken up and laid down as we choose."

Again :—

"Nearly every nation which has ever used paper money has fixed its amount, and set limits which it has solemnly promised again and again not to pass. But such promises are vain. The intention, when they are made, is honest, but it is impossible to keep them. A man might as well jump off a precipice intending to stop half way down."

3.—It undermines social morality. A writer in the *Journal des Economistes* of the September 1878, commenting upon the excessive Austrian paper money issues, says that Vienna is outwardly grandiose and pretentious, but badly drained and otherwise provided, that the character of the people is light and frivolous, and he refers these phenomena to the financial disorder and paper money as chief causes."

4.—Want of elasticity.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Professor Jevons says:—

> "A further objection to a paper money inconvertible into coin is that it cannot be varied in quantity by the natural action of trade. No one can export it or import it like coin, and no one but the Government or banks authorised by Government can issue or cancel it. Hence if trade becomes brisk, nothing but a decree of the Government can supply the requisite increase of circulating medium, and if this be put afloat and trade relapse into dullness, the currency becomes redundant and falls in value. Now, even the best informed Government Department cannot be trusted to judge wisely and impartially when more money is wanted. Currency must be supplied, like all other commodities, according to the free action of the laws of supply and demand."

Henry Dunning Macleod says :—

> "Bullion is not only the sole proper basis of a paper currency, but is the only true *regulator* of its amount."

We might, were it necessary, endlessly add to these opinions by quoting from the works of the great French economists, Bastiat, Michael Chevalier and others. But it is needless. The writers we have cited are authorities of the highest class ; and it must always be remembered that as experimental science advances, false theories and the names of their authors die out, while truth and its exponents gain a firmer hold upon the opinion, and even increasingly influence the course of action, of mankind. All these authorities agree as to the fact—for long and repeated experience has placed it beyond the condition of an opinion—that an inconvertible currency is an evil of enormous magnitude ; and as the paper currency of this country is an inconvertible one, Japan is suffering from this evil, and the facts adduced in our previous articles show how grievously it is operating to her detriment.

The simple fact is that when the Mint was established, no one seems to have grasped clearly the all-important truth that the first great requisite, before setting it in motion, was to put the currency upon a sound footing. Now, it is no use whatever to make coin if, at the same time, you have an inconvertible currency the issue of which is liable to be increased at any moment to meet the financial exigencies of a Government. So fast as the coin is made it will run away, as it has done here and will do everywhere else under the same condition. The reason for this is not always clearly apprehended, but it lies in the fact that every fresh issue of currency depreciates, proportionately to its amount, the value of the paper already afloat. This depreciation is not visible to the eye, or to the uninstructed mind, which does not know where to look for the evidence of it. But the instructed mind sees it in a rise in the value of all commodities; with this, fresh inducements to importations from abroad ; and, as a consequence, an export of the gold to pay for them.

It is obvious, therefore, that beyond the production of a copper or subsidary silver coinage, no permanent purpose can be subserved by the establishment of a Mint unless the whole currency system is under proper regulation. It is not long ago that Italy found this out greatly to her cost. She coined a large quantity of money with the object of introducing greater certainty into the transactions of every day life. But, shortly afterwards, she increased her issues of paper, thereby, of course, enlarging the volume of her currency, and the silver and gold at once left the country. While the present condition of things continues in Japan, we may, indeed, we must, look for a continuance of the divorce of the Mint from the currency.

There is but one remedy for all this, viz., a return to specie payment, or, in other words, a convertible currency. The question must therefore be asked: What evidence is there that the country is in a position to make this change within a reasonable period ?

To this we reply:—Too little, perhaps, to enable us to judge accurately and pronounce positively. Yet we are not without facts to guide us. In some of the provinces, —in Kagoshima, for instance,—we are informed, on excellent authority, that gold, silver and paper circulate freely on a perfect equality, and, if this be so, the same thing is doubtless to be seen elsewhere. Admitting that the present high premium on the paper currency is the result of the great demand for it caused by the late unusual activity of the silk market, it is a fact that for a long time paper and gold have circulated very much on a par in the open market, and this is proof positive that the quantity of the former afloat is in no way excessive. Whatever may have been the case ten years ago, we do not believe that the Government of this country could prevent the paper currency falling to a discount were the issue of it excessive, and the conclusion is thus forced upon us that there is no such excess of it.

But, it will be asked ; Is there not something like ninety millions of paper currency afloat in the Empire ? Is it proposed to declare all this convertible with such a small metallic reserve as the Government now possesses ?

In reply, we would observe that, out of this large amount, about 32,000,000 consists of fractional currency required for the small purposes of every day life, (27,000,000 of the new Frankfort *satz*, and about 5½ millions of the old issue which is being gradually exchanged for these new *satz*). Of course this need not be taken into account. The notes pass from hand to hand as readily as coin, they are extremely useful, and no one who possesses two or three dollars worth of them would dream of demanding silver for them.

Then, there is always a considerable quantity of currency in the hands of the Treasury, paid in on account of taxes, and greater or less according to the time of year. The amount varies from 3 millions, below which it never falls, to 11 millions, beyond which it rarely rises. We will take it at its worst and call it 3 millions. Thus we have :—

Fractional Currency...	...	...*Yen* 32,400,000
Paper in the Treasury	...	... „ 3,000,000
		Yen 35,400,000

Subtract this sum from the 90,000,000 which we have supposed to be afloat, and we have 54,600,000 to reckon with.

Yet, not fully this. It will be remembered that, in one of his more recent Financial Statements, the FINANCE MINISTER showed that the amount of the issues of the old *han* had never been correctly ascertained, in spite of all the pains which had been taken to arrive at it. Nor will the extent of the liabilities which were taken over from the *han* by the Government at the Restoration be accurately known until next July, the limit fixed some time ago beyond which the Government will not exchange the old for the new currency. But, meantime, there are good reasons for believing that the amount out is considerably smaller than was at one time supposed, and we do not think we shall prove to be far wrong if we strike the odd 4,600,000 *yen* off the above total. This leaves us with *yen* 50,000,000, the responsibility imposed by which we must look steadily in the face.

Now, it is usually presumed that if from a third to a half of metallic reserve is kept against a government paper money which is in fair credit with a people, there is

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

no danger in a convertible paper currency. Let us say, then, that 25,000,000 of silver or gold must be kept in the Treasury, and we agree that nothing less than this would be safe. How is this amount to be made up?

So far as we can judge, there must now be about 16,000,000 *yen* in cash in the FINANCE MINISTER'S hands. We shall not pretend to be entirely accurate in these figures, or to be able to verify them until the appearance of the next Budget. But we think we are not far wrong, and this leaves us with 9,000,000 yet to provide, and we shall at once admit a serious difficulty in furnishing this. But it should remembered that there is no easy escape from the great evils of an inconvertible currency. You cannot get out of such a difficulty as that in which this country is placed, without effort, sacrifice, trouble, and, possibly, assistance. But if by making this effort and sacrifice, taking this trouble, or even asking this assistance, you can subdue an evil admitted on all hands to be of enormous magnitude and paralysing effect,—if you can get off the steep incline down which you must always have a tendency to slide, and often find yourself sliding,—if you can discard a thoroughly bad principle, and adopt a thoroughly good one, that is to say, *hard money*, with all its attendant advantages and blessings—you cannot be doing wrong. More than this. You are bound to adopt such a course, for the only alternative is impotent palsy.

To speak frankly, we do not see how this nine millions is to be provided without a foreign loan, and we know that the opinion of the country is against a resort to this means. The feeling is an admirable one. It proves that there is a sound determination on the part of the nation to extricate itself by its own efforts from the difficulties into which it has fallen, and we should be the last to run counter to it. But in this case we plead that something must be done, some feeling must be waived, some determined course adopted. We must say with Lear,

> Where the greater malady is fix'd,
> The lesser is scarce felt. Thou'dst shun a bear:
> But if thy flight lay toward the raging sea,
> Thou'dst meet the bear i' the mouth.

The burden of a small additional foreign loan is a feather weight beside that of an inconvertible currency. No wise man will say that a foreign loan, as such, is necessarily a bad thing, and there are many cases in which he would say that it was a very good thing. But no wise man even pleaded that an inconvertible currency was a good thing, or other than a grievous and most intolerable thing.

Yet, the amount of foreign assistance necessary might be much smaller than the sum we speak of, and for the following reasons.

The country saves from eight to ten millions of *yen* annually by the late measure for capitalizing the incomes of the nobles and gentry, and if this is not to go towards the diminution of the land-tax—of which we yet see no sign—how could it be better bestowed than in a withdrawal to that extent of the paper currency? provided, of course, a proper quantity were always kept in circulation for the wants of the country, and this could always be ascertained by the premium or discount at which it stood in the market. Every ten millions so used would reduce the amount of the necessary metallic reserve in the Treasury in advancing proportion, because safety grows in an increasing rate the nearer it is approached.

There is one great advantage, of what might be termed a mechanical nature, which a silver currency, such as we have proposed for this country, has over a gold currency, and this is a most important factor in the question of how much metallic reserve must be maintained in relation to the paper in circulation. It is far more cumbrous than gold. No man will carry about ten sovereigns if he can get two five-pound notes and ready change for them. Far less would he carry about ten pounds worth of silver, and the same thing applies quite as much to the large transactions of commerce. It is certain that if men were assured that they could obtain silver for their notes on application at certain centres of distribution, the quantity of such notes presented for payment, though it might be considerable for three or six months, would be small after that time, and that, this fact once thoroughly realized throughout the empire, the demand for coin would be far smaller than if we possessed a gold unit and currency.

There is yet one contingency against which we have not provided, viz, the quantity of paper which may be hoarded in the country. This may be considerable, and it would be brought out for conversion into silver directly the currency was made convertible. In order to meet this demand we should propose to issue a note or bill payable at sight or a short date, but bearing a small interest, say 2 per cent, which would present greater attractions to hoarders than purely barren metal or paper. The tendency to hoard and the practice of hoarding, universal in all countries, but specially prevalent in the East, must be reckoned with and provided for. The deposits in the Post-office Savings Banks will gradually do something in this direction, but the Post-master General's Report for 1875 proves conclusively that very little must be hoped for in this direction for many years to come.

We have now gone so far—at a sad expense to our readers, we fear, but in the earnest hope that we have drawn attention to a great evil, and to the necessity, at least, of remedying it, if not to the means by which it may be remedied—that we must shortly state what seems to us the proper course to take in order to put the currency on a proper footing.

Of the return to the silver unit and currency we wrote last week, and with this as a basis for the future, and the assurance that in case of need a loan of a million and a half, or at most two millions, could be negotiated in London—of which there can be no doubt whatever—but which may, after all, not be necessary, the Government could announce that in two, or at the outside, in three years from some given day, all its floating currency would be exchangeable for silver. The immediate consequence of this would be an enormous accession to its strength and credit both here and in Europe. The paper currency would have new life and vigour imparted to it, and every debtor and creditor throughout the Empire would feel that the settlement of their respective liabilities would be attended by a certainty unknown in the previous history of the nation. The present generation of Englishmen knows nothing of the misery resulting from depreciated and fluctuating currency. But let those who have lived in Austria, Italy and Spain give their testimony. Or let those who have no such experience, read Lord Macaulay's description of the national confusion arising from this cause which existed in William the Third's time, and the relief afforded to the nation by the restoration of the currency. If they do this, they will soon see, and at once confess, that there are few evils of so great a magnitude in a struggling and advancing society, as a medium of exchange which no one can trust. The Japanese statesman who will grapple with this question, and solve it, will do more for his country than any other man has any chance of doing, because, as Web-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ster says, in the words we have quoted above, "Ordinary "tyranny, oppression, excessive taxation, those bear lightly "on the happiness of the mass of the community compared "with fraudulent currencies and the robberies committed "by depreciated paper." And do not let us imagine that because we have not seen all the evils of this bad system in this country they are to be escaped if we continue to pursue it. We have at this moment a Finance Minister who, so far as we can judge, fully apprehends the evils of a bad system, because he is wise enough to be guided by conclusions arrived at by an induction from facts. But, so long as you have a bad system, you are liable to be cursed with the vices inherent in it. You might to-morrow find the finances in the hands of an inflationist who thought that the trade of the country required "the vivifying influence of an abundant paper circulation," and who proceeded to act upon this monstrous chimera. We are only a few thousands of miles, and are within too easy reach of a country where the unfathomable ignorance of political economy always displayed by democracies is in full play, and where all the most strenuous efforts of sound and wise men are only just sufficient to keep the horses' heads in the right direction. We are now in this country, so far as practice is concerned, in a *soft-money* stage. Let us learn to look on a soft-money man as the incarnation of all evil, and fortify ourselves in an absolute intolerance of the system, admitting no truce or possibility of truce with it, and regarding it as impoverishing, vicious, demoralizing and fatal.

SPIRIT OF THE JAPANESE PRESS.

Corea.

("Nichi Nichi Shimbun" September 22, 1876.)

We record what has been told to us by a person who has returned from Corea verbatim as we heard it from him.

The outside enclosure of the castle in the capital is very fine, and if we were to compare it to anything in Yedo we should liken it to the Sakurada gate. There is a high wall built with cut stone, and on the top of this again a fence about 12 feet high, but no moat. In the fence both round and large square holes are pierced for guns and also as outlets for discharging arrows. The houses inside the castle are roofed with tiles and are of a slightly better class than those outside. They are, however, all made of hardened mud, as walls with us, and the superiority of some over others consists in their being plastered. The frontage is about 12 or 18 feet and the breadth from front to rear is always about 12 feet. The houses outside the castle are all thatched and the general condition of the streets falls below that of those in Shaliao, in Formosa. In some the dwellings merely consist of a thing like a long bank constructed at the back of the street, with a fence in front of it at a distance of about 12 feet, a roof being placed over both. Filthiness prevails everywhere, but the streets are nevertheless a little cleaner than those of Amoy. The gates of the castle are built of stone in the same style as the *Megane* bridge (in Yedo) and on top of them are towers. They are situated on the North, South, East and West of the castle and are very fine. The King's residence appeared to be in the inmost recess, and there were several erections resembling the great gate at the temple of Zojōji in Shiba. The only currency was copper cash, but some of the people appeared to have a large amount of gold and silver. We saw, however, no houses which appeared to be those of wealthy farmers or merchants. All were single storied; in winter they are warmed by a fire lighted underneath the floor, and the poorer classes sleep even in the coldest weather with nothing on them. In summer they have no mosquito nets and they pass the night by smoking out the mosquitoes, or else by covering up their faces with some material or other. They are thus prevented sleeping at night and in consequence a large number of them take it out during the day time.

The place where we lodged was a temple, but we do not know its name. When any of us went out, all the doors were closed and no one appeared outside. Few of us therefore were able to get an idea of the customs of the people. When, however, one person went out secretly, he found the people in the streets to be poor to a degree. And though there appeared to be no great trade or barter going on, the morning market was extremely busy. There were large quantities of beef, pork, vegetables and fruit for sale, but there appeared to be no transaction in rice larger that twenty or thirty bags.* The ice is very good and abundant. There appeared to be plenty of gold dust in the rich houses, and so there are probably gold mines in the country. There are also silver and coal mines, but they are unworked. The system of farming resembles that of Japan. This year the great drought has prevented a number of the rice fields being planted and the vegetable gardens have also been largely uncultivated. We at last saw two women in the streets—the elder of whom wore a black skirt and looked like a Chinawoman. The younger one wore a garment of sky blue gauze extending from the head down and exactly resembling the veils that used to be worn in Kiyoto.

The Same.

("Hōchi Shimbun" September 25, 1876.)

We have heard in the streets the following account of Corea, purporting to be on the authority of a person who has returned thence.

Our envoy having arrived at the capital, the day for his audience with the king was fixed and apparently notified by the Government to the people before hand, for there was not a single sightseer in the streets, the doors of all the houses were closed and any person who ventured to peep through the interstices was immediately stopped by the officials. In fact it just resembled a progress of the Tycoon in the old days. Our envoy thinking that it would be very hard for the people if this practice were continued to be observed during his stay, asked that the prohibition which had been issued should be relaxed, and consequently very large numbers of sightseers were everywhere assembled at the places he passed on the days he left the capital. The heat at noon never fell below 106 or 107 degrees, nor at night below 95 to 96 degrees, but the people went about entirely unaffected by it. The coolies who were employed by the envoy merely picked up a melon in a field and ate it, and though they did not have a single meal throughout the day they showed no signs of distress. It was said that by labouring hard for one day they were enabled with what they thus acquired to enjoy themselves, without working for the space of three days. They did not like our making excursions about the town and so we cannot give an exact description of the streets. When special application was made to go to any particular place no objection was made to our proceeding there by the road that lead to it, but they disliked our diverging from it. The houses were constructed like small ash-houses in our remote country districts, were destitute of floors and had round thatched roofs. They had neither doors, windows nor ceilings, and merely sufficed to ward off dew and rain. Even in the largest houses ceilings were very rare. We saw not a single kite or crow, but there was an abundance of jays. The distances between Kōkwa and the capital is about 13 *ri*, and though there are no particularly steep ascents or descents along the road, carriages would be unable to pass over a large part of it. There is nowhere any large collection of houses on it, but in some places there was a continuation of five or six as in a village. The soldiers are numerous, are dressed in red and wear short swords, but unless on the march carry neither guns nor bows. They produced a large quantity of beef and mutton at the entertainments which they gave us, but the odour that saluted our nostrils from it on account of the heat of the weather, put eating it out of our power. In fact the only thing we could eat was the fruit. The confectionery was all made from honey and far too sweet. The preponderance of leeks in all their dishes rendered them unsuited to our tastes. Cholera was prevalent and deaths were consequently very numerous. The rest again.

Toleration of Christianity.

("Choya Shimbun" September 28, 1876.)

We cannot clearly understand what are the ideas entertained by our Government on the subject of the sanctioning or the reverse of the Christian religion, nor can we avoid feeling some mistrust in regard thereto.

If we glance backwards a little we see that four or five years ago our Government removed all the notices that were in every part of the country in respect to the "evil sect called Christian," etc, and though this step on their part was no doubt owing in a considerable degree to the influence of the pressure exercised upon

* One bag is about 2½ baskets.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

them from abroad to effect that end, still it cannot be denied that it was also owing to the careful attention which the Government had given to the changed spirit of the times, and to their having perceived, in consequence, that the policy which Tokugawa had instituted several hundred years before in respect to foreign doctrines was entirely unsuited to the present day. They accordingly ceased to look upon that doctrine as being a wrong and corrupt one and the Japanese who placed their faith in it as criminal of the deepest dye, as Tokugawa had done. Consider now what has been the state of matters since the removal of the edicts above mentioned. Missionaries have been despatched by the missionary societies of all the countries of Europe and America (to Japan), who, in the large churches which they have erected, not only in Yedo but in all the open ports, fearlessly worship what they call the 'true God,' and setting up the cross gather their disciples together and instruct them in their doctrines. Our countrymen, again, publicly listen to them, and listening admire them, and admiring believe them, and in the end come to mock the Buddhist, Shintooist and like religions as a useless worship of idols, and to despise their doctrines as false. The Government puts no check on and makes no inquiry into this, and their not doing so must be taken as a sign that their real intention is to quietly authorize the foreign doctrine. There is, however, one point which, when we consider it, makes us doubt whether this or the direct reverse is the intention of our Government.

We recently heard that a certain *samurai* in the Miyé *ken* publicly preached the Christian religion within the jurisdiction of that *ken*, and that the officials thereof hearing of it immediately sent to interrogate him, asking him "by the authority of what "office or person he did so." The *samurai* answered that "he "had received no special authority, but that he understood that the "Government permitted such preaching." The *ken* officials accordingly reported the matter to the proper quarter and asked for instructions as to whether the preaching should be permitted or not, and strict instructions speedily came saying that it should not be permitted. We have also heard that instructions to the same effect were issued in regard to a similar case that occurred in the Kôchi *ken*. We cannot say whether the information is true, but we are inclined to believe, in view of the absence of any discrepancy in the reports given of it, that it is. If that be so, the intention of our Government resembles that of Tokugawa in not permitting but even repressing the foreign doctrine, and we cannot but feel some distrust on the matter.

If may, however, be said that it is not the desire of our Government to authorize the foreign doctrine, but that, while they have no choice but to permit its being for a while preached by the foreign missionaries in Yedo, Yokohama, and the other open ports, it is very far from their intention that it should be disseminated by Japanese in the interior of the country, and that not only, therefore, will they not overlook anything of this kind, but they will strictly forbid it. What can this mean? That a difference will be made in authorizing or prohibiting the preaching of the foreign doctrine according to the place where, or the person by whom, it is preached, and that amounts to saying that its preaching by a foreigner at an open port should be authorized as being unproductive of any damage to the interests of the country but that it should be forbidden on the part of a native in the interior as being the reverse. Would not this be a strange admission? It is clear that no such narrow minded views are held by those who, in the administration of the Government, treat all impartially, and we would therefore guarantee to any extent that this view of the question which we are now considering is not correct.

What then is the feeling with which our Government regards the foreign doctrine? Our humble abilities do not enable us to form any conjecture, and we cannot free ourselves from distrust on the subject. Should, however, anyone ask us whether the foreign doctrine should be allowed or forbidden, we should say that it is better that it should be permitted than forbidden, and better that it should be publicly authorized than merely permitted. And why? Liberality throughout the world recognizes the justice of freedom of opinion—the opposite of liberality is selfishness, and any interference therefore with freedom of opinion is selfishness.

The Settlement of the China Question.

(Nichi Nichi Shimbun.)

As soon as the telegram arrived which announced the settlement of the differences which existed between China and England, we published it in this journal, and a second telegram has been received confirming the news.

We rejoice at the peaceful termination of the affair, and shall in due time proceed to consider the terms agreed upon between Sir Thomas Wade and Li Hung-chang. As yet we have nothing more than telegraphic announcements, so that we do not know the exact terms of the agreement arrived at, but report states them to be as follows:—

(Here follow the articles said to have been agreed upon.)

The above four articles seem to embrace all the important conditions of the Convention, and, as it seems to us, they ought to satisfy all British subjects. But the *Japan Mail* has expressed the following views on the subject:—

(Here follows a translations of the remarks made in this Journal on this subject on the 16th instant.)

Is it not strange that the *Mail* should not only not rejoice at this termination of the affair, but should express disappointment at it? If these words represent the views of the *Mail* and the *Mail* alone, we have but little to say; but if they represent English public opinion, we must say that we cannot see their justice, and we doubt if they will be held by the English people generally. What does the *Mail* think of the present position in which England is placed? Which does it think best for England at this moment, war or peace? Looking at the affair, as we do, from a neutral point of view, England has at this moment much occupation with the whole of Europe on the Eastern question, and were it not for British power we should not see Russia, Austria and Prussia neutral in the civil war in Turkey. And again, this Eastern question is one in which England should be prepared to struggle with Russia and the northern powers of Europe, and, under these circumstances, is it not well that England has gained a victory without shedding blood? The interests she has in the East are not connected with colonization, but with the promotion of trade, and it is important to her to have troops in eastern Europe so as to be prepared in the event of further complications in Turkey. Had she to send troops to these distant Asiatic regions, would it be desirable that she should have her forces thus cut in half? Under these circumstances, England of course desired to have the trouble with China settled as early as possible. Every day of delay might make an important difference to England, from which the Chinese could only profit, and what advantage would it be to England that this difficulty should linger on? Does not the *Mail* seem unacquainted with the affairs of the world, and ignorant of the circumstances in which England is placed at this moment?

Sir Thomas Wade is a noted politician, and thinking it better to come to peaceful terms, he did so. Does the honour of England suffer from the Convention? Those who are really acquainted with the affairs of the world cannot be thus discontented as the *Mail* is. When Okubo concluded a peaceful treaty with China and terminated the trouble which existed between China and Japan, and when Messrs Inouyé and Kuroda succeeded in negotiating a peace with Corea, many young students, ignorant of the actual state of affairs, expressed discontent at these great deeds and said that the indemnity received from the Chinese did not defray the expenses of the Formosan expedition, and that the honour of Japan was stained by the acknowledgment of the independence of Corea. Just at this time the *Mail*, like ourselves, laughed at such views as extremely shallow. Yet, while the ink is hardly dry in which its opinions were expressed, the *Mail* gives vent to its discontent at the terms of the recent settlement, and this is like blaming a person for a certain line of action and and imitating him immediately afterwards.

For ourselves, we are greatly pleased that peace has been maintained, and these words have been written for the purpose of asking the opinion of the *Mail*.

When we receive full particulars of the Convention, we shall recur to this subject.

Centralization and Localization—Satsuma.

(Chôya Shimbun.)

The question whether localization or centralization is best for the country in its present condition, has been freely discussed by the Press, and were we now to bring it up again, the public would probably say:—"We really have heard enough of this question and are sick of it." But as we have heard something new on the subject we shall easily be excused for reverting to it.

We are of opinion that if a government is sufficiently strong to centralize the administrative power, but, thinking that the localization of power would be more advantageous to the nation, permits such localization, everything might be safe enough. But were the Government compelled to localize the administrative power because it has not influence enough to keep it in its own hands, we think it would be very dangerous, and, like a heavy weight at one end

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of a beam, the power at the other end would have no control over it.

Since the Revolution, the Government, being desirous of ruling the whole country impartially, abolished the *han* and established the *ken*, assembled all the *daimios* in the capital, and permitted the *samurai* to embark in mercantile affairs. Moreover, it has recently ordained that bonds are to be issued to the *daimios* and *samurai* in place of their pensions, these bonds to be paid off in thirty years, and the charge they represent, thus extinguished. The nobles are thus provided for, although they were mere drones, idly lying down and doing nothing, and all these reforms have been made for the general welfare of the country.

Thus it would appear that the Government wielded ample power for a complete centralization, but that seeing the evils of this system, it has determined upon a greater local distribution of the administrative power; and thus, this localization, should it take place, will seem not to be effected by a Government at its wits' end and not knowing what else could be done.

Yet, again, when we look to the other side of the question, a doubt arises in our mind which is not easily dispelled, and it refers to the administration of the Kagoshima *ken* (Satsuma). The treatment of this *ken* has hitherto differed widely from that of all the other *ken*, but we are unable to give any reason for this. A strange rumour, however, prevails, which is to the following effect.—When the Government passed the late measure for capitalizing the *samurai*'s pensions, the Satsuma *samurai* refused to accept it, nor, on the other hand, did the Government attempt to force them to do so. The *samurai* had believed that their pension were personal and permanent property, and on hearing of the measure they were violently enraged and said: "The *samurai* of this *ken* differ from those of other *ken*. They possess lands granted to them by the Government and receive the rents paid by the farmers who cultivate them, and now, if the Government purposes taking them, it must pay the actual value of such land." The Governor of the *ken* is said to have been called to Yedo to discuss this subject.

Believing the above rumour to be true, if the Government acts unwisely in this matter, we think a great blot will fall on its reputation.

Among the 400,000 families of *samurai*, it was not only those of the Kagoshima *ken* who possessed lands. But when they were informed of the late measure they showed no displeasure, accepting it with fortitude. And now it is monstrous that the *samurai* of this *ken* alone should be discontented. Yet they are not wholly to blame, because they have throughout not been dealt with as the *samurai* of the other *ken*.

We are, then, led to believe that though the Government has power enough to centralize the administrative power of every other *ken* in the Empire, it does not possess this power in Kagoshima. Any one looking at the real facts of the case would say:—"The Government is about to localize the administrative power because it cannot do otherwise," and, so far as are concerned, we do not know how any other view is tenable. But as it is impossible that our Government should fear the little Kagoshima *ken*, it will doubtless make some wise arrangements in the future, so that our misgivings may be dispelled and localization shall no longer remind us of a heavy weight suspended from the end of a beam.

We have received news by the *Paou-ting* that negotiations at Chefoo have reached a pacific solution, Li Hung-chang having acceded to all the demands of Sir Thomas Wade. Particulars of the settlement are as follows:—Ichang, Wên-chow, Wuhu and Pakhoi are to be opened as ports of trade, and the privilege of landing and shipping merchandise and passengers at six places along the Yangtsze is further secured to steamers. The right of navigation on the Upper Yangtsze by steamers as far as Ch'ung-k'ing is also provided for, and British Consular officials will be stationed both at Ch'ung-k'ing and in Yunnan. An indemnity covering compensation to the family of Mr. Margary and other items, is obtained, and other measures more directly concerning the satisfaction due to the British Government for the murder itself and the attack on Colonel Browne's party are secured. The agreement will take effect immediately.—*Celestial Empire.*

We hear upon excellent authority that the amount of the indemnity agreed upon between Sir Thomas Wade and Li is Tls. 200,000.—*Shanghai Courier.*

Correspondence.

TRAINING NOTES.

To the Editor of the "Japan Weekly Mail."

Yokohama, 30th September, 1876.

Dear Sir,—I think the most difficult task that can be set any man is to have to compose a letter when one has positively nothing to write about, and this is the case with the movements in the "sporting world" this week. The weather has been most unfavorable, and many of the ponies which should command the greatest attention have been physicked, and consequently only conspicuous by their absence.

In contemplation of the reported *Community Meeting*, on the 14th and 15th proximo, one of the most prominent of the opposition party has commenced vigorous training on the Rifle Range, varied occasionally by giving his ponies a free and unrestrained canter round the running path, and on more than one occasion there has been a difference of opinion between the 'horse and his rider' resulting, if I am informed correctly, in favor of the former.

The "Mystery Stable" is mysteriouser than ever, all their ponies are in hard work, but they are *not going to run* (?)

In my last, I was rather inclining to congratulate the "Tartan Stable" on the apparent soundness of the ponies. It appears I was premature. *Hereward*—or as some will call him *Henry Wood*—had to be sent away from the course yesterday without peforming his wanted evolution! Certainly, he had the appearance of being very stiff, but there is plenty of time to get over that.

The principal feature of the week has been the appearance of the Race Programme, which seems—*mirabile dictu*—to have given general satisfaction, as none of those wonderfully concocted letters abusing everything connected with the programme have appeared.

There has not been much alteration made in the programme, although the majority of races are *deservedly* allotted to China ponies. There are eight races exclusively for Japan ponies, and including the two that I hear are going to appear from a new stable now in course of formation, there are seven of these noble steeds in training—that is one for each race, and all will therefore be disqualified for the Solace Cup. It is a great pity that the native article should have so depreciated in the eyes or the sporting world, but I mentioned before full reasons for the difficulty in obtaining Japanese griffins, and the only way to bring the dealers to their senses is to encourage the importation of China ponies and ignore natives altogether. If this be done for a year or so, the dealers will find that they have no market for their stock unless they will sell at moderate prices, and bring ponies into the market without demanding the traditional "*kai-shakko*" which has brought things to this pass.

I hope that next week the weather will be more favorable and that my Notes will contain more of interest to your readers.

Yours, &c.,

TRITON.

IMPERIAL GOVERNMENT RAILWAYS.

Yokohama Station.

Statement of Traffic Receipts, for the week ending Sunday 24th September, 1876.

Passengers, Parcels, &c.	$6,561.07
Merchandise, &c.	$ 937.31
Total	$7,498.38

Miles Open 18.

Corresponding week last year.

Law Report.

IN H. B. M.'s CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

Monday, September 25th, 1876.

Charles Dodge and Edward Lawrence, seamen on board the British ship *Ambassador*, were charged with being absent without leave. Prisoners said that when they were arrested they were on their way to the ship.

C. Prehn, master of the *Ambassador*, stated:—I gave these men 36 hours' liberty on Wednesday afternoon and they have not been on board since. They ought to have returned on Friday morning, and I reported the fact at the Consulate on Saturday.

Wm. Toms, police-constable, sworn:—Yesterday morning I received orders to arrest prisoners. I found them at the boathouse about 11 o'clock, both quite tipsy.

Both were sentenced to seven days' imprisonment with hard labour.

Tuesday, September 26th, 1876.

John White *v.* James Grundy.

This was a claim for $79.50 for board, lodging, refreshments and money lent.

Defendant did not dispute the claim.

Judgment for plaintiff, with costs.

John Brown *v.* James Grundy.

Plaintiff claimed $60 for board, lodging, refreshments and money lent to defendant.

The claim was not disputed and was accordingly given in favour of plaintiff, with costs.

Wednesday, September 27th, 1876.

Leon Jacquet *v.* T. Wallace.

This was a claim against defendant for detention of goods bought at auction; their value, and $10 damages.

Mr. Dickins appeared for plaintiff.

Defendant appeared in person.

Plaintiff, sworn, stated: I bought at defendant's auction at No. 52 Bluff, several of the lots enumerated in this catalogue (shown). Amongst other goods there were two lacquered bowls, which were knocked down to me for $2.50. I have seen my name entered opposite that lot in Mr. Wallace's own auction book. I sent a few days afterwards for the goods. I gave my boy $25 and a note to Mr. Wallace requesting him to grant delivery of my purchases; the boy returned with only two lots, the shirts and brushes now in court. He had been informed that Mr Gargan had bought the bowls and then had them in his possession. I purchased five lots, in all amounting to $17.70; ten dollars were returned by the boy, so that everything has been paid for with the exception of the bowls.

E. Wallace said: Mr. Gargan told me when I wrote to him concerning the bowls that he had bought them and would not give them up. I have offered to give Mr. Jacquet twice the value of the bowls so that this dispute might be kept out of court.

This plaintiff denied.

Edward Wallace, sworn: My brother was in the country at the time this transaction occurred so that he does know more about it than I may have told him. I think it was on the 7th of July that the auction was held at No. 52 Bluff. Mr. Jacquet attended and bought several lots, including brushes and shirts and a couple of lacquered bowls, which were knocked down for $2.50. I really do not remember distinctly about his purchasing the bowls. it was my impression, as auctioneer, that Mr. Gargan bought them. When Mr. Jacquet came to me in August I sent a letter to Mr. Gargan asking delivery of the goods, and mentioning Mr. Jacquet's statement that he was the owner of the bowls and accordingly wanted to have them. Mr. Gargan sent me the brushes and shirts but disputed the ownership of the bowls.

To the Court: It is on account of some dispute between Mr. Jacquet and Mr. Gargan that the former did not then take the shirts and brushes. I have made repeated application to Mr. Gargan for the bowls.

J. J. Fourcade, sworn, stated:—I really cannot say what the bowls were worth; they were lacquered and large and sound.

L. Jacquet to Court:—I should say from the magnificent size and quality of the bowls that they are at least worth $25.

Mr. Wallace said they were sold at their full value; the lacquer was quite new—not at all antiquated.

By the Court:—As the dispute now seems to rest upon the amount due as damages to Mr. Jacquet, one stating $2.50 to be value of the bowls, the other as much as $25, leaving a wide margin, so that no decision can be arrived at until this point is cleared up, I think it should be left to the decision of one competent to judge the value of such articles, as for instance, Mr. White, who has, I believe, had great experience and no doubt could readily form an opinion upon seeing them. Without doing so no judgment other than that to be arrived at by rule of thumb can be made.

It was at last mutually agreed to wait for Mr. White's valuation, and consequently judgment was reserved.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. Van Buren, Consul-General.

and

James R. Morse, George P. Spooner, } Assessors.

Friday, 29th September, 1876.

Antonio Gindles, a seaman on board the American ship *Imperial*, was charged with having on the morning of the 26th instant, stabbed the chief officer with a knife.

Alfred Schaebie, 1st mate, sworn: I am a mariner on board the *Imperial*, now in harbour. I am first officer. I know the prisoner. I was on board on the morning of the 26th. About 3 o'clock in the morning Captain Crosby came into the state room and called me. He said there was no one on deck keeping watch, and requested me to go and see who had the watch. I could see none on deck. I went to the starboard forecastle and inquired who had the watch. All the crew appeared to be awake; some of them said Frenchy (meaning prisoner) had it. I then went round the decks again and could not see anything of him. I went back to the starboard forecastle and felt on all the chests to find if he were lying there asleep. One of the men got up and felt in his bunk; he was not there, nor anywhere in the forecastle. Someone then said he might be on the top-gallant forecastle, so I went there, and found prisoner asleep. I shook him and he jumped up. I asked if it was his watch and he said "yes." I asked why he slept on his watch. He said he was not asleep. I said he *was* asleep. He cried "Look out————————and made a slap at me with his knife.

(A man, who turned out to be the discharged cook of the *Imperial*, here made a disturbance in Court, and was put in irons and locked up by order of his Honour.)

A. Schaebie, continued:—I jumped back when prisoner made the stab at me. He still followed with the knife, so I took a belaying pin and struck him on the head. He ran aft when I struck him. I put the belaying pin back in its place, and as I was walking aft prisoner sprang from behind a water cask and stabbed me. He had been crouching there waiting for me. He stabbed me in the arm; the blade went into the flesh. It was a sheath knife he used. When he stabbed me I pushed him off with my right hand and drew my revolver. As he attempted to stab me again I shot at him. He did not beat me. He was in the act of striking me a third time when I fired. I was not aware at the time I had shot him, but I found out afterwards that I had. He ran to the forecastle and threw away his knife. I informed Capt. Crosby what had happened and he ordered prisoner to be put in irons. I did not fire at him a second time. I was fixed up in a corner so that I could not help myself. I did not follow him into the forecastle. After the captain ordered me to put him in irons I went to the forecastle door and cried to prisoner to come out; he refused for some time. All the rest of the sailors were either in that forecastle or in the other. There are two. He came out at last and went aft, where irons were put on him. His wounds were examined; they were a cut in the head and a shot wound in the arm—a bullet wound. He was examined by a physician at daylight, as soon as the captain could get one to come off. At the time prisoner was found asleep it was his watch. The duty of a watch is to keep awake, strike the bell every half-hour, and look after the ship.

Prisoner had no questions to ask this witness.

James E. Crosby, sworn, stated: I am master of the *Imperial*. At three o'clock Tuesday morning I heard the bells of the other vessels in harbour strike but not ours, neither did I hear anyone moving on deck. I waited about two minutes thinking the man might be forward at the time, and then went to the forward cabin door and hailed the deck, asking whose watch it was. I hailed twice but got no answer. I then went to the mate's door and told him there was no watch kept, and asked him to go and see whose watch it was. I saw him go forward and round the deck and came aft again round the after house. I was standing at the cabin door. I said "the man must be asleep somewhere." The mate went

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

forward again, to the starboard forecastle door. He spoke, but I did not here what he said. He then went on the top-gallant forecastle, and about half a minute after I heard him say "Asleep, eh?" and prisoner's response "No." The mate then said "what, not asleep?" I heard prisoner, in reply exclain "G———," I did not wait for more but called the 2nd mate. I went for my revolver, but before I reached the cabin door on my return I heard a noise, sounding much like a blow or a shot. I ran forward and met the mate just forward of the starboard gangway. He said "Captain, he has cut me," and showed me his arm. I asked if he had shot prisoner or what was the noise? He said he had shot at prisoner who had gone into the forecastle. I looked at the mate's arm and found a slight cut in the fleshy part. There were also several cuts in the shirt. I went to the forecastle door and saw prisoner standing inside the door with some of the men around him. He was swearing, and talking excitedly. I did not understand what he said; all I could make out was that he had cut the mate, and that he would do so again. I told the steward to bring me the irons, which he did. Prisoner refused to be placed in irons. The second mate had followed me, and prisoner and he were talking inside the forecastle door. I told the mate to bring the man out. When he saw we were going to use force he came out and the irons were put on him. Before doing so I examined him and made the steward wash the blood off his head and arm, and not considering anything serious the matter I put him under the half-deck. At daylight I went ashore for Dr. Tripler, who came off and examined prisoner, and dressed his wounds. I reported the affair at the Consulate as soon as it was opened. A warrant was issued and prisoner arrested. I forgot to mention that when prisoner was called out of the forecastle some one inside advised him not to go. I cannot say who spoke.

This closed the evidence for the prosecution.

Richard B. Wright, sworn, stated:—I am a seaman on board the *Imperial* of Boston. I know prisoner. I was in my bunk in the starboard forecastle at the time of the row on Tuesday morning. I believe it was a man named Charley's watch. I can't say what the noise was. I jumped to the door and saw prisoner come staggering up to the forecastle. I asked what was the matter, and he said he had been struck with an iron belaying pin. He laid his head on his bunk, just as the mate reached the door. The mate called the man to come on deck. Prisoner turned towards the door, when I saw the mate level a revolver and shoot prisoner. The mate then ran aft, and I stopped in the forecastle to get a light to see if prisoner was wounded. During that time I distinctly understood the captain of the *Imperial* to say he would shoot the whole crew. (Witness was here advised to confine himself to the facts in the present case and not begin to ramble.)

Witness continued: The captain came forward and requested the mate to show his arm. He did so. He was cut down the sleeve. In conclusion I will only say I saw no arms on prisoner.

To the Court: I am now in prison on a charge of refusing duty on board this ship, with a number of the crew. We have only talked over this matter once. There were six men beside the prisoner in the forecastle. I cannot say of they were all awake. When the mate fired, prisoner cried "I'm shot in the arm." I did not hear more than one shot, and that was fired when the prisoner was peaceably going out of the forecastle. I have seen the wound on prisoner, it enters the arm near the shoulder in front and comes out on top behind. The forecastle is on a level with the deck; there is a doorstep. The men advised prisoner to go when the mate called him out of the forecastle. I do not remember prisoner saying anything. I do not exactly look upon prisoner in the light of an innocent lamb on this occasion, as you call it. I have had no difficulty with the officers on the voyage. Prisoner finally went out of the forecastle.

To the Captain.—The prisoner was just at the door when the mate shot at him. He shot with the right hand.

(The Captain now tried to argue that this was impossible on account of the situation of the forecastle, but the Court overruled the interruption.)

Witness continued:—I looked for the bullet after prisoner had been shot, but I could not find it. The rest of the crew also searched for it. I did not look anywhere outside the forecastle. I have talked over this matter with the crew on board ship. We came to the conclusion that we would see this case through before we would resume duty. We have made up our minds what to do in the event of prisoner being convicted. I do not say that we, the crew of the *Imperial*, formed ourselves into a tribunal to judge this affair. We talked it over.

A. Andria, sworn, deposed:—I am one of the crew of the *Imperial*. I was in my bed on the starboard side of the forecastle at the time this row occured on Tuesday morning, when the mate came round the decks inquiring whose watch it was. I was lying awake. He came to the forecastle door, and I told him it was Antonio's, the prisoner's watch. I had not heard the bell struck. The mate returned again after going round the decks a second time and felt all round the chests. I suggested the man might be on the top-gallant forecastle. The mate went there and I heard a few hard words pass between Antonio and him, but I could not make out that they said. I then heard the dull thud of a heavy weapon being used and immediately afterwards Antonio came into the forecastle with his head bleeding. Wright and I got out of our berths, and then the mate came to the door crying to prisoner to come out. The man was lying with his head on his bunk, and turned round to go when the mate shot him. We all sung out to the mate asking what he meant by shooting into the forecastle. He replied that he would shoot every one of us. The mate went aft. He came back with the captain, and on the way the captain asked the mate to show his arm where he had been cut. He did so. I advised the man to go forward, and he went. I dare say it was three o'clock when I heard this row. It was pretty dark. I have not spoken with the rest of the crew about this matter, nor have I heard them talking about it. I have not spoken with anyone about it till now. Although I am locked up with another man and there are two more of the crew in the adjoining cell, I have heard no conversation about this.

To the Captain:—The mate was standing outside the forecastle door when he shot prisoner. I saw him do it.

Fred. Bartment, sworn:—I was in the forecastle of the *Imperial* on Tuesday morning. The mate came and called for the watch, and I said I did not know whose watch it was. Some of the others said it was prisoner's. I felt in his bunk, but he was not there, and I told Mr. Schaebie he must be on the poop. The mate returned saying he was not there. He then went forward, and the first thing I heard was a crack. Prisoner came running in saying "there are belaying pins flying about to-day." The mate now came up and cried to prisoner to come out. At the same time he fired. I got out of my bunk and went on deck. The mate was coming aft. He said "fetch the lamp, I'm cut." Then I saw the captain who said to the mate "Bring him aft, and if he wont come I'll shoot the whole lot of the lubbers." The captain came to the forecastle with two revolvers, one in each hand. Antoino then went aft. I was in the forecastle when the mate shot Antonio. My bunk is close to the door. I have not talked to the crew about this matter.

Henry Thompson, sworn, stated:—I am one of the crew of the *Imperial* and was in my bunk at the time if this occurrence. All I saw was the mate running forward with a revolver and asking whose watch it was. He came and felt all the bunks. There was a shelf separating my bunk from Antonio's. I saw the mate search Antonio's, but when he was not found some one cried "he must be on the poop." The mate went there, but not finding prisoner he came forward again, when I heard a man fall from the forecastle and prisoner came running in crying "there are belaying pins flying about like hail." The mate came to the door and ordered prisoner out. Antoino was going out when the mate said "take that" and shot him. I went on deck and heard the Captain ask the mate if he was armed. The mate answered "yes." The captain sung out "bring that man forward and put him in irons, and if he wont come, shoot every one of them." The mate said be was cut. There was no light in the forecastle. Mine is an upper berth. I was lying with my head right at the slide when the mate shot prisoner, so that I saw all that occurred. I have not talked this over with the crew; I have perhaps soliloquised.

Adjourned till to-day at 10 o'clock.

Saturday, 30th Septembes, 1876.

Antonio Gindles, a seaman on board the American ship *Imperial*, was charged with having on the morning of the 26th instant, stabbed the chief officer with a knife.

Resumed from yesterday.

Robert Borbank, sworn, deposed: I was cook lately on board the *Imperial*. I was discharged at the captains, request. I was on board on the morning of Tuesday last. I heard the mate quarrelling with the man on the step forward, the mate saying he was asleep. The man said he was not asleep. I heard the man get hit by a belaying pin and the mate cry out he had been stabbed. Then I heard the revolver fired in the forecastle. I saw the flash of the revolver so that I knew where it had been fired. I was sitting outside my room door at the time; I had been sitting there for five or six minutes. I came out when I heard the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

quarrelling. I could not see the door of the starboard forecastle from my room. I judged from the sound that the revolver had been fired in the forecastle. I heard the men cry out to the mate "why do you fire in the forecastle?" And the mate's answer "I'll shoot every one of you that use the knife with Antonio." I heard the captain come forward and say to the mate "If he don't come out shoot all of them."

To the captain: I saw the flash and heard the report.

To the Court: I remember being in the court room yesterday and am very sorry for what I did. I was drunk.

Thomas H. Tripler, sworn, stated: I am a practising physician in Yokohama. The captain of the *Imperial* came for me last Tuesday morning. I went on board and found the prisoner on deck in irons with a scalp, wound which had been bleeding and a bullet wound in the arm. I had the irons taken off and the wounds examined. I looked at the bullet wound first. I found the bullet lodged in the arm over the shoulder near the joint. It had entered right underneath the arm. When the wound had been received the arm must have been raised at right angles with the trunk of the body. The steward and the cabin boy were present at this examination. The wound is not serious, nor is that on the scalp of importance. I saw where the mates shirt had been cut in the arm but I did not remove the bandages from the wound.

Alfred Schabie first mate, to the Court: I had the pistol on my person at the time of this row. I did not go aft and get it when the disturbance took place. Prisoner was in the act of stabbing me when I fired. He was standing about two or three feet from the forecastle door and a foot off it. It is not true that I fired into the forecastle as the witnesses have stated.

Captain Crosby: I did not tell the mate to shoot all the crew if this man would not come out of the forecastle. I have not the least recollection of what I did say. I know it was not to that effect. I told him to go and bring the man out if he refused to come. I did not say at all hazards.

Court now retired for a moment, and returned to ask the prisoner if he wished to say anything for himself? He answered in the affirmative.

Prisoner was sworn and stated: I was on my watch on the top of the forecastle when I heard the mate come and ask me "is it your watch Frenchy?" He asked "are you a sleep?" I said "no, sir." The mate the struck me with a belaying pin. I ran to the forecastle and told the rest of the crew what the mate had done. The mate came to the forecastle door and cried "came out, you——, I'm after you." I was leaning with my arm a little above my head on the forcastle door when the mate shot me. The mate ran aft and returned with the steward the, 2nd mate and captain, and cried to me to come out of the forecastle. The captain said to the mate, "shoot him through the heart." I did not use my knife on the mate. I dont know how he got the wounds in the arm.

I shipped at Cardiff and have had no difficulty with the officers prior to this affair.

JUDGMENT.

The Court find you guilty of the charge in this indictment. By the evidence given it has been proved that you struck the mate with a knife, with intent to do serious bodily injury. It is known that on many occasions sailors experience great difficulty in keeping their tempers within bounds. Sailors' lives are hard; but it is their duty to curb their tempers under all circumstances. It is the law of all countries, and of America, that the officers on board ship must be obeyed, and sailors must remember this however great the temptation may be to speak back when rebuked by an officer. Since we came to Yokohama we have discovered that all the vile luxuries which many sailors delight in are to be had here at the lowest rates. Jack can have any amount of sprees here and plenty of the vilest liquor to drink at the lowest prices. When he arrives in port he is lured by the representations of those land-sharks who endeavour to persuade him that this is a perfect paradise. He forgets the comforts of his own ship and the kindness of his officers. He does not remember that he is far from home and has only his ship to convey him back there. Coming on shore he finds friends like the spider to the fly, who will take him in till all his money is expended, and when he is destitute, turn him into the street to find his way into prison if not successful in getting another ship.

It is the belief of the Court that rank perjury has been committed on the part of some of the witnesses for the defence. We wish to be as lenient as possible with you, not believing you to be a ringleader of what appears to be a conspiracy on the part of the crew. It is our opinion that you are not the only insubordinate on board, nor the worst. You are sentenced to pay the costs of Court and to be imprisoned for six months.

Clarence Blecher was charged with being drunk and incapable.

William Hazell, police constable, stated:—On the 27th, at ten o'clock I found prisoner lying in the street drunk and incapable. He is a common drunkard about here. I arrested him to save his life. He has been lounging about *saké* shops for the last two or three months killing himself with drink.

Prisoner stated:—I was discharged from the *Saco* as a condemned man about the 5th of May this year. I have tried to get work here but I can't; I am too ill to do hard work.

His Honour said he would take care of him and endeavour to get some of the Naval officers to transport him home.

IN H. M. F. M.'s CONSULAR-GENERAL COURT.

Before J. J. KESWICK, Esq., Consul-General.

Monday, September 25th, 1876.

C. M. da Silva was charged with having stolen an *obi* from a Japanese second-hand store kept by Hara, in Takashima-chô.

A Japanese police-constable deposed.—About one o'clock on Friday last, complainant came and told me that prisoner had been lying down in his store for some time, and now that he had gone an *obi* was missing, and he suspected prisoner of having taken it. Plaintiff accompanied me in search of the prisoner, and we found him in company with a Chinaman who had the *obi* in his possession. I arrested both.

Prisoner admitted having stolen the *obi* and was sentenced to 15 days' imprisonment. Should he again appear before the Court for a similar offence he would be sent to prison at Macao.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

Tuesday, September 26th, 1876.

John Andersen, a Swede, seaman on board the U.S.S. *Kearsage*, was charged with being drunk and incapable.

He had nothing to say for himself and was sentenced to be locked up till the return of the *Kearsage*.

THE CLOSE OF THE NEGOTIATIONS.

(Celestial Empire.)

The particulars of the settlement of the Yunnan Difficulty which we have received must, of course, be regarded much in the light of the Old Testament; namely, as foreshadowing, only, a fuller revelation. We can hardly suppose for an instant that the articles in our possession constitute the full and final terms of the agreement. Such a hypothesis would involve, to our mind, a very great injustice to Sir Thomas Wade; especially as the concessions now published were virtually at his disposal before he left Peking. We must not be understood as in any way undervaluing the enhanced facilities for trade. These are, we believe, more important than people generally are inclined to admit. The opening of new seaboard ports is a step towards the extension of channels for our capital; and some few months back, as our readers may remember, we took pains to point out the advantages likely to be derived from the establishment of foreign commerce at several of the ports named. Over and above this we have a real and tangible commencement of the opening-up of the interior of the country, for which we have been so anxious for so long. The Upper Yangtsze is now to be placed at the disposal of river-steamers, and Ichang, which lies in the very heart of China, six hundred miles beyond Hankow, takes its place among the Treaty ports. The benefits arising from this enlargement of our scope for trade are obvious; to begin with, for six hundred miles, at least, foreign goods will be free from imposts where hitherto the levies have been severely felt. The six ports to be opened on the Yangtsze for landing and shipment of passengers and merchandize will be under native sense superintendence and regulations, and will not be administered by the foreign Customs' service. No foreigner will be allowed to carry on trade in these ports, the most important of which is Nganking. We do not wish to revert to an unsatisfactory controversy further than to say the traditions of Chinkiang are a stumbling block in the way of opening trade to foreigners on the Yangtsze at least. The commercial capital of Szechuen, Ch'ung-k'ing, is to be the residence of a Consular official, and a representative of British interests and, we imagine, of British arms, is to be stationed in the province of Yunnan. It is further reported that the *likin* taxation is to be placed under the control of the Customs service and that various other modifications of existing fiscal systems are to be introduced. We hear from unofficial friends that the two plenipos Li and Sir

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Thomas Wade have earnestly endeavoured to deal with *likin* and other extra taxations upon foreign goods. The matter however is hedged round with many difficulties, so that we are afraid reforms must be considered for a time experimental. Foreign interests are in good hands, as Sir Thomas Wade has, owing to his superior means of information and long study of the subject, a clear opinion as to what might be done and what is impracticable; for in any reform proposed it will be politic not to override proper Chinese susceptibilities and rights. It is further said that the duty on Opium will be raised to Hk. Tls. 50 per chest, while inland, barrier, and *likin* taxes inclusive are not to exceed Tls 50 more:—making Tls. 100 in all. Just now the duties are most irregular, and vary according to the financial needs of the province. In Fokien, for instance, the duties and imposts have amounted frequently to Tls. 230 per chest, and we have heard of Tls. 270. If the agreement limiting the taxation to Tls. 100 per chest be fairly carried out by the Chinese,—and it may be so, as they understand perfectly well that smuggling is crippling the revenue—we think the arrangement may prove a very expedient one: and supposing it to be permitted in return for certain immunities, we recommend the houses engaged in the trade to submit with a good grace. The opposition made on this point by Indian firms to Sir RUTHERFORD ALCOCK'S treaty clause was unreasonable, and if the truth be known imperilled an important part of the Indian revenue. What we want is not freedom from taxation, for that would be absurd. China must have revenue. We want moderate levies, uniformity, and fixity by law. Uncertain and arbitrary taxes kill trade. As far, therefore, as all this goes, it is well; but as we said before, something of necessity remains behind. It must have struck our readers very forcibly, in reading the list of articles agreed upon, that one or two subjects, regarded by the bulk of the community as the most important involved in the entire controversy, have been studiously omitted and ignored. The indemnity, which was never popular, has been agreed upon, and a portion of it is to go to the family of Mr. Margary; but, we ask, is this the satisfaction which England is supposed to accept for the outrage in Yunnan? What is to be done with Margary's murderers? Are they to escape scot-free? Or is Sir Thomas Wade waiting until the views of the Home Government are expressed with reference to the report of Mr. Grosvenor, on the arrival of which a new series of negotiations is to be commenced? This sounds absurd enough, but as far as we are informed at present it seems the unavoidable conclusion. The settlement, as now published, is of a purely commercial character, and might have been arrived at months ago. It cannot, therefore, be considered a final one. It is now rather more than a year ago that the negotiations were said to be concluded, and the affair settled. A similar list of conditions, concessions and what not, was published, and for a day or two everybody thought the thing was finished. To-day, in the middle of September 1876, we seem to be in precisely the same position as we were last August twelve month; and therefore, we say it is impossible that we can be in possession of the full particulars. We should like to hear something about the material guarantees respecting which Sir Thomas was said to be making such stringent and inflexible demands. We are sure that the Minister's experience will not permit him to rely solely on words and promises. No one should value commercial privileges more highly than a commercial community; but nobody will have much faith in the upright fulfilment of the new engagements into which China is about to enter, judging from past experiences, without some good security. Besides which, the controversy in itself is not of a nature which admits of any settlement that is purely commercial and nothing else. A sugar-plum is no real balm for a slap in the face. We do not want to look upon Margary's death as the price paid for our future prosperity in China, nor to accept mercantile concessions as a sop-in-the-pan for a grave political crime. It is a question that affects not only the pockets but the honour of our countrymen; and until full justice is done upon the criminals in Yunnan, and China is compelled to eat much ignominy as part atonement for the deed, the Yunnan outrage can neither be forgiven nor forgotten.

*** Since the above was in type we have been told that the Yunnan question and other matters not concerning trade have been virtually settled, but that the terms and condition will not be made known until after reference has been made to England. We are led to believe that the solutions are in accord with the honour of our country.

The Constantinople correspondent of the *College Gazette* writes that a great number of the Mahommedan criminals in the prisons of Stamboul have been pardoned on condition of immediately taking service among the Turkish irregulars.—*Pall Mall Gazette.*

THE WAGNER FESTIVAL AT BAYREUTH.

(The Times.)

The rehearsals for this long-talked-of and unexampled celebration are over; and, we have reason to believe, the result is eminently satisfactory to Richard Wagner himself. What has been hitherto disclosed it is the privilege of very few to take note of, inasmuch as with the exception of the singers, players, decorators, machinists, &c., engaged in the performances, only some of the most intimate friends of the poet-musician were admitted. Among these must have been a privileged contributor to a local journal, who, under the signature of Heinrich Porges, has contributed glowing accounts of the rehearsals one after another as they occurred and whose descriptions have not merely enlightened the inhabitants of Bayreuth in particular and Bavaria in general, but penetrated through various channels to other and remote corners of the earth. Herr Porges, comparing his demigod to Æschylus and Shakespeare, with Beethoven thrown in, leads us to expect much, and if but a fourth part of which he affirms be accepted as gospel, an exhibition without precedent is really in store for us.

Twelve months ago we gave some account of Wagner's artistic career and his persevering efforts through a long series of years, amid all sorts of ups and downs, to reach the position he now occupies, and to place before the judgment of the world a realization of what may be termed his life's dream. Further consideration, however, of various incidents which help to make up the sum of his unremitting endeavours may, at this critical moment, when he who has so severely judged others must be judged himself in turn, not be without interest, especially to the large number among us who have watched his career from the beginning. Franz List, the world-famed pianist—Abbate Listz, as of late he has come to be styled—was first to perceive in Wagner that which very many fail to perceive even now—a genius born to refine and purify the lyric stage, and, by setting musical and dramatic matters on a proper footing, consorting them as they should be consorted, to endow it with newly awakened life. Liszt, unsought for and of his own free will, brought out *Tannhäuser* at Weimar, in which small though historically interesting town, the acknowledged "Emperor" of what Wagner has somewhere humorously described as "Hammer-music" (the musician of the *Zukunft* is not renowned as a pianist of mark) reigned for a lengthened period, a sort of harmonious Goethe. He not merely caused *Tannhäuser* and subsequently, at Wagner's own suggestion *Lohengrin*, to be given, as efficiently as they possibly could be given with the means at his disposal, but extolled both operas to the skies in journals and isolated pamphlets. The result, according to local opinion generally, and that of the preacher of the "Drama of the Future" in particular, being in each instance a success, the generous Liszt urged on to fresh endeavours the ambition of his new *protégé*. "Behold," said the Hammer-King, "thus far have we arrived; now create for us some new work that we may advance still further." For this we have Wagner's own authority, in that original and remarkable "*Communication*" to his "Friends" through which he confidently unfolds himself, and which forms a preamble to the first published edition of his three dramas (the "word," without the music), *Der Fliegende Holländer*, *Tannhäuser*, and *Lohengrin* (1852). Although, like much else he has written, addressed, in accordance with his avowed intention, exclusively to his "friends," the *Communication* found its way into print, and bound up with the text ("the word") of the three librettos abovenamed, became accessible to all who cared to peruse it. From the same authentic source we learn that, uncertain and perplexed as to the manner in which the story of *Siegfried's Tod* should be presented, Wagner had contemplated the earthly life of the Saviour as a theme for the next embodiment of his peculiar art-doctrines. A statement of the motives which led to such an idea would scarcely edify those not versed in Wagnerian mysteries; and the uninformed may read with equanimity that "a clear undeceptive glance at the outward world" sufficed to convince him that he must inevitably abandon the subject. This was about the time of the Dresden revolt, in which regarding it as the beginning of a general uprising in Germany, he took an active share. His position as operatic Capellmeister at Dresden thus forfeited (a position for which, we believe, he was in some degree indebted to Meyerbeer), Wagner, by the advice of a friend, went to Paris, which, his former residence in the French capital having been anything rather than agreeable, conjured up bitter reminiscences. "On my first recognition of its loathsome shape," he says ("*Communication*"), "I cast it from me like some nocturnal phantom, hastening to the Alps of Switzerland, so as to inhale no longer the pestilential odours of the modern Babel." Years afterwards, the production of *Tannhäuser* afforded "the stupid and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

thick-headed people in Paris," unable to comprehend and appreciate Hector Berlioz (*Oper und Drama*), an opportunity of avenging themselves upon Wagner of which, it may be remembered, they took ample advantage—notwithstanding the fact that, to conciliate their tastes, he even deigned to introduce ballet, one of those adjuncts to operatic performance towards which he has felt extreme repugnance. Somewhere about the period of his quitting Paris for Switzerland Wagner resumed the literary polemics which began with his short treatise, *Die Kunst und die Revolution*, of which the world took little more notice at first than it vouchsafed to the "two paradoxes" supported by George in the *Vicar of Wakefield*. In a more elaborate essay, *Das Kuntswerk der Zukunft* (already referred to), Wagner developed his new theory at greater length. His object, he informs us, was to make art independent of its so-called "patrons," whose bad taste caused it to be used by interested traders for the mere purpose of speculation; in fact, he was desirous of severing it altogether from "the political conditions of the modern world," insisting that Art, instead of being divided into separate manifestations, should be one and indivisible, tending to a single human purport. This treatise found many readers; the Art-work of the future became a frequent topic of discussion among earnest thinkers, and Wagner had already laid the foundation for that purely literary—independent of poetical—reputation which culminated in his next and most carefully wrought-out dissertation *Oper und Drama*. In that work he dwells chiefly upon art in the abstract, and especially on the union, or rather amalgamation, of poetry and music in his ideal drama. Except by its author's most vehement and irreconcilable opponents, *Oper und Drama* was admitted to be a masterpiece of subtle argument. It won over to his creed a large number of influential disciples, who took up the argument, and fought for it, in several instances almost as emphatically and uncompromisingly as himself. The storm of controversy now burst forth, and Wagnerism became a proselytizing faith. "Every one," said Edouard Hanslick, "must now think Wagnerially, write Wagnerially, and compose Wagnerially," or be impeached for high treason against art. And yet the operas hardly made such rapid strides towards general public acceptance as Wagner, despite his professed disregard of public opinion, eagerly desired. His "*Communication*" gives a fair and interesting account of his early struggles, his ever deepening convictions, and the steady growth of his inventive power. *Oper und Drama*, it was believed, would be the last effort of the kind from the pen of Wagner; but, unfortunately, the *cacoethes scribendi* was too strong upon him; and the "*Communication*" was followed up by other polemical writings, among them being a letter on "Judaism in Music" (addressed to Madame Marie Muchanoff) and a treatise upon the art of conducting an orchestra, both of which, the former more particularly, gave offence in many quarters, and created for their author far more enemies than friends. The talk about Jews and Jewish music—especially the passages referring to the "*music-bankers*" of the day, who have sprung from the school of Mendelssohn, or been recommended to the world by his patronage—would, but for the feeling that clearly prompted them, simply provoke a smile. To pass, however, to a less uncongenial topic—the earnest demand of Liszt for "some new creation" was met with eager acquiescence by Wagner, who immediately set to work upon recasting his early projected drama upon *Siegfrieds Tod*, which, during long and earnest consideration, gradually expanded into the colossal "Trilogy," with preamble, which under the title of *Der Ring des Nibelungen*, will shortly be presented to an audience, including the German Emperor himself, from all parts of the civilized world, in a theatre built by Wagner for himself after Wagner's own designs.

For the personages and incidents of this extraordinary work Wagner has gone to various sources. But a careful examination of each of these with the object of explaining the organic whole which he has, with infinite art, constructed, would be a superfluous, nay a hopeless task. Whatever different opinions may exist with regard to his claims as a musician in the abstract, there can be but one about Wagner's right to be considered a poet of high gifts. His treatment of the folk-stories of *Tannhäuser* and *Lohengrin*, that of *Lohengrin* especially, would alone establish the fact. In the *Ring des Nibelungen*, however, he has taken a loftier flight, covered a wider field, and depicted a far greater variety of character and emotions. After exploring the Northern primeval mythus, that dark country which separates the end of one civilization from the begining of another, he has gone into the cycle of heroes and deeds immediately springing out of it, and welded the two into one harmonious drama, in which their intimate connexion, as cause and effect, is logically deduced, gods and heroes alike being subject to the desires and passions that stimulate humanity and control its actions. In carrying out his plan Wagner seems chiefly to have resorted to the Icelandic Eddas, the *Völsunga Saga*, and the *Nibelungen Lied* of the German middle ages, the *Heldenbuch*—although König Elberich, a dwarf, and a certain Gibich, king of a territory on the Rhine, play conspicuous parts—not being brought under contribution. How much proceeds from these it would be too long to inquire, nor is it necessary. Enough that Wagner has fused the materials they afforded him into a consecutive drama, of which the proportions are symmetrical, while the action progresses with ever increasing interest till the close, comprehending the death of Siegfried, the self-immolation of Brunnhilde, and the restoration of the fatal ring to the Rhine nymphs. These incidents do not form the catastrophe either of the *Völsunga Saga*, or the *Nibelungen Lied*, but Wagner's object was simply to construct a drama, according to his own original view, of which Siegfried, the type of pure human heroism in Teutonic legend, should constitute the central luminous point. How this early enchained his fancy, he tell us in the oft-cited *Communication*. About the same period Wagner entertained the idea of an historical drama, which he also desired to fashion in the spirit of myth, unfettered by exceptionally historical details. His chosen hero now was Barbarossa; but the accomplishment of his task, after the manner contemplated, appeared to him to present insuperable obstacles; and abandoning the scheme, he from that period became wholly absorbed in Siegfried—not Siegfried as we find him in the *Nibelungen Lied*, but Siegfried of the absolute myth, "which as yet only the folk have created." This magnificent figure, nevertheless, long as it had attracted his attention, did not entirely "entrance" him until he succeeded in beholding it in its purest human significance. Then it was he saw the possibility of making Siegfried the hero of a drama, which would never have suggested itself so long as he knew him exclusively through the medium of the *Nibelungen Lied*. At the same time it appears singular that Wagner should first hit upon Siegfried's death as the subject of a drama intended to stand alone. The death now occurs simultaneously with the "dusk of the gods" and the vanishing of Walhalla, in *Götterdämmerung*, the last section of the trilogy to which *Das Rheingold* serves as preamble. The entire character of Siegfried was clearly not here set forth. The story of his boyhood and early adventures was indispensable to the true understanding of a hero who, while by aid of certain symbols in his possession, he might subdue all nature to his will, unconscious of their power, allows them to become the means of his own destruction. To Wagner's inner sense of this want of completeness we were indebted for the drama, which, under the name of *Siegfried*, forms the second part of the trilogy. Still unsatisfied, however, he deemed it advisable to anticipate *Siegfried* by yet another drama—*Die Walküre*, in which the mystery of the hero's birth is foreboded; and even this last not sufficing, *Das Rheingold* was projected as an introduction to the whole. Here we go directly to the fonutain head, and are concerned with the gods, giants, and dwarfs (Niblungs) of Scandinavian mythology, their common jealousies, disputes, and quarrels, the sin which results in the loss of eternal youth, and their final annihilation. We have now the great conception entire, each division dependent upon that immediately preceding it. *Das Rheingold* as Mr. Huffer reminds us in his essay on the subject, has been compared with the introduction to Goethe's *Faust*; but the comparison does not hold, insomuch as *Faust* would be quite intelligible without an introduction, while the characters and incidents of the *Nibelungen Ring* being foreshadowed in the *Reingold*, the præludium is dispensable to a thorough comprehension of the whole. Accepting the *Rheingold*, moreover, as an integral part, some critics are of opinion that the *Walküre* might have been omitted. This, for obvious reasons concerning its main purport, would hardly be objectionable, much as we should thereby inevitably lose of what is worth preserving; but then, how explain the anger of "All-father" Wotan against Brunnhilde, his favourite daughter, chief of the Walkyrie, and substantially as much the heroine of the trilogy as Siegfried is the hero? We must, in short, accept Wagner's plan as he himself has developed it, or reject it altogether—to which latter alternative his uncompromising disciples by no means incline. The "advance still further" in the opinion of very many, who, since the idea of the *Nibelungen Ring* was first engendered have been loud in anticipatory praises, and for 20 years and more have prophesied, in its completion and representation according to the stipulation of its author, the solemn inauguration of a new era for art, would seem to be fairly accomplished. A few days more must bring us face to face with the "all-drama" which is to work this miracle, and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

enable impartial and hitherto uninitiated lookers-on to frame an opinion of their own, an opinion with which the *music*—not heard, as some of it has hitherto been heard, in fragments, but as a necessary and inseparable part of the entire structure—must have no little to do.

THE PROPOSED SILVER SWINDLE.

(The Nation.)

We drew attention some time ago to the remarkable change which came over the friends of irredeemable paper-money since silver began to fall rapidly in value. We need not remind our readers that two years ago there prevailed in a large and growing portion of the community, and found constant expression in Congress through Messrs. Butler, Kelley, Morton, and others, an opinion that gold and silver coin was a relic of barbarism; that paper promissory-notes, issued by the Government and non-exportable, were the money of the future, the true money of democratic communities, and the best standard of value. Butler, indeed, went so far as to deliver a lecture showing that a really good measure of value ought to have no intrinsic value of its own any more than an arc of the equator. They made no distinction between gold and silver coins; both were equally objectionable; and the redemption of the legal-tender notes *in either* was denounced as an act of gross oppression, which, if perpetrated, would be perpetrated in the interest of heartless capitalists and money-lenders. Nor did they confine themselves to economic praise of the greenback. They threw a poetic halo about it. Not only was it the "best currency the world ever saw," but it was the "battle-born, blood-stained" greenback by which the Union had been saved. In the memorable debates of 1874-5 in the Senate, Morton, Logan, and Cameron talked as if gold and silver coins were an infamous invention of kings and priests for the impoverishment and deception of the poor and lowly, and so on through a round of folly and ignorance which no sensible man can now run his eye over without shame and disgust.

Now, there has been, as everybody must have noticed during the last year, a considerable falling-off in this admiration for paper-money. In fact, it is now some months since we remember to have seen any open and plain spoken advocacy of paper-money. The inflationist orators have changed their tune. They no longer call with the same vehemence for more greenbacks; they no longer extol Government paper as the only true money. They simply protest against contraction and against resumption on a day named. They talk of coin with a certain indulgence, and even tenderness, as a good thing to have, and as something which the Government ought to "accumulate."

The reason of this is that, suddenly and owing to circumstances which nobody even two years ago could have foreseen, one of the precious metals commonly employed as money has fallen so low relatively to gold as to be worth less than the paper legal-tender. It, therefore, seems to offer to every debtor, including the Government, the means of paying his debts in coin with less value than he received or than the creditor expected. It thus has that delicious flavor of broken faith which many of the inflationists so much prize in any large pecuniary transaction, and the promise of its growing abundance gives it that element of uncertainty as a standard of value which made them clamor so fiercely for arbitrary Government control of the volume of the greenbacks. The prospect of a rich yield of silver is, of course, as good as the prospect of a plentiful issue of legal-tender notes. Silver, they think, if it is abundant, will reach "the poor man's pockets" by the same mysterious process, which they have never revealed, by which the fresh issues of greenbacks were to be applied to "the wheels of industry." In fact—we cannot avoid the conclusion—as soon as a species of coin presented itself with which they could cheat as effectually as with paper, they dropped the paper and became hardmoney men. We do not say that every silver resumptionist is a knave or inflationist, but we are quite sure there is no knave or inflationist in the country who is not a silver resumptionist.

They, accordingly, are now making desperate efforts to have silver made a legal tender for an indefinite amount, and, unhappily, in this they have supporters among persons who in the days of the inflationist agitation were on the side of honesty and common sense. These latter now say that as both gold and silver were a legal tender when the Government bonds and notes were issued, there is nothing dishonorable or objectionable in paying them off in either gold or silver coin. In 1873, an act was passed, like so many other things without adequate debate in Congress, it is true, but not without abundant notice out-of-doors, demonetizing silver, and making gold our sole standard. It excited but little attention at the time, both because we had no coin in circulation and because silver was worth a little more than gold, and would therefore, even if in circulation, not have been used as a legal tender except in very small amounts. Had the then relation in the value of the two metals remained unchanged, we should never have heard a word of objection to the act in question. In fact, it seemed then, and seems still, to all rational and honest financiers a step in the right direction, and it is a step which all civilized countries are taking, or trying to take, because the increase in the production of the precious metals and in the volume of exchanges has made the inconveniences and dangers of a double standard pretty plain to all who have thought much on the subject. But, strange to say, the very reasons which are operating among other civilized nations to demonetize silver are producing no impression on many honest and intelligent men among ourselves, and they are now urging our return to the position from which Europe is eagerly escaping, solely because the Government would thus, they think, be able "to resume specie payments" more readily than they can do in gold.

To the great army of rascals who love whatever is tortuous and tricky, who enjoy keenly all roguery which is not punishable by the courts, and with whom there is no use in arguing on the morality of a transaction after they have discovered that "there is money in it," we here have nothing to say. But it is fair to ask such promoters of "silver resumption" as the Chicago *Tribune* and Cincinnati *Commercial* whether they really believe that honesty is merely a question of words, and that, as long as the name of an act is unchanged, its nature and results are of no consequence. They seem to suppose, if a man promises to pay a debt in "coin," for instance, that it makes no difference what changes in value the coin has undergone in the interval between the promise and the payment—a piece of moral obfuscation which flows, we cannot help thinking, from the fact that in the currency discussions of the last ten years we have become used to "payment in coin" as a synonym for honesty. But the only virtue in coin, as money, is its stability. It is better money than other things mainly in proportion to its stability. Coin which varies greatly in value is no better, or little better, than Government paper. The reason why men clung to gold and silver so long as standards of value was that they furnished a man who parted with his property to another better assurance that he would get it back again than anything else did. If either of them loses this power, calling it "coin" does not make it honest or useful money. Silver has lost it; and to put it in circulation, therefore, is to furnish knaves with an instrument of knavery, and not to furnish civilized men with an instrument of exchange. To go back to it when it is low because it enables you to pay a debt which you contracted when it was high, is to be guilty of knavery, no matter what name you give it. Even if the Act of 1873 had never been passed, and silver was still a legal tender, for a great Government to use it to pay its debts with would be a very questionable transaction, and for precisely the same reasons which forbid it to pay its debts in paper—viz., because it would disappoint the just and reasonable expectations of its creditors. If a convertible Government note were a legal tender, and it suddenly became irredeemable and depreciated through a fresh issue or a war, or other public folly or calamity, payment of debts in it might still be lawful but would cease to be honorable. This is an almost exact parallel to what has occurred in the case of silver, and, in fact, is a favorable one, for we have discarded silver, and it is proposed we should return to it.

It may be said, and is said, that if silver had remained a legal tender, and had risen in value, the creditors of the Government would not for that reason have abated any portion of their demands. Very likely not. As a general rule, men take all they can get; but if, through any extraordinary social revolution, silver had risen in value relative to gold and to commodities as much as it has fallen, it would undoubtedly have been the duty of the Government to demonetize it in order to prevent injustice being done; and for the same reason, it would have been its duty to avoid taking advantage of the disturbance in dealing with its own debtors and taxpayers. The discovery and practice of the various tricks which are possible in the payment of debts and the sale of commodities through defects or differences in the various species of legal tender, are things usually left to the lowest order of exchange brokers. The present attempt to have them made a branch of statecraft carries us back to the Middle Ages, and ought to diffuse hope and joy through all the penitentiaries in the country.

Happily, however, the immorality of the proposed measure is not the sole objection to it. There is another one, which moralists

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

like the Chicago *Tribune* will appreciate more distinctly—it would inflict frightful injury on the Government credit. To go back to silver now, after having formally abandoned it, would be, in the eyes of the world, the equivalent of a fresh issue of legal tenders for the payment of the bonds. It would depreciate the bonds, not only on account of the discount on silver, but on account of the vague alarm as to the future excited by what would be considered a shameless breach of faith, and matters could not be set right by saying that we agreed to pay the bonds in "coin," and here was the "coin." Quibbles of this kind may go down in caucuses, but they are, as all sharpers and blacklegs know, of little use among clear-headed business men. There is—owing, doubtless, to a composition of causes—a strain of dishonesty running through the political world just now which makes politics consist largely in the concoction of tricks and evasions, and political criticism confined to the police courts. Let us hope that the election of Hayes will bring in a better era.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—*Cotton Goods* and *Yarns* continue in good demand and quotations have advanced. *Yarns:* In the absence of any unsold stocks of importance, natives are offering for large quantities to arrive, but most of their offers, though considerably improved, do not lead to much business, as they are still too low to cover the risk of a probable falling tendency in the rates of exchange. However nothing positive can be said on account of these transactions, as the information about contracts to arrive is scanty and unreliable. The general impression, however, is, that large contracts have been made previous to the decline in exchange. On the other hand, buyers are still very eager to secure further quantities, which no doubt points to a good enquiry and probable large consumption in the interior. Deliveries are very satisfactory, and *Yarns* are taken away almost as they arrive. *Shirtings* are about in the same position as *Yarns*, and even low makes of 7 lbs. and 8½ lbs., which some time ago where rather neglected, have become saleable at improved rates during the last few days. Stocks of 9 lbs are much reduced. *T. Cloths* are in moderate enquiry; *White Shirtings* and *Drills* nominal. In *Turkey Reds* not much is doing. *Taffachelass* have advanced and *Velvets* are firm.

Grey Shirtings:—							
7 lbs.	38½	yds.	39 in.	per pce.	...	$1.65	to $2 10
8 lbs.	38½	yds.	44 in.	„	...	2 00	to 2 60
8 lbs. 4 to 8 lbs.	38½	„	39 in.	„	...	1.95	to 2 60
9 lbs	38½	„	44 in.	„	...	2.40	to 2.95
T Cloth 7lbs.	24	„	32 in.	„	...	1 50	to 1.75
„ 6lbs.	24	„	32 in.	„	...	1.17½	to 1.27½

White Shirtings:—			
60 to 64 reed 40 yds. 35 in.	per pce.	... ...	2.20 to 2.40
Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb...		0.70 to 0.90
Black Velvets			8.00 to 9.00
English Drills 15 lbs. 40 yds, 30 in.		... ...	2.65 to 2.85
Taffachelass	12 yds, 43 in....		nom. 2.00 to 2.40

Yarns.—

No 16 to 24	per picul...	$30 50	to 34 50
No. 28 to 32	per picul...	$31.00	to 39.00
No. 38 to 42	per picul...	$39.00	to 41.50
Reverse Twist ... ... 16-24 ...	„ ...	$33.00	

Woollens.—A very active demand has prevailed during the last few days, and prices have risen considerably, principally for *Mousselines de Laine*, of which plain goods are from 1½ to 2 cents per yard higher according to shade, and printed, which are actively enquired for, may be quoted from 2 to 5 cents advance, according to patterns.

Bradford *Fancy Goods* and *Cloth* have so far not yet benefitted by the movement in the same measure, but the demand has improved and prices have a decided upward tendency also.

Plain Orleans	40—42 yds	32 in....	5 00 to 8 00
Figured Orleans	29—30 yds	31 in....	4 25 to 5 00
Shimagoro	30 yds.	30 in....	4.25 to 5 50
Italian Cloth	—30 yds	32 in....	0 27 to 0 35
Camlet Cords	29—30 yds	32 in....	5.75 to 7 00
Camlets Asstd.	56—58 yds.	31 in...	16 50 to 17 50
Lastings, Japan	22—30 yds.	32 in....	12 00 to 13 00
Plain Mousseline de Laine	—30 yds.	30 in...	0 19 to 0.20½

Figured Mousseline de Laine...	30 yds.	30 in...	0.26 to 0.32½
Multicolored „	...30 yds.	30 in...	0.32 to 0.43
Cloth, all wool plain or fancy..	48 in. to 52 in...		0.80 to 1.20
Presidents	...54 in. to 56 in...		0.65 to 0.80
Pilots	...54 in. to 56 in...		0.45 to 0.60
Union	...54 in. to 56 in...		0.50 to 0.72½
Blankets, scarlet & green 7 to 8 lbs....	per lb...		0.41 to 0.48

Sugar.—The business has been small during the week, holders being very firm, but prices have generally improved for all kinds and are as under.

Sugar:—Takao in bag	per picul...	$3 30	
„ in basket	„ ...	$3 00	
Taiwanfoo in bag...	„ ...	$3 20	
do. in basket...	„ ...	$2.95	
China No 1 Ping-fah	„ ...	$7.60	
„ No. 2 Ching-pak	„ ...	$6 70	
„ No. 3 Ke-pak	„ ...	$6.05	

China No. 4 Kook-fah	per picul...	$5.85	
„ No. 5 Kong-fun	„ ...	$4.70	
„ No. 6 E-pak	„ ...	$3.80	
Swatow...	„ ...	$2.95	
Daitong	„ ...	$2.65	
Japan Rice		$2.30	to $2.35
Kerosene Oil			$3.50

Kerosene Oil.—Improved telegraphic advices make holders as firm as ever, and there are no sellers under $3.50. The demoralization amongst the native dealers continues.

EXPORTS.

Silk.—The latest advices received from the home markets, and the difficulties attending financial arrangements between shippers and bankers, are checking business. There are very few buyers in the market, and our present quotations are for the most part nominal, at the prices which were reached soon after our last report, dated 23rd instant. Since then, arrivals have been 1,580 bales, and settlements barely amount to 600 bales.

Silk-worms' Eggs.—Total arrivals are about 350,000 cards. Buyers and sellers are as far as ever from an agreement upon prices, and the market is not yet opened.

UNIVERSITY OF CALIFORNIA

Tea.—Our market for the past week has been very quiet, settlements for the period amounting to 1,100 piculs, distributed only between three or four buyers. Recent advices from New York require a marked reduction on ruling prices to encourage a revival of demand.

Common	$10.00 to 15.00	Fine	$28 00 to 32 00
Good Common	16.00 to 18 00	Finest	35.00 to 40 00
Medium	19 00 to 21.00	Choice	Nominal, very scarce.
Good Medium	22.00 to 24 00		

EXCHANGE AND BULLION.

Exchange.—Sterling rates have somewhat improved during the past week, at the same time Private Paper for forward delivery has been placed at about 1 per cent. under Paper for immediate delivery, for which latter the Banks are firm in their demands at 4s. and 5.06 for francs. For Bank Bills the demand as yet has been small, considering the large sales of imports.

Rates close as follows :—

Sterling—Bank 6 months' sight	3s. 10½d to 3s. 11¼d.
,, Bank Bills on demand	3s 10½d.
,, Private 6 months' sight	3s. 11½d. to 4s.

March 4, 1876. 52 ins.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Hence forward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,

London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 41.] YOKOHAMA, SATURDAY, OCTOBER 7, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DIED.

On the 3rd inst., at No. 113, Yokohama, ALEXANDER WYLIE, aged 57 years.

Notes of the Week.

The Government has been a large purchaser of dollars, giving, of course, paper currency in exchange, which has declined considerably in consequence. The operation is perfectly sound and legitimate and will unfortunately be profitable. We say 'unfortunately,' because we dread the idea of any operations of this kind undertaken for motives of profit in a country of such entire ministerial irresponsibility as this. In the present case profit was the legitimate result of an operation beneficial in itself, inasmuch as it relieved the pressure due to an insufficient volume of currency. But profit must not be made the *motive* of such operations, and, it should be observed that they ought to be conducted with the least possible advantage to the Government, all such profit consisting of an indirect tax on the people levied by means of an extremely injurious instrument—an inconvertible currency.

The new Shooting Regulations have not yet made their appearance, but the Japanese have only to thank themselves for the delay. They cannot apparently abandon their claim to the fines, a claim which the more it is examined the less it bears the examination. For what does it amount to? Simply this, that the foreign courts shall given up their sovereign rights, which involve the whole principle of extra-territoriality, and administer Japanese law in them at the dictation of the Japanese authorities. Is it to be presumed for a moment that this can be conceded? Of course, it is not. What, however, may be possible is to attach certain conditions in the shape of penalties to the shooting license, and, in case of the infraction of those conditions, the party holding it—the shootist as the Americans amusingly call him—would be liable to a civil suit in his own court for such penalty. The idea—we must disclaim the authorship of it—is ingenious enough, and affords a very good solution of the whole question which really presses at this time of the year. We fear, however, we are a long way off any regulations protecting game in a proper scientific manner, though even this is not beyond the realm of hope. The Japanese are developing a passion for sport, and buying guns, pointers and retrievers. We have heard of no movement in the horn market.

It is gratifying to observe that the Convention made between Sir Thomas Wade and Li Hung-chang presents many points beyond those which reached us by telegram and were published in our issue of the 16th ultimo; and we are glad to think that in expressing our disappointment at the results then supposed to embrace all the points of the Convention, we added the words "presuming they are as we have given them." Of course men in prominent positions must run the gauntlet of public criticism; but it must often be hard, when a bad knot has been untied with as much skill and patience as lie in human nature, and under conditions perhaps more perplexing than the outside world knows of, to find all the difficulties of the task ignored and the success disparaged with which it has been dismissed. It may be hoped that the Press of China will analyze the Convention fairly and accurately, and count up the gains which the commerce of the world may expect eventually to derive from it. But there is one point on which we must say still another word, because the Press of China, so far as we have observed, has not touched upon it. We allude to the indemnity of Tls. 200,000 to be paid for poor Margary's life to his family. Of the amount, all we can say, is that the larger, the greater reproach to us. One tael would be too little and too much; two hundred thousand taels are too much and too little. From a money point of view, the sum is an extravagant valuation of human labour; from quite a different point of view—one which refuses to estimate human life by money—it is nothing. To move to a larger house, to set up a carriage, and dress and eat more delicately as the compensation for the murder of a priceless child, seems to us inexpressibly revolting. We should dread to see his image in every mirror and hear his voice from every corridor. We wish to import no vain sentiment, still less any sentimentality into the question. Nor should we object if, under circumstances of treachery instigated by a central or local government in any part of the world, an unattached traveller were murdered, the deed were expiated by a money payment. We do not like it, but it might be the best possible solution of the consequent difficulty. When it comes, however, to an officer detached on duty for a special service at the command of his government or his chief, it is his business and duty to go, and if he falls, he falls. His death should be avenged, his murderers should, if possible, be executed, and his parents, wife or children, if dependent on his exertions, pensioned. But they should be pensioned by the State. No money should be exacted for his life. There seem to us to be no relations between the two things. You cannot multiply a book by a picture—there are no relations between the two which enable you to do so. Nor should you take money for the life of an officer killed on duty. It is moral force which counts most in the East—perhaps everywhere, but certainly here. What do these eastern races say when they hear of these things? They imagine it arises from a money-greed, which it does not. They cannot see our reasons for it in all their true bearings, and must inevitably misread them. We have no desire to appear other than we are to them: but we should like them to understand more of what we really are, in power, in motive, but, above all, in our higher moods. The existence of these in us is practically unknown to the nations outside India, where they must make themselves more or less felt and appreciated. That the proudest and richest nation in the world should extort a sum of money for the murder of one of its officers in the course of his duty, is, to our mind, utterly wrong in all its bearings,

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

and we cannot reconcile it either with what we conceive to be sound reason and feeling, or even sound policy. We attach no blame to those who are responsible for this item in the Convention, but we hope that, one of these days, the question at issue will be regarded in a different and what seems to us a higher light.

The Amateur Dramatic Corps brought its last season to a close with less satisfaction than has usually attended its efforts. Whatever the cause, its last performance excited a good deal of adverse criticism, and we hardly think that the absence of all defence lay in anything like a proud conviction that this criticism was unjust. The Corps is again about to exert itself for our amusement, and intends opening the season next week with *Plot and Passion*. The play has been strongly cast, and we have heard enough of the rehearsals to feel sure that the slight cloud which obscured the lustre of the Corps was but a passing one. We wish it every success, and this involves a full house, which we may safely bespeak for it.

From the "Japan Mail Daily Advertiser."

Monday, 2nd.

We learn from the *Hôchi Shimbun* that Kagoshima was visited by a severe gale, or typhoon, on the 11th ultimo. Early in the morning the wind blew hard from the north-east and so continued all day, but shifted to the south-east in the evening. A vessel called the *Tokuyo Maru*, laden with sugar, was lying in the harbour, and at 11 p.m. broke from her moorings and drifted on shore, where she became a total wreck. Sad to say all her crew, including one foreigner, were drowned. The *Genrio Maru* was also in harbour at the time, but having got up steam was enabled to ride out the storm.

NOTIFICATION 36.

There are some farmers engaged in raising sheep who are troubled to find purchasers for their wool, therefore those who are desirous of quickly disposing of it may apply, in accordance with published rules, to the Bureau of Agricultural Industry, where, for the present, their wool will be purchased.

ÔKUBO TOSHIMICHI,
Minister of Home Affairs.

The following are the prices which the Department will pay.

Merino	30 *sen*	per pound.
Southdown, Cotswold	25	„ „ „
Chinese	20	„ „ „

From the *Chôya Shimbun*.

We hear that Mr. Sugita, of the *Saifu Shimbun*, has forwarded a memorial of the *Genro-In* concerning the Press and Libel-laws.

From the *Hôchi Shimbun*.

On account of extensive trade in silk this year the tea business has been comparatively dull, but we hear from Shidzuoka that orders are coming from America for large quantities of tea.

Erratum.—In the last issue of the *Japan Weekly Mail*, p. 894, 2nd column, last line but seven, for "of the September 1878," read "of September 1873."

Tuesday, 3rd.

From the *Chôya Shimbun*.

His Excellency Sanjô and suit returned to Tôkiô at 11 a.m. on the 30th ultimo, and presented themselves without delay at the Imperial Palace.

From the same.

On the 30th ultimo Mr. Hayakawa, an official of high rank, was summarily dismissed from his position in the Tôkiô *Saibansho*, and further, as he was leaving his office, was arrested by the police and taken to prison. It has not transpired what charge is made against him.

From the *Akébono Shimbun*.

A notification concerning payment of the salaries of foreigners employed in the various Government offices was issued in April of the 5th year of Meiji, but hereafter any office may pay them in foreign money as convenience may dictate.

From the *Hôchi Shimbun*.

It is expected that the Empress Dowager will start for Kiôto, viâ the Tokaido, about the first of next month, where she will remain for fifteen days, returning to the capital about the 16th of December. The Empress is expected to start for Kiôto about the 10th of December, also travelling overland, and His Majesty the Mikado will leave for the same place about the 15th of next January, proceeding to Ôsaka by steamer, and visiting his ancestral tombs at Nara *en route* to Kiôto.

From the *Nichi Nichi Shimbun*.

Mr. Kuribara, the late manager of the *Sômô Zasshi*, assisted by his counsel Mr. Matzuda, appealed to the Superior Court against the sentence of suspension of his journal, but the Superior Court has declined to consider the appeal and on the 30th ultimo returned to Mr. Kuribara the petition which he had sent in. It is said that Mr. Kuribara now intends laying his case before the *Daishin-In* (Supreme Court of Appeal).

From the same.

Hitherto the Imperial Marines kept guard at the magazines and gates of the Naval Department, but for the future this duty will be performed by the police.

From the *Mainichi Shimbun*.

On the 29th ultimo Mr. Kuroda arrived at Yokohama from Hakodate in the *Genmu Maru*.

From the *Ôsaka Nippô*.

About one hundred thousand dollars worth of bullion enters the Mint every day, and work is actively continued from seven in the morning until five in the evening.

Wednesday, 4th.

A meeting of a section of the residents, called by private invitation, and admission to which was conditional on a money payment, was held yesterday afternoon at the Grand Hotel. The representatives of the Press were excluded, but the meeting was generally understood to be one in connection with racing affairs and the rights of the community in regard to the Race Course. It is obvious, however, that its proceedings cannot possess the slightest shadow of a title to validity, in respect of any action which may be taken by it in the name of the community.

A curiously shameful outrage was perpetrated by three Europeans at about midnight on Monday last, on the property of Mr. Beato, No. 17 Bund, the four large plate glass windows of whose studio were broken by stones deliberately thrown from the road. The *momban* heard the noise made by the crash of the glass, but being old and inactive he could not pursue the miscreants who were the authors of the outrage. A reward of $50 has been offered for such information as will lead to their detection, and we most heartily hope it will have that effect.

A fire broke out yesterday afternoon at a medicinal bath-house in Mikawa-chô, Tôkiô, which spread with alarming rapidity in three directions. Nothwithstanding the high wind which prevailed at the time the fire was subdued in about two hours a half after the first alarm was given, but not before it had destroyed 810 houses. It says a great deal for the firemen of the capital, that under the circumstances they obtained a mastery over the flames in so short a time.

The agent of the Great Northern Telegraph Co. yesterday informed us that the Russian line were again open, and the latest telegraphic advices received from England were dated the 2nd inst.

From the *Chôya Shimbun*.

A notification has been issued by the Minister of Home Affairs, to the effect that an agreement has been made between the Japanese Government and the Messageries Maritimes, that whenever either Japanese or foreigners employed by the Government travel by the ships of this company on service, a discount of fifteen per cent will be allowed

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

on their passage money. Those officials who intend travelling by this line should therefore apply to the Naimusho for a certificate to the effect that they do so on Government service.

Akébono Shimbun.

Mr. Mori, the Japanese Minister to China, will start for Peking about the 18th or 19th of this month.

From the same.

It is expected that the custom of binding prisoners will hereafter be abolished and they will be handcuffed instead, ropes only being tied round their waists or fastened to their girdles.

From the *Hôchi Shimbun.*

The Government is rewarding the families of those officials and police who where either wounded or killed in trying to subdue the late insurrection in Wakayama *ken.*

From the *Mainichi Shimbun.*

A cloth weaving factory is to be built near the foreign paper-mill at Oji, Tôkiô.

From the *Eiri Shimbun.*

It was expected that the *Kencho* of the Gunma *ken* would have been established at Takasaki, but it has been built at Mayebashi, and was opened on the 29th of last month.

From the same.

A Christian meeting house has been built at Kiyayegacho, Yotsuya, Tôkiô, and the opening ceremony took place last Sunday, when a congregation of three hundred assembled. Service will hereafter be held there every Sunday and Wednesday.

From the *Nichi Nichi Shimbun.*

One of the Imperial carriages will be forwarded from Tôkiô to Kiôto by steamer, for use of the Mikado and Empress when visiting the western capital.

From the same.

From the 16th of the month the Imperial troops will go through a series of manœuvres at Narashino, in the province of Shimosa, which will continue for five weeks.

Thursday, 5th.

From the *Akébono Shimbun.*

All the members of the *Genrô-In* have been presented with the photograph of the Empress Dowager.

From the *Nichi Nichi Shimbun.*

H. E. Sanjô was again received at the Imperial Palace on the 3rd instant, and presented some Itroff seal skins and cloth manufactured at Sapporo to H. M. the Mikado.

From the same.

New appointments of judges will be made to the *Saibansho* of Nagasaki, Hiôgo and Osaka.

From the *Mainichi Shimbun.*

Mr. Nomura, the Vice-Governor of this *Ken*, visited the German man-of-war *Vineta* on the 3rd instant, when a salute was fired which was replied to by the fort at Kanagawa.

From the same.

At Urawa, on the Nakasendô, a branch of the Tôkiô Hospital is now in course of construction.

From the *Chôya Shimbun.*

A bold attempt was made on the 2nd instant by a prisoner confined in the cells of the Central Police Station to set fire to the building, which fortunately was discovered in time and the flames easily extinguished, the incendiary being caught in the act.

From the *Hôchi Shimbun.*

A table of articles sent to the Philadelphia Exhibition has been made out, of which a copy will be presented to various foreign Governments.

From the same.

The Minister of Home Affairs is about to forward an official letter of congratulation to the Government of the United States on the success of the Philadelphia Exhibition.

Friday, 6th.

The *Mainichi Shimbun* reports that a telegram arrived from Italy the day before yesterday, to the effect that great distress would be caused in that country if both silk and silk worm's eggs were not freely purchased here, and therefore the Italian Government had advanced money to merchants for the purpose of buying all that Japan could produce, which money would arrive by an early mail.

We merely give this statement for what it is worth, as showing how much the *Mainichi* must know of foreign markets and the method of conducting business in Europe.

From the *Hôchi Shimbun.*

Mr. Kuriyama, of the *Kôko Shinpô*, was summoned to the *Saibansho* on the 4th but did not make his appearance, and in consequence received an intimation that he should appear without fail on the 5th instant in answer to the summons.

From the same.

A daughter of H. I. H. Arisugawa-no-Miya will be married to-day, the 6th instant, to a member of the house of Fushimi.

From the same.

Mr. Sewaki, of the *Gaimusho*, left Tôkiô yesterday for Vladiwostock, having been appointed Japanese Consul there.

From the *Akébono Shimbun.*

The opening of the new Paper Money Department will, we hear, take place on the 8th instant.

From the same.

It is rumoured that the dockyards at Yokosuka will be removed to Wakayama or Kagoshima *ken*, on account of the inconvenience of the present situation.

From the *Chôya Shimbun.*

There appears to be much sickness at present in Tôkiô. On the 25th ultimo 228 patients presented themselves to Dr. Asada for treatment, two-fifths of whom were suffering from *kakké* and the rest from fever.

From the *Nichi Nichi Shimbun.*

HisMajesty the Mikado invited their Excellencies Sanjo, Terashima, Yamagata, and Ito, with other high officials, to dinner at the Imperial Palace on the fourth instant.

From the same.

The Government officials who recently returned from the North have been granted seven days' leave.

Saturday, 7th.

The M. M. steamer *Menzaleh*, with French Mails on board to the 27th August, left Hongkong yesterday at 6 p.m.

From the *Hôchi Shimbun.*

Mr. Hanabusa, the Secretary of the Japanese Legation at St. Petersburg, will return to Japan about the middle of next month.

From the same.

A regulation will come into force next year requiring that all almanacs for sale shall bear a revenue stamp.

From the same.

On the 3rd instant seven foreigners of different nationalities were examined at the Yokohama Post Office for certificates according to the new regulations for Masters, Mates and Engineers. Five of them passed successfully and received certificates accordingly from the *Naimusho*, while two of them failed.

From the *Osaka Nippô.*

Mr. Yamamoto, the editor of the *Osaka Nippô*, was summoned to the *Saibansho* on the 30th ultimo, and put in charge of the ward officials.

From the *Eiri Shimbun.*

We hear the rumour that foreigners employed by Japanese will be permitted to reside only in the houses of their employers, unless, of course, they live in the foreign settlements.

From the *Nichi Nichi Shimbun.*

The Imperial gardens at Fukiage and Hamagoten will be open every Saturday to all those who have permits.

We have heard nothing specific, as yet, of what is going on in the mysterious recesses of the capital. It is whispered, however, that the Convention which has been arranged will not be ratified quite so readily as was hoped. If this is true, it shows simply that, as we before observed, the powers of Li Hung-chang were limited, and Sir Thomas Wade will be placed in a very awkward position. It is clear that any re-opening of the negotiations would be ridiculous; in fact, impossible. We fail to see what could be resorted to in such a case excepting an appeal to force. Probably however Sir Thomas Wade has even deeper resources of diplomacy, unfathomable as the 'poet's mind' of the Laureate.—*Shanghai Courier.*

Private advices from the North add a little to the stock of information we have elsewhere published with regard to the new Convention. First and foremost, Sir Thomas Wade seems to have exerted himself to the utmost to get the Governor of Yunnan brought to trial, and to have *failed*. The Chinese Government refused pointblank to do any such thing; and Sir Thomas, wishing to make the best of the situation, saw the futility of further efforts. He accordingly strove to secure future safety rather than punishment of the guilty, and he thinks he has succeeded, in virtue of having obtained certain concessions from the Chinese. It is probable that this portion of his negotiations will be the most severely criticised. The Convention as far as trade is concerned is to be considered tentative, and after a trial of five years the whole matter of Western commerce is to be placed upon a permanent footing. The residence of foreign officials in Yunnan and Szechuen—for it is said that the representatives of other Powers than England will have the same right—is certainly the first step of any importance since the last war, in the opening up of the country. The French will work so as to develop the trade between Yunnan and Tong-quin, the British towards Bamo and down the river to Rangoon; and thus the Chinese will be made to feel that all the measures they take to keep the foreigner out,—such as the murder of Margary—only lead to the very end they dread. Furthermore there are to be bonded warehouses for opium, the duty on which is to be paid by the seller: but prior to its being delivered out of bond, says our correspondent, the purchaser must present a receipt for the likin tax. He throws doubt upon the reported increase of the duty from Tls. 30 to Tls. 100 per picul.—*Celestial Empire.*

THE RACE-COURSE CONTEST.

IT is idle to suppose that the meeting of the supporters of the Yokohama Racing Association held at the Grand Hotel on Tuesday last was in any sense a representative meeting of the community, or had any legal validity as such. The exclusion of all who refused to pay a qualification fee may have been a necessary move in the tactics of the opposition, in view of the undoubted fact that had the meeting been thrown open to every one, the line of march would have effectually blocked by the adherents of the old Club. The exclusion of the Press seems, so far as we can learn, to have been a blunder arising out of the stupidity of the check-taker or door-keeper. But it was a capital error the full weight of which must fall on the heads of the managers, and augurs extremely ill for the future of a movement which claims the Course for the public, and one of the first articles of the creed of which is that greater publicity in racing affairs is the true medicine for the evils which have beset them. When the Chairman addressed the assembly as "the representatives of the community, having nearly all of you no private interests to serve," not only must his sense of humour have been hugely tickled to think that human credulity would stand so audacious an assault upon it, but he must have been troubled with the serious misgiving of a man of the world whether that credulity would stand it without absolute collapse. The human mind, however, is so full of illusions, that the meeting seems to have accepted the flattering tribute to its virtues and its representative character, and swallowed the chairman's "twa-and saxpenny flee" at a gulp. He knew his *monde* apparently, and certainly managed it well. We doubt whether the band of men who carried the Reformation itself felt more certain that they were the appointed means of freeing Europe from the domination of popery, than did the most obscure of the seventy-five who responded on Tuesday last to the call of the movers of the new Racing Association, that they were spokes in a fly-wheel added to a new machinery for regulating racing in Yokohama, if not the future movements of mankind generally.

We shall do the Chairman's knowledge of human nature more justice than to suppose he valued his adherents at more than they are worth. But there was a ring of sincerity in General VAN BUREN'S speech which contrasted ill with the very false position in which he has placed himself in this affair—a position of which he seems wholly unconscious. But is he not a Consul, and thus *ex officio* one of those who, as trustees of the Course, must be called upon to act in something of a judicial position and capacity in relation to the questions now at issue? Granting, as we most freely do, that he is animated solely by a desire to secure for the whole community rights to which he thinks they are fully entitled, and which have too long been withheld from them, and to bring some wholesome disinfectants to bear upon a noisome atmosphere, we must take exception to his appearance in the arena of public discussion, where he can only be regarded in the light of an ardent partisan or an obedient follower. Admitting for the sake of argument—though we recently gave the reasons on which we dissented from it—that the decision of the majority of the Ministers in regard to the rights of the community to the Race Course, was sound, and that the Consular Board was bound to take measures to uphold these rights, we are still totally opposed to the course of proceeding adopted by General VAN BUREN, and by those of the Consuls who, without taking an active part in the meeting, showed by their presence there

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

that they sympathized with the object for which it was called together. We presume that the want of unanimity on the question among these gentlemen was the reason why no meeting of the community as such was called by their collective authority. Had happier circumstances favoured the calling of such an assemblage, it would have been open to the American Consul-General to take any part in it he thought proper. But, under the circumstances of the case, he was in his wrong place, and it is our duty and privilege to tell him so.

We do not know that any good purpose would be subserved by our analysing his speech very closely. He paid many compliments—doubtless as sincere as they were deserved—to those who had in any way been associated with the present movement or the antecedent causes from which in has sprung. He was satisfied of the high character and spotless integrity of the Committee of the old Race Club—whom he is anxious, however, to remove by a measure which has not a shadow of legality on which to rest; he had the most profound respect, personally and officially for the BRITISH MINISTER, whose views on this question, however, he treated with a but thinly veiled contempt; and he addressed his audience in tones and terms of respect to which he must have felt that very many of them have been wholly unaccustomed. If General VAN BUREN could have stayed the flood of subtle humour which favoured us with the metaphor of the cats, he might have said with Antony,

> Good friends, let me not stir you up
> To such a sudden flood of mutiny.
> They, that have done this deed, are honourable.
> What private griefs they have, alas, I know not,
> That made them do it; they are wise and honourable,
> And will, no doubt, with reasons answer you.
> I come not, friends, to steal away your hearts;
> I am no orator, as Brutus is;
> But (as you know me all) a plain blunt man,
> That love my friend; and that they know full well
> That gave me public leave to speak of him.
> For I have neither wit, nor words, nor worth,
> Action, nor utterance, nor the power of speech,
> To stir men's blood: I only speak right on;
> I tell you that, which you yourselves do know.

But perhaps we are somewhat old-fashioned in these matters, and our taste has been formed on the rude models of the past. We have no wish to impose it on others, and may even so far make a concession as to say that if the speaker did not catch us all, it was surely not for want of effort to put salt on our tails or any deficiency of material.

Passing for a moment over the regulations which were proposed at the close of the General's speech—to which, however, we shall return shortly—we come to the election of the committee of the various nationalities interested in this question. Now, no one will dispute that the Association founded on this occasion had a perfect right and full power to elect a committee to superintend the management of its affairs. But it is well that all illusions should be dispelled in regard to their power and position, in case any such illusions such exist. They are the representatives of the members of the Yokohama Racing Association, and this only. To imagine that they are an executive body elected by the community to manage the affairs of the Race Course under the Trustees (the Consuls), is the purest, or perhaps the wildest, fiction. They have such power as may be delegated to them by the Association—not one iota more. And here, in the name of the community generally, we protest against the altogether preposterous doctrine that the Consular body, as trustees for the Race Course, are to possess the power of appointing the Executive Committee necessary for its control and management. During the whole course of a long residence in the East we have never come into contact with a more absurd or arbitrary piece of presumption. As trustees the Consuls form an excellent and perhaps the only qualified body for the execution of the trust. But, apart from many other good reasons, the Course was granted to the community, and its own elected representatives are the only proper persons who can constitute a proper Executive Committee.

Having said thus much, however, and tried to estimate the real value of the meeting of Tuesday, and of the machinery then and there put together, we think it right to say that the main objects of the new Association, as we understand them, viz., to throw open the use of the Course and the privilege of competing in the races, to the whole community, and the improvement of racing, have our entire sympathy. The rules of the old Race Club undoubtedly gave it a monopoly which it was never intended to possess, and which has been more or less used—as all monopolies ever have and ever will be used,—for the benefit of the monopolists. Let us cut away all these superlatives about "most honourable gentlemen and spotless integrity" and all the rest of it, and test the thing by its results. As a matter of fact, have not the good things which hang over and round the course—if the adjective good may be thrown away on such things—been almost exclusively monopolized by a small section of the community to whom the race meetings have been a source of large and steady revenue? If it be otherwise, we have been utterly misled by men incapable, we are persuaded, of misleading us, so far as their own good faith is concerned, and the *consensus* of opinion among them is perfect. And if this arises from a monopoly of the privileges of the Course, having its foundation in the rules imposed by the monopolists, and hitherto uncontested, it is time some reform was made. The old Club has certainly been warned long ago of the exclusive nature of its management. It may not have black-balled applicants, and may have done no more for the benefit of its members than any other club would have done. But there is a strong feeling abroad that it has been over exclusive and monopolising, that it has rejected many good suggestions for a more liberal line of policy, and would not now find itself face to face with an extremely ugly opposition if it had made a few trifling concessions. By a move which seems to us to want many of the features of legality, the door which it kept closed so tenaciously has been thrown open in its face, and now it must reckon with an ugly rush of men whom it might have allowed to enter in good temper had it clung less closely to assumed rights which analysis has a tendency rather to dispel than to confirm.

At the same time it is only just to the Race Club to say that they were placed by the community in a false position from the beginning, and the consideration of this fact must not be left out of sight. Arbitrary powers were undoubtedly given to them, and they exercised them in the belief that their course of action best promoted the purposes of sport. That they also rather perhaps insensibly than with premeditated intention, turned them to their own advantage—and we do not say this in any very reproachful manner—is to say that they are men, and that human nature is what it is.

When we come to the troublesome question of the improvement of the whole *morale* of our racing, our hopes are raised, not by the wider gates opened, and what might be called the more democratic character of the revolution,—in which we have not the smallest belief—but by greater openness and publicity, by the destruction of the close borough system which characterized the old Club and the rather unwholesome atmosphere such institutions have a tendency to generate. In close corporations there

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is a good deal of in and in breeding of minds, until a generation of deformed or ricketty ideas grows up and constitutes the sole and admired progeny of its partial parents. All this is bad, and something may be hoped for from a wider circle of intercourse. Nor would it be just to ignore the fact that the Regulations proposed for the management of the new Association appear sound and comprehensive, and, if enforced by a Committee superior to all fear and all favour, are certainly calculated to do good.

And here it may be well to make such short reference as seems fitting, to the acrid humour which has pretended that the strictures made in this journal somewhat more than a year ago against the noisome atmosphere of our local racing affairs, were untrue, extravagant or exaggerated. We well remember the incident which suggested these strictures, and will even give it to our readers now. It was an account given to us by one who happened to be present at a race-breakfast, at which the characters of those who move chiefly in racing matters, were, *quoad* their racing, mercilessly and openly assailed without defence or protest of the feeblest kind from any single person present. And what we said then we adhere to now. We repeat it even, and say that it is an infamous and shameful thing that, by any means or for any cause whatsoever, there should be so absolute a want of confidence between man and man here that characters should be thus assailed, it may be impudently assailed, and that this should constitute the staple conversation of a social entertainment. It appears to us that if ever men are placed collectively in a position where the *point d'honneur* is of imperative force, it is in regulating sports in which they themselves compete. The barest imputation of dishonour in such matters is either infinitely disgraceful to him who makes it, or to him who is justly charged with it. The caprices of codes of honour are well enough known to moralists, and we shall not pretend to defend them. But so long as such codes have any force, a society which makes light of them except on the ground of a higher and less mutable morality, is in an unsound state. To the charges made specifically against individuals entrusted with the regulation of these matters we have never listened with patience. But we altogether object to a condition of affairs which excites, tolerates, repeats and multiplies them, and think it an unworthy and an odious thing that character should be treated so lightly. In a great measure we attribute the notorious fact that such is the condition of things in this place to the poisonous atmosphere which surrounds our races, the race-lotteries being the chief ingredient in its constitution. We have not one word to retract or modify in the passage with which General VAN BUREN fortified himself on this point, and those who like it least will not be, to our minds, those who have any special right to find fault with it.

It is well to look facts in the face, and it would be very foolish to imagine that the opposition to the old condition of affairs is without force and back-bone. All this sorry talk about mountains and mice will soon be reduced to its true value, and now that the door has been forced, the special point at issue, viz., the power assumed by the old Club to confine the use of the Course to its own members, is practically carried. Without some rather rough tactics we doubt whether this could have been done, much as we dislike moves of this kind, and great as seem to us the mistakes made in the opening of the game. To the fall of one Club, the rise of another or twenty more, or their amalgamation into some racing or jockey club of the future, we must be excused for professing a profound indifference. But we may profess with at least equal sincerity, a strong desire to see the advantages offered by the Course diffused over the widest possible area, and, above all, an improvement in the general tone of racing affairs.

Such support to the new movement as may be found in the above few words has been suggested by the hope that racing is to be improved, race-lotteries distinctly discouraged, and the whole sport placed upon a more liberal and a sounder, because more open, footing. If these are not among the *bonâ fide* intentions of the promoters of the Association, it will be impossible to regard their scheme otherwise than as one of the most delusive and audacious shams that has ever been palmed off upon the public.

SPIRIT OF THE JAPANESE PRESS.

THE PRESS-LAWS.

(Kôko Shinpo.)

As the Press- and Libel-laws are among the existing laws of this country, it is not my intention to meddle with them. But I have been so deeply moved by a tale told me by a friend of mine who has been undergoing imprisonment for an article published in the *Hiôron Shimbun*, that I write this article for the sake of the whole nation.

The question I am desirous of bringing up before my countrymen is the reform of the Press- and Libel-laws. It would be well if they were altogether abolished, but so long as they stand on our statute book, I fear this is not practicable, and if the worst of them were reformed, we should be satisfied for the present. The improvement I desire to urge is that imprisonment for offences against these laws be abolished, and fines substituted for it. In thus expressing myself I neither wish to show partiality towards others nor to embarrass the Government. I desire solely the good of the country.

The punishment of imprisonment has been inflicted upon writers with the object of making them regret their errors, of convincing them that they have done wrong in publishing articles of an obnoxious nature, and warning them against a repetition of the offence. But if we look into the actual condition of affairs, we see that these laws have no effect at all. Do those who have been thus imprisoned really regret the offences they have been charged with committing? The friend to whom I have already referred assures me that they feel no such regret. On the contrary. They deem it most honorable to have suffered in the cause of the country. And what opinion on the subject does the public hold? It thinks highly of the men who have been imprisoned, sympathizes with them and holds them in honour.

But, if men who are punished by the laws feel no regret for the offences for which they are punished, and when the public, far from regarding them with scorn, holds them in honour, the number of men thus imprisoned will increase, to the great injury both of the law and of society. Perseverance in the infliction of such punishments will be regarded as the rule of injustice, the people will lose all fear of them, and the *prestige* of the law will be destroyed.

If the injury so done were limited to the efficacy of punishment, I would contentedly drop the question. But I am of opinion that this will not be its limit. The spirits of those who have suffered imprisonment will become bolder and bolder, and finally a great agitation will be the result which could only be met by fresh laws and further imprisonments. If we look at the proceedings of the Government, we observe that the number of convictions is constantly on the increase, and what it may be in the future no one can tell. If these men gain in vigour and influence, and cause an agitation which no laws or dread of penalties can check, it is impossible to estimate the injury the country may sustain, and the fruits of such absurd punishments cannot be of advantage to the nation.

We are now advancing in civilization, and such penalties as have been inflicted on our writers are wholly incompatible with such a movement. The foreign Press of Japan by no means praises the conduct of our Government in this matter, and the reflections made upon it will not redound to our credit abroad—a matter well deserving the attention of the Administration. If reform is not speedily made, and if, owing to the strength of reactive movement,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

trouble should arise in this country similar to that which took place in France at the end of the eighteenth century, not only will the peace of the nation be destroyed, but we shall be ridiculed abroad, and I am far from desiring to see this.

Now, as I have already stated, the punishments inflicted do not make the writers feel really guilty of the crimes imputed to them. Such punishments are regarded as injustices inflicted by the Government. But as the Government cannot free itself from all imputation of injustice (in this matter), it would do well to abolish imprisonments and simply inflict fines. It should also permit all those who are now in prison to be released on payment of certain fines in lieu of undergoing the remainder of their term, and, for the future, to confine the punishment of offences against the Press-and Libel laws to fines. The writers would then feel sentiments of content and gratitude towards the Government, whose measure would meet with universal praise. Thus great advantage would ensue from the abolition of this useless punishment. It would moreover tend to preserve the peace of the nation, and enable us to escape the reproach of being looked down upon by foreigners. Are not these ample reasons why reform should take place as early as possible?

I live in the south-eastern part of the country, where I can cultivate my land in freedom. But when I think of those who are suffering the hardships of prison life for the free expression of their opinions, and those who will succeed them in similar misery, and when I further think of the injury all this will do to the country, my eyes shed tears of sorrow.

Now, there are many men animated with the most patriotic motives who have been imprisoned for slight errors, the foreign powers watch us with eager eyes, our treasury is empty, and the sympathy of the people is becoming gradually alienated from the Government. Thus the condition of our nation is very dangerous indeed,

I, with some of my companions, assembled in the fields and discussed what could be done to help this. And a great man came forward, his eyes filled with tears, and he said, "I cannot die in peace unless the condition of my country is reformed." When I heard this I straightway threw down my hoe and turned homewards to write this. I ardently hope my wishes may be understood by all.

(Note by the Editor of the Kōko Shimpō.)

The above has been forwarded to us by the writer, Mr. Kawamura of the Kagoshima *Ken* (Satsuma). The main object of his essay is the modification of the Press laws, and the salvation of the country from the danger with which it is threatened. We coincide with our correspondent in his estimate of this danger and his desire to avert it, but are strongly opposed to any modification of the present laws. Ignorant though we are, our soul is filled with ardour in the cause of the country, and we refuse to put any restraint upon the free expression of opinions or to comply with the will of our officials simply from the fear of these laws. So long as our views accord with reason and justice we shall say and do what we please; and if in doing so we break any laws, we care not even though death be the penalty of our imputed offence. Is it not right that men should follow their reason at all hazards? We are grieved indeed that the punishments inflicted on writers do not exceed fines and imprisonments. If such punishments as hanging or crucifixion were to prevail, we should soon put an end to all hypocritical profession of patriotism, for no truly patriotic man would first measure his words by such advantage or disadvantage as would accrue to him from uttering them. We urge that the Press-and Libel-laws be made more severe, and we shall then know that the writings which appear in the papers are fom genuinely patriotic men.

For all this, however, our correspondent seems warmed by a true love of his country, and, coinciding with him fully in this respect, we have published his letter in our leading columns.

Corea—A Possible Dilemma.

(Hōchi Shimbun.)

When we glance back at the past we see that nearly a year has now passed away since certain important events took place at Kokwa. At that time the warlike spirit which prevailed in this country was directed toward the north-west, and was fostered by the uncertainty whether war or peace would actually result. But when the spring arrived this warlike spirit melted away with the ice and snow, a treaty of peace and amity was signed between our neighbours and ourselves, and the friendly feeling which was then developed between the two countries, has since been effectually confirmed by an interchange of embassies.

Our Commissioner, Mr. Miyamoto, returned from Corea last month, and although we are unacquainted with the details of his mission or the special instructions he received from the Government, still there is no doubt that friendly feelings have been firmly established between the two countries, misunderstandings which were unfortunately rising have been swept away, and troubles which were looming on the political horizon have been dispersed by this treaty of amity and peace, so that we may safely congratulate ourselves on its accomplishment.

But for all this we must not hastily conclude that, because our differences with Corea have been readily disposed of, and that our diplomacy has been successful, no troubles or complications are likely to arise out of our negociations with that country, so that a word of warning on this subject may not be out of place at present.

But before expressing our ideas on this point, we must first briefly glance at our existing relations with western nations.

England, France, Russia, and other great nations, possess that experience which enables them without trouble to carry on diplomatic relations among themselves and with friendly nations, but Japan, on account of her inexperience, can only carry on her intercourse with other nations with great difficulty. And why is this? Because the degree of civilization to which we have attained is far below that of those countries referred to above, so that we are unable to associate with them on terms of equality.

On the other hand, the task of preserving our present relations with Corea is a delicate one, as the Coreans are very obstinate, and though they may lavish on us expressions of friendship, they may detest us in their hearts, so that were we to urge them to any course to which they objected, these friendly relations might be seriously imperilled, Thus, to carry on straightforward intercourse with them and yet do our best to promote the interests of our country, may be a matter of great difficulty, as we must so act as not only to please those western countries which are our superiors in civilization, but we must avoid offending that country which is inferior to us; and this course requires that all possible caution and discernment should be brought to bear in our foreign relations.

We all know that England, France and America have been insulted by Corea, and further that England is bent upon obtaining satisfaction for the same by threats of war, while there must be some cogent reason why she does not immediately seek satisfaction by an appeal to arms.

Now that Japan is on friendly terms with Corea and that diplomatic relations have been established, it may be that England purposes asking the good offices of Japan in acting as intermediary between her and Corea. Suppose the British Minister at Yedo makes proposals of this nature to our Government, what is to be done? Should our Government interfere, it is clear that it could not satisfy both England and Corea, and such interference might lead to complications which would be detrimental to our interests.

Taking a retrospective view of events connected with Corea, we call to mind that about eleven years ago some French missionaries were murdered there, and that for this outrage the French Government sent some men-of-war to Corea which attacked and nearly captured Kokwa. After this occurrence the Corean Government sent a special envoy to So, the Prince of Tsushima, upbraiding him for not sending assistance to an ally when attacked by an enemy, and asking for the support of Japan. The then existing Government intended sending in return Messrs. Hirayama and Koga as envoys to Corea, to advise that nation to cast aside its exclusiveness and to establish intercourse with foreign powers. But internal troubles arose in Japan at that time, so that the idea of an embassy to Corea was abandoned. Now even at that time, when no definite treaty of alliance existed between Japan and Corea, the latter nation expected us to assist them in their difficulties, and, should complications now arise between England and Corea, how much more would the latter expect assistance from us now that we have a treaty of alliance with them. So that, on the one hand we may offend England by refusing to accede to the application of the British Minister to act as an intermediary between his country and Corea, and, on the other, may destroy the existing friendship between ourselves and the latter nation by acceding to this request. And, again, should we so decline to act, and the British Minister in consequence make direct propositions to Corea, hostilities might result between England and that nation, in which case the latter would have more cause than ever to demand assistance from us, and perplexities and difficulties would certainly arise which we should be puzzled to meet. Under any circumstances our action in the matter would be of serious moment, and would greatly imperil our relations with both countries. But it may reasonably be said that,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

both England and Corea being independent nations, we ought not be called upon to advise any line of action on the part of the Coreans nor to interfere on behalf of English interests. It would be quite reasonable on our part to refer England to China for assistance in impending negociations, especially as our friendly relations with Corea are of recent date, and have not been put to any severe test. We should thus, besides, avoid the risk of being condemned by other nations for our action in this matter.

Furthermore, France and America would immediately follow in the footsteps of England, on the plea that they had also been insulted by the Coreans, and demand our mediation, so that our treaty of amity with Corea would be a constant source of annoyance to us in our relations with foreign countries. Our position as mediator between highly civilized western nations and semi-barbarous Corea could not fail to be an anomalous one, and such as would entail upon us constant anxiety and trouble. We therefore think our Government would act wisely in declining to accede to the request of England for mediation, and would, by so doing, advance the interests of the country by preserving our present friendly relations with Corea. We should then be able to carry out our treaty with Corea in all its integrity, and prove before Heaven that we were anxious to observe every clause of it.

But, after all, our fears may be uncalled for, as doubtless the experienced British Minister is wise enough to see that an appeal to our assistance would only complicate our relations with Corea, without materially benefitting the nation he represents. At het same time we still hold to the opinion that matters may turn out as we have suggested and dread, and therefore consider that a thorough ventilation of the subject is not out of place.

Representative Institutions.

(Chugai Hiôron.)

Since the time of the Restoration the new root of the welfare of the people was the Imperial Decree of 1875. But they have been anxiously expecting the fruits of this Decree, as the farmer longs for rain in time of drought. No result, however, has yet sprung from it. The officials are too indolent to cultivate it—or is it that that the people themselves are too weak and ignorant? Be it the one or the other, words cannot express how greatly this delay is opposed to the will of our most gracious Emperor.

And now again His Majesty, of his benevolent desire to promote the welfare of his people, has commanded the *Genro-In* to compile a code of our nation's laws. And when we reflect on the ardent desire he shows for the prosperity of us his subjects, our eyes overflow with tears of joy and gratitude.

But there are men among us who declare that the people are yet too slavish and ignorant for liberty, and that any scheme for constitutional government must be long deferred. Their views, however, are not merely to postpone this. They wish to put an end to the scheme altogether. Yet if they are as brave and learned as they profess to be, is it not their duty to invigorate the minds of these people who they say are thus weak and ignorant? They do precisely the contrary, however, and try their utmost to defeat their welfare, thus deserving to be called wicked men, inasmuch as they are obstructions in the way of the will of our most gracious sovereign.

An Imperial Decree is like the sweat of the brow; once issued it cannot be recalled.* And the people on the other hands must not wait and continue waiting. They must obey the Imperial will, and promote the welfare of the nation, even though they thereby render themselves victims of death.

Has the present Government laws?

Yes, indeed; but they are incomprehensible to the people. More than one case has recently occurred in which two men who have committed the same offence have been differently punished, while others who committed the same offence are now free. And there is moreover a detested clause (in the Press- and Libel-laws) to the following effect: "whether a statement be true or false." By means of this clause many officials bring suits against people into Court.

But such a clause should not exist in a country of advancing civilization. Whether we look at the question from the standpoint of pure reason, or from that of the practice of the most civilized nations, such laws should not exist, and as they are not in accordance with reason, it is not unnatural that they are unintelligible to the people. It is for this cause that we have said that laws exist indeed, but they are not understood by the people.

Laws are enacted to regulate and rectify the conduct of men. When there is a principal and an accomplice in an offence, it is unnecessary to say that they are equally guilty and should be punished equally. But when we see them punished as offenders against two different laws, such laws cannot be called intelligible, or, if they are, the administration of justice must be utterly at fault, and thus laws cannot do the work they were designed to accomplish, viz., regulating and rectifying the conduct of men. When, too, we have a clause preventing men from stating facts which are true, the law is prevented from doing its appointed duty. Under such a clause men who act contrary to the wishes of the officials cannot escape punishment whatever they may try to do. We, like all other Japanese, are not by any means pleased to hold our rights at the pleasure of the officials. We therefore sincerely hope that laws which the *Genro-In* has been ordered by the Mikado to compile will not be such that the officials can administer them at their own arbitrary will.

Some years ago when the ex-*Sangi* Goto, Itagaki and others presented a memorial urging the establishment of a Representative Assembly, the general opinion of the nation was decidedly with them, and all the leading writers supported them. The officials on the other hand strongly opposed the project, and the *Genro-In* is really the only result of this agitation. But when we closely look into the matter, no real reform has been made.

We now know that the Emperor has commanded Arisugawa-no-Miya to compile a code of laws, and Messrs. Yanigawara, Hosokawa, Nakashima and Kanda, all members of the *Genro-In*, have been appointed a special committee to carry out the Mikado's will. These gentlemen are doubtless highly educated men of profound talents. But the task they have been called upon to perform is one of the greatest importance, for the welfare of the Emperor and that of the whole nation are involved in it. And, in dealing with so important a question, we strongly hold the opinion that a representative institution ought to be established, so that the whole wisdom of the nation may be utilized. Moreover laws should not be made by the arbitrary will of the governors alone. The opinions of the people on whom they are forced should be consulted. Thus, if it is too early now, the time will never arrive, and it will be an indelible blot on the history of the country if the fear of temporary trouble causes the delay of such an institution. The higher and educated sections of society in Japan entirely approve of the scheme.

Yet there is a class of men who argue against this. But they act in vain, for the laws of nature are irresistable. There are many causes of trouble now existing in the country, and one of them is the pressure upon the Finance Department. Such difficulties can only be remedied by the Government and the people working together. Many profess to think otherwise; but they are in great error. In Japan, as in other countries, the people as well as the Government are responsible for whatever is done by the state; or, in other words, whenever the Government commits an error, the people have to suffer with it, or whenever any stroke of good fortune comes the people partake of it as well as the Government. But our people have no share in bringing about these results, although they suffer from the mistakes or misdeeds of the Government.

At present the officials alone possesses this governing power, and thus we are strongly convinced that it should be divided between them and the people; this is only what is right considering that the responsibilities (of the results) of government are borne partly by the Government and partly by the people. The institution therefore of a House of Commons will neither injure the Government nor the people. This is the result to which the Imperial Decree points, and we greatly rejoice that it is so.

The New Code of Laws.

(Nichi Nichi Shimbun.)

Should our projected national code of laws be compiled from new sources or from existing laws? The laws of the western nations appear to us as if made entirely from modern sources; but it is not really so; they have been compiled from previously existing laws. It is supposed, for instance, that the laws of the United States were new laws. But since the Declaration of Independence all the laws and customs of the states have been derived from England, and thus are nothing other than English laws. Now this shows that a new nation springing up as did the United States cannot make laws of its own, still less can this be done by a country of long standing.

---

* This appears to us the most unsavoury simile in the world, and the worst but one, for James Montgomery's

"As streams meander level with their fount,"

has long enjoyed the proud preeminence of being the worst.

* It is exactly the reverse.—[Ed. J. W. M.]

There is no exact spot on which it is known that laws were first made and enforced, but we are of opinion that when mankind rose slightly above the condition of savagery, and they glanced back at the past and forward to the future, laws were found to be necessary, although they at first took a very primitive shape. What are laws? They constitute the foundation of a nation's polity. Those who govern do so by means of them, and those who are governed obey what they deem just and right. Thus laws are evidences of the limits of the power of those who govern and those who are governed, and as these two classes constitute a nation the existence of a nation presupposes laws.

We learn from history that in ancient times the Emperors of Babylonia had the power of killing or sparing the lives of their subjects, without causing the least trouble of a serious nature. But when they attempted to change the laws, their subjects rose against them, unwilling to allow them to carry out their own ideas, and such laws as it is not within the power of the nation to change are called National Laws.

How must law be made for Japan? Should we make new ones or compile a code from already existing laws? We are very decidedly of opinion that we should adopt the latter course, as new laws, if made, would be but so many written documents. We have no wish therefore that laws should be imported from western countries and enforced upon this nation. Rather let our new code be compiled from laws which have long existed in the country, with such modifications and reforms as suit our present condition.

After the institution of feudalism had existed many centuries in this country, the revolution broke out and the Mikado was restored to his true place in our polity, and a party arose which was strongly impressed with the more liberal views of the west, and strongly opposed to feudalism. The whole nation at once made rapid strides towards civilization, and Satsuma, Choshiu and other *daimios* surrendered their fiefs to the Emperor. In a short time the feudal system which had so long prevailed was abolished, and, in order of satisfy the claims of the *samurai*, the *daimios* were appointed to the offices of *Han Chiji* (Governors of provinces). But, soon afterwards, the *han* were abolished and a real monarchy was founded. Still, this did not suffice to do away with feudalism altogether, and the *samurai* of the different clans held widely diverse views and formed opposing parties. Since the quelling of the Saga insurrection, however, in the seventh year of Meiji, party feeling has greatly abated, but, unfortunately it is far from extinct yet, and this is the reason the Government has lately been amalgamating the *ken*.

Such being the present condition of the country, we think that if the Government were to form distinct legislative, executive and judicial bodies, the first to compile a code of laws agreeable to its subjects, the second to put them into force, and the last to preserve order, it would be the best course which it could pursue.

But, in order to compile a suitable code of laws, it appears to us that the best course to pursue would be for the various *ken* and *ku* to have representative assemblies, and for the Government to send officials to them to discover what opinions are held by the people on these subjects, and then to compile a code of laws from those hitherto existing in the country with the necessary reforms and modifications of them. This would suit us far better than any newly composed or imported laws.

The death of Santa-Anna, a former President and Dictator of the Mexican Republic, which was recorded last week, took place at Havannah, where he had been living in retirement for many years, in expectation of being recalled to Mexico by another turn in the wheel of fortune. Santa-Anna took part in 1821 in the war of independence against Spain, and in 1833, after having been in opposition to several Governments, he was chosen President in succession to Senor Pedrazza. In 1837 he defended Vera Cruz against the French, and lost a leg during the attack. He was again elected President, and again deposed between 1841 and 1845. He was then banished from the country, and went to live at Havannah, but he returned to Mexico in 1846, and took part with General in the insurrection against President Paredes, to whom he succeeded. He was made commander-in-chief of the army during the war in 1847 between Mexico and the United States, but he was beaten at Buenavista by General Taylor and at Cerro-Gordo by General Scott. After having been appointed dictator, the latter general again defeated him twice; and his former rival, Paredes, having fomented a revolt against him, he was obliged to fly to Jamaica, whence he was recalled four years later. In 1853 he was proclaimed dictator for life, only to be upset in the following year, and to be obliged again to go to Havannah. When the Archduke Maximilian was proclaimed Emperor of Mexico, Santa-Anna accepted the rank of grand marshal from him, but he was one of the most active of the conspirators against him.—*Pall Mall Gazette.*

A TALE OF A CAT.

[From the Japanese.]

INTRODUCTORY.

He who would fain know something of society as it existed in Old Japan, must now depend for his information upon the literature of the period which has excited his curiosity. By Old Japan we would not be understood of necessity to refer to times so exceedingly remote as those in which the dragon and the griffin had it all their own way, or the crane lorded it over the tortoise. We allude rather to the times which terminated with the hurricane which blew down the Shôgunate and its attendant military aristocracy, and tore up, as it swept across the face of the country, much which was interesting and ornamental, depositing in its place kerosine lamps and printing presses, grey shirtings and French perfumery, and such like inestimable blessings, useful we are bound to admit—would that we could say ornamental.

If our enquirer's object be to scan the political horizon or finger the secret springs and levers that do move a Court and manufacture history, we fear we cannot help him. But if his aspirations have a narrower limit, and he scorneth not things trivial and domestic, we would take him by the hand and direct him to the works of fictions, as a source from whence he may draw all the information he is in need of. He will be greatly assisted in such an investigation by the illustrations with which these books are filled. By their help he can see, not only how the houses of the period were constructed and arranged, but how my Lord was dressed and bore himself, and how my Lady wore her hair in those old days. Nay, more than that. If he's curious on such points, he can behold for himself the very stages by which her tiring woman built up her glistening tresses, how she laid her powder on and touched her pouting lips with scarlet *beni*. These and other mysteries of the dressing-room, too sacred to so much as hint at, he will find pourtrayed in many a novel.

He can be present, if he's so disposed, at many a goodly feast, partaking in imagination of viands without number, from the lordly *tai*, which forms the centre piece, to cuttle-fish, *awabi* or a slice of *sashimi*. Nor need he spare the liquor. He'll find the brand exactly to his palate, however difficult to please he may be. He has only got to think of it, and, lo! it's there upon his tongue; and if he finds his company a little dull and formal now and then, he can turn for distraction to the band of fair musicians who await his orders to thrum the *samisen* and twang the *koto* and beat the drum for his delectation the while.

Nor is this all; for he can peep into the kitchen beforehand and see how mistress cook prepares his dinner, and it will perhaps amuse him to cast a glance around, too, whilst he's about it, upon her pots and pans and quaintly shaped utensils, when her back is turned and she's busy with her fire. Or, if he soars above such trifles and is with martial ardour fired, he'll have no trouble in finding out a fencing school or tilting yard, and lingering there, if so it pleaseth him. Or if he feels at home in wars and riots, he can be spectator to frays and fights innumerable. He can there make acquaintance with the real ruler of the country in those "good old times," the arbiter of every quarrel, the avenger of every insult, and, alas! that it should be said, the ever ready agent of injustice, the fountain of dishonour as well as honour—the sword of old Japan.

In fine, he may mix in crowds or wander in solitude with the assistance of these pictures. He can be present at festivals and merry makings, death beds and funerals, and live for the time in scenes which have passed away for ever and left no trace behind them.

Many of these stories are constructed with considerable ability and give evidence, incidentally to the plot of the story, of a high amount of civilization existing in the times of which they treat. We learn from them, too, that the selfsame hopes and fears and jealousies directed the affairs of men in those remote periods as do so at the present day. We find, moreover, that for all her wretched social status, woman took no inconsiderable part in most of the events recorded. She was often a central figure on the stage, and was at the bottom of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

most troubles then as now. In fact, it becomes pretty evident that human nature has always been the same, presumably from the time when the serpent whispered a compliment into the ear of mother Eve.

The plot of a Japanese novel is generally a highly complicated one, and is overcrowded with events of a sensational order. Love, murder and suicide abound, and even the supernatural is pressed in to the service. Ghosts are indeed. But enough and to spare of introductions—nobody reads them now-a-days, they are as obsolete as prologues to a play—so we'll just make our bow, and merely premise, before the fiddles begin, that our little piece is a free translation of a single number of a sixteen volume novel. We claim your indulgence, good critic, as is usual in such cases, but we will own to disappointment if you damn our play, and fail to admit that some of those old novels must have been written by men acquainted with their trade, and that, ages before Tom Jones was dreamt of, or Peter Schæffer had cast his metal types.

Chapter I.

In the days when Yoshimitsu was Shôgun of Japan, there lived at Suwo a military noble of the name of Mekomadaiyo Munitsura. The world ran smoothly with Munitsura, for he owned a broad domain, had servants and retainers at command, and kept a decent state in a good old fashioned way within his castle walls. It adds little of interest to the story that the happy tenantry whom he ground and imprisoned at his pleasure were wont to avenge themselves upon his reputation, and aver amongst themselves that he had been a robber. When was it ever otherwise? Has a man ever succeeded in raising himself above the vulgar crowd that some ill-natured fellow was not certain to turn up, by dint of nods and winks and inuendoes to play havoc with his character? However that may be, is of little moment. Had it been remarked instead, however, that the gentleman in question was of a haughty and overbearing disposition and dissipated habits, there would have been much of truth in it. But what of that? Did not an imperious temper befit a nobleman, and were not irregularities to be expected of one who had nought to do and whose time hung heavy upon his hands in consequence? It might reasonably have been expected that a man so pleasantly circumstanced as our Hatamoto would be free from cares, for what more could any man require than wealth, station, a smiling crowd of courtiers who submitted with the most charming grace to mutilations and imprisonments, and, last and best of all, a lovely and accomplished wife? Ah! there was where the shoe pinched though, for all that. His consort was a barren tree, and he had never a child to inherit all his honours and emoluments. What wonder now that he was moody and ill-tempered, and grew worse and worse as time went on! To possess all the world and yet have one wish ungratified is more than human nature can stand without being ruffled. There seemed no help for it, however, so the pair, to cheer their loneliness, were at length constrained to adopt a child, as was then the custom of the country, and bring him up as if he were their own. Their choice fell upon a promising little fellow, a son of one Kawakara Mimbu, and to whom they gave the name of Nedzutarô.

As time rolled on and Nedzutarô's character began to be unfolded, he was found to be of so lively and pleasant a disposition, and clever withal beyond his years, that his adopted parents, instead of rejoicing that the venture had turned out so well, never ceased to lament the fact that he was not their own offspring. The Baron in particular, of a violent disposition originally—as has been hinted at above—became morose and ill-tempered beyond endurance, and from swearing horribly at trifles took to abusing his wife for her misfortune. To a woman of the sensitive nature of his Lady it could not fail to be a matter of continual grief that her Lord was so cast down and disappointed in this matter of a son and heir, and as the result of long brooding on the business and a series of cabinet councils with her special gossips, she made her mind up to consult Dairokuten,—a deity who was supposed, among his other duties, to take matters of so delicate a nature into his special consideration.

Having laid her sorrows and a contribution at his feet, she was informed by the God that, by the observance of a certain regimen and a strict attention to a penance prescribed by him, the darling wish of her heart might yet be accomplished. To that end she was to fast from fish, flesh, and fowl, for the space of twenty-one days, and, simultaneously with this abstinence, she was to pray nightly from midnight until dawn upon the roof ridge and standing on a straw mat of the coarsest description. (Peas in the shoes had not then been invented, possibly because shoes were as yet unknown.)

Hard terms these for my Lady. But when did resolution flag when spurred along by affection? Behold her then, poised upon the giddy eminence of the ridge tile, with eyes cast down and hands folded across her bosom in supplication, her garment rudely handled by the wanton night wind, her long black hair, unloosed, now floating round her, now rudely dashed across her lily face as a flying cloud is swept across the surface of the moon, and her delicate feet all bruised and bleeding by the uncompromising mat. And all this meekly borne with but one object—to please a husband. How sad if it had failed! But no! Dairokuten was as good as his word, and in due time she became the happy mother of a chubby boy.

Who so happy now as Mubatama, who so proud as her imperious spouse? There were grand doings at the castle to celebrate the event, feastings and entertainments innumerable and much rejoicing. (The wood-cut in the story book represents the father in the sacred limits of the nursery, attended by his sword-bearer and swelling with pride and joy, whilst superintending the attiring of the little stranger.)

The fond and foolish parents, in longing for the walking stage to come ere yet the precious infant had learned to crawl, and wishing for the time when he who had scarcely yet begun to cry would speak, had spent as yet four happy years, Midsunosuke, as he had been called, gradually finding his way so effectually into their hearts, as to dislodge from those narrow chambers, which had not room for both, his foster brother Nedzutarô, the sight of whom became daily more hateful to them, insomuch, that a desire to be well rid of him by degrees ingrossed all their thoughts.

Alas! that so it should have happened. But had it been otherwise this veracious history would never have been written.

(To be Continued.)

CONVENTION ENTERED INTO BETWEEN SIR THOMAS WADE, K.C.B., MINISTER PLENIPOTENTIARY AND ENVOY EXTRAORDINARY, AND LI HUNG-CHANG, IMPERIAL HIGH COMMISSIONER AND GRAND SECRETARY OF STATE FOR CHINA.

The following is a rough draft of the Chefoo Convention, signed by the two high contracting parties and now awaiting ratification at the hands of their respective Governments. It is divided into Three Principal Sections, as under:—

I.—*Respecting the Outrage committed in Yunnan.*

1.—An Imperial Edict to be published in the *Peking Gazette*, and a Proclamation issued throughout the entire Chinese Empire, setting forth the facts of the affair, subject to the directions and approval of the British Minister.

2.—Consular Officials to visit the various towns and public places to see that the said Imperial Proclamation is properly posted where all can see it.

3.—The family of the late Augustus Raymond Margary to receive an indemnity of Tls. 200,000.

4.—A further indemnity to be paid, covering the expenses of the Expedition under Colonel Browne, which met with failure and repulse.

5.—A Special Embassy to proceed to England, to present apologies, etc,

6.—All old claims of British subjects against the Chinese Government, hitherto in abeyance, to be settled satisfactorily without delay.

[The penal clauses, affecting the murderers of Mr. Margary, have not, as yet, transpired. Indeed their existence has been authoritatively denied.]

II.—*Respecting the Diplomatic Relations of the Two Countries.*

1.- The position and interests of the Diplomatic representatives in Peking and the Consular officials in the open ports, in relation to the Chinese authorities, to be reorganised and placed on a different footing.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

[It is believed that the Tsung-li Yamên is to be abolished, and a Seventh Board added to the Six Boards (or *Lu Pu*) already in existence, equal to them in rank, to transact the affairs of foreign nations.]

2.- The Supreme Court in Shanghai to be recognised by the Chinese authorities.

2.--The Mixed Court in Shanghai to be remodelled, and mixed cases to be dealt with upon a different footing from heretofore.

4.--Mixed Courts to be established in all the other open ports.

III.--*Respecting the Future of Foreign Commerce.*

1.--Four new ports, namely, Ichang, Wuhu, Wên-chow and Pakhoi, to be opened to foreign trade, besides six new landing-places on the river Yang-tsze.

2.--A system to be adopted of uniformity in transit-passes, for foreigners and Chinese alike, by which the arbitrary levying of *likin* duties will be avoided.

[The alterations in the present system of leviage on opium, embodied in this clause, which are of a somewhat extensive nature, are alluded to elsewhere.]

3. The question of *likin* taxation generally to be hereafter dealt with.

4.- The settlement of Shanghai to be enlarged, and its limits definitely fixed.

Exclusive of the above Clauses, and forming the subject of a separate compact altogether, an agreement has been arrived at respecting the residence of political representatives at Chunking in Szechuen and Ta li Fu in Yunnan, who, however, for diplomatic reasons, will occupy a footing different from that of Consuls. We are also able to state that the railway is likely to become the property of the Chinese Government, under Imperial guarantee that it shall be carried on under similar management to that of the China Merchants' Steam Navigation Co., and in due time extended to Soochow. *Celestial Empire.*

Law & Police

IN H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Thursday, October 5th, 1876.

A. MITCHELL *v.* BOURNE & Co.

This was a claim for $99, being duty on damaged tea bought at defendants' auction, stamped and ready for re-shipment.

Plaintiff appeared personally; Mr. Bourne appeared for the firm, but admitted no claim.

A. Mitchell, sworn:- On the 15th ultimo I attended an auction of damaged tea at Messrs. Bourne & Co.'s. The conditions of sale were posted up. I don't know if they were read, but Mr. Bourne distinctly stated before he sold the tea that it was to be sold as it stood. The duty had been paid and the Customs' mark was on the chests. From this I inferred that I should be able to ship the tea without paying duty again. Immediately they were sold I applied for the Custom House documents. Bourne & Co. referred me to Paul Heinemann & Co., who referred me back to Bourne & Co. Not receiving any satisfaction, and finding that the duty had been refunded by the Custom House, I brought this action against Bourne & Co. I may say that I offered to refer this case to arbitration so that it should not be brought into court, but this was refused.

To the Court:--There were 222 half chests of tea.

To defendant:--I believe that I knew the tea was damaged in the boats going off to the steamer. I am aware that goods are stamped before going off to a ship. I did not think of asking you if duty had been refunded to the shipper, because you said they were to be sold as they stood. I can prove that the duty had not been refunded till two days after the sale.

E. J. Goeghegan, sworn:- I attended the auction of tea at Bourne & Co's. I heard it stated that it was to be sold as it stood. I inferred that the duty would be an arrangement between the purchaser and the Customs, that is to say, if the tea were reshipped it would go duty free. I bid $3 for the tea. I did not take that into consideration.

Plaintiff had no written testimony to bring forward, but called

Ashiwara, a Customs official, who stated:--The duty on the tea which was sold by auction on the 4th ultimo was paid by the Customs to Paul Heinemann & Co. on the 18th. The application was made on the 15th, I think in the evening. The amount of duty was $279.95 on 630 half-chests of tea.

To defendant: I think there probably was a preliminary application made by P. Heinemann & Co. on the 14th ultimo. I was not the officer who received the letter from them on the 15th, so that I cannot be positive about the hour at which it was presented.

T. B. Moore, sworn, stated: I was present at the auction of tea on the 15th ultimo. It was sold as it stood.

To defendant: You said the tea was to be sold as it stood. It had the Customs' stamp on it.

W. Bourne, sworn, deposed: On the 15th September I had an auction of damaged teas on the hatoba, some three or four parcels in all, one of which was bought by plaintiff. The goods were sold as they stood on the hatoba. Had I been asked prior to the sale if the goods were to be sold duty free, I should have answered "no". Had they been sold as duty paid they would have fetched a higher price. I contend that it is the duty of an intending purchaser to make himself familiar with the conditions of sale. I contend that we are merely agents, and should not be held responsible in this matter.

To plaintiff: By saying that "it was to be sold as it stood," I meant with all its advantages as well as disadvantages. I knew that an application had been made for a return of the duty paid before the sale. Mr. Heinemann had told me so.

Plaintiff to Court: I have paid duty on the tea reshipped by me. The amount of duty on the goods bought is more than $99.

Mr. Moore, recalled: I do not know the exact amount of duty, I think about $70 were paid. The tea was refired and repacked before reshipment.

Paul Heinemann, sworn, examined by defendant: I remember the sale of tea on the hatoba on the 15th September. I did not hear you say anything about the duty having been paid. I think I heard you say "I sell them as they stand." I am certain that the application for refunding duty was made a day previous to the sale. The duty was actually repaid to me by the Custom House on the 15th because it is so entered in my books. I went round to your office on the afternoon after the sale and told you that I had made application for the duty.

To the Court: I told Mr. Bourne distinctly before the sale that the duty would be re-funded to the underwriters and not to the purchasers of the tea. We act as agents in this matter and gave Bourne & Co. a commission for selling the damaged tea. There were four lots in all. We bought one at $3.25 per chest. If I am not quite wrong Mr. Mitchell was present when we gave Mr. Bourne these instructions. Mr. Mitchell came to me after the sale asking about the duty documents for the teas he had bought. I said they had not been sold under that condition and referred him to Messrs. Bourne & Co. I received a note a day or two afterwards from them telling me that a claim was being put in against me. I said it was absurd.

To defendant. The different lots of tea were differently damaged.

To plaintiff: The tea is insured at home. I do not know in what office. We are the shippers of the tea and are the immediate agents for the underwriters, whose interests we must protect in every way. I thought you had paid too much for the damaged tea. The tea was certainly not insured in the China Traders' office.

To the Court: Our application to the Custom House on the 14th was distinctly for the refunding of duty.

Plaintiff stated he had gone to the Custom House immediately after the sale, and was told that application for refunding the duty had not been presented to them.

Defendant contended that there was no claim since the goods had been taken delivery of, and that they were not liable in the matter, but merely acted as agents for a principal. The tea was not sold under condition that the duty would be refunded to the purchasers.

Judgment to be given on Saturday morning, at 10 o'clock.

Saturday, October 7th, 1876.

Judgment in this case was to-day given in favour of defendants.

Friday, October 6th, 1876.

Thomas Allisso, was charged with refusal of duty on board the British ship *Mary Fraser*.

Israel James Dexter, master, stated:—Prisoner refused duty at 7 a.m. on the morning of the 5th instant so I put him in irons. I could not understand what he was saying because he spoke in broken English. I have not tried to ascertain what his reason was. He was one of the *Lennie* mutineers, and turned Queen's evidence. I heard this from the Shipping Master at Cardiff. He is the only Maltese on board. I know that he has tried to breed a disturbance amongst the sailors.

Prisoner stated:—When just one day out from Cardiff the first mate forced me to do the work of two men, and tried to make a quarrel with me. Afterwards he did the same thing. I want to

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

keep quiet but he won't let me. I like the captain and have nothing to say against him, but the first mate molests me greatly.

His Honour recommended the captain to discover prisoner's grievance and take him on board again, watching for the slightest sign of insubordination, in which event he must bring him up again.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. Van Buren, Consul-General.

Monday, October 2nd, 1876.

F. Thompson, F. Bartment, A. W. Lang, P. Sauvarien, A. Andrea, C. Tennnyson, R. B. Wright, A. Distenberg, C. Hagelberg and S. Sevenson, seamen, were charged with refusal of duty and insubordination on board the American ship *Imperial*.

His Honour addressing the accused said: I am sorry to see you brought before me on such a charge. I am accustomed to hear the complaints of sailors, and they are many, for a sailor's life is a hard life. But you are not here to make complaints; you are accused on a criminal charge of insubordination, punishable in the most severe manner. You have now a final chance of saving yourselves by returning quietly on board ship and to duty. Are any of you willing to go?

Sauvarien, said he was, and His Honour accordingly ordered him to be removed from the rest of his shipmates.

The accused were now asked what they had to say in answer to the charge and Wright, as spokesman, pleaded guilty.

A. W. Lang, sworn, stated: I shipped as seaman on board the *Imperial* at Cardiff. I did my duty in a proper manner, and have been treated by the officers in the same way. But I have to complain of the food. We got salt beef twice a-week, pork, hard bread, and pease-and-beans soup, changed one day to another. We were reduced to three quarts water a-day; afterwards to two and a half quarts. We had to catch rain water and drink it, whilst the cow was supplied from the tank. The hard words used by the captain and mates were abominable. They often knocked us down. When we arrived in port we had to work the boat from six to six, and afterwards to keep watch in the night. Then the mate shot into the forecastle, thereby putting us in danger of our lives. These are my reasons for refusing duty.

To the Court:—I did not complain to the captain. The mate knew all about it and should have told him.

To the Captain:—We had twice fresh meat on the voyage. We had flour twice a week. If we did not get duff we got soft bread. Gingerbread, which I call flour and molasses, was in the forecastle now and again; but I don't eat it. We had four quarts of water a-day. I don't know that the water served equally fore and aft.

Frederick Thompson, sworn:—I shipped as seaman at San Francisco. I did my duty as far as I can recollect. We have been treated very badly and called out of our names by the officers. We were reduced from three to two and a half quarts of water on the voyage from San Francisco to Liverpool. I stayed on board the ship at the captain's request whilst we lay in Liverpool. We afterwards went to Cardiff where the first and second mates were shipped. When we got to sea we were called aft and the captain asked whether we would be put upon the usual allowance or rather be fed as he liked. We said we would try his treatment. The water ran short and we had to catch the rain and fill the tanks with it. This water got bad and the captain told us not to give it to the cow. Then we were reduced to two and a half quarts a-day. We had been called out of our names very often by the officers. The first officer often threatened to knock us down. These were my reasons for refusing duty. My life was in danger.

To the Captain:—I never complained about the food on the voyage. I agreed to take what food you gave us.

Fred. Bartment sworn, deposed:—I have been badly treated. My life has been in danger on board that ship and that is my reason for refusing duty. I have been called out of my name, and have been short of water. Through the cow being on board I was short of water. The last night I was on board the captain said he would shoot every one of us. I don't know what for; it may have been for fun.

Richard B. Wright, sworn:—I have simply to state in my own behalf, that through the transactions which occurred on the 26th of last month my life was in danger. I fear trusting it again in the hands of officers who show such little regard when in the heat of passion, for the lives of those entrusted into their hands. These are my reasons for refusing duty.

His Honour now read over the above deposition and asked what witness meant.

Witness said he had spoken plainly and his life was not insured.

His Honour remarked that he was a prime specimen of a sailor orator, with enough learning to oil his tongue a little and to use big words. Hearing witness speak reminded him of the poet's caution,

"A little knowledge is a dangerous thing:
Drink deep, or taste not the Pierian spring."

He never heard such a silly complaint. That grown men should come into court and make such statements was simply ridiculous.

A. Andrea, sworn:—I shipped at Cardiff. When we got to sea the Captain asked us if we would have our provision according to the scales or let him give us full and plenty. One of the men answered for the whole "we prefer the full and plenty, and no waste." We had a gallon of water per day at first; then it was reduced to three quarts, and afterwards to two and three quarters. The captain had had plenty opportunity to fill in with water both before and after we reached Anjer. Three quarts of water are not sufficient for any one. Since we came to Yokohama I asked the captain for some money to buy a few articles I wanted. I received $4. I went on shore on Sunday forenoon and returned on Monday evening. I returned quietly on board and lay down. I was rather sick. When the men knocked off the captain sent for me aft. He asked me why I had not come on board in the morning in time for work. I told him I had been sick all day. The mate then interfered. I cannot remember what he said. I went to bed. About ten minutes to one in the morning the mate came on board drunk. As you say he was *rather* sick. The watch called me, saying the mate wanted me. I went on deck and met the 2nd mate. He asked me to take this watch. I said I intended to take my watch in turn. I then ran aft to keep my watch. He followed me, talking to and bothering me all the time. The men were talking on the poop and I told them to turn in or the captain would kick up a row. I have nothing to do with any plot or conspiracy on board the ship. I consider myself old enough to act for myself. I have sailed 25 years under the American flag and have had no such trouble as this before. After what has happened I cannot go on board again. The captain allowed the mate to use any amount of insolence with us and he carried a six-shooter always. I did not think it usual for officers to carry fire arms.

To the Captain: I cannot say how long we were kept on two quarts and a half of water. We did not suffer because the Almighty furnished us with rain. I say the rain was bountiful. You did not state anytime for me to return on board when liberty was given me on Sunday.

Charles Hagelburg now said he would like to go on board ship, so his Honour separated him from the rest.

S. Sevenson, sworn: I refused duty because of the conduct of the mate with Frenchy. Had this row not occured I should have stayed on board; but would want to be discharged.

His Honour said that he could not understand what they were there for. They had not made any complaint, except about the water, and that was not of sufficient importance to justify them in refusing duty. Not one of them ever complained to the captain about their food. It was very evident they had made up their minds to get free to go on shore and enjoy the luxuries of the place. There was evidently a conspiracy among them, and one or two who persuaded them to refuse duty.

The judgement of the Court is that you remain in jail till the ship sails. That you pay the costs of these proceedings, and the cost of keeping you in jail. If you refuse to go on board willingly at the right time you will be sent in irons.

Wright, now rose and asked liberty to speak a few words. He said his reason for refusing duty was because the Captain had threatened to shoot all the crew.

The Court said that this statement had been made before and was registered in the books.

Before General T. B. Van Buren, Consul-General.
and
N. J. Stone } *Assessors.*
F. H. Olmsted }

Tuesday, 3rd October, 1876.

Charles Wright, a marine, was charged with having stolen from Thomas MacGuire, on Sunday the 3rd ultimo at No. 136, a cloth coat worth $15, a hat, a necktie and $6.10 in cash.

Prisoner pleaded not guilty.

Thomas MacGuire, sworn, deposed: I am a seaman out of employment at present. I live at No. 136, Victoria Street. I know the prisoner. On Sunday evening, the 3rd September, between three and five o'clock, prisoner was standing in the middle of the street. I was in a row with the quarter-master of the *Golden Age*. Prisoner had had two drinks with me at the bar before this. When he saw the row commence he walked into the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

dining room and took my coat and hat from the table on which my clothes were lying. I saw him go out of the door with the coat on his back. I did not call out to him; I had too much drink in me. I did not see him till he returned on board his ship, the *Kearsarge*. I saw him on board there the day before she sailed on her last trip. I asked him to pay for the clothes and have no more trouble about it. He offered to pay for the coat. The value of the coat was $15. It was of blue cloth and had not been worn before the day on which I came on shore. There were five Mexican dollars in the inner pocket and a half dollar American money besides some Japanese small change; in all amounting to $6.10.

Prisoner had no questions to ask this witness.

R. F. Littlefield, sworn: I am bar-tender at the *Welcome Tiew*, No. 136. I saw prisoner on Sunday the 3rd for the first time. I know MacGuire. I was present at the time of the theft. At the time the clothes were taken the house was full of sailors and a fight commenced in the bar-room. MacGuire and a quarter master from the *Golden Age* went to the back yard to fight it out. Whilst they were at it, prisoner came in and walked off with MacGuire's coat and hat. I saw him carry them away.

To prisoner: MacGuire did not give you his clothes to hold before he began to fight. You gave me the quarter-master's boots, and I took them.

Prisoner stated he had one witness to bring forward, Robert Brady, a marine on board the *Kearsarge*.

The Court then adjourned till this morning at 10 o'clock, when prisoner's witness will be able to appear.

Wednesday, October 4th, 1876.

Resumed from yesterday.

Robert Brady, sworn, deposed: I am a marine on board the *Kearsarge*. I know the prisoner. I was at No. 136 at the time of the row. I saw MacGuire give prisoner his coat to hold before he began to fight. Prisoner tore the coat somehow whilst holding it. He then asked me to take a run through the town with him. We went to the Yoshiwara where a row got up between a *Tennessee* man and another. This man lost his coat in the fight and asked prisoner for the one he was carrying. Prisoner said he could not give it him because it was not his own. He at last told the man that he could have it if he would be sure to give it to MacGuire. Prisoner then gave it on these conditions. That is all.

To the Court: I was standing in the bar when MacGuire gave prisoner the coat to hold. I suppose there were a dozen men in the house at the time. I had met the man with whom MacGuire was fighting the night before. There was a good deal of loud talking and swearing going on. I was sitting looking on when the fight commenced. I don't know what the other man did with his coat. When prisoner took the coat and put it on, it (the coat) was out in the yard. I do not know how it came there. I saw him put it on in the yard about half an hour after the row. I do not know, and will swear that I do not know, that the quarter-master took off his coat and shirt and gave them to the prisoner and that MacGuire threw his clothes on the floor. Prisoner had his own coat on, so that when he put MacGuire's on he had two coats on his back. Prisoner did not spend money in the street after we left the grog-shop. Neither of us spent any money. I do not know the name of the *Tennessee* man. MacGuire was somewhere in the house when prisoner put the coat on. My impression was that prisoner put it on so that the police could not recognise him as a sailor they were looking for. He had his own hat on. I have not seen the coat since.

To MacGuire:—I cannot say when the row commenced. There were several other of my shipmates in the house at the time. It is not true that I was not in the house at the time of the row and had not been there since ten that morning. I did not see Thomas Dunn knock your head against the wall. I did not see the row.

Michael O'Malley, sworn, deposed:—On the evening of the 3rd September I went to the Yoshiwara with Mr. Eldridge, the chief mate of the *Cashmere*. While there a row sprang up between some English sailors and Mr. Eldridge. Eldridge and I ran out and were chased down the street. I was quicker than Eldridge and got ahead of him. The sailors tore his coat off his back. Eldridge was taken to the police station. I was told that the other men had been arrested. I went to the station and saw them and Mr. Eldridge. Mr. Eldridge was telling the police that he did not wish to get his name in the papers and wanted to go. Eldridge was talking to prisoner who had a coat on. We then went out and had a drink of beer. Then Eldridge said he was ashamed to go on board ship in such a mess. Wright proposed that I should lend my coat, and he (Wright) would lend me the one he had on. I lent Mr. Eldridge my coat and took the one Wright gave me. I took the coat to MacGuire in the morning, but he disclaimed it. I did not see Wright the next day. (A coat and hat produced.) That is the coat Wright gave me. That is, a black coat and pretty well worn. I did not see prisoner afterwards about the coat.

MacGuire had no questions to ask witness.

To prisoner, who denied having given witness the coat now produced: That is the coat you lent me that night. I know it, and what is more I know that you sold MacGuire's coat to Hatzu and that Hatzu has it now on his back.

Hatzu, the proprietor of the *Railway House*, was sent for, and in the meanwhile prisoner was asked to make his statement.

Prisoner, sworn, stated: I was at No. 136 drinking with MacGuire when he went out have a fight with a quarter-master from the *Golden Age*. They both came into the bar-room and MacGuire handed me his coat, hat and neck-tie. I put the hat, and necktie on the bar, and held the coat on my arm. Then the fight commenced. Afterwards MacGuire and the quarter-master came to the bar and we had a drink. MacGuire told me to keep the coat till he called for it. I waited for over an hour. At last I turned to and put on the coat, proposing to Brady to have a run. Just before going out I asked MacGuire for the loan of a dollar. He said he had not a cent in this world. Brady heard him make that statement. I went out with the coat on and Brady and I got into *jinrikishas* and went to the Yoshiwara. We met last witness and a sailor in a house with some Japanese police. They had been in a row just before. I asked Michael what was the matter? Eldridge asked me to run up to Anderson's at No. 26, and till him to come for he was in a mess at the police station. I went and returned with Anderson. Then all four of us went to No. 26. Eldridge asked me for a coat, and this marine, Brady, offered him his, when I promised to give him, Brady, one of mine. I said I would run down to Johny White's and get another. Mike promised to give the coat to MacGuire. I heard nothing more of it till MacGuire came or board the ship cursing and swearing and asking me for his coat, or he would have me locked up. I offered to pay for the coat but denied having stolen anything from it. The day I was brought to the jail MacGuire sent me word saying that if I would give him $12 he would say nothing more about it, as he wanted to get away with his ship. I have no more to say.

To the Court: That is not the coat I gave Mike. The one I gave him was new and as heavy again as that. I never saw that one before.

Brady, recalled, to Court: I cannot swear to this coat. I do not know if it is the one belonging to MacGuire.

Nimoto Tokichi, alias Hatzu, warned: I am not certain that I have seen prisoner before. There are so many people coming into my place. I would not buy anything from such a man as prisoner. I have not bought such a thing as a coat anytime last month. I have not a blue coat in my possession. I am quite willing to have my place searched.

MacGuire, recalled: That is not my coat. I was told that my coat had been disposed of at the *Railway House*. I went down there, and saw Mr. Hatzu with it on his back. I examined it carefully and recognised it by the sleeve-lining. I told him it belonged to me. He said had bought it. I did not give prisoner my coat to hold. It is a false statement. I am sure that the money was in my coat for the bar-tender had given me the change just before.

By the Court, to prisoner: Are you willing to pay for those things? There is no doubt that you took them.

Prisoner answered that he was willing to pay for the coat, but he had not taken the other things. Indeed, MacGuire had no money to be stolen.

The Court held a different opinion, and gave the following

JUDGMENT.

The Court finds you guilty of petty larceny. You are sentenced to remain in prison for three months, and to pay the value of those things you have stolen. Should your vessel leave the port before the expiration of that term, you will be delivered over, with a report of your offence.

If you do not pay this money, you will remain in prison for 90 days longer.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General,
and
C. D. HARMAN, G. HURLBUT, } *Assessors.*

TÔKIÔ *Fu, v.* J. M. BATCHELDER.

This was an action to recover ground rent for certain lots of land in Tsukidji, to the amount of *yen* 3,500.80.

Defendant denied indebtedness for this or any sum whatever; but admitted having leased Lots 1, 2, 21 and 22, Tsukidji, from the Japanese Government under certain conditions, which, however, had not been fulfilled, to defendant's great loss. He therefore prayed that judgment might be given against the Japanese Government for damages to the amount of $10,000, and further moved that the Court should order securities to be filed in Court by plaintiffs, so that should judgment be given against them the money should be forthcoming.

The Court could not find anything in the Regulations which provided that security should be given for more than costs; on the contrary it is stated that these Courts should be open to the Japanese for prosecuting their claims. Therefore the motion was refused.

Defendant then asked that the original map of the Foreign Concession in Tôkiô, and a copy of the Land Regulations defining the boundaries and condition of sale of such lots, be produced by plaintiffs.

Plaintiffs were unable to produce these documents, and the Court ordered that they should be brought forward at the next meeting.

Defendant asked that plaintiffs should now prove their case, but the Court replied that in the matter of the lease it had already been admitted on the part of defendant that such had been made.

Defendant applied that the Court be adjourned till the 12th instant, when the documents required should be produced, to which the Court assented.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before P. F. KEMPERMANN, Esq., Acting Consul.
Assessors,—Messrs. PELTZER and HAGENS.
Friday, 6th October, 1876.
Gustav Spiess & Co. *v.* Gustav Schmidt.

Mr. Grunwald represented the plaintiff, and Mr. Montague Kirkwood the defendant. This was a claim by the firm of Gustav Spiess & Co. of London for the payment to them of the sum of £482.18.4 on a balance of account forwarded to the defendant in January last, and also by the firm of Gustav Spiess & Co. of Leipzic for the payment to them of the sum of Marks 2,439.55, on a balance of account also forwarded to the defendant in January last.

The defence raised by Mr. Kirkwood in his answer was, that the power of attorney filed in Court, was only a power of attorney authorizing Mr. Grunwald to sue for the Leipzic firm and not one giving him any authority to sue for the London firm, because the firm of Gustav Spiess & Co. in London was subject to English law, and that law required that a firm should sue in the names of its partners and not in the name of the firm; and for the very good reason that there was no registration of firms in England as in Germany, and that as a firm must sue in the names of its several partners, a power of attorney authorising any one to sue for it must be given in the names of the partners and not in the name of the firm. That the defendant had always regarded these firms as separate in his dealings with them. That he had received a letter, dated January 4th, from the London firm, which was confirmed by subsequent letters, informing him that that firm had assigned £180 of the balance alleged to be due to it to one Carl Mumm of Leipzig. (Letters produced). That he had also received letters from the Leipzig firm informing him that they had ceded marks 2,400 of the balance alleged to be due to them to the said Carl Mumm. That he had received a letter dated January 21st from the London firm, informing him of the insolvent position of that firm, and of the Leipzic firm, and that since that date he had had no information as to what steps had been taken with respect to creditors, etc. That Mr. Grunwald had made many false statements to the defendant with respect to these matters, and that the defendant had, for all these reasons, refused to recognize Mr. Grunwald as acting for these firms; that the accounts rendered him by the said firms he did not admit as correct and never has admitted as correct, and that he required them to be proved. That the firm in London had still goods of his, consigned to them for sale, in their hands not yet accounted for, and that he was ready and willing to pay what (if anything), on closing accounts, might be found due from him.

Mr. Grunwald, in his replication, stated that Gustav Spiess was a partner of the London firm, but that this Court had nothing to do with English law. It was true that the cessions of £180 and marks 2,400 had been made to Carl Mumm, but that these cessions had been cancelled, and that in any case he held sufficient authority to act for Carl Mumm, and therefore asked that he be joined as co-plaintiff and that the *juramentum calumniæ* be proffered to the defendant.

Mr. Kirkwood in his rejoinder repeated what he had stated in his answer with reference to the power of Mr. Grunwald to sue for the London firm, and supported his argument as to the *lex loci* and not the *lex fori* governing, by reference to Savigny (vol. VIII) Puchta, Story and Phillimore. He also stated that the plaintiff's attorney was aware at the time he commenced the suit of the cessions to Carl Mumm, that these had not been cancelled, that the letters the plaintiffs' attorney had received from Carl Mumm only authorized him to receive monies for him, but did not give him power to sue, and that his authority was not in such form as the law requires. That the Court should not take his promise to produce a proper authority within a fixed time, as the only case in which the Court was allowed by law so to do was were there existed only some small and unimportant error in a power otherwise in due form, and of the intention of which there could be no doubt. That there were no grounds whatever for administering the *juramentum calumniæ*, such oath only being demanded when there is on the evidence a *primâ facie* proof of *chicane*, and that if *chicane* existed it was the plaintiff's attorney's. That the demand of the plaintiff's attorney to have Carl Mumm joined as a party was ridiculous, as his interests were opposed to those of the firm, and that under the circumstances the claims (if any) of the London firm, Leipzic firm, and of Carl Mumm, should be brought in three suits and not in one.

After further argument on both sides His Honour delivered judgment to the following effect.

That Mr. Grunwald has no power to act for the London firm of Spiess & Co.

That Mr. Grunwald has no power to act for Carl Mumm.

That since marks 2,400 of the balance of account of marks 2,439.55 due to the Leipzic firm has been ceded to Carl Mumm, there are only marks 39.55 due to the Leipzic firm from the defendant.

That the defendant therefore pay to the plaintiff's, i.e. the Leipzic firm of Gustav Spiess & Co., marks 39.55, and that the plaintiffs pay two-thirds of the costs and the defendant one-third.

OUR RELATIONS WITH TURKEY.

(Pall Mall Gazette.)

Mr. Disraeli's career in the House of Commons was closed by a speech in his best manner on the relation of the British Government to the Ottoman Empire, and on the imputed responsibility of England for the atrocities of the Turks in Bulgaria. It was necessary to meet the motion of Mr. Ashley with energy and directness, for public opinion has been too much imposed upon and agitated by passionate or interested sentimentalisms, and there has been for some time a real danger that popular feeling, stimulated by the hideous details of slaughter and outrage on which Sir William Harcourt expatiated last week, may precipitate some act of national rashness that no Ministry could resist or guide. The speech of the Prime Minister ought to clear up the confusion into which the public mind has been thrown by those whose interest or pleasure it is fish in troubled waters. It must be seen that we have to make a choice between the extravagant indulgence of sympathy and the maintenance of a policy any departure from which the country, in its after-mood of sobriety, would be sure to disapprove. We do not say, and Mr. Disraeli does not say, that our sympathies are misdirected, but that they should not be allowed wholly to overmaster the judgment and carry our actions away helplessly captive. It is true that many of the statements by which the public feeling has been excited are either without foundation or are grossly exaggerated. Thus Mr. Forster and Sir William Harcourt, responsible statesmen both and competitors not long ago for the Liberal leadership, repeated last week some of the most mischievous of these appeals to popular sentiment. They reiterated the assertions of a newspaper correspondent "which (as the Prime Minister said) spoke of 32,000 persons slain, 10,000 in prison, 1,000 girls sold in open market, forty burned alive in a stable, and cartloads of human heads paraded through the streets of the cities of Bulgaria." But each of these statements

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

has been shown, as Mr. Disraeli pointed out, to be specifically untrue. The forty girls were not burned in the stable; the 1,000 girls were not sold in open market. The number of prisoners was almost certainly less than one third of that stated by this correspondent. As for the number of the slain, Mr. Baring computes it to be 12,000—a frightful sacrifice of human life, no doubt, but hardly more than one-third of that originally alleged to have been perpetrated by the ruthless fury of the Turks. This horrible destruction might surely have been deplored in adequate language without the amazing hyperbole of Sir William Harcourt, who spoke of it as the "depopulation" of a province which contains 3,700,000 inhabitants. As well might it be said that London was depopulated by the last epidemic of cholera. When such excesses of rhetoric are deliberately used, not by irresponsible journalists, but by leaders of the Opposition, it is time to ask whether the propagation of popular illusions is not among the gravest of political offences. If Mr. Disraeli had in truth been chargeable with speaking too lightly of the atrocities in Bulgaria, his error would still have been venial in comparison with that of which the leaders of the Opposition have been guilty. As for Mr. Ashley, his indiscretions may be passed over as sufficiently punished by Mr. Disraeli's rebuke. The member for Poole does not seem as yet sufficiently familiar with Parliamentary usages to understand that the public conduct of a Ministry ought not to be impeached and the character of an absent servant of the Crown assailed in a motion on the third reading of the Appropriation Bill.

We trust, however, that most candid persons will acknowledge the propriety of Mr. Disraeli's declarations. They were not wanting in adequate expressions of the disgust and abhorrence which all civilized men must feel at even the mitigated and attenuated history of the atrocious scenes in Bulgaria. But Mr. Disraeli would be unfit to have a principal part in directing the public action of this country if he did not feel that it was necessary, supremely necessary when public feeling has been excited by artificial stimulation, to place policy before sentiment. This is what Sir William Harcourt and the critics of the *Times* and others who intoxicate themselves with draughts of their own rhetoric refuse to do. They thrust sentiment into the foremost place in their thoughts and arguments, and leave policy to take care of itself. But statesmen responsible for the government of a vast Empire like ours cannot indulge in this reckless luxury of uncontrolled emotion. It was very easy for Sir William Harcourt with magnificent vagueness to "counsel" the Government, as Mr. Disraeli says, to enter into an immediate engagement with Russia for the complete expulsion of the Turks from Eastern Europe. We trust that the country has sufficient manliness and sobriety of judgment left to reject so monstrous a proposition, if it should ever be advocated, not in loose rhetorical appeals, but under political responsibilities. We believe, rather, that Mr. Disraeli has touched the strongest chords that vibrate in the English character when he says in words worthy of his best days of oratorical triumphs:—"Those who suppose that England ever would uphold, or at this moment particularly is upholding, Turkey from blind superstition and from a want of sympathy with the highest aspirations of humanity are deceived. What is our duty at this critical moment is to maintain the Empire of England; nor will we ever consent to any step—although it may obtain comparative quiet and a false prosperity—which could hazard the existence of that Empire." If the country distrusts the methods by which the Ministry have been labouring to fulfil this duty, the remedy is easy, but it must be remembered that those who speak with authority from the front Opposition bench do not recognize this duty as paramount. Sir William Harcourt and Mr. Forster seem to desire that we should avenge civilization on the Bashi-Bazouks and Circassians by tearing down the remaining fabric of Turkish empire, and this without the least conception of what ought to be, or may with safety and advantage be, erected in its place.

At a meeting of the Liverpool Chamber of Commerce last week it was resolved, in consequence of the serious inconveniences arising from the fall in the value of silver, to memorialize the Government to convene an international conference on the subject. It was pointed out that India suffered from the depreciation, and merchants dealing with countries having a silver standard were incommoded by the fluctuations; and it was suggested by some members that equilibrium might be restored by our having both a silver and gold standard. It was urged, on the other hand, that it would be inopportune for Government to interfere, as silver was simply subject to natural economic laws, and if the fall was due to their operation, Government interference could not give it a fixed value.—*Pall Mall Gazette.*

THE DIFFERENT EFFECT ON TRADE OF A CHEAPENING OF THE PRECIOUS METALS, AND OF A DEPRECIATION OF INCONVERTIBLE PAPER.

(The Economist.)

We showed last week that neither the depreciation of an inconvertible paper nor the appreciation of an artificially limited coin, produces as a rule any effect on trade. What an English exporter to America gains on the one hand, in the additional price for his goods, consequent on the depreciation of greenbacks, he loses on the other, by the additional price which he has to pay for gold, or a bill payable in gold, which he requires to bring that price to England. Greenbacks are of no use here, and their depreciation upon an average, though by no means always in every particular case, effects the prices equally of all things. It is a local depreciation, beginning in a particular country, affecting alike all the property and products of that country, but affecting nothing out of it.

But it is necessary to distinguish this most carefully from a depreciation of the precious metals caused by a large new supply. That new supply is a new exportable product sent from the country of its origin through the world, and thus affects more or less, in proportion to its magnitude, the world's trade.

Suppose, for simplicity, that silver were the *only* precious metal in the world—that all nations used it as money, and that none of them used gold in that way at all—the process of depreciation by such new supplies as are expected from Nevada, would be this: prices in Nevada, and in the rest of the United States would rise; in consequence, imports into the United States would tend to increase, exports from them would tend to decrease, and so an unfavourable balance of trade, as the phrase is, being created, silver would be exported; it would be the best way in which America could pay for her imports, and she would so pay for them. On the other hand, the country from which those imports came—suppose it was India—would receive that silver, and in proportion as it received more and more, its prices would be more and more raised. What happened, in consequence of the new silver, in the country of its origin, will again happen in the country of its first receipt. Imports into that country will be stimulated, exports from it checked, an unfavourable balance of trade created, and silver will be sent to the countries which it has to pay. Then, in their turn, these countries—the countries of second receipt as we may call them—will undergo all the same changes. The depreciation of a depreciated paper is a stationary depreciation, fixed in the country which makes the paper; but that of a precious metal is a *travelling* depreciation, which passes slowly over the civilized world, altering trade everywhere, creating a new article of export, first from one country and then another, and, in consequence, generating a new trade of export to pay for it in the country which receives it.

The *modus operandi* of this process is much affected in the usual state of the world by there being two precious metals used as money—gold and silver—and also by gold being in many ways the principal of the two; but though the detail is changed, the principle is the same. In a country which uses gold only as a standard currency, silver is a commodity having its price only in gold, just as silk or cotton; that price goes up and down in the same way, and is quoted in the same way. And London is the principal centre of the wholesale commerce, and especially of the new wholesale commerce of the world. We buy more readily than any other of equal enterprise; and, therefore, all great business requiring new capital on a sudden comes here. Accordingly, the new silver for the most part goes not straight to India and the East where it is a money, but to England, where it is a common article, and we send it over the world and to the nations where it is a money. But this is only a change in the *route* of the depreciation. It interposes a sort of house of call; it does not change the essence of the matter.

No doubt the first effect has been to advertise and make far more obvious than it would otherwise have been, the depreciation of silver. If silver had been our money, as gold is, we should scarcely have been as yet conscious of its being depreciated. A few millions more silver (from Germany or elsewhere) would have eased the money market, and have tended to raise prices. And we should have had to pay for that silver just as we pay for the gold which *does* come. But this process would have been very gradual—probably, as yet, nearly unfelt. The ready demand for silver currency in England would have much maintained its value here. You could not have depreciated it much without increasing its quantity—both the quantity in the Bank and the quantity in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

out-of-door circulation—very largely. But as silver is not a money (except as a token)—not a money regulating prices; not a money which more and more is wanted as the value falls more and more—there has been no new English demand of equal or comparable size. Some more silver may, in consequence of the cheapness, have been taken for the arts,—but this is all. The actual supply from Germany, and the apprehended supply from America have come to a market which other circumstances had made bare of demand. They generated no new demand, and in consequence, there is a great fall in the value of silver in England. The travelling depreciation has come, and has been intensified, as has been shown.

This sudden fall in the value of silver in England, has caused a corresponding alteration in the exchange with the countries whose money is silver. As is well known, between two countries which use the same metal for money, there is a natural and fixed par of exchange. A certain weight of that metal of a certain fineness, in the currency of one of these countries, will always exchange for an equal weight of like quality in the currency of the other. But between two countries, one which employs gold and the other silver, there is no such natural par. The relation between the two currencies depends on the amount of the one metal which will exchange for a given amount of the other. When, as now, that amount much varies in England, there is an immediate change in the relation of the English gold currency to foreign silver currencies, because the amount of gold which it would take here to buy any given amount of silver, to export it and coin it into those silver currencies, varies.

And this is the process by which the depreciation travels on another step. Silver being cheaper here, more of it will be bought and sent to the countries where silver is money. But its value there against commodities will not fall as suddenly as it has here. We see that it would not, if silver had been the only metal used as money in the world. And the countries where it is used, are, within their own boundaries, in the same position. The more silver falls in purchasing power, the more of it will be wanted to purchase commodities, and the demand for it, therefore, will increase incessantly where the supply is augmented. The silver prices of commodities will be slowly raised everywhere where silver is money, and a great deal of it will be required in the process, and the course of trade will be changed. The silver countries must find exports to pay for this new article, silver, which is coming in upon them.

We must, therefore, carefully distinguish two things which are often confounded in discussing this subject. First we must see that a depreciation of a metal used as money, whether silver or gold, is utterly different in its effects from those of a depreciation of currency of paper, for it creates an international trade, and that of paper a local one only.

Secondly, we must see that the depreciation of silver in London, where it is only a commodity, is a wholly different thing from its depreciation in countries where it is a money. The first, as we have seen, is very rapid, but the second is very slow indeed. And the second will counteract the effect of the first, as it is now daily doing, and will tend to raise the value of silver in London—in the *entrepôt*—where the market is so sensitive, by distributing it over vast regions where much more will be wanted if the value falls comparatively but a little.

Thirdly, we must observe that this process is not at all bad for the trade of England. No doubt the fall in the rate of exchange is a disadvantage to shippers to the countries where money is silver. But then another class of exporters will be benefitted, for we import that silver, and have to pay for it. The loss on the one hand will be counterbalanced by a gain on the other.

THE POLITICAL RESULTS OF MR. DISRAELI'S TRANSLATION.

(Pall Mall Gazette.)

Mr. Disraeli's retirement to the House of Lords, and its probable consequences, immediate and remote, are discussed with increasing animation. The motives of his choice—for it is an English peculiarity that a man like Mr. Disraeli may choose whether he will be an earl or not—appear generally to be inferred almost entirely from personal considerations; but, while it is not easy to doubt that he was swayed by such considerations in a great measure, we are inclined to think that they were allowed to operate only because of good political and party reasons. The character of public men, the main stress of their fancies, sentiments, convictions, is always doubtful matter. The plainest of plain dealers—the most candid, the least mysterious of statesmen—have their minds and motives very differently construed; and Mr. Disraeli happens not to be of that order of our kind. To call him a "mystery man" is not all flippancy. He has been fifty years before the world; he has been observed and studied by two whole generations; and it is felt to this day that he alone can reveal what he is, stript to the natural man. To settle the surprise of the earldom, people go back to "Vivian Grey" and then on to "Lothair," and in forming their conclusions seem as often to interpret the books by the earldom as the earldom by the books. Characteristics of race, of breeding, of association, are called in to substantiate certain inferences from Mr. Disraeli's "fashionable novels" which, before we heard of the peerage, were not thought to be safe inferences; and it is now pretty generally decided for the first time that there was no satire, and nothing but a real Oriental awe of rank and splendour, in his extravagances about grand titles and vast wealth. It may be so; and Mr. Disraeli, as he gets within range of the woolsack, may know all the joy that Moses missed when he died in sight of the Promised Land. But, for our own part, we do not feel sure of it. Should ever that autobiography be printed which it is almost his duty to write, and should it there appear that Mr. Disraeli gloried in his peerage after his grandiose novelist fashion, we shall have to admit that our own guess at his character was at fault. So far as we can observe, few men of his day know so well the relish of a proud humility; and if he sees about dukes and earls a glory invisible to common British eyes, what does that mean? It means that he has more active historic perceptions and a more ardent historic fancy than other people; and therefore that he is not likely to lose himself in the dream that the Earl of Beaconsfield, who can play no long part and who must die childless, is a grander figure than the Mr. Disraeli of fifty years' growth in greatness. We cannot but think it would have suited his temper at least as well, as certainly it would have better harmonized with the tenor of his career, if he had chosen to die plain Mr. Disraeli—ranking nominally with "the late Mr. Pitt."

And if we are right in this conjecture, we are all the more justified in speculating upon his motives in passing to the House of Lords; for thus those motives appear to spring as much from public as from private considerations. Certainly some very good reasons of that kind may be adduced. In the first place, a wearied Prime Minister of seventy-two should avoid the work and worry of "leading" the House of Commons if he thinks himself worthy of preservation for the good of his country and his party. But this cannot always be done without sacrificing the interests of party at any rate. Not so in the present case. Mr. Disraeli can leave the House of Commons without much immediate damage to the interests of his party in that Chamber, and probably with much ultimate good to it. Who knows? It may be that Mr. Disraeli, conscious that before many years are past a new Tory chief must reign in the House of Commons, aware that more than one of his comrades may fairly claim the place, apprehensive that jealousies might arise when his own great authority was no longer present to regulate or appease them—finally, mindful of the fact that no one who can be chosen to lead the House of Commons after him has yet acquired any distinctive mastery of debate—it may be, we say, that reasons like these have determined the Prime Minister to pass through the House of Peers to Westminster Abbey. They are good reasons assuredly, and such as may particularly operate upon the mind of a man willing to complete his great revenge upon the party which never wholly liked and never fully trusted him. He has led them well; by the help of Mr. Gladstone he has established them in prosperity; and now he is doing that which will enable him to leave them at last with a greater measure of comfort and security. Unless he wills it otherwise, or unless he is overtaken by some great blunder, it is fairly certain that the chief of the Tory party will die Prime Minister of England. Looking to the limits of his own career, he need not trouble himself about anything his political opponents can do either within the walls of Parliament or on the stump; nor need he fear any change in the temper of the constituencies which would make his presence in the Commons' House very desirable. How, then, can he more worthily close his life as a great party leader, than in preparing for the time that must come after him—in helping to raise up new leaders, in guiding and supporting them from without by unrivalled parliamentary skill and by an authority unquestioned? For, as we have said, there is not one of his colleagues who has not yet to learn the arts of leadership. They may have all the necessary faculties, but faculties alone do not make the complete political general. For that experience is needed, the cultivation of fact as a kind of sword exercise, and frequent practice, not of the sort that we see in forensic playgrounds, but in the face of danger and under the menace of penalties for failure. These con-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ditions are not fulfilled by issuing a writ of appointment to the post of leader. We believe Mr. Disraeli's choice of a successor in the House of Commons not only to be the best before him but one that promises thoroughly well. In all ranks and conditions of men, look hopefully on him who from a stock always sound and well-rooted makes sudden, strong, and rapid growth after forty. Such a man is Sir Stafford Northcote; who till within the last three years wanted opportunity a little, but simple self-assertion more, to reveal the statesmanlike stuff of which he was originally composed. Now he will have plenty of opportunity; he will be compelled to a fair degree of self-assertion—though that, perhaps, he has by this time at sufficient command; and if further he can show invention as well as judgment, audacity as well as discretion, we may expect from him a high career. But we shall venture to say that Sir Stafford's chances of success (meaning also the welfare of his party and of parliamentary government) would not with all these advantages have been so well assured if he had taken up the leadership with his own leader in heaven instead of in the House of Lords. *It* would have been more embarrassed; *he* would have been more embarrassed; and he would have lacked what, with all sincere respect to him, he needs for a while;—the advice of an old parliamentary tactician and the support of an authority the like of which is nowhere else to be found on his own side of politics. And thus Mr. Disraeli serves his party, as well as the friend and comrade in whom he most confides. To some of us the promise of such a result will not be particularly grateful. We are not all Tories, nor all anxious for a long continuance of Tory government. But we are now viewing the matter not as partizans but as observers of parties; and, no matter what our political bias may be, we all understand that the efficiency of Parliament would not be enhanced by *both* parties falling into confusion. However, it is not easy to work out in a newspaper article all the considerations suggested by this view of Mr. Disraeli's translation.

One adverse circumstance occurs to us, regarding the matter as a question of party prospects, and that, too, we can only hint at now. It is commonly believed that Mr. Disraeli is anxious to devote himself to foreign politics. There is another general belief (it may equally unfounded) that foreign politics are not particularly safe with him. It is thought by men of all political creeds that they are safer with Lord Derby. Now if the first-named of these beliefs turns out to be a true one; if the leisure of a peerage is employed by the Tory chief as here suggested; and if Lord Beaconsfield shows any aptitude for stepping out before Lord Derby in the field of "foreign affairs," then those other beliefs will operate not to the advantage of the Government; and so far the elevation of Mr. Disraeli will fail in usefulness to his party. However, we have no right to assume anything of the kind at present.

ARRIVALS.

Oct. 1, *Sunda*, British steamer, Lee, 1,704, from Hongkong, Sept. 23, Mails and General, to P. & O. Co.

Oct. 1, *Serpent*, British barque, Abel, 258, from Nagasaki, Sept. 16, Coal, to P. M. S. S. Co.

Oct. 3, *Mary Fraser*, British ship, Dexter, 1174, from Cardiff, May 19, Coal, to P. & O. Co.

Oct. 3, H. M.'s gun-boat, *Thistle*, Captain Pugh, from Nagasaki viâ Inland Sea and Kobe.

Oct. 5, *Genkai Maru*, Japanese steamer, Connor, 1,917, from Kobe, Oct. 2, General, to M. B. Co.

Oct 5, *Nagoya Maru*, Japanese steamer, Young, 1,914, from Shanghai and ports, Oct. 3, Mails and General, to M. B. Co.

DEPARTURES.

Oct. 1, *Tori*, British schooner, Williams, 55, for Guam, Ballast, despatched by Captain.

Oct 1, *Wallace*, British steamer, Brand, 1,270, for Kobe, General, despatched by Jardine, Matheson & Co.

Oct. 2, *Hiogo Maru*, Japanese steamer, Vroom, 896, for Kobe, Mails and General, despatched by M. B. Co.

Oct. 2, *Sumida Maru*, Japanese steamer, Gorlach, 860, for Hakodate, Mails and General, despatched by M. B. Co.

Oct. 2, *Korio Maru*, Japanese steamer, Drummond, 600, for Yokkaichi, Mails and General, despatched by M. B. Co.

Oct. 3, *Malacca*, British steamer, Edmond, 1,709, for Hongkong, Mails and General, despatched by P. & O. Co.

Oct. 4, *Hiroshima Maru*, Japanese steamer, Furber, 1,870, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Oct. 4, *Taihei Maru*, Japanese steamer, Hubenet, 500, for Kobe, Mails and General, despatched by M. B. Co.

Oct. 5th, *Meiji Maru*, Japanese steamer, Peters, for Kamaishi, Stores, despatched by Lighthouse Department.

PASSENGERS.

Per Steamship *Sunda*, from Hongkong.—Mr. and Mrs. Gould, and W. C. Kymusleef in the cabin, and 4 on deck.

Per Steamship *Sumida Maru* for Hakodate.—Mr. J. Albensen.

Per Steamship *Malacca* for Hongkong.—Bishop Burdon, Mrs. Burdon, Captain Seymour, Messrs. Pearson, T. Walker, J. E. Cooper, T. Jackson, Howlden, and 7 in the steerage.

Per Steamship *Hiroshima Maru* for Shanghai and ports.—Count de Monale, Jas. Ashbury, Esq., M.P., The Hon. Mr. and Mrs. Mounsey, Mr. and Mrs. Simpson, infant and European maid, Revd. Mr. and Mrs. Oblinger, Captain and Mrs. MacQueen, Miss Harshburger, Mr. and Mrs. Woolley and two children, Messrs. Levy, Strome, Jordan, Robertson, Maertens, Endicott, E. C. Kirby, Dr. Coles and 21 Japanese in the steerage.

Per Steamship *Nagoya Maru*, from Shanghai and ports.—Paymaster Carmody, U.S.N., Lieut. R. W. White, R.N., Lieut. Groves, U.S.N., Mr. and Mrs. Newcomb, Captain Shannon, Messrs. C. E. Endicott, N. P. Kingdon, T. L. Brower, De la Bastide, G. Prince, J. H. Curtis, J. H. Walsh, Leadbitter, Knoop, Pole, Hartmann, and 22 Japanese in the cabin, 295 in the steerage.

CARGO.

Per Steamship *Malacca* for Hongkong.—

Silk to London	... 264 bales.
France	... 109 „
Total... ...	... 373 bales.

Per Steamship *Hiroshima Maru* for Shanghai and ports.—

„	... *yen* 4,000

Per Steamship *Nagoya Maru*, from Shanghai.

Treasure	... $10,804
„	... *Yen* 1,000

REPORTS.

The H. M's ship *Modeste* returned to the anchorage yesterday, from a cruise down the Bay for practice.

The *Serpent* reports strong gales throughout the passage, on the 18th an unusually severe one.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, Henry Allpass.—To the Proprietors of Norton's Camomile Pills."

September 2, 1876. 26ins.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—We have again to report that a considerable business has been done for the past week, and in most instances prices show a further advance. In *Yarns* and *Shirtings* large transactions to arrive were reported. Other cotton articles have likewise shared in the general improvement, and especially *Velvets* are in good demand at higher rates.

Grey Shirtings:—					
7 lbs.	38½ yds.	39 in.	per pce.	$1.65	to $2.10
8 lbs.	38½ yds.	44 in.	„	2.00	to 2.60
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„	2.00	to 2.60
9 lbs.	38½ „	44 in.	„	2.75	to 2.95
T. Cloth 7lbs.	24 „	32 in.	„	1.50	to 1.75
„ 6lbs.	24 „	32 in.	„	1.17½	to 1.27½

White Shirtings:—					
60 to 64 reed	40 yds.	36 in.	per pce.	2.20	to 2.40
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb	0.70	to 0.90
Black Velvets				8.25	to 9.50
English Drills	15 lbs.	40 yds,	30 in.	2.65	to 2.85
Taffachelass	12 yds,	43 in.		*nom.* 2.00	to 2.40

Yarns.—

No. 16 to 24	per picul	$31.00	to 35.00		
No. 28 to 32	per picul	$31.00	to 39.50		
No. 38 to 42	per picul	$39.00	to 41.50		
Reverse Twist 16-24	„	$34.00			

Woollens.—The past week has been a very active one, and transactions in this staple have been on a rather large scale. The general tone of the market continues very healthy and firm. Plain *Mousselines de Laine* have further advanced, and have been largely disposed of at prices from 20 to 21½ cents according to quality and assortment. Printed goods are also much higher and are much enquired for at quotations. Bradford goods have also advanced, and *Black Plain Orleans, Italian Cloth, Figured Orleans* and *Shimagoro* have found buyers at improved rates. The demand for *Cloth* is likewise more lively, and we hear of transactions in *Black Presidents* at 83 cents, and *Unions* at 80 cents.

Plain Orleans	40—42 yds.	32 in.	5.00	to	8.00
Figured Orleans	29—30 yds.	31 in.	4.25	to	6.00
Shimagoro	30 yds.	30 in.	4.25	to	6.25
Italian Cloth	—30 yds.	32 in.	0.27	to	0.36½
Camlet Cords	29—30 yds.	32 in.	5.75	to	7.00
Camlets Asstd.	56—58 yds.	31 in.	16.50	to	17.50
Lastings, Japan	22—30 yds.	32 in.	12.00	to	13.00
Plain Mousseline de Laine	—30 yds.	30 in.	0.19½	to	0.21

Figured Mousseline de Laine	30 yds.	30 in.	0.27	to	0.35
Multicolored „	30 yds.	30 in.	0.35	to	0.45
Cloth, all wool plain or fancy	48 in. to 52 in.		0.80	to	1.20
Presidents	54 in. to 56 in.		0.75	to	0.85
Pilots	54 in. to 56 in.		0.45	to	0.60
Union	54 in. to 56 in.		0.60	to	0.82
Blankets, scarlet & green 7 to 8 lbs.	per lb		0.40	to	0.45

Sugar.—We have still to advise an improvement in quotations, though business has been limited.

Sugar:—Takao in bag	per picul	$3.70	China No. 4 Kook-fah	per picul	$5.35
„ in basket	„	$3.55	„ No. 5 Kong-fun	„	$4.70
Taiwanfoo in bag	„	$3.60	„ No. 6 E-pak	„	$3.80
do. in basket	„	$3.45	Swatow	„	$2.95
China No 1 Ping-fah	„	$7.60	Daitong	„	$3.00
„ No. 2 Ching-pak	„	$6.70	Japan Rice		$2.30 to $2.35
„ No. 3 Ke-pak	„	$6.05	Kerosene Oil		$3.50

Kerosene Oil.—The market is firmer, and dealers offer $3.50 for small parcels.

EXPORTS.

Silk.—Owing to the causes adverted to in our last, transactions during the past week have been small. Prices have decidedly been easier, and persistent rumours of impending political difficulties in Europe further contribute to depress the market.

Since the 22nd ultimo settlements are about 600 bales of Hanks and 300 of Oshiu sorts.

The arrivals since the beginning of the season are now fully 17,000 bales. If we consider that total settlements for export do not exceed 14,600 bales, and estimate at 500 bales the silk sold for native consumption, we must conclude that, visible or not, the unsold stock is not far from 2,000 bales.

Silk-worms' Eggs.—Total arrivals are 514,000 cards. No transactions.

		At Exchange 4/ in London.	*At Exchange 5.05 at 6 m.s. in Lyons.*
Hanks.—Extra to No. 1	$1,110 to 1,150	38/7 to 39/10	107 to 110
„ Best No. 1 & 2	$1,080 to 1,110	37/7 to 38/3	104 to 116
„ Good No. 2	$1,060 to 1,070	36/11 to 37/3	102 to 103
„ Medium No. 2½	$1,020 to 1,050	35/6 to 36/7	98 to 101
„ C'mon. No. 3	$ 990 to 1010	34/6 to 35/2	96 to 97
„ Inferior No 4 & 5			

		At Exchange 4/ in London.	*At Exchange 5.05 at 6 m.s. in Lyons.*
Oshiu—Best to Extra	$1,100 to 1,150	38/3 to 39/10	106 to 110
Medium to Good	$1,000 to 1,050	34/10 to 36/7	96 to 101
Hamatski.—No. 1 & 2	$ 830 to 850	29/1 to 29/10	81 to 83
„ No. 3 & 4	—	—	—
Kakeda.—Extra	$1,270	43/10	122

Tea.—Business continues to be very restricted, purchasing being principally confined to a few lots of fine goods. Prices are unchanged, and country merchants seem inclined to send their Teas in more freely than they have done recently.

Common		$10.00	to 15.00		
Good Common		16.00	to 18.00		
Medium		19.00	to 21.00		
Good Medium		22.00	to 24.00		
Fine		$28.00	to 32.00		
Finest		35.00	to 40.00		
Choice		Nominal, very scarce.			

EXCHANGE AND BULLION.

Sterling rates have fluctuated almost daily during the past week, according as the demand for Bank Bills or Private Paper predominated.

Rates close as follows:—

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 42.] YOKOHAMA, SATURDAY, OCTOBER 14, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Opposition being for the present withdrawn, the Mitsu Bishi Company have, not unnaturally nor unreasonably, taken advantage of the fact to announce that from the 1st of November next they will raise the rates of freight and passage money by their steamers to Shanghai and way ports.

A first class passage to Shanghai will then cost $45—an amount at which the travelling public cannot fairly grumble, considering that the trip extends over a period of eight days—and a first class ticket to Kobe will cost $15, an abatement of 5 per cent. being made on return tickets. The present low rates cannot properly remunerate the Company, and it is possible that the comfort of passengers suffers in consequence, so that the moderate advance in rates now made may benefit those travelling by causing increased attention to be paid to their requirements. The advance in the rates of freight is as reasonable as that of the passage money.

The entries for the Autumn Meeting of the Yokohama Race Club closed on Tuesday last, and we may congratulate the members on having so many ponies entered for the various events. In view of the fact that another Racing Association has been formed, which takes away from the old Club several who were important supporters of their former race meetings, it is rather surprising that the Club's programme should have been so well filled, the entries falling but little short of the total of those of last spring.

A full house assembled at the Gaiety Theatre on Friday evening to do honour to the opening of the season. The Amateurs had struck a high key-note, and all were anxious to know whether they could keep up to the pitch. The play of *Plot and Passion*—usually associated with the name of Mr. Tom Taylor, though it is generally understood that there was a Fletcher to his Beaumont—was selected for the occasion, and the choice spoke well both for the courage and taste of the manager and his confidence in the corps. It were useless to sketch the plot of a play so well known to the majority of playgoers of this generation. But a tribute to its merit, however, unworthy of the work, may perhaps be pardoned. It is constructed with rare skill, the interest of the spectator is excited from the very opening of the piece, is fully sustained during its progress, and rises towards the conclusion so as to excite emotions of a very high order. It abounds with striking situations not one of which is forced or extravagant. They all arise naturally out of the antecedent circumstances which give rise to them, they succeed each other in what might be termed an orderly progression, capable of being anticipated yet striking when reached, and they all bring out with great force and in fine contrast the prominent features of the characters engaged in them. In the scene, for instance, which presents to us de Neuville playing at *écarté* with the Abbé (Fouché disguised), nothing can be more admirable than the manner in which th noble young enthusiast, as incapable of calumny as of suppressing what he knows to be true, is lured on to avow the authorship of the pamphlets directed against the very man with whom he is playing, and is only prevented, by having his attention sharply drawn to the game, from unintentionally ruining Desmarets, who furnished him with the materials used for the purpose of making Fouché infamous throughout Europe by painting him in his true colours. Very admirable, too, is the scene in which Madame de Fontanges protests against the odious errand on which she is ordered to Prague by Fouché. Base as is the part she has been compelled to act owing to the hold which Fouché has established over her by her passion for play, our sympathies are never wholly alienated from her, and are powerfully excited in her favour by the protest she makes against being used as an instrument of treachery to lure the young legitimist. The terrible conflict in her breast between a compliance which makes her life and occupations more than ever odious, in spite of all the fascination which play affords her, and the dread that society will learn of her connection with the Bureau of Police, is full of human and dramatic interest and closes the first act with admirable effect. In the opening the second act we find her at Prague, passionately beloved by de Neuville, herself yet unmoved, however, by his devotion. For a few moments our sympathies, hitherto in her favour, in spite of all, are in terrible danger. Either Miss Herbert failed in infusing into her running comments on de Neuville's letter those emotions which the dramatist intended they should embody, or the nobler part of her nature had been too much demoralized to permit of her feeling all the sorrow, which, as a woman, she ought to have felt for one so noble and generous, lured to his destruction by her means and through so pure a passion. We are inclined to think Miss Herbert was at fault here, for the author shows great skill in his work. She moved too easily in her horrid and hated task. There should, it appears to us, have been more instinctive irrepressible aversion to it, and more regret—if, indeed, she had not yet learned to love de Neuville—in her discharge of it. Nor should it be forgotten that, within a very short time, when compelled to leave Prague secretly and suddenly, she writes to him to avow her own passion. Under these circumstances, surely some greater intimation of its existence, even if only in a latent form, should have been given while reading his letter. If we are not much mistaken, this scene requires a fresh reading. It cannot be right that she should lose her hold of us entirely, even for a short time, otherwise the impression would be produced that de Neuville had lavished his passion on an unworthy object. An object of pity she must be, and though pity may be akin to love, it must not be evoked by conduct which excites displeasure, still less indignation or aversion. De Neuville's character is the very ideal of truthfulness, nobility, bravery, modesty and generosity. We are from the first not greatly pleased that his love should have fallen where it did—though, of course, he was unaware of the circumstances of Madame de Fontanges' life—and are in no

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

humour to be too lenient towards one who certainly used all her fascinations to gain his love, without any intention of returning it. If so noble a passion is to end in tragedy, the spectator must bear it as best he may. But if in union, he must be guarded against the reflection that it has been expended on one incapable of truly returning it, or appreciating it at its priceless value.

The scene in which the intrigue is exposed to de Neuville which brought him within Fouché's reach, and convicts Madame de Fontanges of the treachery forced upon her by his unpitying will, is among the finest we know of on the modern stage. In the midst of all de Neuville's agony at the thought that he had been deceived by her whom he loved so well, in a paroxysm of grief which rent his whole nature, all his thought is for her, not for himself—anguish that the being he thought so pure and so worthy of all his devotion, should prove to be below the idea of her which his own mind had formed, and which he had endued with all the nobility of his own nature.—The curtain drops on the discovery of Fouché's treachery and his consequent disgrace, and consigns him to Vincennes—as it should.

To all the reflections which suggest themselves regarding the times in which the plot is laid, and the machinery Fouché kept at work in furtherance of the designs of the greatest genius and greatest scoundrel—possibly the former, certainly the latter, which, if any man doubt, let him read Lanfrey—the world has ever seen, we must turn a deaf ear. Such men as Desmarets and Fouché were his necessary and worthy tools, and it is not uninstructive to learn from the play of yesterday evening that each was plotting against the other during the whole of their intercourse. "We are never so liable to be deceived," says La Rochefoucauld, "as when we think we are deceiving others."

And now a few words regarding the Amateurs themselves. Mr. Newcome looked and played well. He still wants weight for a character like that of Fouché. Some of his words were of iron, but the manner of their delivery was not enough so. Still, he did extremely well, though his utterance is frequentlo too rapid. Mr. Spurgeon as *Desmarets*—a very fine part—was as good as ever. But he hardly looked villain enough. Of course we are not objecting to his black velvet and Valenciennes lace—though, by the way, the dresses were a sartorial anachronism all the way round, being those of Louis the Fifteenth or better Sixteenth, and not those of the Empire—there are doubtless plenty of villains in black velvet and Valenciennes. But though he had a sinister look, and a heavy kind of walk which was extremely clever and effective, he is not so good in vice as in virtue. His Lavater has spoilt us for him in any other character. But, of course, he was admirable and quite unapproachable, and it is really quite annoying to have to praise him so much and so often. He must beware of the fate of Aristides. As to Mr. Vernon as the *Marquis de Cevennes*, it is difficult to know what to say. He was, as he always is, very humorous, but the humorous part of the affair was that he should have been cast for a French marquis, and an exquisite of the former court. It is no reproach to Mr. Vernon to say that though he made us all laugh, he was as little like a French marqnis as a man could well be. What we wanted was an exquisite who was extremely ridiculous without being at all aware of it. But Mr. Vernon was only too well aware that he had to make people laugh by some other means, and he employed them accordingly. But it was not the part of the *Marquis de Cevennes*. Mr. V. seems to us so humorous that we are entirely convinced that if he were smothering Desdemona, we should all roar at some irresistible thump he would give to the pillow, or he would sit on her head and turn round to the audience looking quite unconscious of the fact that severe tragedy hardly permitted such liberties. He must not, however, think all this blame. He is invaluable as a member of the corps; but, as a French marquis—well, as Costard says of Nathaniel, "you see how it is, *a little over-parted*"!

Mr. Fredericks as *de Neuville* looked very well indeed—the powdered hair and well-touched eyebrows suiting him admirably. He will play the part—one of the most winning and noble we have ever seen—with greater ease on the second performance, though he acted very well last night. His voice is strangely sympathetic, and accorded well with the tenderness, sincerity and generous sentiments he was called on to express. Mr. Coventry as *Jabot*, and Mr. Rewerb as the lugubrious and taciturn *Karl*, were quite unexceptionable. On Miss Ella Herbert as *Madame de Fontanges*, a great deal of the burden of the play fell and she supported it admirably. She looked wonderfully well, and threw herself into some of the great scenes in which she takes the chief part, with much emotion and effect. In view of the immense difficulties she encountered, her performance was a great success, and every new part she assumes brings with it the evidence of improvement. Miss Sprightly as *Cecile* must beware of getting into one settled manner for all characters and all occasions. She trips about as merrily and pouts as naturally when her mistress is half heart-broken as she did as "Queen of the Cocky-olly birds." A little more sympathy, if you please, Miss Sprightly.

The orchestra under Mr. Wagner is a most admirable revival, but wants one, or better two, violas, (very difficult things to find) and a contrabasso. Even a bassoon would do good service—the *'celli* were not strong enough. The overtures played were good music, and, with the exception of a little trouble in the first part of the *allegro* in the *Zauberflöte*, went very fairly.

The whole performance was a great and most legitimate success and does the Amateurs high credit.

One word to the scene-painter. We are sorry to say the picture of the scene overlooking Prague is sadly unlike reality. The "blue hills," are indeed spoken of in the play, but they are a long way off, and the picture should have given the rising ground on the right bank of the Elbe (ascending), with the Hradschin covering all the higher portion of it. The river ought to be three times the width, with a beautiful island just at the spot on which the eye lights under the sitting-room window. The monument to St. John Nepomuc should stand on the centre of the bridge.

From the "Japan Mail Daily Advertiser."

Monday, 9th.

The *City of Peking* is reported to have made her last passage from here to San Francisco in 15 days 12 hours.

The O. & O. steamer *Gaelic* arrived from San Francisco yesterday, but again brought no mail, so that we are indebted to a private source for the telegraphic news which we are enabled to lay before our readers. The *Gaelic* will be despatched for Hongkong at noon to-day.

From the *Akébono Shimbun.*

Two English instructors of Agriculture will arrive in Japan about the middle of next month, having been engaged by the Bureau of Agriculture.

From the *Chôya Shimbun.*

The drill ground of the Toyama Gakko (Military School) in Tôkiô is to be greatly enlarged.

From the *Nichi Nichi Shimbun.*

H. E. Mons. Struve, the Russian Minister, was honoured by an interview with His Majesty the Mikado at the Imperial palace on the 10th instant, in order to present a letter from his Government.

On the same day Count Von Montz, in command of the German man-of-war *Vineta*, was presented to His Majesty.

From the same.

It is said that ex-*Sadaijin* Shimadzu Saburo, and ex-*Sangi* Saigo Kichinosuke arrived at the capital lately, their object being to request permission of the Government to purchase the domains of the former *daimios* of Satsuma, Ôsumi and Hiuga.

From the *Hôchi Shimbun.*

Mr. Otowa, the editor of the *Aichi Shimbun*, was fined 15 *yen* on the 3rd instant for violating the Laws of Libel, by pub-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

lishing a communication from a correspondent in No. 57 of that paper.

From the same.

Mr. Enomoto, the Japanese Minister at St. Petersburg, has presented to His Majesty the Mikado twelve Siberian fox-skins, sewn together and forming a carriage rug.

From the same.

We hear that the additional clauses to the treaty, and the Commercial Regulations which Mr. Miyamoto has recently negotiated with the Corean Government, will soon be notified to the public.

From the same.

Mr. Hayashi, an official of the *Naimusho*, who had been ordered to remain at Loochoo for three years on Government service, returned very unexpectedly to the capital on the 4th instant, the reason of his doing so being as yet unknown.

From the same.

A newspaper called the *Sakai Shimbun* is about to be started at Sakai in the province of Idzumi, and the *Kinkô Shimbun* is also announced for publication at Akasaka, Tôkiô.

The P. & O. steamer *Khira*, with English Mails on board to 4th September, left Singapore on the 30th ultimo, so that the arrival of the *Bombay* with the Yokohama portion of this Mail, may be looked for on Sunday next, the 15th instant.

Tuesday, 10*th*.

The late rise in the Silk market has necessitated an extension of the tables of comparative cost lately in use. Those by E.P. have been thus supplemented and are now in print, and form an indispensable assistant to the merchant and silk-inspector. They range from $350 to $1500, at from 3.6 to 4.10, and frs. 4.45 to 6.09, exchange.

From the *Hôchi Shimbun*.

NOTIFICATION No. 111.

All cases concerning foreigners were hitherto dealt with at the Branch Office of the Tôkiô *Fu*, Akashi-chô, Tzukiji, but after the 9th instant they will be heard at the Chief Office of the Tôkiô *Fu*.

KUSUMOTO MASATAKA,
Vice-Governor of Tôkiô Fu.

October 7th, 1876.

From the same.

It was intended that His Majesty the Mikado would be present at the grand parade of troops at Narashino-hara, in the province of Shimôsa, on the 16th instant, but His Majesty being unable to attend personally will send a representative.

From the same.

Mr. Ôkubo, the acting editor of the *Chôya Shimbun*, was summoned to the *Saibansho* to answer for a communication from a correspondent published in No. 919 of its issue on the 7th instant, and has since been placed in charge of the ward authorities.

From the same.

It is rumoured that special permission has been granted to the *shidzoku* of Kagoshima *ken* to sell or purchase the Government bonds that are to be issued in lieu of the pensions of *shidzoku*.

From the same.

It is expected that all newspapers will be ordered to report to Government particulars of their circulation.

From the *Nichi Nichi Shimbun*.

On the 30th ultimo great changes were made in the rules for the management of the Navy Department.

From the *Osaka Nippô*.

Mr Godai's present indigo factory is to be pulled down and more commodious buildings, occupying a large area, erected in their stead, in which machinery driven by steam will be used throughout.

From the same.

Shimadzu, the *daimio* of Satzuma, had up to recent date some 300 *kerai* (retainers) in his employ, but he has now reduced the number to 100, and those relieved from their duties have received as a present 30,000 *yen*, to be distributed amongst them in recognition of their faithful services.

Wednesday, 11*th*.

From the *Hôchi Shimbun*.

A person who recently returned from Corea informs us that he found good specimens of coal while on his way from Kokwa to the capital, which burned well, and therefore infers that coal must be abundant in Corea, though apparently the Coreans are ignorant of the use of it.

From the *Akébono Shimbun*.

Some Loochooan students are to be admitted into the Government Agricultural School at Tôkiô.

From the same.

The term of employment of the Chinese in the Bureau of Agriculture has expired, but their engagement has been renewed and they will remain where they are for another year.

From the *Nichi Nichi Shimbun*.

The Tôkiô *Fu* has selcted some 120 residents to assess the values of different lots of land in Tôkiô.

From the same.

Three Chinese were brought before the Tôkiô *Saibansho* yesterday, but the charge against them is as yet unknown.

From the same.

His Majesty the Mikado takes horse exercise every day when the weather is favourable.

From the *Chôya Shimbun*.

It has been settled that Her Majesty the Empress Dowager will start for Kiôto on the 10th of November.

From the same.

Mr. Suyehiro, the editor of the *Chôya Shimbun*, after serving his term of eight months' imprisonment, resumed his post in this office on the 9th instant.

Thursday, 12*th*.

From the *Hôchi Shimbun*.

Some forty of the lower officials of the Mining Department received their *congé* on the 9th instant.

From the same.

On the 4th of November, being the anniversary of the battle fought in Oshu during the late revolutionary war, a service in commemoration of that event will take place at Shôkonsha, in Kudan, Tôkiô.

From the same.

News has reached Marseilles from Morocco of fresh disturbances in that country. The Ghitam tribe having refused to furnish a military contingent, the Emperor marched against them, but, being surprised at night by an ambuscade, he is said to have suffered serious losses and to have narrowly escaped being taken prisoner himself. The Imperial army returning in force to the scene of this disaster is said to have devastated the country, and the women and children taken prisoners were sold as slaves.—*Pall Mall Gazette.*

THE CURRENCY.

IV.

IF we have been fortunate enough to find any attentive readers of our three previous articles on this subject, they will all in probabability have noted several points on which we have not yet touched, and several objections to which we have not yet replied. We purpose on the present occasion to deal with these, or such as have suggested themselves to us, and at the same time to reply to the only serious attempt which has been made to traverse the position we have taken up.

One of the first points which suggests itself is this:—How do we know that a reserve of 25,000,000 *yen* will be sufficient to meet *a double drain, coincident in point of time?* That is to say:

1.—A drain for export to liquidate an adverse balance of trade.

2.—A drain for internal use originating in a possible loss of confidence in the Government paper, or in other causes.

It is not enough that the country should be safe in the event of either one of these contingencies occurring alone. It must be safe even though both should occur together.

It must be observed at the outset that the effect of such drains, although identical as regards the *metallic reserve*, are essentially different as regards the *currency*. When a drain for internal purposes takes place, no change occurs in the volume of the currency. So many coins take the place of so much paper—that is all. But when a drain for export sets in, it is clear that by exactly the amount of coin exported is the volume of the currency decreased. Now the tendency of a decrease in the volume of the currency will be to check a drain. The longer such drain goes on, the less likely is it to continue, in consequence of the increasing diminution in the volume of the currency. It must be borne in mind that the relations between the commodities and the money of any country depend upon the quantities of both. In other words, the prices of commodities depend upon the quantity of money circulating. This quantity of money, therefore, can neither be increased nor diminished without altering the relations which exist between money and commodities, unless, of course, the commodities themselves are increased or diminished to the same extent. Given, an increase of money, but no increase of commodities, and prices rise, *i.e.*, money becomes less valuable: given, a decrease of money, but no decrease of commodities, and prices fall, *i.e.*, money is more valuable. It is obvious, therefore, that the rise in prices which takes place under an inflated currency and leads to an export of gold, has its converse in the fall of prices which follows a contraction of the currency and attracts the gold back again. It may, therefore, be predicted with entire certainty that under a convertible paper system no drain could go on very long, and it is most important to remember that a currency founded on this sole sound basis, becomes self-regulating, calling in the gold when the economical conditions demand it, and parting with it when nothing but benefit results from the outflow. Nothing resembling the drain we have seen during the past six years could possibly occur, even supposing there were gold enough in the country to permit the repetition of it. This drain was the immediate and inevitable result of the issue of an inconvertible currency necessitated by a state exigency of the first order, and we can only be too thankful that the injury it did to the country has been confined to the very reparable one of the extrusion of its gold. Had the Revolution lasted two years longer, nothing could have prevented the fearful misery which attends the wholesale depreciation of an inconvertible currency; whereas the contraction of the total currency of the Empire caused by the outflow of the gold, has served to keep the paper, generally speaking, at par.

Another point here worthy of remark is, that any legislation which would have the effect of encouraging the home manufactures, without resorting to a system of protection by tariffs—an expedient which no wise economist would for a moment suggest in the present state of the world's knowledge on this subject—specially deserves attention. The distress existing in this country is very much greater than is generally imagined. In former times the castles of the *daimios*, scattered here and there throughout the country, were centres of distribution from which flowed in all directions small streams of wealth which brought employment, remuneration and content to the surrounding inhabitants. The wheel or shuttle of the manufacturer was busily employed in furnishing materials which were consumed in the little local court maintained by my lord and lady. The smith, the joiner, the mason, the carpenter, the tailor and sandal-maker, the silk-weaver or maker of brocades, and the many tradesmen of all occupations whose labour once found a market at the castle, or among the host of retainers quartered near it, now find but scanty occupation and poor recompense. The productions of many of them have been superseded by foreign goods, the excessive importation of which has been stimulated by this very currency which is itself the sign and measure of much human misery. The contraction of the currency will do something to revive the industry and restore the prosperity of these people, by discouraging excessive importations of foreign manufactures, and thus bringing back the gold with which the country has been compelled to part. We can be satisfied with no commercial relations between this country and ourselves which do not bring to it as great a measure of advantage as it yields us. Do not let us flatter ourselves that the Japanese are collectively the happier for our presence here, or that we are absolved from the duty of pointing out remedies for the distresses it has produced. Granting that the time had come when foreign intercourse could no longer be avoided; granting that the isolation which preceded it conduced to a false and wholly artificial civilization, the inherent weakness of which was proved by its fall when brought into contact with our own; granting, too, that the country, if wisely and economically governed during the next ten years, will be restored to its former content, besides being endowed with a thousand new blessings, for which, in its old condition, it could never have hoped;—granting these things, we say, it is still certain that its future will be more or less prosperous, and its vitality, power and accumulated wealth increased or diminished, as its commercial legislation is based upon more or less sound economical principles.

The second kind of drain from the Treasury which we might have to face, and most certainly to fear, is that arising from the presentation of an uncertain proportion of the paper for exchange into specie. Now, the paper currency of a country is of two kinds, active and passive. The active portion is that which is demanded for the ordinary every-day operations of its commerce and trade. The passive part is that which is retained by individuals for reasons either of frugality, parsimony, apprehension of the future, or the love of hoarding for its own sake. There is abundant reason, however, for believing that the active portion of the currency here bears a very large ratio to the passive portion. For

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

some years we have seen the currency floating at, or about par; and we have lately seen it rise to an extraordinary premium—not, indeed, perhaps, over the whole country, but certainly over the most commercially active portion of it. To suppose or fear that there is danger of any serious quantity of the paper demanded by the business of the country being brought to the Treasury to be exchanged for specie, is to believe that men will put themselves to serious trouble and expense for no advantage and to no purpose whatever. It is not in human nature to do this here or elsewhere; and we may rely that if there is a return to specie payments, the time fixed for which permits of that gradual strengthening of the confidence of the people in the promise and solvency of the Government which the interval would naturally produce, the quantity of paper so brought to the Treasury, or Branch National Bank, or whatever the centre of distribution may be, will be extremely small.

In regard to the passive portion, we ought to be prepared for its being considerable, as all ignorant and frugal people are incurable hoarders. Yet, while so prepared, we need not greatly fear a heavy drain on this account, for the reason that, as stated in one of our previous articles, gold, silver and paper float currently to our certain knowledge, at precisely equal values in one of the great provinces and may fairly be presumed to do so elsewhere. Why should men who can now get gold or silver for their hoarded notes, by merely presenting them over an exchange counter, and yet who do not do so, form an altogether new resolution on the subject when the danger of disappontment, far from being increased, is greatly diminished. There can be little reason to fear that they will do this.

There is still one point which must be forcibly impressed on the Japanese Government in case it undertakes, after ample deliberation, the change we advocate. In our third article on this subject, we stated, among the necessary conditions of the measure, that the future unit of currency "should be produced in quantities large enough for the purposes of the foreign trade." But we want more than this. There should be as little delay as the nature of circumstances admits, in the conversion into this currency of all bar silver or Mexican dollars imported for that purpose. And here the example of the American Government in regard to the Trade Dollars, may well be followed. The Government made such arrangements that any applicant for a quantity of this coin is supplied with it, out of a large stock kept for the purpose, directly his own bar silver is assayed and valued. He has not to wait until the silver he tenders is converted into the coin he requires, but the coin is handed to him the moment the Mint is satisfied that he has given the equivalent of what he demands. There are no practical difficulties in such a course, and it is certain that, unless adopted by the Japanese Government, abundant discontent would arise out of the relations between the Mint and the public.

There is still one reason worth a few words, and worth a great deal more thought, why the FINANCE MINISTER should never be satisfied until he has carried the great point we have urged on the Government, *i. e.* a return to specie payments. So long as we have an inconvertible currency, the reserve of bullion in the Treasury affords a a perpetual temptation to other Ministers who are the Heads of Departments, to draw upon it for the service of their branches of the administration. The Minister of War, of the Navy, or Public Works, or Public Instruction knows there is a large sum of money lying practically idle, and thinks it very hard that a slice of it cannot be spared for some very desirable improvements in his own department. The Minister of Marine refuses to accept all his responsibilities unless a couple of iron-clads are added to the Navy, the War Minister cannot do without several batteries of Krupp guns, the Public Works without some costly building out of all relation to the actual needs of the occasion, and so on. The FINANCE MINISTER may be ever so stern, but he cannot always withstand these applications, which will be made so long as there is a fund presumably disposable for such purposes. All this temptation should be taken away, and if any Department wants money, it should be given from the revenue, or refused because the revenue will not permit of the appropriation.

Finally, we think it well to warn all sanguine currency reformers, or those who, agreeing with us, hope that everything will come right if this one great reform is only carried, that it is foolish and idle to hope more from it than it legitimately promises to yield. You cannot make a man rich by merely showing him how to manage his money; you cannot increase the wealth of a state by simply adjusting its paper and metallic issues. The change to a convertible currency in Japan will not bring to every young lady's feet a handsome young nobleman with a large estate. It will not cover the country at once with roads and railways. It will not increase the revenue or diminish the expenditure —at all events by direct means. It will work no miracles, and human life will present much the same aspect as it now presents. But it will give greater certainty to the transactions of every-day life; it will impart a new confidence to men in making contracts extending over lengthed periods of time; it will incite to new enterprise, and vivify declining enterprise; it will act to the home and foreign trade as governor and fly-wheel do to the steam-engine, regulating the amount of force at work and the application of that force.

We now pass on to consider the objections to our proposals made by a writer in the *Hiogo News*, who, though, as we think and hope to show, quite in the wrong, has still approached a serious subject seriously, and need not be greatly reproached for a little harmless dogmatism. But before he says that such and such an asserted fact exists only in *our* imagination, that this is "a fallacy" and that "is wrong," he should certainly have taken greater pains to master the question at issue, and been more sure that he had eliminated from his own conception of it certain serious errors into which he has fallen. But we shall not affect to have been disturbed by all this. There are only two questions worth discussing; viz, is our currency in a sound or an unsound state, and are the measures we have advocated for its reform such as would approve themselves to sound economists.

The writer of the article, then, appears to have wholly missed the broad general position advanced by ourselves in regard to the Mexican dollar. That position is this: that the employment of a coin for the purposes of trade, which is wanting in the very first characteristic of a good currency, namely, the capacity of circulating, is necessarily fraught with injury to trade. It was pointed out that the large quantity of silk sold to foreigners, had placed in the hands of the Japanese a large quantity of Mexican dollars; that the circumstances of trade obviously required that the currency of the country should expand, but that in consequence of the non-circulation of the Mexican dollar, it could not expand. In virtue of the course of trade, a large mass of coin had come into the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

hands of the Japanese, but, *in place of passing freely into circulation and augmenting the volume of the currency as a good currency would have done*, they hung in suspension within the area of a square mile or something like it. It was further argued that the holders of this coin, which is thus useless for the purposes of internal trade, having to procure a currency possessing the property of circulating, had to sell their dollars to obtain that currency, and that the large mass of dollars thus brought forward for exchange, had raised the price of paper *yen* far above its normal or average value as measured in Mexican dollars, and that this rise in price was a loss to the producer—a position which is still maintained.

It must be admitted that the writer not only appears to have failed in apprehending this simple position, but has raised other questions which tend to becloud the subject. Thus, as we understand him, he alludes to the *rise* in the value of the Mexican dollar as measured by the *rate of exchange in London*, and proceeds to argue that if there had been a silver *yen* currency it would have risen in the same way. No doubt it would, although not to the same extent, but the *fall* in the value of the Mexican dollar as measured in paper *yen* is the main point to which attention is to be directed. It is not necessary to clog this part of the subject by any reference to the foreign exchanges.

There is some obscurity and want of logical coherence in the article. Thus, after pointing out that gold coin has left the country and assigning certain reasons for it, which are partly right and partly wrong, the writer goes on to say that as the gold coin has gone away, we have now a currency of paper *yen* and Mexican dollars and "nothing else," and then adds:—

"Under these circumstances the enormous recent demand for silk has brought out the peculiarities of the position with startling vividness." But if the gold had *not* gone away, the peculiarities of the position would have been brought out with equal vividness. For the same quantity of silk would have been sold, the same quantity of Mexican dollars would therefore have been brought into the market to be exchanged for the circulating gold coin, and the pressure of the large mass of *non-circulating* coin seeking exchange would have caused an appreciation in value of the *circulating* gold coin.

The writer specially dissents from our view that the premium on paper represents a loss to the producer. He argues that the premium paid for paper represents the recent appreciation of gold over silver, for paper *yen* are, he says, "practically gold." But it is quite certain that paper *yen* are not "practically gold." They are not convertible into gold, nor have they even any fixed value as measured in gold. Let us suppose that there is a heavy demand for imports. The Japanese dealers who wish to buy have to procure Mexican dollars to pay for them. How do they get these dollars? By giving paper money to the silk and tea merchant in exchange for them. But what happens when the dollars are exhausted? Then the dealer begins to buy *gold* with his paper, for the foreign banker will buy the gold against dollars. Now when paper money is thus *seeking* gold, the number of *gold yen* to be obtained for 100 paper *yen*, *tends to become less and less as the demand increases*, that is, paper goes more and more to a discount as compared with gold. Are paper *yen* practically gold at such a time? Surely, not. And they are never, "practically *gold yen*." The error into which the writer has fallen is that of forgetting that the paper *yen* is a circulating medium continually varying in value, whether measured in gold *yen*, silver *yen*, or Mexican dollars. It has no fixed relation to any one of these coins. Its continual fluctuations in value are inseparable from its character of being inconvertible and is a strong reason for a return to convertibility. But while this is clearly true, it is also true that it has a tendency towards a certain normal value, as measured in Mexican dollars, and this is caused partly by the fact that the volume of the paper money is fixed, and partly by the fact that the amounts of paper money and Mexican dollars seeking to be exchanged for each other are not generally so much out of proportion as they have recently been. This normal or average point is about 400, or 100 paper *yen* for 100 dollars. Sometimes the price is a little lower, sometimes a little higher, but, speaking generally, this is the normal or average price. There can be no doubt, then, that the recent heavy rise in the value of paper *yen*, as measured in Mexican dollars, represented a loss real to the producer. In June last, for every 100 dollars worth of silk the producer could get 100 paper *yen*. Two or three months later he could get 93.25 only. And it does not settle the question to say that 93.25 would buy back $100 again. The question he asks himself is this, Will the 93.25 paper *yen* which I take with me into the country, buy as much labour and goods as the 100 *yen* did three or four months ago? And the answer is clear: it will not.

Under the present system periods will always be occurring when the native medium of circulation will be raised unduly in value relatively to Mexican dollars, no matter what that medium may be. What is wanted is a currency that will circulate among foreigners and natives alike, and that, under such circumstances as have lately occurred, will pass *out of Yokohama and augment the currency* in accordance with the demand of trade. True money is a *generalised* purchasing power; Mexican dollars are a *particularised* purchasing power, and the basis on which foreign trade is conducted will be considerably enlarged and strengthened on the day when the Japanese silver *yen* becomes the recognised medium of payment.

SPIRIT OF THE JAPANESE PRESS.

Appeals in Criminal Cases.

(Chôya Shimbun.)

Laws are an important part of the property of a country and should be regarded by the whole nation with confidence. But if they are incomplete they become the property of the officials alone, the people learn to distrust them, and they can no longer be termed the laws of the entire nation.

When the laws are incomplete and their wording is ambiguous, the officials can punish men according to their own will, and not according to the true weight of the offence that has been committed. And again, there are cases of bold and sturdy men, who, being thoroughly convinced that they are not guilty of the offence with which they are charged, refuse to admit such guilt, and are then confined in prison for a long term by the officials, or who, by means of torture, are made to confess crimes of which they were entirely innocent. When the laws are employed in this manner, they can no longer be termed the laws of the nation, they are merely the property of the officials, who by means of them are able to inflict as much suffering on the people as they please. When laws are in this state, there will be an increase in the number of convictions of innocent men, and of escapes of guilty men. Many troubles spring from this source, the worst of which is that the people lose all confidence it the laws.

Such was undoubtedly the condition of affairs in days gone by, but we are happily now beyond this stage, and it must be admitted that great improvements have been made of late years in the administration of the law. Yet we are still not without some grave doubts with regard to the justice of some of our present proceedings.

And there is one point on which we desire specially to put ques-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

tion to the Government, viz, how is it that men are made to suffer double as much punishment as they are sentenced to by the Courts? For instance, a man is sentenced to three months' of imprisonment, but is confined for six months. It will doubtless be said that such things used once to happen, but they do so no longer under the present Government, and, generally speaking, men would be justified in such an answer. Yet we have unmistakeable proofs of the fact. Mr. Motoki, the editor of the *Saifû Shimbun*, was sentenced by the *Saibansho* to two years and a half imprisonment. He then appealed to the *Daishin-In*, which delayed giving its decision for six months, the effect of such decision being that he must serve his term of imprisonment for two years and a half from the date thereof. Thus Mr. Motoki has actually to undergo three years imprisonment.

Again, Mr. Hokiyama, the former editor of the *Nichi Nichi Shimbun*, was sentenced by the *Saibansho* to three months' imprisonment. But, while in prison, he appealed to the *Daishin-In*, and in default of any judgment arriving from that body previous to the expiration of the term, he was released from prison by the *Saibansho* and placed temporarily in charge of his relatives to await the decision of the *Daishin-In*. A few days afterwards this decision was given, and confirmed the judgment of the *Saibansho* and, on the strength of this, Mr. Hokiyama was compelled to undergo three more months of imprisonment. Is not this suffering twice the penalty awarded by the first Court?

We hear that appellants are confined in different cells from the common prisoners, there to await the decision of the *Daishin-In*, but the food and the place itself are the same in both cases, so that the only difference between the two sets of men is, that one is awaiting a decision while the other consists of convicted criminals. The difference between them, therefore, in respect of condition, is little more than nominal.

Is it not a grievous misfortune that men who thus appeal are kept waiting in prison for the decision of the upper Court, and that if the former judgment is confirmed, they have to undergo the term of imprisonment awarded by the first Court, from the date of the new judgment.*

Nor, supposing the appeal is allowed by the *Daishin-In*, and the appellant is pronounced innocent, is there any way to compensate him for the hardships he suffers during the interval which his appeal involves. We earnestly entreat the Government to extend its mercy to men thus situated. The officials of the Judicial Department may hold certain views on this question, and when it comes under review for reform, changes may have to be made in many other parts of the system, and this may be the reason why reform is not undertaken at once. But are not the laws the property of the nation? If we lose confidence in them, even for a moment, the officials who administer them cannot be pronounced guiltless.

A Limited Monarchy.

(Chôya Shimbun.)

A German scholar of great acquirements, Biedermann by name, has said:—"In instituting a limited form of government, the choice of the fittest time is a question of equal importance and difficulty, for, if done either too early or too late, a country will be sure to suffer great hardship and peril.† The discovery therefore of the fittest time is indispensable."

These words were uttered by a man of great talent and learning, who must have studied history and well weighed his conclusions before expressing himself. And thus we believe these words, which carry more weight with them than words uttered under excitement.

There are now two parties existing in Japan, the one clamorous for rapid reforms, the other inclined towards slower measures. The former is desirous of establishing a limited form of government as early as possible, while the latter thinks we are not yet ripe for it and seeks to delay the change as long as possible. The opinions of these two sections differ as widely as fire and water; still, if both were to bear well in mind what had been said by this great German scholar, it would be well for our nation.

Now, what is the proper time spoken of above? A time when a limited form of government would best suit the people. And what are these certain "hardships and perils?" They are the loss of happiness and the advent of much misery which a nation might suffer from too much haste or too much delay in instituting a limited form of government.

Now the minds of men differ as much as their faces, and as there are always two sides to every question, one says it is too early and the other that it is too late, and there is no means of ascertaining what is really the proper time. Yet, for all this, it seems as if there must be some way of finding it out. This Mr. Biedermann, however, has only said that it was of the highest importance to discover what was the right moment, but he says nothing about the method by which this may be ascertained. It would seem therefore that this 'proper time' is a thing of difficult discovery. As times change according to the will of man, the German scholar must have meant that the men of learning who live in such times must have discernment enough to discover them.

Our country is daily advancing in civilization and so are the writers who treat these questions, while the two parties who hold these opposite views preserve their positions tenaciously and both long for victory.

Is not the present the time for the institution of a limited monarchy in this country? Very probably some excellent arguments will be found to gainsay this proposition; but they in no way represent the general feeling of the times. And such arguments are merely the suggestions of idle times, and those who make them seem to think further that the only proper time is when every one in the country has arrived at the summit of civilization. Yet should we listen to arguments of this kind we should bring upon the nation, from the Emperor down to the lowest peasant, unnumbered woes.

Look at England and France—countries foremost in civilization. Are all the people of those countries statesmen, philosophers, or men of extensive learning? Though London be grand and Paris enchanting, there are men living there who know not either how to read or write; and how much more ignorance still must there be in the interior? We have been told that the most superstitious ideas prevail among the farming class in Scotland—ideas which seem utterly stupid to any man of common sense, and this proves that there are ignorant men both in Great Britain and France. Yet in both these countries a limited form of government prevails, and has prevailed for many years past. At the time, too, when the government took this form in those countries, there must have been far more ignorance among the people than at present, and all this proves that in order to have a limited form of government it is not necessary to wait until a country arrives at the highest stage of civilization. It would be idle to plead that all our people are thoroughly educated and civilized, but when the educated classes contend for the institution of a limited form of government, the proper time for establishing it has arrived.

Our Emperor expressed his desire for a more limited form of government in the Imperial Decree of the 14th April 1875, and recently ordered the *Genro-In* to compile a new Code of National Laws. The German scholar quoted above has said that it is a difficult thing to find the right moment for constitutional changes, and so it is. But many among us who have watched these things very earnestly and carefully, think that the proper time is the present, and that no good reason can be given for letting the opportunity pass.

Missionaries.

(Chôya Shimbun.)

(A Communicated Article.)

There is a body of men in this country called missionaries. They are men who could not be content solely to teach their own countrymen at home, but have travelled over thousands of miles of the wide ocean and made it their duty to teach and convert us Japanese to their religion, and the numbers of Japanese so converted is steadily on the increase. Love is said to be the foundation of their faith, and they hold that all men belong to one great family and are therefore brothers. Thus, say they, men should associate with each other without heed to nationality, and that boundaries should not exist which keep nations apart from each other. The native converts, many of whom receive assistance from these missionaries, hold the same views and do not seem in the least ashamed of them. Such is the present aspect of Christianity in Japan.

But this world, which these Christians term a single family, is divided into east and west, and these two portions are again subdivided into separate nations, each nation having its own Government. When the people of any country become enlightened, they receive protection from their Government, and when prosperous and wealthy they are termed powerful nations.

If we look to the present condition of the world, we see that the weaker countries are always jealous of the advance of others in power and wealth and wish that they themselves were in the

---

* No! It cannot ligitimately be called a misfortune. It must deliberately be called one of the most iniquitous instances of injustice ever perpetrated on the face of the earth.—[Ed. *J. W. M.*]

† Doubtless some profound wisdom underlies this remark, but it is extremely difficult to discover it.—[Ed. *J. W. M.*]

same position. Moreover, every nation evinces a strong desire—we make no pretension to explain so glaring an absurdity—to be the ruling power over all other nations.

Now the desire to increase the power or territory of a country cannot be in accordance with Christian doctrine, while the equal feeling which it is supposed that all men should entertain towards each other, is of impossible attainment. Let us suppose that a foreigner and a countryman of our own were drowning at the same time, to whom should we first render assistance? Naturally, we should save our countryman first and afterwards the foreigner, and this choice is made because we esteem friends and strangers differently. And when a man is pressed by poverty arising either from misfortune or any other cause, does he not always apply first to his friends and then to strangers? This arises from the fact that men know that something of the nature of disgrace attends the request for assistance, and they desire that a knowledge of their circumstances should be confined among their friends and not made known to strangers; nor are any men free from this feeling.

Now when we examine into the circumstances of the native converts, we find that a large number of them are receiving assistance from the missionaries and have no other means of supporting themselves.* Yet they do not seem in the least ashamed of their condition, and this is natural enough, for they regard the whole world as a single family and the missionaries as their brethren. But suppose that a war should break out between two nations, would they call all those who struggle for their country the enemies of their religion?

Let us cast an eye to the countries whence the missionaries come. Russia, for one, is ever seeking to increase her territory by the subjugation of other nations. But do not the Russians, who assuredly burn with this lust of conquest, profess Christianity as their faith? The cause of the nation and the commands of the religion never can be reconciled.

Now when these converts receive charity from the foreign missionaries, they shamelessly say that the whole world is but a single nation and the missionaries are their brethren, though on other occasions they say that foreigners are our enemies. We cannot restrain our scorn for such shameless inconsistency. Whether looked at from a moral or intellectual point of view, all this is wrong. If owing to bodily weakness or any other form of misfortune, a man is unable to command the necessaries of life by his labour, let him go to his friends and relatives for help, and, if this fails, let him go to the poor house, rather than seek the assistance of foreign missionaries. It is indeed no slight disgrace to go the poor-house, but it is far better than to receive alms from foreigners. I have not the slightest ill will either against the missionaries or their religion. But it grieves me to think that there are many who apply to them for help without any attendant feeling of shame. This will bring on our nation the scorn of foreigners, who will say that the Japanese are insensible to shame, and may be made members of the Church for a very small amount of money.

* We believe this to be an entire misapprehension. A statement of the same kind was made some months ago, and we referred it to one of the leading missionaries in the place, who assured us that it was quite unfounded. It should also be stated, however, that circumspectly as assistance may be, and doubtless is, given, nothing could be more unreasonable than to suppose that a missionary is not to relieve such cases of want and distress among his converts as may come before him.—[ED. J.W.M.]

A TALE OF A CAT.

(Continued.)

But wherefore all this bitterness and rancour against unconscious Nedzutarô? The reason is obvious enough when it is remembered that the contract of adoption by which he had been proclaimed Munetsura's heir, forbade that he should be supplanted in his rights by any other person, albeit a scion of the house itself.

Such was the reflection which rankled in the bosoms of his parents, and made them wish a thousand times a day that they had never seen the face of him whose shadow lay upon his foster brother and obscured him. There he was, however, and how to get rid of him was now the question. As they could not decently thrust him out of doors, they determined to try if, by dint of insults and annoyances, they could not succeed in making him run away of his own accord, or, better still even, put a period to his existence to escape from misery. Their measures, to this end however, met with the ill success which they deserved, as, owing to the gentleness and loyalty of his disposition, he accepted blows and evil usage without a murmur, regarding them rather in the light of heaven-sent corrections delivered by the hands of his parents, than as unmerited chastisements. And, indeed, it is not improbable too that he had not overmuch of leisure to devote to the consideration of the question, inasmuch as his time was fully occupied between perfecting himself in all those manly exercises and accomplishments which befitted a *samurai*, during the day, and in poring over the ancient classics by the lamp's dim light after he had retired to his chamber, and when not required to minister to the amusement of his worthy father, whose habit it had of late become to lie abed all day and spend his nights carousing. At such times the unlucky lad was sure to feel the weight of his father's displeasure if he manifested any signs of abstraction or fatigue, and most especially it behoved him to keep his attention on the stretch when desired to take a hand at checquers—a game of which his father was immoderately fond—even though the sun surprised them at their sitting.

In spite of all these trials and drawbacks, however, Nedzutarô grew and prospered, so that at the age of fifteen he was quite a comely fellow, pleasant to look upon and of intelligent and engaging manners. So much so, indeed, was this the case, that even his exacting father could not help praising him now and then in a surly fashion, and hoping that his own son would turn out like him. This, repeated once or twice in the presence of his wife, who could not brook that any standard of comparison should be applied to the child she had gone through so much for, and who was being "defrauded of his rights," as she went to say, so inflamed her hatred against Nedzutarô, that she at last set about in earnest to compass his destruction.

Now, it chanced that my lady had amongst her waiting women a little maiden named Koharu, a shy and timid beauty, who was at once the admiration of all the men and the envy of the women. The plum trees in the castle garden had blossomed but sixteen times since she first saw the light, and if the lines and sonnets inscribed about the houses of the men at arms had aught of truth in them, no spring had ever yet produced a blossom so lovely that its tint could vie in delicacy with the bloom upon Koharu's cheeks; and, as to her eyes, so bright and sparkling were they said to be by those who boasted of a glance—they were but rarely seen for the silken fringes which overhung them and the modesty which forbade them to be raised—that the sun himself, and indeed the remainder of the heavenly bodies whose business it is to shine, were out of fashion as standards of brilliancy with the wits and poetasters of the castle, and were voted downright dull and lustreless by the jovial blades who drank her health and sang her praises.

Small wonder then if young Nedzutarô, whose opportunities of seeing and admiring her were many, inasmuch as she was a favorite of his mother's and in constant attendance upon her, should, from feasting upon her beauty in silence, have gradually assumed boldness enough to faulter out a bashful greeting when he encountered her about the house, and, meeting with no more terrible rebuff for his temerity than a smile and a blush, have come in process of time to love her with all his honest heart, and even permit himself to hope that his affection was returned, although he had not as yet found the courage to resolve for ever the doubts and despairs which beset a lover's path.

And what of my Lady all this time? Was she ignorant of this little drama of many acts which was being played before her? Not she. By that subtle instinct, or what you will, which informs a woman the moment love making begins, and fixes all her attention, thereupon not a single glance of admiration from Nedzutarô, or responsive rise of color on the part of Koharu, escaped her. She read the idyl through and through, and rejoiced at it exceedingly, for it seemed to her that chance was working hand in hand with her to bring about Nedzutarô's destruction. When she thought the time had come for action, she desired Koharu to attend her in her chamber, and having dismissed her other women, she thus addressed her:—

"What is this my eyes have told me, girl? Nay, speak not, hussy, for I require no answer from you. Was it for this that I took you, a dirty and neglected little starveling, and fed, and housed, and clothed you until you ripened beneath my fostering care into the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

comely woman that now you are? What would have been your fate by this but for my goodness, none can know better than yourself. And what is my return for all my kindness? In place of centering all your regard and affection on me, your mistress, whose hope it was to be so requited, you neglect her for her enemy. Nay, deny it not, for you know I speak the truth."

Confused and overwhelmed with shame at the discovery of a secret which she had fondly fancied was buried out of sight and suspected by none, what could Koharu do, but vow and protest between her sobs, and in intermittent sentences, that her love for the best of mistresses was unchanged, that her heart was broken by her words, that she could never smile again if her mistress continued to think so hardly of her, that as to Nedzutarô—here a crimson flush overspread her tear-stained face, as the sun at times shines through an April shower—she thought it no harm to let him speak to her on one or two occasions, but, as to her heart, it was all her kind and noble mistress's, nay, her soul, her very life, was in her hand! Thus vehemently protested poor Koharu, and begged to be forgiven.

"Of course, your life is mine," said Mubatama, "and perhaps I mean to prove your willingness to part with it in my service before another sun has risen."

Although her heart died within her at these cruel words, Koharu had yet sufficient presence of mind not to betray any outward emotion, but, bowing her head upon the mat, meekly replied, "It is your's to command and mine to obey. Be your wishes what they may, I am ready to perform my part, even though it include the laying down of my life."

"Nay, nay, my child, I do not know that I require so great a sacrifice from you. I have a fancy, however, to learn how Nedzutarô employs his time, and I would put him to a test with your assistance. To-night, my lord, your master, will be absent from the castle, and will not therefore require your lover's presence. You, too, shall have a holiday, as I absolve you from attendance on myself. Go late, then, to Nedzutarô's chamber, and handing him this letter which I have written for you, throw yourself upon your knees and, declaring your affection for him, implore him to take you for his wife. If he refuse, then draw this *wakizashi*, and make believe to cut your throat; and if he still is obdurate, and the love you profess for me, your mistress and benefactor, is not false, perform the act in earnest, as is your duty."

(To be Continued.)

YOKOHAMA RACE CLUB.

A special meeting of the Yokohama Race Club was held yesterday afternoon in the rooms of the Chamber of Commerce, kindly lent for the occasion, the following members being present:—Messrs. Keswick, Strachan, D'Iffanger, Center, Brooke, Engert, Pinn, Ness, Thurburn, A. Mitchell, J. A. Fraser, Reimers, W. J. Cruikshank, Johnstone, Farley, McRitchie, Henley, James, Glennie, Cope, Mills, T. Wallace, Pollard, J. P. Reid, Dodds, A. Winstanley, Mollison, Bennett, Hamilton, Pugh, Hartley, Abbott, Braun, J. Walter, E. J. Reid, Haselwood, Hay, Cook, Brewer and Jones.

Mr. J. A. Fraser was voted into the Chair, and briefly informed those present, that owing to unfortunate differences which had taken place about the position the Club was in as regards their tenancy of the Race Course, the Committee had thought it desirable to draw up a report, which he would now call on the Honorary Secretary to read.

Mr. Keswick, the Honorary Secretary, then read the following:—

GENTLEMEN:—Your Committee has been long silent under the imputations cast upon the Race Club, but this silence has been due to the fact that an opportunity has scarcely presented itself for the Race Club to state its case to the public, if indeed such statement has been necessary, considering that the Club has been and is still ready to rely on the good sense of the community to discredit the absurd and groundless statements that have been made against it.

Before proceeding to deal with more recent events affecting the Race Course, it is as well to refer back to 1866, to the public meeting held in that year, at which the Community placed the Course in the hands of the Race Club, and it should be clearly understood too, that the Yokohama Race Club dates its birth, not from that meeting, but from four years previous—1862. This is a fact of some importance as showing that the Club has not been in possession of the Course as Representatives or Trustees of the Community, other than that the Community of 1866 gave over its charge of the course to the Yokohama Race Club, as the best means of ensuring its proper government, and in the interests of the sport of racing.

From 1866 down to the present time, the Club has continued to govern the Course. It has paid in each year the full rent claimed by the Japanese Government (a reduction on the original rental having been agreed to by the Japanese Authorities during the years from 1870 to 1875 inclusive), it has provided annual race meetings, maintained and improved the Course, and its control has been carried out with an earnest desire to provide fair sport for the public. Meetings of the Club called by public advertisement have been held twice a year, and at these ample opportunities have been afforded either to members of the Club, or to the public through members of the Club, to being about any change in the general administration of the Course.

Admission to Club membership has practically been open to all, and throughout the nine years that the Club has controlled the Course, the ballot of membership has only told adversely in one case. No prejudices of class have stood in the way as preventing members of the Community from joining the Club,—men of different pursuits, and by reason of those pursuits men whose intercourse either socially or in business is limited, have met on one common ground as members of the Race Club and have raced side by side in friendly rivalry. On one point only in connection with membership has the Club been firm, in that it has opposed, and successfully, the admission of professionals, and in so doing has been in harmony with most Race Clubs throughout the East.

Of so called Community rights in connection with the Course throughout the long period 1866 to 1876, the Club has heard nothing, and this is not to be surprised at considering that there have been no Community grievances. The annual meeting of the Race Club held in January of this year at the Chamber of Commerce rooms passed off quietly. A Committee was elected for the year and the Club's tenancy for another year being entered upon, the rent for the Course was paid in advance, and month by month up to the present date, money has been disbursed by the Club for the maintenance of the Course on the security of this year's tenancy. Had the Community desired to take over the control of the Course from the Club, or to make fresh arrangements with respect to it, they had an opportunity of doing so at the close of each year. It may not be amiss to state here that the rent for the current year ($1,500), and the expenses of maintenance from January 1st to date, make up a sum amounting to upwards of $2,500.

In the spring of this year *one* of the Community (this phrase is used as it is one that seems to commend itself to those who arrayed themselves in opposition to us) sought admission to the Club. He was proposed and seconded, but the ballot of the Committee was adverse to him in its result—two voting for and three against him. Of the motives that prompted the votes in favour of or against the applicant, it is not the business of the Club nor of the public to enquire—there may have been excellent reasons for the exclusion. If the exclusion in this case was one that offended the good sense of the Club generally—there was a remedy, and that was to call a meeting of the Club, censure the action of the Committee and thus ensure their resignation. But this would appear to be too open and straightforward a course for those interested in the admission of the applicant. A memorial was drawn up at their instigation addressed to the Consuls, charging the Club with usurping the rights of the Community and with pretensions to exclusive proprietorship. The memorial obtained some 130 signatures of the general public, and if rumour speaks true, a period of two months or more of active importuning was spent in achieving this result.

Of those who signed the memorial it may safely be stated that a large proportion have never attended the Race Meetings as spectators, and are indifferent on the subject of racing generally. Moreover a memorial setting forth an alleged grievance does not, as a rule, fail to attract signatures, particularly when defence of public rights, usurpation of power, are the snares employed to gain public sympathy, and no attempt is made to obtain a hearing from the other side. That the memorial did not receive twice the number of signatures under the circumstances is the only thing to be wondered at in connection with it. The memorial was placed before the Consuls, who were asked to declare

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

whether the Race Course was given for the use of the Community or no, and if given to the Community to see that that body was secured in its rights. The Senior Consul in his reply informed the memorialists that the Consuls were unanimously of opinion that the Race Course was granted for the use of the Foreign Community, but he also took care to point out that the Consuls experienced a difficulty in dealing with the question owing to the absence of a Title Deed.

The Senior Consul addressed the Foreign Representatives in respect to the non-existence of the title deed, and at the same time forwarded a copy of the memorial. In due course replies were received and the correspondence which has been published in the local papers needs no special reference here, as it has been accessible to all.

The action of certain of the Consuls consequent on the replies from the Foreign Representatives is now matter of notoriety: but it would be interesting to know how those of the Consuls who have taken the recent steps in respect to "Trustees" reconcile their action in proceeding to appoint Trustees, with their opinion as expressed in their letter of the 3rd July to the memorialists, when they state that they experienced a difficulty in dealing with the question for want of a title deed.

If the difficulty existed then, surely it exists still, considering that no title deed is as yet in the hands of the Consuls, and an important fact apparently overlooked by them is, that the title deed issues from the Japanese Government who have something on their side to say as to its terms, and before the deed can be acted upon it must be sealed and delivered by the proper authorities acting for the Government.

Surely if the Consuls were, as expressed in the letter of July 3rd, unanimously of opinion that the Course was granted for the use of the Community, and the absence of a title deed did not, as it is asserted it does not now, stand in their way, why did they not then proceed to the nomination of so called Trustees? The question of a reference to the Ministers need not have stood in their way, as they were unanimous on the question of the Course having been given for the use of the Community. So far as the recent nomination of so called Trustees is concerned, the Race Club declines to recognise them, holding that any committee of management should be elected by and from amongst the community and not by a certain number of the Consuls, who, if report speaks true, are warm and active supporters of those hostile to the Race Club, which includes a by no means unimportant section of the Foreign Community.

A letter addressed to the Foreign Representatives signed by seventy-seven members of the Club, protesting against the recent nomination of "Trustees," as an act which is neither binding on the Community or the Club has already been sent in.

If the community so desire it the Club is perfectly ready at the end of the year to resign its control of the course to whatever body may be appointed at a *bonâ fide* meeting of the community, and with the voting power fixed on a proper basis. To such body the Race Club will cheerfully submit the consideration of its rights and interests.

Of the right of the Club to exclude other than members from the use of the course for the current year it is not proper here to speak at length. It will suffice to say that any action of the club in respect thereto has been based on the fact of its tenancy, and of having paid the full rent up to the close of 1876.

Moreover the opponents of the Club have paid no heed to the fact that the Club's tenancy of the course has resulted from the action of the community, and that on the security of such tenancy disbursements have been made to a large amount.

The Club, as stated in their letter to the Foreign Representatives, will not now oppose the entrance on to the course on other than their own race days of individuals or other members of Race Clubs. To do so would be to court attack from those who doubtless would not scruple to resort to other than legitimate means to enforce their wishes.

The pendency of a case in one of the laws Courts here precludes further remark on this subject.

A word may not be out of place in respect to a charge more whispered than openly stated, that the Yokohama Race Club is in the hands of an English clique. Racing is an English sport, and any Club got up here for the promotion of the sport would naturally include amongst its members a large proportion of Englishmen, more particularly out of a Community in which Englishmen numerically preponderate. As a fact the Club has been open to all nationalities that go to make up the Yokohama Community, and the difficulty has been to get other than Englishmen to serve on the Committee, notwithstanding efforts to obtain the services on the Committee of gentlemen not Englishmen being members of the Club. At times these efforts have been successful, and succeeding years have witnessed the election of a Committee which has comprised gentlemen whose presence on the Committee has been a sufficient answer to the insinuation that the Club is managed by an English clique. Of the charges brought against the Race Club elsewhere, that it has drawn up race programmes to suit particular individuals, that it has been guilty of untold iniquities and that it has sanctioned the loosest practices at the Race Meetings, the status of the Club, the gentlemen that go to compose it, and those who are elected to govern its affairs, offer as fair an assurance to the public as can be given that racing in Yokohama, under the management of the Race Club, has been as free from the evils that are inseparable from the sport, (and for which the public is as responsible as the Race Club) as it is possible racing can be in any part of the world.

And now briefly to sum up;—the position the Race Club affirms for itself is this:

That they are the tenants of the course up to the close of the present year by virtue of the payment of the full rent for this year, and have the right to exclude any one of the Community, not being a member of the Club, from the use of the course, until the termination of their tenancy. A right, let it be borne in mind, the Club will not seek to exercise except on the days appointed for their Autumn Meeting.

That the Club will continue to preserve its integrity as the Yokohama Race Club subject to its own rules, and that in the event of the management of the course passing to other hands, the Club will endeavour to arrange for the exclusive use of the course on those days in Spring and Autumn which may be mutually arranged for the holding of the Spring and Autumn Meetings, and subject to such terms as may be agreed upon between the Committee of the Yokohama Race Club and those who may have the management of the Race Course.

That the Club will also endeavour to arrange for the repayment in whole or in part of the amounts expended by the Club in improvements.

It is possible that some member present may see fit to remark on the proceedings that attended the gathering of a section of the Community at the Grand Hotel on the 3rd instant, when the Yokohama Race Association was formed, as, comment on those proceedings will find no place here, further than to add that in this brief statement put before the Club, facts have been relied on, declamatory orations and mistatements being left to those who rely upon such aids to support their case against the Yokohama Race Club.

Mr. Ness then rose to make a few remarks. He said that the Committee had done wisely in giving the full account just read by the Hon Sec. and he thought the Club could fully justify their proceedings. There was no doubt about the Club having paid the rent of the course up to the end of the present year, and consequently the Japanese Authorities were bound to uphold them in their present occupancy, and even, he thought, give them a proper notice to quit. Should the members of the Club admit that the *soi-disant* Trustees, as appointed by some of the Consuls, fully represented the community, and had the power at once to oust this Club from their rights in the Course, then they should admit that every individual member of the Community had a right to claim a share in the balance of cash in the hands of the Club, without having contributed one single cent by way of subscription to its revenues. They were all well acquainted with the action taken by that body calling themselves the Yokohama Racing Association, the principal exponent of whose views was a well known official who advocated their cause with an energy worthy of himself; and while with one breath he charged the members of this Club with being trespassers and wrongdoers, and further of being guilty of innumerable iniquities, in another breath he hoped these charges were not true, as he professed to have an enormous respect for the Yokohama Race Club generally, and was happy to say many of its members enjoyed the extreme felicity of being numbered among his personal friends. The promoters of the opposition to this Club pretended to work for the rights of the community, with a view to restore privileges which the community had been iniquitously deprived of for ten years, while they actually adopted the identical principles of this Club, which had so altered its rules

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

as to meet the views of the community, so that the difference was only a matter of detail. It is true the Racing Association professed to desire that the moral standard of racing should be raised, but that they could or would so raise it was not worthy of thought. The effect of their rules would be to admit professional riders, while the rules of this Club excluded them.

Mr. Ness proposed and Mr. Farley seconded that the report just read be approved. Carried unanimously,

Mr. Brooke enquired if any correspondence on the question had taken place, and if so, proposed that copies should be appended to the report.

The following letters where then read by the Hon. Sec.

Yokohama, 7th October, 1876.

Messrs.

RUSSELL ROBERTSON,
J. J. KESWICK,
W. J. CRUICKSHANK,
W. M. STRACHAN and
J. WALTER.

} *Committee Yokohama Race Club.*

GENTLEMEN:

I have the honor to inform you that by the action of the Board of Foreign Consuls at Yokohama, Messrs. G. Blakeway, J. J. Van der Pot, E. G. Vouillemont, J. Middleton, A. Schaeffer and H. P. Lillibridge, were elected Trustees for the management of the Yokohama Race Course.

I am instructed also to inform you, that the Board of Trustees, noticing your published programme and advertisement for a Race meeting to be held on the course, during the first, second and third of November next, have no wish or intention to interfere in any way with such meeting, but to advise you that the course will also be open to the use and disposition of the Yokohama Racing Association from this date, for training purposes, conjointly with yourselves, excepting only on the days of your meeting, on which days the course will be at your sole disposition.

The Trustees are also informed that the Ground-rent due from the community to the Japanese Government for the current half-year, has been paid through your Club.

Will you kindly furnish me with a list of your membership, also a memorandum of rent and expenses for the current half year, to enable the Trustees to adjust the proportion to be refunded to you.

I am,
Gentlemen,
Very truly yours, etc.,
H. P. LILLIBRIDGE,
Hon. Secty. Board of Trustees.

Yokohama, 9th October, 1876.

H. P. LILLIBRIDGE, Esq.
Yokohama.

SIR.—I beg to acknowledge receipt of your letter of the 7th instant informing the Committee of the Yokohama Race Club that by the action of the Board of Foreign Consuls at Yokohama, Messrs. G. Blakeway, J. J. Van der Pot, E. G. Vouillemont, J. Middleton, A. Schaeffer, and yourself were elected Trustees for the management of the Yokohama Race Course. This statement is incorrect! The action of certain of the Consuls in the direction you intimate is altogether invalid so far as British, Swiss, and Portuguese subjects are concerned, and it follows therefore that the Committee of the Yokohama Race Club is not in a position to accord you any recognition as Trustees of the Race Course.

You say that the Trustees, so called, have no wish or intention to interfere in any way with the forthcoming Race Meeting of the Club of which due notice has been given to the public, but you advise the Committee that the Course will also be open to the use and disposition of the Yokohama Racing Association from this date for training purposes conjointly with the Yokohama Race Club, excepting only, on the days fixed for the Race Club Meeting.

I do not doubt but that this intimation is courteously meant, but it loses value from the fact that any interference with the Club on the days fixed for the meeting would be a most unwarrantable intrusion, if not altogether an illegal proceeding.

So far as the Yokohama Racing Association is concerned the Club is quite ready to accord them the use of the Course for training and racing purposes until the termination of the Club's tenancy, which expires at the end of this year, and had the Association been formed at any time prior to this during the Club's occupancy of the Course, a request to the same effect would have been at once acceded to by the Committee of the Race Club.

If you elect to regard yourself, and those on whose behalf you write, as the channel of communication between the Race Association and the Race Club, I shall be happy to furnish you, in that capacity—but not as Trustees—with the figures called for in your letter, which will determine the proportion to be paid by the Race Association for the use of the Course.

I am, Sir,
Your most obedient servant,
JAMES J. KESWICK,
Hon. Secretary,
Yokohama Race Club.

Mr. Ness then proposed the following resolutions, which were seconded by Mr. Winstanley and carried unanimously.

1.—That the Yokohama Race Club continue on the same basis as a club as heretofore, it being understood that the use of the Course may be enjoyed by any other racing association or club willing to contribute an equitable share of its rent and incidental annual expenses.

2.—That the Club disputes the pretended right of a mere majority of the Consular Board, representing a minority of the community, to appoint Trustees of the Course. The Course being dedicated to the Community, in the Community alone should be vested the right of appointing a committee of management. To such committee the Yokohama Race Club will cheerfully surrender the course at the expiration of its tenancy.

The meeting then separated after a vote of thanks to the Chairman.

Correspondence.

TRAINING NOTES.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 14th October, 1876.

DEAR SIR,—It was a matter of regret, equally to myself as to your readers, that I was prevented last week from furnishing you with my *Sporting Notes*, which have in so short a time raised your journal to that standard of popularity which you have so vainly and valorously striven to attain, and I trust that no unforeseen occurrence will happen to again interrupt the weekly information which is so anxiously sought for by the sporting world in general and the Yokohama Racing Association in particular. The training during the past fortnight has been particularly lively, the great feature of the week being the appearance of the new stable (Col. Forrester's), which at first start comprized *Chorister* (late *West Mongolian*), *Sirocco*, and several griffins. The first named was, to quote a local poet, "nipped in his blossom," or some other limb, and after a vigorous effort to effect a half mile in some wonderful time, refused to listen longer to the voice of the charmer, and has been transferred to one of the new stables connected with the Yokohama Race Association. *Sirocco* has never yet won a race on this course, but, certainly if he can run up to his form at last meeting, he should pick up laurels this time, especially as he is being trained in the most approved and careful manner. The griffin *Greyling* is a showy looking pony, and the Colonel is to be congratulated on having taken him out of the *Tartan's* hands; but to my idea he is not likely to do much this meeting, being in too poor condition. On looking over the entries, I find that the second griffin from this stable—generally known as *Mo-katz*—has not yet been entered, which is, I think, a mistake on the owner's part.

On Tuesday morning there was an unsually large attendance of both spectators and quadrupeds, and the entertainment wound up by a "pow" of some interest, in which Mr. Saville on a griffin beat his own pony *Drift* with a friendly jock up, doing the 5 furlongs on the outside in m. 1.33, a creditable performance when the riding is taken into consideration. All were disappointed in the looked for gallops on Wednesday prior to the entries closing, but I dare say we shall make up for this on some future occasion. Most of the old stagers have been doing their accustomed spins;—once round in 2.32 to 2.36 being about the time. Mr. Morrison is unfortunately troubled about many things. *Braemar* is inclined to sulk, and *Hereward* is peculiar in his gait. He is very likely to be so on the first race day, so much so, in fact, that he will probably

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

reach the gate considerably ahead of his opponents on more than one occasion. *Lintie* is in splendid form and will doubtless be able to hold the name he has gained as a "goer." Of the griffins entered by Mr. Morrison I can say but little; they do not appear up to the usual *Tartan* standard, but probably there is a second *Drift* somewhere behined the scenes. *Saracen* (late *Grasshopper*) and *Crusader* are both going well, and like their owner look very pretty. The former is, in my opinion, the best pony on the course for any distance over a mile if well ridden. He showed by his going this morning that he is fully up to his old form.

Mr. John Peel has bad luck with his ponies, both the griffin *McTavish* and *Ta Phairshon* showing unmistakeable signs of lameness. *Bonito*, too, has been thrown out of training, thus leaving *Grey Friar* the only sound representative of this stable in the China pony line. He did his $\frac{3}{4}$ mile this morning in very good style, but without showing any particular turn of speed. The Japanese griffin *Albandale* is rather too young to make a successful debut. Japanese ponies are seldom of much use for racing until past 7 years old, and the majority of them reach their prime even 3 and 4 years later than this, as we have seen in the case of *Samurai*, *Montezuma*, *Typhoon* and others. The *Mongolian* Stable will doubtless carry off their share of the winnings, but at present none of their stud show much turn of speed. *South Mongolian* is hardly in fit order to train, being still rather lame. *North* is decidedly lazy, while the others, too numerous and complicated to mention, have not had enough quick work to bring out their galloping powers; but, as the Messrs. De Benter are satisfied, I suppose no one else has any right to find fault. *Chief Mongolian* late *Ravenslee* had a short spin this morning, but as yet there has not been any need for a 'stop watch' on these animals.

The entries for the various races are much better than could have been expected, and they show that notwithstanding the opposition and annoyance to which the Race Club has of late been subjected, the majority of its members are determined to show that they will support the right cause through thick and thin. I hope that the Griffins' Plate will be better filled up when the post entries close, as there are plenty to choose from.

On Friday last the *combined* stable of the Yokohama Racing Association, numbering some 25 to 30 of different sizes, shapes and colors, including the five griffins from Shanghai, made their first appearance on the course, marshalled by Count Collodion and attended by several prominent supporters of the new movement. Among the griffins many old Shanghai residents will recognize the plucky little chestnut that for so long carried one of Shanghai's most popular brokers on his daily rounds. This, however, is do reason why he should not now make a racer. I must not forget to mention that the well known hat of one of the *soi-disant* Trustees might also been distinguished in the paddock this morning, and the Y. R. A. may be congratulated in having their interests so energetically looked after.

Your truly,

TRITON.

Some important discoveries have been made at Athens during the past month. The Archæological Society has commenced excavations at the foot of the precipice on which the Parthenon stands—namely, below the south-west angle of the building. Between the base of the Acropolis at this point and an outer wall of mediæval and Turkish construction a large quantity of soil has accumulated, and in removing this the antiquarians came upon the remains of a classic building, which, according to the Athens correspondent of the *Levant Herald*, "there is every reason to regard as the Temple of Æsculapius described by Pausanias, and mentioned by other authors." Many fragments of inscriptions have been found; a much mutilated head of Æsculapius, a female torso, and some votive tablets, with the usual symbolic or commemorative reliefs. But the great "find" consisted of an inscription of eighty lines, setting forth the treaty concluded between the Athenians and Chalcidians, when as mentioned by Thucydides, the former under Pericles had subdued the whole of Eubœa. From the fragments of the temple that have been discovered it is clearly seen that it was of the Ionic order.—*Pall Mall Gazette.*

Law Report.

IN H. B. M.'S CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

Tuesday, August 10th, 1876.

Pietro Barucca *v.* E. Lewis.

This was a claim for $5.

Defendant denied the claim.

Pietro Barucca, sworn: Last year I had a claim against Lewis for $68 which he was ordered by the Court to pay. $63 have been received, but there is a balance of $5 for which I now sue.

To defendant: I repaired the musical box now in Court. You paid me for that.

Plaintiff to Court: Everything is paid for. There is only the $5 due to me.

E. Lewis, sworn, stated: Two months ago, I sent this musical box to plaintiff to be repaired. He kept it for a week or so, putting in a main spring. He sent in a bill for $15; but when I refused to pay so much he brought it down to $10. Three days afterwards I sent for a Japanese (now in court) to see if a new main spring had actually been put in. It had not.

Verdict for plaintiff.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. Van Buren, Consul General.

Monday, October 9th, 1876.

James Lanchran was charged with assault and battery on the person of William Waggott, a bill collector, on Saturday last at the house of prisoner in Benten.

Prisoner admitted the charge, under provocation.

William Weigert, sworn, stated: On the 7th instant I called on prisoner for part payment of an account. I went upstairs as usual and knocked at his door. The servant answered, and said "no" when I asked if her master was in. I said I came from No. 20. She went in and brought out $5.00 and a note which was not for me, so I returned it. She again reiterated the statement that her master was not in. I said he must be at home, and rapped at his door three times. I then opened it and saw him in the room. I said "Good morning," and when he noticed me he jumped up and caught hold me by the clothes, striking me with his fist repeatedly. He had a ring on and I was soon bespattered with blood. I escaped as quickly as possible and at once proceeded to the Consulate to complain.

To prisoner: On the 3rd you told me to return on the 7th, not in seven days. I went as I thought at the appointed time. The servant told me you were not at home; but I heard her speak to you and I was convinced you were there when you sent out the note. I saw you from the sitting room. You were in the inner room, the door of which was closed. I knocked repeatedly. You were perhaps quite justified in refusing to see me if you did not wish to, but you told a falsehood when you said you were not at home. I opened the bedroom door on my own authority thinking it neither crime nor insolence. Had you come either into my sitting or bed room I should neither have abused nor struck you.

Tomé, a Japanese woman, being warned stated:—On Saturday last after tiffin Mr. Waggott came upstairs and I asked if he came from Copeland or what he wanted. He answered "I come from Copeland." I had a note with $5 which master had ordered me to give to Copeland's collector, and brought it to him; but he would not take it and pressed on to the bed-room door. I saw master and he meet. They ran together and fell down.

To the Court:—I admit that it was a falsehood when I said master was not at home. My reason for saying so was because I could not understand what Mr. Waggott was saying. I do not think the accused was under the influence of liquor.

To plaintiff:—You opened the door before master answered to your knocks.

Plaintiff, stated:—The bill I was collecting was from the *Grand Hotel*. The balance was $15,15. I first went on the 3rd when I received $10 on account. I was told to return on the 7th.

Prisoner now stated:—I was very tired on Saturday and knew I had a hard day's work before me, so I took a rest. I told the servant that when a bill collector from Copeland came, to hand him a note and $5, giving her both at the same time. I warned her not to disturb me till a quarter to two when I must return to the office. I had hardly lain down for ten minutes when I heard voices in the sitting room, then a rap at my door which I did not care to answer. Plaintiff then stuck his head in. I demanded a reason for his daring to enter my private bed-room, and asked if he did not think it very bad and wicked? I then ejected him.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

In answer to the Court's enquiry as to the means used in ejection, witness stated :—I struck him once in the chest and he fell over a chair. That wound which plaintiff now has on his face was received in the fall. Perhaps, had I known the disgrace which would follow my hastiness, I should not have hit so hard. Had it at first been my intention to use my fists at all, I would have taken off my ring.

Ordered to pay a fine of $5 and the costs of Court.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General,
and
C. D. HARMAN, } *Assessors.*
G. HUELBUT, }

TŌKIŌ *Fu*, *v.* J. M. BATCHELDER.

Thursday, October 12th, 1876.

(Continued from the 7th instant.)

Plaintiffs were represented by Nakamura Tsunekatsu; defendant appeared personally, and requested that a note be taken by the Court of its resolution at last sitting that security need not be lodged by plaintiffs for the amount of damages claimed, and that it was not necessary for plaintiffs to cite their case.

Plaintiff then produced a map of the foreign Concession of Tsukiji and a written copy of the regulations for that settlement, dated November 26, 1867. Also a letter from the *Chiji* of the Tōkiō *Fu*, dated the 17th day of the 11th month of the fifth year of Meiji, to the U. S. Consul, C. O. Sheppard, Esq., and the reply of the said Consul, dated December 20th, 1872, asking the names of the Americans living outside the foreign settlement.

Defendant stated that he had bought there allotments in Tsukiji in 1872, in accordance with the printed regulations.

W. H. Denison, Vice Consul-General, sworn, deposed:—I have been connected with the Consulate since 1869. (map shown). This map, together with a letter from the Tōkiō *Fu* to Mr. Sheppard, U. S. Consul, dated 11th day of 4th month, (no year) and a printed paper headed "Further Arrangement relating to theF oreign Settlement of Yedo," I found in the U.S. Consular archives of the Consulate at Tōkio indexed May 11th, 1870, at "Letters Received." These archives were taken possession of by order of the U.S. Government. (Another paper produced) This is marked on the ontside "Plan of the foreign settlement in Tōkio, March 1870," and endorsed "showing a plan of the different allotments for foreigners." (Another map now presented.) This is a duplicate of the other; both were enclosed in a letter from the Tōkio *Fu* to Mr. Sheppard, dated May 2nd, 1870, saying that the sale would take place June 2nd, 1870, and that the maps were plans of the lots to be sold.

Plaintiff recognised these documents.

Nakamura Tsunekatsu, examined by plaintiff, stated :—These are the regulations for the purchase of land by foreigners from the Japanese, as issued in 1870. (Plaintiff's exhibit *B.* shown.) Printed copies were posted up in Tsukiji, and also sent to the different Consulates. That is the map which is spoken of in the first clause in these regulations. I recognise the blue line as that mentioned in Article II; also the red line which is spoken of in Article I. All the lots referred to in Article II have not been leased by the Government to foreigners, therefore the foreign settlement has not been extended beyond the blue line. All of the lots marked B. B. and C. C. C. have not been leased to foreigners. Foreigners attached to the Legation or in the employ of Japanese do not live inside that red line. About three hundred foreigners in all, such as I have described, live outside Tsukiji; under one hundred inside. This is an estimate only. The Seiyoken Hotel is outside the red line. More than is shown by the red line has been included in the foreign concession of Tsukiji; it has been extended as shown by the dotted red line. Foreigners cannot live outside the concession. Those spoken of before first began to live outside these limits when they went into the employ of the Japanese; that was during the Shōgunate. The Tsukiji Hotel had been built before the time of the sale in 1870. All foreigners were obliged to live there and in other places in the settlement at that time. You have paid for lot No. 1, Rios 1,470, 3 boos 2½ shu; for No. 21, Rios 586, 3 shu; for No. 21, Rios 419, 2 boos, 1 shu; No. 22, Rios 391, 3 shu.

Resumed at 1.30 p.m.

Examination of plaintiff continued :—The upset price was *rios* 1 *boys* 2 per *tsubo*. In lot 2, there were 358 *tsubos;* in No. 1, 307⅛ *tsubos;* No. 21, 277¾ *tsubos;* No. 22, 238⅞ *tsubos*. In all, 1,181⅛ *tsubos* @ *rios* 1.50, making the upset price of the whole about *rios* 1,773, which would make the bonus about *rios* 1,041.

Plaintiff examined by the Court :—The land outside Tsukiji which has been given to the Legations was ceded in time of the Shōgunate. There are no foreigners except those attached to Legations or employed by Japanese living outside Tsukiji. Missionaries are not allowed to live outside the boundaries unless employed by Japanese. The Tōkiō *Fu* does not know of any foreigners living outside Tsukiji under their servant's names. Foreigners are obliged to apply to the Foreign Office for leave to live outside the limits.

This closed the examination of plaintiff; defendant now called his witnesses.

Charles Pollard, sworn, stated :—I am a lithographer. I reside in Tōkiō, at the Seiyoken Hotel. I know of other foreigners who have lived there. I cannot say exactly how many. Mr. Taylor and Mr. Harris have lived there, and several others whose names I cannot call to mind just at present. I have visited perhaps three or four foreigners who live outside Tsukiji. I have called at the house of Mr. Dyer, and at Mr. Hill's, and Mr. MacVean's. There is a house in Ginza which I am told belongs to Lane, Crawford & Co., a foreign house, doing business in Yokohama. I have been in the French restaurant at Ginza; but I cannot say who is the proprietor. Ginza is the main street of Tōkiō, outside of Tsukiji. I have been in Thompson's apothecary store. I have been in a foreign barber's shop. I have noticed a dentist's display in Ginza. Frenchmen appeared to be the managers of the restaurant at Ginza. There was a Japanese in the barber's shop besides the foreigner. Mr. Thompson appears to be the manager of the drug-store. I have been in the store said to be kept by Lane, Crawford & Co. It was apparently kept by a young foreigner. I do not know if the hotel man in the Seiyoken was in the employ of Japanese.

Guido F. Verbeck, sworn :—I came out to Japan as a missionary, but am at present in the employ of the Japanese *Genrō-In*, at Surugadai. The land I hold is by agreement with the Japanese, The owner is a *yakunin* of the Gaimushō. He lives in one part of the house and I teach him. I pay the dues on the house and ground. They do not amount to more that $5 a quarter. There are altogether about 360 *tsubos* of land, and I am not aware that any more money is paid in the way of ground rent than the sum stated. I have not seen a bill citing three cents per *tsubo* as ground rent. Mr. Poate lived in one part of the house for five months this year at a rental of $10 per month. I know a good many foreigners living outside Tsukiji. In Surugadai live Mr. and Messrs. Arthur, Mr. and Messrs. Cochrane, Mr. Hill and several others. The Russian Legation is also there. I know these people are there; but that is all. Most of them are in the employ of the Japanese Government. Mr. Cochrane is employed by Mr. Nakamura, a Naval officer who keeps a private school.

Thaddeus Davis, sworn: I am private secretary to General Le Gendre. I have lived in Yedo since July 1873, outside of the foreign concession. When I first came I lived at the Seiyoken, I think about two months. I then went to Shiodome. I lived there for two and a half months. I then had a position in the Kaisei Gakko, for about four months. I was then appointed to the Formosan bureau. This terminated in August last year. I have been living in various places since then in the employ of the Kaisei Gakko. In the latter part of last August I removed to Tsukiji. Altogether I have lived about ten months and a half at the Seiyoken. There were a number of foreigners living there with me. Mr. Barton, a pay-master of the Naval Department; Mr. Holt, and his wife, of the Kaitakushi; Mr. Taylor a superintending engineer of the Mitsu Bishi Co.; Mr. C. P. Pfoundes, who was part of the time only in the employ of the Japanese. The captain of the *Solent* also was there; and Mr. House, who was not in Japanese employ that I am aware of; Mr. Pollard in private Japanese employ; Mr. Hodgkins of the Mitsu Bishi Co., and Mr. Harris. These are all I can remember. I enjoy the acquaintanceship of a great many people in Tōkiō, the majority of whom live outside of Tsukiji. I think there are several foreigners living in Ginza who are not in Japanese employ but carrying on business on their own account. I knew the Hare brothers, who were agents for Hudson, Malcolm & Co. They had a private residence in Ginza. I have been in the French restaurant, the barber shop and the druggist's. Foreigners appeared to be the managers of these establishments. I have been into a restaurant kept by Messrs. Gilbert and Eyton under a Japanese name. They signed receipts as managers. I have heard of the practice but do not know absolutely that foreigners take houses under their servants' names. I know a man named Davidson, living at Shinagawa, who used to be in the employ of the Grand Hotel. He resided with Mr. Hayes of the Mining Department. I dont know if he is there now; but he was four months ago.

Capt. Charles Fletcher, sworn :—I have resided in Tōkiō. It

Digitized by Google

was in 1870 I had charge of the hotel in Yedo. All foreigners visiting Yedo at that time boarded at the hotel in Tsukiji. I was at the sale of land, but not being an intending purchaser I did not take the trouble to look at the plans. The conditions of sale were posted up in the hotel. Foreigners were not permitted to lease land outside the concession then. There were very few foreigners in the employ of the Japanese Government at that time. The French military mission had been in existence for some time. Mr. Waters, the Government builder first resided outside the "red line." He first lived at the hotel and then a house was built for him outside. I recollect Mr. Peshine Smith coming to the hotel; he afterwards went to the Gamusho. The hotel was burnt down in February, 1871 or 1872. The majority of men who were doing business in Yedo lived at the hotel or in its immediate vicinity whilst I was there. That hotel has never been rebuilt. The hotel I kept was a very large one, and entertained a great many guests, at times even a hundred. I think there are two hotels in Tsukiji now, but I don't think they do much. The last time I was there I believe I was the only visitor.

Heinrich Lohmann, sworn:—I am a tailor and cutter. I have had a branch establishment in Ginza under the name of Izakatzū, to whom everything belonged except the goods which we furnished. He got 20 per cent. on all sales. The 20 per cent. was given for rent and for the expenses of boys and bantos in the shop. I issued bills under the name of "Lohmann, Kuehmeister & Co." to foreigners. The banto made out the Japanese accounts in Izekatzū's name. The goods were all taken from No. 70. We had Izekadzū's name above the door.

Adjourned till the 16th instant, at 10 a.m.

IN THE IMPERIAL AUSTRO HUNGARIAN CONSULAR COURT.

RUSSELL ROBERTSON, Esq., Acting Consul.

Tuesday, October 10th, 1876.

August Halsar, an Austrian, was charged with having assaulted a Chinese horse-boy on Sunday afternoon.

Sergeant Loxton, sworn:—Yesterday about five o'clock a Chinaman came for the police to go on the hill with him. He said some foreigners had taken several racing horses from their *bettos*. I sent two constables and went to see Mr. Keswick, whose horses they were. After I got back to the station I found that the constable had returned with four men; prisoner, two Norwegians and a German. They were drunk and we put them in the lock-up.

August Kalsar, stated:—I was to go to day to Tokio, and went out into the country to have a spree with some friends. We met some horses on the road and I stopped to admire one of them. A Chinaman, who was leading it kicked me on the chest, and when my companions saw that they pounced upon him and gave him a thrashing.

The case was dismissed.

THE CHEFOO CONVENTION.

Convention entered into between Li Hung-chang, Chinese Imperial Commissioner and Plenipotentiary, Grand Secretary of the Wên-hwa-tien, Governor-General of the province of Chihli, and Earl of the First degree, and Sir Thomas Wade, K.C.B., the British Imperial Commissioner and Plenipotentiary.

Whereas in the spring of the present year Sir Thomas Wade had the honour to receive a despatch from the Earl of Derby, Secretary of State for Foreign Affairs, bearing date of the 1st January last, instructing him that in any comprehensive settlement of the matters in dispute, the three following stipulations were to be insisted upon:—

a.—Satisfaction for the Yunnan affair.

b.—The terms agreed upon last year with reference to intercourse between the high officials of China and Foreign Powers to be given full effect to, to show China's intention to fulfil her promises.

c.—Steps be taken to ensure that better regulation of commercial relations, which in September last, it was agreed was necessary.

In all his discussions with reference to future policy Sir T. Wade has made these clauses the basis of any settlement. It is unnecessary to enter into the repeated consultations held by Sir Thomas Wade with the Tseng-li Yamên; it is sufficient to state in detail the several clauses relative to future action agreed upon by him with H. E. Li Hung-chang.

Section I.—*The Satisfaction for the Yünnan Affair.*

1.—Sir Thomas Wade has drawn up in a separate document his proposals for the settlement of the Yunnan case, but the general tenor of the memorial on the case is to be arranged between him (Sir Thomas Wade) and H. E. Li Hung-chang; whereafter it may be submitted to the Throne by either the Tsung-li Yamên or H. E. Li Hung-chang; but before it be so submitted, a draft is to be transmitted to Sir Thomas Wade for his inspection.

When the Imperial Edict in answer to this memorial is issued, a copy of it and of the memorial is to be forwarded by the Tsung-li Yamên officially to Sir Thomas Wade. The Tsung-li Yamên will besides issue instructions to the several provinces to publish proclamations embodying in full this memorial and the Edict in reply, and when this has been done will inform Sir Thomas Wade to that effect. Sir T. Wade will then reply notifying the Yamên that, within a period of two years, the British Minister resident in Peking, will from time to time send officers to the several provinces to see that the stipulations with regard to the publication of these proclamations have been carried out; when, either upon the British Minister in Peking himself informing the Yamên to this effect, or instructing the Consul at any of the open ports to inform the local authorities, an officer shall be deputed by the high local authorities, to accompany the British officer on his inspection.

2.—In the memorial to the Throne upon the Yunnan case, an Imperial Edict is to be prayed for instructing the Governor-General and Governor of Yunnan, upon the arrival in Yunnan of the officer appointed by England for the purpose, to select a a high official of experience and ability, who in consultation with the English officer, will draw up a set of rules and regulations for commercial intercourse between Yunnan and Burmah.

3.—England shall be at liberty for a period of five years, dating from the 1st January, 1877, to appoint an officer to reside at Tali fu or other suitable place, in the province of Yunnan, to examine into the conditions of trade, to ensure a satisfactory basis upon which, when the time comes, regulations of trade can be drawn up. All questions affecting British officials or people also shall, as occasion may require, be arranged by these resident officials and the provincial authorities in concert. It will be for England, after consideration of the various attendant circumstances, to fix a date for the opening of commerce either, as may seem fit, before or on the expiration of this term of five years. Passports having already been issued for the expedition which it was proposed to send last year from India into Yunnan, the Indian Government will continue to be at liberty to send this expedition at any time it may see fit.

4.—A sum of 200,000 Haikwan Taels, as fixed by Sir Thomas Wade, is to be set aside as indemnity to the families of all those who suffered any damage in Yunnan, for all the expenses incurred in connection with the Yunnan case, and in satisfaction of all claims brought by British merchants previous to the present year (2nd year of Kwangsu) against the Chinese Government for loss entailed by the wrongful acts of its officers. This sum Sir Thomas Wade will draw against as required.

5.—On the termination of this case an Imperial letter expressing regret for what occurred in Yunnan, shall be at once despatched by a special Imperial Envoy to England. The names and rank of this Imperial Envoy and of his suite are to be previously submitted to Sir Thomas Wade, that he may inform his Government of them, and the draft of his credentials is likewise to be submitted by the Tsung-li Yamên to be submitted to Sir Thomas Wade for his inspection.

Section II.—*Improvement of Official Intercourse.*

This clause relates to the etiquette to be observed between the Minister and his suite in Peking, the Consuls, and their staffs at the ports and the Chinese authorities [of corresponding rank] in their official intercourse; to law procedure, and all matters affecting officials generally.

1.—In a memorial to the Throne bearing date of the 9th October, 1875, the Tsung-li Yamên stated that "the cultivation of thorough acquaintance with foreign officials and affairs generally was not undertaken solely with a view to the transactions of matters affecting the international relations of China with foreign nations, but was also with the object of accrediting representatives to foreign countries."

In view of the fact that the intercourse at Peking and the ports between the officials of England and China, both personally and by correspondence, is still in many respects of an unsatisfactory nature, it is advisable, in order to avoid future misunderstandings and discussions, that some sort of rules should be agreed upon. It is, therefore, proposed that the Tsung-li Yamên shall address a despatch to the Foreign Ministers resident in Peking, requesting

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

them to join in drawing up a "Code of Etiquette," such that the behaviour of Chinese officials to the foreign officials residing at the ports of China may be in all respects identical with the etiquette followed in intercourse between foreign nations and with the treatment accorded by foreign nations to Chinese officials abroad. The fact that China has now herself commenced appointing Ministers abroad, renders the settlement of such a Code essential.

2.—In the 16th Article of the Treaty of 1858 it is stipulated that "British subjects who may commit any crime in China shall be tried and punished by England; Chinese subjects who may be guilty of any criminal act toward British subjects shall be tried and punished by the local authorities; and all cases affecting the two countries shall be adjudicated in an equitable manner by the British and Chinese officers conjointly." In the English version of the original treaty the first clause reads "British subjects who may commit any crime shall be tried and punished by the British Consul, or other public functionary authorised thereto according to the laws of Great Britain;" and the corresponding expression made use of in the Chinese version "shall be tried and punished by England" covers this meaning. Hence, therefore, England has framed an elaborate Code of Rules, and established at Shanghai a Supreme Court presided over by a Chief Judge and other officers in order to ensure the settlement of law cases in conformity with the treaty stipulations, and is at present engaged in revising this Code so as to make it as perfect as possible. China also has established at Shanghai a Mixed Court for the adjudication of cases in which both China and foreigners are interested, but either owing to the officer deputed to try these cases not being of sufficiently high rank, or owing to fear on his part of incurring odium, he has time and again failed to secure a proper decision. It is now agreed that the Tsung-li Yamên shall address the Ministers of the Treaty Powers resident in Peking, requesting their co-operation in drawing upon a set of regulations which will ensure a more satisfactory administration of justice.

3.—In all cases, whether in the interior or at the treaty ports, of murder or robbery of a British subject the British Minister will send an officer to the place to hold an investigation. As it is advisable at the present juncture that, in order to avoid future misunderstanding this should be clearly laid down, Sir Thomas Wade will address a despatch to this effect to the Tsung-li Yamên requesting them to state in reply that this is the mode of procedure which shall hereafter be followed.

As regards the settlement of cases affecting both Chinese and foreigners, so long as the laws of the two countries are dissimilar, the only plan to be adopted is to lay the charge at the Consulate of the nationality to which the defendant belongs; the plaintiff's Consul can only be present at and watch the judicial proceedings. But should the latter consider the investigation unsatisfactory, he shall be at liberty to enter a protest in detail: thus injustice to both parties, it is to be hoped, may be avoided: The word *ho t'ung*, in the 16th article in the treaty, is to be read that the defendant is to be judged according to the laws of his own country, and this to be given effect to by the officers of both nationalities.

Section III.—*Commercial Relations.*

1.—At the ports opened to foreign trade, it is stipulated by already existing treaties that *likin* shall not be collected upon foreign goods within certain limits. Sir Thomas Wade will now move his Government to agree, in order to avoid all abuse, that the foreign Settlements (or Concessions) at the Treaty Ports shall be the area within which foreign goods shall be exempt from *likin*. The Chinese Government will thereupon sanction the opening of Ich'ang-fu, in Hupeh; Wuhu-hien, in Anhwei; Wênchow-fu, in Chêkiang; and Pehhai-k'ow (Pakhoi), in Kwang-tung, as treaty ports and Consular stations. England shall, besides, be at liberty to appoint an officer to reside at Chungk'ing-fu in Szechuen, to examine into the conditions of British trade there; but before steamers run up to Chungk'ing British merchants shall not be allowed to reside there or to establish houses of business or warehouses. When steamers succeed in running as far as Chungk'ing, further arrangements are to be made.

In a spirit of compromise, moreover, China sanctions the ports on the Yangtze of Tat'ung and Anking in Anhwei; Huk'ow, in Kiangsi; Wusueh, Luk'i-k'ow, and Shashih, in Hukwang;—at which, as being inland ports not opened to foreign trade, the shipment and discharge of cargo is prohibited under the Yangtze Regulations,—being made ports of call for steamers, at which passengers and goods may be landed or shipped. The shipment and discharge, however, can only be made in native boats in accordance with the regulations already in force affecting native trade. Foreign goods covered by a half duty certificate will in accordance with the regulations, after examination, be exempted from *likin*. Native goods covered by certificate can only be shipped; they are not to be landed for sale. All other goods are to pay duty and *likin*, the local authorities taking the steps necessary to ensure a uniform and satisfactory system. Foreign subjects will not be allowed to reside at these ports or to establish houses of business or warehouses.

2—At the ports opened by the present Convention or previously at which settlements have not been laid down, the British Consul, in consultation with the Consuls of other treaty-power nations, and the local authorities, shall determine upon the site to be set apart for the residence of foreigners.

3.—Sir Thomas Wade will move his Government to sanction the treatment of opium as an exceptional commodity, and agree that when British merchants import opium into a treaty port, it shall be examined by the Foreign Inspectorate, and shall be kept in warehouses or receiving hulks until sold, when the foreign merchant shall pay the tariff duty, and the purchaser shall at the same time, in order to the prevention of smuggling, pay the *likin* into the Custom House. The amount to be paid as *likin* is to be fixed by the several provincial Governments according to the circumstances of each.

4.—It is distinctly stipulated in the various treaties entered into with foreign countries, that half duty certificates shall, on application, be granted for the conveyance of foreign goods inland. To give further effect to this stipulation the Tsungli Yamên is to devise an uniform system to be followed whenever passes are hereafter issued by the Customs. Foreigners and natives without distinction shall be at liberty to take out passes. In the treaties, besides, distinct provision is made for the bringing of native produce from the interior by foreign merchants for shipment. British merchants shall be at liberty, when they have paid half duty and received a pass, to take goods to a port of shipment. If the goods be not the property of a British subject, or if the goods are not conveyed to the port of *bonâ fide* shipment abroad, they cannot avail of this privilege. Sir Thomas Wade is willing to concert measures with the Tsungli Yamên to ensure that the regulations to be drawn up shall not be abused.

In the 7th Regulation appended to the tariff regarding the conveyance of foreign goods inland and the purchase of native produce inland, the word inland *(nei ti)*, is to cover all places on the seaboard, or the banks of rivers, or away from rivers, not opened by treaty to foreign trade. China is herself to devise measures to prevent abuses of this clause.

5.—Article XLV of the Treaty of 1858 stipulates that if British Merchants re-export abroad foreign goods which have paid duty, the Superintendent of Customs shall, on application being made, issue a drawback, which shall be subsequently accepted as payment of duty. This clause, however, fixed no limit [within which re-exportation should be made]. It is now agreed that this period shall be limited to three years, after the expiration of which term drawbacks shall not be issued.

6.—The Hongkong authorities having complained that the Revenue steamers sent by the Canton Customs to cruise in the waters adjoining Hongkong and Macao for revenue purposes have interfered with Chinese traders and junks, it is now agreed that England shall appoint a Consul, China an officer of equal standing, and the Hongkong authorities a third officer, who shall examine into the matter and agree upon a set of regulations to be given effect to, such as to benefit the revenue collection of China and not interfere with the [commercial] interests of Hongkong.

7.—Effect is to be given to the clauses above set forth, relative to the opening of the new treaty ports and of the six ports of call upon the Yangtze for the shipment and discharge of cargo, within six months from the date of the issue of the Imperial Rescript sanctioning H.E. Li Hung-chang's memorial.

A date will be fixed from which effect will be given to the two clauses relative to the exemption of foreign goods from *likin* with the area of the foreign settlements, and to the simultaneous collection of duty and *likin* upon opium by the Foreign Inspectorate, after England has consulted upon the matter with the other Treaty Powers.

Supplementary Clause.

England proposes next year to send an exploring expedition from Peking to India by way of Kansuh and Kobo-nor or through Szechuen, &c., into Thibet and thence to India. At the proper time the Tsungli Yamên will take steps, as circumstances may require, to issue the necessary passports, and due information to the several provincial authorities and the Resident in Thibet. Should the expedition not follow this route, but start from somewhere on the borders of India and Thibet for China, the Tsungli Yamên,

Digitized by Google

upon receipt of information to this effect from the British Minister, will forward a despatch to the Resident in Thibet, instructing him to deputo officers, as circumstances may require, to secure their safe transit; and to prevent difficulties [subsequently], passports besides will be issued by the Tsungli Yamén.—*N. C. Herald.*

THE CURRENCY.

(*Hiogo News.*)

Of all the subjects which come under the head of Political Economy perhaps hardly one furnishes such an unfailing theme to writers as the currency of a country. Even in countries where a well regulated system has been long established, something or other is continually turning up in connection with this question which directs public attention anew to the subject, to the great benefit of ink and paper makers, if not to that of anybody else, and we may perhaps find the reason of this in the fact that though there are certain well known laws which nearly all disputants will admit as governing the question of currency, the conditions of human society are so variable as to continually demand, according to the thinking of some people, a modification of principles in their applications to practice. Of the currency of Japan when foreigners first came here little need be said at this time of day. It was wretchedly bad, and the evils which arose out of its existence were so enormous and so patent that it was the plainest of plain things that a reform was one of the first necessities of foreign intercourse. This was accordingly decided upon, and in the mean time the Mexican dollar the standard coin of the foreign trade of China was adopted as a medium of currency between Japanese and foreigners at the open ports. The Government then took that coin, wisely enough, as a basis upon which to work, taking it as a unit of value. But the Government at once strongly against the wishes of its most disinterested advisers, decided to issue a coin of that value not only in silver, the universal medium of exchange in Asia, but in gold also. It was announced that the gold coin would be of slightly less intrinsic value than the silver, but for the purposes of our arguments we may dismiss consideration of the fractional difference. This was of course a great mistake. A single standard of either metal would have been preferable, as there is no power resident in the Japanese Government to maintain the relative values of any two metals. To the Government the recent fall in the price of silver all over the world has come as a painful commentary on its proceedings. It is not our purpose to enlarge needlessly at the present moment on the method adopted by the Government in the issuing of its gold coinage: the trick played on the public, we shall call it, not to mince matters. After announcing what the coin was to be, it issued another Notification giving a table of the weight of the new gold coinage, but without expressing so many words that in the interval it had decided that the standard gold yen should be only of the intrinsic value of the United States dollar instead of the Mexican, and even bolstered up this fictitious value of the gold coins by not withdrawing the notification about the reception of them at the Custom Houses at the originally nominal value. They went off rapidly as soon as coined, and even reached a considerable premium before the fraud—so we maintain it was—was known to any but a few bullion dealers, (who of course held their tongues as long as they could), and the coin was only kept from falling to its intrinsic value by the artificial favor extended to it at the Custom House. There may therefore be said to have been then the Mexican dollar, the Japanese gold and silver yen and the paper yen of the Government, all current together at nominally equal values. But the evils of the double standard soon became apparent, for silver commencing to fall rapidly as against labor and gold in the other markets of the world, while the Government maintained a legal equality between them in Japan, nearly the whole of the gold coins was exported for other purposes than that of currency, and the evil has been aggravated through the Government, with a pertinacity in wrong doing little less than marvellous, forcing on the coinage of gold and stopping long ago that of silver. The result has of course been that we find ourselves here to day with a currency of Mexican dollars and paper yen, and nothing else. Under these circumstances the enormous recent demand for silk has brought out the peculiarities of the position with startling vividness. For while the sudden demand for dollars (the currency of foreigners) to pay for silk ran them up to 3d. an ounce over bar silver of the same fineness, paper yen (the Japanese currency in which alone the produce could be paid for) stood at some six per cent. premium against Mexicans. It is therefore not surprising that the *Japan Mail* should, in its two latest issues, have considered the present state of exchange, the evil of it and the remedy which should be applied. Setting aside an error of which the *Mail* has been convicted (it was principally one of exaggeration, and did not materially affect the argument) we are convinced, that it is to a great extent wrong in its diagnosis of the facts, and wrong again, not so much in the remedy itself which it proposes, as in the method of its application. The evil complained of by the *Mail* as having happened lately is that the Japanese producer has not received for his silk the price which he ought to have received, *because of the premium on paper as against Mexican dollars*, asserting that the reason of this premium is the insufficient quantity of the paper currency to meet the demands upon its service. This is wrong; for though a sudden demand for a particular currency, paper or otherwise, will raise the market value of it, the *Mail* has failed entirely to show that any such cause for what it would call the rise in paper, exists out of its own imagination, while it has apparently altogether forgotten the cardinal fact that so long as the Government retains a double standard, the paper "dollars in currency" (as it calls the Japanese paper money) represent *gold yen*. Speaking of the Japanese merchant, the *Mail* says:—

"..... it is obvious that for every 100 dollars' worth of silk or tea which he has reeled or grown, he only receives 93.25 dollars in currency, so long as this premium lasts ..... But his engagements for the most part assume the form of stipulated sums, and he thus gets no return in value for the premium he has paid on the paper which comes into his hands. In other words, he has to pay away, say, 100 dollars, but has only 93.25 dollars to do it with."

This is a fallacy altogether. It is perfectly true that for every 100 *dollars'* worth of silk the producer only gets 93·25 "dollars in currency," but "dollars in currency," as the *Mail* calls them, are practically *gold yen*, and the engagements of the producer, being in his own currency, are not affected by the fact of the number of Mexicans which the foreigner had to discount to pay for the silk. If the producer wish to pay away to any one 100 *dollars* he has the equivalent of 93·25 gold yen to do it with, which is sufficient for the purpose. That the price of Mexican dollars in Yokohama against gold in London may affect the price of silk is true enough, but it is another part of the question altogether. The recent sudden rise in Mexican dollars here was not a rise in the price of silver against gold so much as a rise, from accidental and shortlived circumstances, in the value of a particular coinage. Even had there been a large quantity of silver yen in the country, an equally unexpected demand for them would have raised the price of them the same way for the time being, but as it would be a mistake to assume that a rise to be a rise synonymous with a permanent rise in the price of silver, it would be unjust to expect the Japanese producer to accept them in place of the gold representing paper at anything less than the discount which would represent their intrinsic value.

Assuming the premium on paper to be owing to its inadequate supply, the *Mail* propounds as a remedy that the Government should issue a lot of paper money and buy Mexicans for the Treasury at par; but as we believe we have shewn the fallacy of the diagnosis, it is scarcely worth while considering the remedy. But the Treasury, if not minded, may perhaps perpetrate a notable swindle. Dollars are at a comparatively low price and the Government could buy them with its paper currency at a heavy discount. An Imperial Notification making paper yen redeemable on demand *in silver only*, supposing the country would stand it, would then enable it to buy them up with Mexicans at par. We present the Finance Minister with the suggestion. Something of this may be in the mind of the *Mail*, as it proposes a second remedy in the shape of "a resumption of specie payments, or, in other words, a convertible currency." The *Mail* holds the discussion on this point over to its next issue, but it is difficult to see how such a conversion, if honestly carried out, will affect the foreign merchant much. The price of silk depends on the demand for it in market, and on the price on the one hand of the labor which produces it and on the other hand on the price of the coin which the foreigner gives in exchange for it. At the present moment there is a certain amount of inconvenience resulting from the fact that the Japanese producer wishes to to be paid in what is practically gold, while the foreign merchant wishes to pay in silver, but the greater part of that inconvenience results mainly from causes beyond the power of any Government to control.

MEMORIAL ON THE YUNNAN OUTRAGE, PRESENTED TO THE THRONE BY THE GRAND SECRETARY LI HUNG-CHANG.

(S. C. & C. Gazette.)

[The writer] presents a Memorial requesting the issue of a Decree. He would humbly recal the fact that in the 6th moon of the 13th year of the reign Tung Chi, (May-June, 1875), the British Minister residing in Peking proposed to the Yamên of Foreign Affairs, in accordance with precedent, to issue passports duly sealed, under which an official mission from India might enter Yunnan by way of Burmah, and the Interpreter Margary might be sent to meet it; also to write letters informing the provincial Governments along the line as well as to the Governor-General and Governor of Yunnan.

It was in course of time stated by the British Minister that, in the 12th moon of the same year (January 1875), the Interpreter Margary had reached Bhamo in Burmah and, having there met Colonel Browne and the rest of the party sent from India, was returning through the Yunnan country, when on the 17th of the 1st moon of the 14th year of the reign of Kuang Sü (21st February, 1875), he, the Interpreter Margary, was murdered at Man-wyne, a place which he had reached in the jurisdiction of Momein. On the 18th day (22nd February), Colonel Browne and the rest were attacked and driven back by an armed force.

In the 5th moon of the same year, Your Majesties despatched Li Han-chang, Governor-General of Hu Kuang, to make enquiry and take action, and the ex-Vice-President Sich Huan was sent to act with him. The British Minister at the same time sent Grosvenor, Secretary of Legation with other [officers], whom he had selected, that they might be present at the investigation.

In the 3rd moon of the 2nd year (March 1876), Li Han-chang and his colleague, having completed their inquiry, reported to the effect that the murder of the Interpreter Margary was the act of savages, who had demanded black mail of him; that he had refused to pay it, and had been killed by them in consequence, and that it was at the instigation of Li Chên-kuo, the military officer (*tu-ssŭ*, major?) at Nan-tien, since cashiered, that his fellow travellers had been stopped. The case being one affecting foreign relations, they (the Commissioners,) did not think it well to take on themselves to award a sentence, and they prayed Your Majesties to instruct the Tsung-li Yamên to confer with the Board of Punishments and to report their joint opinion. Your Majesties having been pleased to signify approval of this course, a copy of the Decree, reverently made, was communicated by the Tsung-li Yamên to the British Minister, to whom were also forwarded copies of the memorial of Li Han-chang and his colleague, with copies of depositions and letters.

And whereas the depositions of Li Chên-kuo, now cashiered, and the other prisoners supplied adequate (or trustworthy) evidence against them, the proper course would have been to award such penalties as, after reference to the laws of China, the prisoners should be found severally to deserve. The British Minister, however, has handed in a memorandum prepared by him, in which he states that, having carefully considered the report of the Secretary Grosvenor and those with him, he is of opinion that, although, by the laws of China, there might be ground sufficient for the conviction of Li Chên-kuo and the others whom Li Han-chang and his colleague have pronounced, on the depositions and other evidence before them, to be the principals in this case, [the prisoners, if the evidence] were tested by the law of England would not, in his belief, be held to have been justly convicted; that the punishment of the persons above mentioned, consequently, so far from being regarded as acceptable in England (or, by the British Government), would, on the reverse, but too probably excite [feeling of] mistrust and apprehension. The persons murdered and driven back in this case, [the British Minister observes,] were British officers, and inasmuch as Western civilization teaches that punishment of the past is not of so great consequence as the security of the future, he has earnestly requested that the parties in this case, now awaiting sentence, be not punished.

Your servant having, in obedience to Your Majesties' Decree, repaired to Yen-t'ai to confer with the British Minister, would submit that, as the laws of China and the West differ from each other, and as there is a corresponding difference between their modes of proceeding, the sentences [that would otherwise have been passed,] be modified so as to meet the exigencies of the case. Chang Tung-hau, General of the division of Tên-yueh; Ting (Memory); and Wu ch'i-hang, sub-prefect of that jurisdiction, have already been cashiered. They need not therefore be taken further account of. As regards Li Chên-kuo, the *tu-ssu* cashiered, with Lêu Tung-wa, Lu Ta, and the others, eleven in number, if there be no impropriety in the request, [the memorialist] would respectfully pray your Gracious Majesties, as an exceptional instance of humanity beyond the prescription of the law, to deign to accord the request of the British Minister, and as an act of indulgence to consider the possibility of granting remission of their sentences. Prostrate he awaits the decision of your Sacred Majesties.

He reflects at the same time that by the murder of the Interpreter Margary, he being an officer sent on a mission by a friendly power, and provided with a passport, and by the repulse of the officers with him, a wound could not fail to have been inflicted upon the relations of amity existing between the two countries; while with the deep interest taken by Your Majesties in foreign relations, Your Majesties cannot but have felt deeply concerned thereat. [The memorialist] proposes accordingly to request Your Majesties to issue for publication in the capital and the provinces a Decree the promulgation of which may dissipate misgiving in the public mind.

China and other nations having long since made treaties with each other, religious observance of which is equally incumbent on both sides, in the 9th moon of last year the Tsung-li Yamên presented a memorial praying a more perfect exposition of the provisions of the treaties, and a circular was written by it to the provincial governments reminding them of the provision under which foreigners travelling with passports are entitled to protection, and enjoining on them a special attention to the meaning of the treaties [in this regard], and the duty of action in conformity therewith, as differing circumstances might require. [Your Majesties replied to that memorial] and it is the writer's duty to request that a Decree may now be issued directing the Governors-General and Governors to obey with awe Your Majesties' Decree of the 11th day of the 9th moon of last year (9th October, 1876), and once more to issue strict orders to their subordinates with reverence to second the desire of the Government to keep on terms of amity with friendly states, and to remember that whenever a foreigner is travelling in the interior with a passport, they must act towards him in respect of his treaty rights, as the treaty requires; that he must be duly protected; that if any serious harm befal him in consequence of their omission to take proper precaution, the authorities of the province concerned will be held responsible; that in every prefecture, sub-prefecture, and district, proclamations are to be posted, so that every household may know the relation in which the Chinese and foreigner stand to each other. [This done,] misunderstandings will be certain not to occur.

Should your Majesties honor the above proposition with your approval, it will be for the Tsung-li Yamên to draught the proclamation that is to be sent to the provincial Governments for their guidance.

Whether the course suggested in this memorial for the termination of the Yunnan affair be worthy of adoption or not, the writer humbly beseeches Their Majesties the Empresses Dowager and the Emperor, when They shall have perused it, to signify.

A Respectful Memorial.

THE "INSIDE" OF THE EXTRADITION DIFFICULTY.

(The Nation.)

The article in the July number of the *Law Review* and the letter from Mr. D. A. Wells lately published in the *Tribune*, throw a great deal of unexpected light upon the controversy between the United States and Great Britain over the cases of Winslow and Lawrence. The article in the *Law Review* is, unless we are greatly mistaken, written by a lawyer who has an authority in matters relating to extradition quite as great as those exercised by Judge Benedict, who decided the Lawrence case, and will be likely to make practical applications of his carefully-arrived-at conclusions in cases of future Winslows and Lawrences. Mr. Wells's letter brings forward facts which have hitherto been only suspected, and, while they do not furnish an explanation of the curious course the proceedings have taken, they put us on the track of one.

In the first place, it appears that the law of the subject is simple, well-settled, and has been repeatedly acted upon by our Government. It is that a person surrendered under an extradition treaty is it be tried only for the crime for which he is surrendered. As to the reason on which this rule rests, it is (as we have all along maintained in these columns) simply that in no other way can the right of asylum (one of the most jealously guarded rights in free countries like England and America) be preserved. The *Law Review* points out that the rule is not even limited by the question of bad faith. A nation has, of course, no right to make a pretense

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of the commission of an extraditable crime for the concealed purpose of getting hold of somebody who has committed a political offence; but, more than this, even if there be no pretence about it, and the offender has really committed a crime for which his extradition is honestly demanded, the right of asylum is obviously gone if the Government, after getting possession of him, and honestly trying him for one offence, proceeds afterwards to hang him for another.

This being the reason of the rule, it would seem singular if the publicists who have considered the subject should differ on it. But the fact is that not a single case can be found of any writer of authority who has discussed the subject at all, who has not laid the rule down precisely as we have stated it here. Wheaton, Kent, Story, and other well known authorities, it is true, have not expressed any opinion on the point probably because it seemed too obvious a corollary from the principle of extradition to need discussion. The Continental writers, Fœlix, Martens, Heffter, and every one who has touched the matter, are unanimous in stating the rule to be that no one can be tried except for the offence for which he has been surrendered. The rule has been steadily recognized by the French Government, the only qualification that they have attempted to engraft upon it being that announced by the Minister of Justice in 1867, that the application of the rule must be left to the political department of the Government, and not to the courts—*i.e.*, that the courts can only postpone the matter till the Government has been applied to. This later French view has been adopted by some courts in this country (including Judge Benedict's), which take the ground that the courts, having possession of and jurisdiction over a criminal, cannot enquire into the alleged breach of international law, but must leave it to the executive department of the Government. These cases have been spoken of as settling the point of international law, but it is obvious, as the *Law Review* points out, that instead of settling it they refuse to discuss it. The writer pertinently enquires whether the case of the State *v.* Brewster (7 Vermont R. 118), in which the Court refused to consider the defendant's allegation that he had been kidnapped across the Canada border, and thus wrongfully brought within its jurisdiction, decides that kidnapping is permitted by the law of nations.

In reply to all this, we have Mr. Fish's assertion that by the "practice" of the two Governments the rule has been abrogated; and here comes the most singular fact of all, that the assertion is flatly contradicted by the whole recent history of the Government; by Section 5,275 of the Revised Statutes, which provide that the President shall protect a person extradited to the United States "until the final conclusion of his trial for the crimes or offences specified in the warrant of extradition"; by four extradition treaties made since 1842 with Italy, Salvador, Nicaragua, and Belgium, in all of which the principle that no one can be tried except for the offence for which he is surrendered is expressly incorporated; by the action of Mr. Fish himself, between 1871 and 1873, in agreeing to the insertion in a new treaty with England herself of this very principle; by the Attorney-General of the United States, in a letter to the District-Attorney, Mr. Bliss, under date of December 22, 1875, directing him to try Lawrence "upon the charge upon which he was extradited, and upon no other"; and, finally, by an express order, issued May 21, 1875, by the President himself, directing Mr. Bliss to stop all proceedings in Lawrence's case "except upon the charges upon which the said Lawrence was extradited."

Having thus seen that the best authorities and the reason of the matter agree in the rule as we have stated it, and also that this rule has been expressly adopted by the Attorney-General and by the President as their guide in the Lawrence case, any one might fairly feel surprised if he were told that, at the very same time that the highest officers of the Government were insisting upon it that Lawrence should be tried only upon the charge upon which he was extradited, the Secretary of State was maintaining that Winslow could be tried upon any offence, whether included in the Extradition Treaty or not. Yet such was the fact. On May 21, 1875, the following order was issued by the President to the New York District-Attorney:

"WASHINGTON, May 21, 1875.

"In the matter of Charles L. Lawrence, the District-Attorney of the Southern Districts of New York is directed to stay all proceedings *except upon the charges upon which the said Lawrence was extradited*, and until the report of the Solicitor-General, to whom the matter has been referred, is made, and until further ordered; and the District-Attorney may exercise his option as to the time when he will proceed *upon the charges mentioned in the warrant of extradition*. U. S. GRANT."

On the 22d of December was sent the following letter to the same officer:

"SIR: Application is again made to me in the Lawrence case, with a long record and an opinion of Judge Benedict. I now repeat what I have heretofore written with earnestness and urgency, and what I carefully tried to impress upon you when I saw you here, that, for grave political reasons, Lawrence must first be tried upon the charge upon which he was extradited, and upon no other until that trial is ended, and, whether such a course of proceeding for other crimes shall or shall not be taken must await the order of the President. Now, upon examination of the papers, it is perfectly easy for you and the Court to determine upon what charge Lawrence was extradited, and to proceed to try upon that charge, and that only. This is a matter of great importance, and you must not hurry in it. There are other questions involved of a serious nature, as I have already told you, and we want to proceed in strict conformity with international law and in mature leisure; therefore I hastily [illegible] and [illegible] that you be not [illegible] and [illegible] I [illegible] that [illegible] that [illegible] be made in the case.

EDWARDS PIERREPONT, *Attorney-General*."

While, on March 31 of this year, Mr. Fish, in his long letter to Mr. Wickham Hoffman, Chargé d'Affaires at Berlin, laid down the rule as having been for years, "that where the criminal was reclaimed in good faith, and the proceeding was not an evasion or pretence to bring him within the jurisdiction of the Court, it was *no violation of the spirit of good faith to try him for other charges than the particular one on which he had been surrendered*."

If we now turn to the action of the New York District-Attorney, and enquire how he executed the orders sent from Washington, we find an equally singular state of facts. Lawrence was extradited for the forgery of a single bond and affidavit, but forgery was not really the crime for which the District-Attorney was pursuing him, and Lawrence, knowing this, petitioned the President that he might only be tried on the forgery. This the President directed, as we have seen. The subsequent proceedings were as follows: He was arraigned for some offence which neither was, or was not, the offence mentioned in the warrant of extradition. Mr. Fish says, in his letter of March 31: "Up to this date Lawrence has been arraigned only upon one indictment, and that on the forgery of the bond and affidavit mentioned in Sir Thomas Henry's report to the Home Office." Lawrence, however, took a different view of the matter, and pleaded that the indictment set forth a different offence. Now, any lawyer will see that if the District-Attorney had been trying to obey the orders of his superiors, he would have taken issue upon this fact—that is, he would have denied that there was any difference between the crime set forth in the indictment and that mentioned in the extradition warrant. Which was right would at once have been apparent. The point would either have been decided against Lawrence or against the Government, and, in either case, the extradition part of the dispute would have been at an end. Instead of doing this, however, the District-Attorney demurred—*i.e.*, he admitted that the offence in the indictment did differ from that in the warrant, thus taking ground which may not verbally clash with Mr. Fish's statement, but which essentially answered the same purpose as the "arraignment" on a different offence would have done, and, flatly disobeying all the spirit of the orders he had received from Washington, insisted that the Court must pass upon the question whether this was material or not. The Court having, of course, declined to pass upon the point, and decided it in favor of the Government—that is, decided that it was no concern of theirs how Lawrence came under jurisdiction any more than if he had been kidnapped, and that they could now try him for anything they pleased. Meantime, the English Government got wind of these proceedings, and, Winslow's case coming next, declined to surrender him without a specific pledge.

We do not mean to undertake to explain these proceedings, but merely to call the attention of the public—which has been ingeniously diverted from the real merits of the case—to one or two facts. Mr. Bliss is at the head of an institution known as the "District-Attorney's office," which is the great party headquarters, next to the Custom-house, in this city. He nominally owes his place to the President, but in reality he holds it at the pleasure of Mr. Conkling, whose active henchman he is. He is in control of machinery of the most effective kind, that of the criminal law, for extracting money from the mercantile community of this city, for purely technical violations of the most technical and unintelligible system of revenue law in the world. As we know from the Phelps-Dodge case, he can make merchants innocent of any wrong disgorge small fortunes out of mere terror. Around him he has a corps of informers and spies, headed by a veteran at the business, who was deep in the Phelps-Dodge outrage. It is also a fact that under the present system of politics the District-Attorney's office is one of the chief centres from which money is furnished to "save the party" when election time comes round; that the person who saves it is Conkling;

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

who appoints Bliss; and the party when saved turns out to be Bliss and his janissaries. It is also a fact that Lawrence, though nominally arrested for forgery, is in reality pursued for frauds on the revenue involving an unknown amount of money and the reputation of a number of New York merchants; that to get a hold upon Lawrence which he could not escape was not easy, inasmuch as the offences against the revenue for which he was "wanted" were not extraditable crimes; that he was demanded for forgery, and, once over here, the District-Attorney, by raising, in violation of express orders, a point which was not in the case at all, got a decision practically handing Lawrence over to him for sentence; that Lawrence has now pleaded guilty to all the indictments against him; that he has been released on extremely moderate bail; that he has been given "elegantly furnished apartments" in the District-Attorney's office, where he and Jayne are to be seen in frequent consultation.

These facts may not suggest any explanation at all, but one thing is quite clear—that the key to the whole difficulty between England and ourselves on extradition is in the keeping, not of the President, nor of the Attorney-General, nor of Mr. Fish, but of Mr. George Bliss, the District-Attorney for the Southern District of New York. All the trouble in the Winslow case came from the Lawrence case, in which our Government had in the most authoritative manner adopted the English view of the matter, and directed Mr. Bliss to do the same. Mr. Bliss, instead of doing so, raised the very question about which he had been told by the Attorney-General he could hardly make an honest mistake, and by the President to hold his tongue, got it decided in his favor, and thus forced the Government into the position which Mr. Fish took in his despatch of March 31, and which obliged him to be silent about the most material facts in the case, and to color others so as to make it appear that the view expressly repudiated by the President and Attorney-General was the distinctively "American" view of the case. Now, in any other country under heaven, or under any other system of administration than this, what would have happened? Simply one thing. When it appeared that Mr. Bliss had not obeyed orders he would have been cashiered for making at the very least a gross mistake. Why was not this done? Because, as we say, the District-Attorney's office is, next to the Custom-house, the great party headquarters in this State; because it furnishes a large part of the sinews of war by which "politics" are carried on; because at its head is an active politician who is a right-hand man of Mr. Conkling, who controls all of the offices in the State; and because the President has no more control over him than if he were Conkling's body-servant. Thus it is that Bliss and his associates carry on "the party," that Conkling is made senator, and that Conkling in his turn appoints and keeps in office "the boys," who do this sort of work for him, snap their fingers in the face of the President, and pervert the administration of the State Department. The President and the Attorney-General may issue orders as much as they please, but they are not obeyed; and we finally have the disgraceful spectacle of the ends of justice defeated and the two great law-abiding nations of the world embroiled in a quarrel in which there is no room for dispute, and no material difference of opinion, and no result except a general jail-delivery, in order that a gang of informers and Government officials may keep each other in office at the expense of a great commercial community.

The latest news from Alexandria supplies a missing link of considerable importance in the history of the conflict between the Khedive and the Egyptian Courts. The action of M. Haakman, the Dutch judge of the mixed tribunals, which has been so much discussed here, seems to have taken place in immediate reference to certain cases in which the Egyptian Daira was not, as has been hitherto supposed, the defendant, but the plaintiff. The Daira, against which judgments have been obtained by the holders of Daira Bonds, has itself obtained fifty-three verdicts against Europeans who have refused to pay rent for portions of the estate which they occupy as tenants. And it was only when the representatives of the Daira, having successfully resisted execution against the estate in its character of defendant, applied for execution against its tenants in the character of plaintiff, that M. Haakman took the decisive step of which we have lately been informed. Sitting alone in the Court of Summary Justice, M. Haakman stated that under the circumstances actually existing he should decline granting execution to the Government until the 20th of October. The president of the Court of Appeal, M. Lapenna, has since, however, repudiated the act of his subordinate, and replaced him by the Greek judge, M. Antoniadis. For the present therefore, we must suppose that the Khedive, while defying in his own person the jurisdiction of the court, is to be allowed to avail himself of its processes for the purpose of enforcing his claims against his own debtors. Such a state of things cannot, of course, be allowed to continue, and the action of the Khedive will only have the effect of bringing matters to a crisis, and hastening that decision on the part of the Treaty Governments which he, for his own part, professes his readiness to submit to.—*Pall Mall Gazette.*

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—After great activity and considerable transactions during the last week, the market now presents a rather quiet appearance, but prices remain firm. We quote for

Grey Shirtings:—								
7 lbs	38½ yds.	39 in.	per pce...	$1 65	to	$2 10		
8 lbs.	38½ yds.	44 in.	,, ...	2 00	to	2 60		
8 lbs. 4 to 8 lbs.	38½ ,,	39 in.	,, ...	2 00	to	2 60		
9 lbs	38½ ,,	44 in.	,, ...	2 45	to	3 00		
T. Cloth 7lbs.	24 ,,	32 in.	,, ...	1 50	to	1 75		
,, 6lbs.	24 ,,	32 in.	,, ...	1.25	to	1 35		

White Shirtings:—						
60 to 64 reed 40 yds.	35 in.	per pce.	2.20	to	2.40	
Turkey Reds 24 yds.	30 in.	2—3 lb. per lb ...	0 80	to	1 02½	
Black Velvets			8.50	to	9.50	
English Drills 15 lbs.	40 yds,	30 in....	2.80	to	3.00	
Taffachelass	12 yds,	43 in.	2.00	to	2.40	

Yarns.—

No. 16 to 24 ... ...per picul..	$32.00	to	36.00	No. 38 to 42 ... ...per picul...	$39.00	to 43.50
No. 28 to 32 ... ...per picul..	$33.00	to	40.00	Reverse Twist ... ... 16-24 ... ,, ..	$34.00	

Woollens.—The activity reported in our last has somewhat fallen off, as stocks of most of these articles are considerably reduced, and dealers prefer awaiting the arrivals of the French and English mails before entering on new engagements. Prices remain firm, however, and the general tone of the market continues healthy.

Plain Orleans	40—42 yds	32 in....	5.00	to	8.00	
Figured Orleans	29—30 yds.	31 in....	4.25	to	6.00	
Shimagoro	30 yds.	30 in....	4.25	to	6.25	
Italian Cloth	—30 yds	32 in....	0.27	to	0.36½	
Camlet Cords	29—30 yds	32 in....	5.75	to	7.00	
Camlets Asstd.	56—58 yds.	31 in ...	16.50	to	17.50	
Lastings, Japan	22—30 yds.	32 in....	12.00	to	13.00	
Plain Mousseline de Laine	—30 yds.	30 in ...	0.19½	to	0.21	

Figured Mousseline de Laine..	30 yds.	30 in...	0.27	to	0.35	
Multicolored ,,	...30 yds.	30 in...	0.35	to	0.45	
Cloth, all wool plain or fancy..	48 in.	to 52 in...	0.80	to	1.20	
Presidents	54 in.	to 56 in...	0.75	to	0.85	
Pilots	54 in.	to 56 in...	0.45	to	0.60	
Union	54 in.	to 56 in...	0.60	to	0.82	
Blankets, scarlet & green 7 to 8 lbs....	per lb...		0.40	to	0.45	

Sugar.—We have still to advise an improvement in quotations, though business continues limited.

Sugar:—Takao in bag ... ...per picul...	$3 85	China No. 4 Kook-fah ... ...per picul...	$5.40			
,, in basket ... ... ,, ...	$3 65	,, No. 5 Kong-fun ... ... ,, ...	$4 80			
Taiwanfoo in bag... ... ... ,, ...	$3 73	,, No. 6 E-pak ... ... ,, ...	$4.10			
do. in basket .. .. ,, ...	$3.55	Swatow... ... ... ,, ...	$3.25			
China No 1 Ping-fah ... ... ,, ...	$7.60	Dantong ... ... ,, ...	$3.25			
,, No. 2 Ching-pak ... ... ,, ...	$6 75	Japan Rice	$2 30	to	$2 35	
,, No 3 Ke-pak ... ... ,, ...	$6 10	Kerosene Oil	Nominal.		$3.50	

Kerosene Oil.—We quote Kerosene Oil in fair demand, with no sellers at $3.50 to $3.65 per case. Improved advices have been received from America, and we hear of much higher rates in China.

EXPORTS.

Silk.—Our fortnightly report dated 11th instant was to the following effect:—

A few days after our last, dated 25th ultimo, prices had further advanced $30 to $50, when a reaction commenced, the result of which a comparison of present with previous quotations shows to be a fall in prices of $10 to $30, whilst costs, owing to a higher rate of exchange, remain nearly the same. The causes of that reaction are the scarcity of dollars in this market and a fall in prices at home, induced by the unsettled state of political affairs in Europe.

Settlements since the 25th ulto. are 640 bales of Hanks, and 350 of Oshiu sorts, making a total since 1st July of 14,750 bales against a total export of 13,591 bales for the last season.

The shipments of the fortnight are 1,252 bales, which bring the total export since 1st July to 13,947 bales against 4,038 last year for the corresponding period.

Supplies are coming in freely; the stock estimated at 2,000 bales is an unusually large one, and the market closes weak at the following quotations.

	At Exchange 4/1 in London.		*At Exchange 5.15 at 6 m.s. in Lyons.*			
Hanks.—Extra to No. 1...	$1,080 to 1,120	38/4	to	38/3	106 to 100	
,, Best No. 1 & 2 ..	$1,030 to 1,050	36/7	to	37/3	101 to 103	
,, Good No. 2 ..	$1,000 to 1,020	35/6	to	36/2	98 to 100	
,, Medium No. 2½	$ 970 to 990	34/6	to	35/2	96 to 99	
,, C'mon. No. 3 / ,, Inferior No 4 & 5	$ 900 to 950	32/2	to	33/10	89 to 94	
Oshiu—Best.....	$1,060 to 1,080	—		—	104 to 106	
,, Good / ,, Medium	.....$1,000 to 1,040	—		—	98 to 102	

	At Exchange 4/1 in London.		*At Exchange 5.15 at 6 m.s. in Lyons.*			
Hamatski.—No. 1 & 2...	$ 800 to 820	28/9	to	29/5	80 to 82	
,, No. 3 & 4..	$ — —	—		—	—	—
Kakeda.—Extra	$1,225	43/2			120	
,, Best.....	$1.100 to 1,150	39/4	to	40/8	108 to 113	
,, Medium to Good.	$1,050 to 1,080	37/3	to	38/4	103 to 106	

Silk-worms' Eggs.—The total supply available for export this year is estimated at 1,200,000 cards, and arrivals in this market already amount to 650,000. Sellers and buyers, however, are as far as ever from agreeing upon prices; the former ask from $2.50 to $3.50 per card, and there are as yet no transactions to report. About 30,000 cards, delivered under the contracts which were made at the beginning of the season, have been shipped by the French mail of the 10th instant.

Since the above was written, the telegraphic advices have been, as far as the maintenance of peace of Europe is concerned, rather reassuring. Exchange has risen to 4/1, and sellers having submitted to lower rates for all except the superior grades of Hanks, business has been more active.

Arrivals amount to 375 bales, and deliveries to 450 piculs.

We have no change to report in the Silk-worms' Eggs market. Buyers seem disposed to pay $1.50 for good annual green, and as much as $5 is offered for a particular mark of the northern districts, but there is nothing doing. Total arrivals are fully 700,000 cards.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tea.—A brisker demand has arisen, and settlements for the closing week amount to 3,000 piculs. *Good Medium* grades have attracted most attention, and prices for these show an advance of $1.50 to $2.00 per picul, the quality, however, being very poor. If the demand continues, it is quite possible that this grade may touch $25 to $26 before the close of this month, but the rising rates of exchange may tend to check operations.

Common	$12.00 to 15.00	Fine	$29.00 to 34.00
Good Common	16.00 to 18.00	Finest	35.00 to 40.00
Medium	19.00 to 21.00	Choice	Nominal, very scarce.
Good Medium	22.00 to 25.00		

EXCHANGE AND BULLION.

Exchange.—There has been a moderate business doing in Private Paper, at slightly higher rates; the demand for Bank Bills continues smaller than anticipated, which is partly caused by the greatly reduced price of satz against dollars.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 0¼d.	On Shanghai—Bank sight	77
" Bank Bills on demand	3s 11½d.	" Private 10 days sight	78½
" Private 6 months' sight	4s. 1d.	On New York—Bank Bills on demand	94
On Paris—Bank Sight	4.95	" 30 days sight Private	97½
" Bank 6 months' sight	5.06	On San Francisco—Bank Bills on demand	94½
" Private 6 ms. sight	5.18	" 30 days sight Private	98
On Hongkong—Bank sight	2% dis.	Kinsatz	395
" Private 10 days' sight	4 " noml.	Gold Yen	384

CAUTION.
BASS & CO.'S ALES.
PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)
"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,
AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 43.] YOKOHAMA, SATURDAY, OCTOBER 21, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

At Hiogo, on the 17th inst., the wife of A. M. TOWNSEND, Esq., of a son.

MARRIED.

On the 14th instant, at the British Legation, Yedo, by the Revd. W. F. H. Garratt, ARTHUR ANDERSON, of Shanghai, to EDITH FANNY, daughter of J. Mackrill Smith, of Yokohama.

DIED.

At the "International Hotel," October 20th, at 4.15 p.m., NORMAN, aged 9 years, eldest son of NORMAN WIARD, Washington, D. C.

Notes of the Week.

We have been favoured with the following, which is a copy of the reply from H. B. M's. Minister to the petition lately forwarded to him by the members of the Yokohama Race Club.

Yedo, October 20, 1876.

GENTLEMEN,—I have the honor to acknowledge the receipt of your letter of the 6th instant, bearing seventy-eight signatures, and addressed to me as *Dogen* of the Foreign Representatives. You therein challenge the action of certain of the Consuls in having themselves elected a Committee of gentlemen whom they have called Trustees of the Yokohama Race Course, and while stating that you have no wish to exclude members of the community not belonging to your Club from the present use of the Race Course, although you have paid the full rent to the Japanese Government for the current year, and that you are quite willing that the management of the Course should be confided to Trustees appointed by the community, you express the hope that your rights in this question may meet with fair consideration at the hands of the Foreign Representatives.

I placed this letter as soon as I received it in the hands of my colleagues, and I need not assure you that the rights of all those members of the community who are willing to contribute equally to the cost of maintaining the Race Course, whether as individuals or as associations, will receive the fullest consideration at the hands of the Foreign Representatives. The latter have not yet authorised me to reply to your letter, but in the meantime I think it only due to British subjects to inform them that as I see no reason why the community of Yokohama should be denied the liberty of electing the gentlemen who are to have the management of the Race Course, for which they, the community, have to pay, I consider that the action of some of the Consuls to which you refer is in no degree binding upon the British section of that community.

I have the honor to be, Gentlemen,
Your obedient servant,
HARRY S. PARKES.

To F. D'IFFANGER, Esq.,
C. F. REIMERS, Esq.,
JAMES DODDS, Esq.,
And other members of the Yokohama Race Club.

An account will be found elsewhere among our translations of a *fracas* which has taken place at Fusan between the Japanese and the Coreans. It is curious to see how our own experiences are repeated, not only in negotiation, but in the difficulties which attend the contact of alien races. The disturbance here recounted resembles rather the collisions which occur in China between foreigners and Chinese mobs, than the cutting-down to which foreigners in this country were at one time subjected. There assuredly is no evidence of a particularly conciliatory disposition in the conduct of the "certain person" in this case; and judging by the account, which is given by one of themselves, the Japanese, though quite ready to complain of the high-handed conduct of foreigners, seem equally ready to assert that superiority of bearing which brings about these untoward difficulties.

A concert will be given on Monday evening next at the Masonic Lodge in aid of the funds of the Temperance Hall. The cause is a good one, and, with a readiness which enhances the grace of compliance, the Choral Society and other amateurs of both vocal and instrumental music have promised their valued assistance. The occasion is one which justifies a special interest in the performance. Mr. Henderson, one of the chief promoters of the Institution and its most active director, is about to leave Yokohama on his return to Europe. He has spared neither time, trouble nor money in his effort to promote its welfare, and it is no secret that the finances of the Institution are not in as flourishing a state as all would desire to see them. We trust, therefore, that the residents, and such adherents in Tôkiô as a good cause, and the love, at least, of a beautiful art may attract, will respond to the appeal intended to be made to them on Monday evening, and show by their presence that they appreciate both the end sought to be attained and the means employed to attain it.

Of all the dry and wearisome subjects which can occupy the human mind, currency is about the dryest. But it is quite as important as it is dry, and this must be our excuse for a series of articles which must be very unacceptable to the majority of our readers, but which we hope may eventually do some service if only in drawing attention to an unsound condition of a most vital part of the machinery of the state. In any matter the only issue of which is whether we are right or wrong in such and such an opinion, we must, as a general rule, be content to express the opinion, and leave it to take its chance of dying or surviving as it may deserve. But, in a case of this kind, all objections to our views, seriously urged, demand a reply, and hence our article of to-day. Nor should foreigners forget that they are greatly, though only indirectly, interested in this question.

The indirect and unanticipated effects of international intercourse are well deserving of attention, and justify the reproduction of the following paragraph from the *Hiogo News*.

In the *Japan Mail* about six weeks ago there was a paragraph on the advantages to Japan of the introduction of kerosine oil, which stated that "If the opening of Japan to foreign trade had conferred upon the Japanese the sole boon of the kerosine lamp, which is now so generally seen throughout the country, it would have amply justified itself." Among the many reasons given in support of this statement, and which would seem by themselves to justify it, the *Mail* has omitted one which has since been introduced to our notice by a friend who has lived for several years in this country, in a familiarity with the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

inner life of the people which is seldom achieved by any great number of foreigners at one time. He asserts confidently that owing to the extensive and extending use of kerosine oil, the itch is rapidly disappearing from among the people. That it is a cure for the disease is perfectly well known, and if the experience of others corroborates that of our informant it will be a curious fact in the history of civilisation.

In another column will be found the Programme of the Autumn Meeting of the Yokohama Racing Association, the entries for which close on the 31st instant. Post entries for griffins and hacks remain open until the 10th proximo.

It has been stated, in these columns as elsewhere, that the reduction on return fares made by the Mitsu Bishi Company is 5 per cent. This is an error. The allowance made is 20 per cent., and we have been requested to draw attention to the fact.

From the "Japan Mail Daily Advertiser."

Monday, 16th.

From the *Nichi Nichi Shimbun.*

His Majesty the Mikado visited the *kuadzoku*, Mr. Nakayama, on the 13th, and after luncheon was entertained with a performance of *Nô*.

Their Excellencies Sanjô, Iwakura, Kido and others were also present.

From the *Chôya Shimbun.*

A fire broke out in Mr. Tsuda's green house at Azabu, Tôkiô, on the 13th at 2.30 p.m., but was fortunately extinguished in half-an-hour.

From the *Akébono Shimbun.*

The Dutch Consul has expressed his desire to exhibit Dutch produce and manufactures in the National Exhibition which is to be held next year at Tôkiô.

From the *Mainichi Shimbun.*

A branch office of the Mitzu Bishi Company will be established at Niigata.

From the *Hôchi Shimbun,*

The Chinese Government has decided to send a resident Minister to Japan within the year.

From the same.

The Chinese Government has sent a letter to the Loochoo Government to the effect that the country is without doubt a tributary of China, and it must therefore duly send the usual tribute.

From the same.

The publication of the *Saifû Shimbun* will commence about the end of the month.

From the same.

Great reforms have taken place in the *Kuadzoku* Club, Tôkiô. A committee of its members have been appointed who will settle, as far as possible, any trouble that may arise among their retainers, the *shidzoku*, on account of the capitalization of incomes, in order to avoid trouble to the Government as much as possible.

Tuesday, 17th.

From the *Chôya Shimbun.*

On the 14th instant a Notification (No. 127) was published by the Prime Minister, making known the additional clauses of the Treaty and the Trade Regulations which have been concluded with Corea by Mr. Miyamoto, the Japanese Commissioner.

From the *Mainichi Shimbun.*

As the rates of the Mitzu Bishi Company have been raised, a foreigner living at No. 10 Yokohama will start a line between Shanghai and Yokohama.

From the same.

The *Sumida Maru*, belonging the Mitzu Bishi Company, which arrived at this port on the 14th instant from Hakodate, reports that snow fell in the neighbourhood of that town on the 9th instant.

From the *Nichi Nichi Shimbun.*

We hear that the punishment of banishment is to be resumed in Japan, and that the Bonin Islands have been selected as the locality to which offenders so sentenced will be sent, for which purpose an inspection of the Islands will shortly be made by officials of the *Naimusho.*

From the same.

Mr. Takahashi, the editor of the *Chiûgai Hiôron*, who is now undergoing imprisonment for an offence against the Press-laws, was summoned to the *Saibansho* on the 13th instant, and was there informed that the article which he published in No. 15 of the above paper to the effect that "there were no settled laws in Japan" was a violation of the 14th article of the Press-laws, which rendered him liable to 3 months' imprisonment, but as he was at present undergoing imprisonment for a previous similar offence, the punishment due to the second would be remitted.

From the *Akébono Shimbun.*

Shimadzu, the present Lord of Satzuma (not Saburo) handed over to the Army Department, a few days ago, the arsenal which was in his possession.

From the same.

His Excellency Iwakura will start for Kiôto on the 6th of next month.

Wednesday, 18th.

From the *Hôchi Shimbun.*

Mr. Takaha, the editor of the *Kinji Hiôron*, was yesterday sentenced to imprisonment for four months and a fine of 80 *yen*, for having violated the 4th article of the Libel-laws in having published an article, in the fourteenth number of the issue of his paper, reflecting on the *Shihôsho.*

From the same.

The opening of the Railway station at Tamachi, between Shinbashi and Shinagawa, was to have taken place on the 15th of this month, but has been postponed to a later date.

From the *Nichi Nichi Shimbun.*

NOTIFICATION.

It is hereby notified that all civil cases in the Tôkiô *Fu* must, until further notice, be brought for preliminary examination before the *Ku Saibansho* (Ward Court).

ÔGI TAKATÔ,
Minister of Justice.

October 12th 1876.

From the *Chôya Shimbun.*

In anticipation of the requirements of the police force for summer clothing next year, orders have already been sent to Aichi *ken* for 15,000 pieces of a cotton cloth called *kokura.*

From the *Akébono Shimbun.*

Certain persons belonging to the Hamamatsu *ken* have applied for permission to publish in Tôkiô, a newspaper to be called the *Môsô Jijô.*

From the *Osaka Nippô.*

Mr. Yamamoto, the editor of the *Osaka Nippô*, has been fined 20 *yen* for publishing an article concerning Mr. Kanda Kôhei, the late Governor of Hiôgo, which was deemed an offence against the Libel-laws.

From the same.

Hitherto no regulations existed for Chinese subjects travelling in the interior, but now it is expected that such will be immediately promulgated.

Thursday, 19th.

The *Nevada* is not due here until Saturday next, the 21st instant, her arrival being timed to meet the *City of Peking* due on that date from San Francisco, so as to take the American mails on to Shanghai forty-eight hours after the arrival of the latter. In consequence of this arrangement there will be no Mitsu Bishi Co.'s steamer despatched for Shanghai on Wednesday next, the 25th instant.

Mr. Mori Arinori, the Japanese Minister to Peking, left for China yesterday by the *Tokio Maru.*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

A telegram from the United States reports that Ohio has gone Republican, and Indiana Democratic in the State elections. This makes it very probable that Mr. Tilden will be elected next month.

From the *Hôchi Shimbun.*

Mr. Iwakura has decided to invite the Chiefs of the various Departments on the 17th of every month to his residence, to play at chess, etc., for general enjoyment. The meetings commenced the day before yesterday, the 17th instant, for the first time.

From the *Hôchi Shimbun.*

Dr. Wagner, a German subject, has been appointed to manage the Exhibition which is to take place next year at Uyéno.

From the *Mainichi Shimbun.*

Twenty three Loochooans arrived in the *Tokai Maru* on the 17th instant, and immediately proceeded to Tôkiô.

From the *Chôya Shimbun.*

Some 179 boxes of old gold and silver coins were sent from the *Ôkurasho* on the 17th instant to the Mitsu Bishi Company, whence they are very likely to be sent to the Ôsaka Mint for recoinage.

From the *Nichi Nichi Shimbun.*

The following is a statement of the number of the Imperial forces, as returned by the Army Department on the 1st of September last.

IMPERIAL BODY GUARDS.

Friday, 20*th.*

From the *Nichi Nichi Shimbun.*

On the 18th instant a religious ceremony was held at the Imperial Palace, in celebration of the third anniversary of the death of Yorihime-no-Mikoto, a daughter of the present Mikado.

From the same.

On the 18th instant the first number of a newspaper called the *Kaichi Shimbun* made its appearance at Tôkiô.

From the same.

A special department called *Juzai-tori-shirabe Kioku*, or office for examination of prisoners liable to capital punishment, will be attached to the *Shihôsho.*

We learn from the *Nichi Nichi Shimbun* that three countrymen who travelled to Kiôto by one of the afternoon trains from Osaka, bought a bottle of Bass' beer wherewith to regale themselves on the way, the unwonted potency of which had such an effect on them that they went fast to sleep, and failed to wake up even on arrival at Kiôto. A strict examination of the carriages does not seem to have been made by the railway porters, as the three sleepers were left undisturbed while the carriage in which they were, was, with several others, shunted into a shed for the night. About midnight the effect of the beer passed off and the sleepers awoke, but the darkness and strangeness of the position in which they found themselves so terrified them, that they set up a succession of unearthly yells, which, fortunately for them, attracted the attention of a policemen, who released them from their position and sent them about their business with an admonition.

From the *Hôchi Shimbun.*

Another newspaper, to be called the *Miyé Shimbun*, is about to be published at Tsu, in the province Isé.

Saturday, 21*st.*

The M. M. steamer *Tibre*, with French Mails on board to the 10th September, left Hongkong on Thursday, the 19th instant, at 6 p.m.

From the *Nichi Nichi Shimbun.*

His Majesty the Mikado will, it is said, hereafter preside over the meetings of the *Genro-In.*

From the same.

It is said that the cotton crop has this year proved very unfavourable, and that the Chinese, having heard of this, are about to ship over here 200,000 piculs.

From the same.

Dysentery now prevails at Matsumura, in Chiba *ken*, to an alarming extent, there being only ten families out of two hundred that have not been attacked by the same.

From the *Chôya Shimbun.*

Père Nicolai preaches every Sunday before a large congregation, who assemble at Yamamoto chô, Tôkiô.

From the *Akébono Shimbun.*

It is said that a code of laws is being prepared by the Government for the administration of the Bonin Islands.

From the *Kôfu Shimbun.*

Mr. Takase, the editor of the *Kôfu Shimbun*, was summoned to the *Kencho* on the 16th instant, and fined 15 *yen* for having violated the 5th Article of the Libel-laws.

From the *Hôchi Shimbun.*

When Her Majesty the Empress passes along the Tokaidô on her way to Kiôto, she intends bestowing gifts of money on those persons over eighty years of age who reside in the neighbuorhood of her route. The several *kencho* have received orders to ascertain the number of recipients for this bounty under their jurisdiction.

THE CURRENCY.

v.

PART of the article on the Currency which appeared in our last issue, consisted of a reply to certain objections urged by a writer in the *Hiogo News*, to our statement of the cause of the recent striking rise in the value of paper money. In its issue of the 14th instant there is a second article upon the same subject, putting forth an opinion which had been already expressed in its former article. It is entirely at variance with our own, and we shall do the writer the fullest justice by presenting it to our readers in his own words.

"We asserted on the other hand, our belief, that as the Japanese paper represented, in consequence of the double standard, gold *yen* just as much as it did silver *yen*, the premium on paper against Mexicans really represented the premium on gold. We suspected that the *Mail* did not see to what a great—to almost an entire—extent the double standard was at the bottom of the mischief," and further on in the same article,

"It, (i.e. the "*Japan Mail*") will probably see in a while that the double standard is at the bottom of the mischief."

If, in using the word "mischief," the writer wishes us to infer that he regards the rise in value of Japanese paper money as an evil, he must allow us to say that his utterances on this subject are wanting in clearness, not to say consistency. In his first article,—and indeed in the very passage we have just quoted—he contends that the premium on paper was really the premium on gold *yen* or Mexican dollars, the paper money being, in his opinion, "practically gold." The conclusion which (as we understand his first article) he deduces from this is, that a producer who got 93.25 paper *yen* only for 100 Mexican dollars, had nothing to complain of; in other words, no "mischief or loss" had happened to him. Yet we find him now saying that the double standard is at the bottom of the "mischief."

The dominant idea in the writer's mind that the "double standard" is the cause of the rise in the value of paper money, is wholly erroneous.

If by "double standard" he means to imply that there are two metallic units of value in this country, either of which a creditor may, at his option, pay to his debtor, there is not the shadow of a foundation for such an opinion. In that sense—and it is the proper sense of the term—there is no double standard in this country. The metallic legal tender is the gold *yen*; the silver *yen* and its sub-multiples, are legal tender to the extent of 10 *yen* only. This arrangement leaves silver *yen* in masses to find their market level. And it is more probable that the expression is only a loose way of saying that there exists a gold coin called a *yen*, and a silver coin called a *yen*, and if this is so, we have no hesitation in saying that we agree with him as to the fact, while we wholly dissent from the inferences which he draws from it in regard to the late rise in the value of paper money.

Cleared from inaccuracies of expression, we think his position will be correctly defined in the following sentence.

"The existence of two coins made of gold and silver respectively, but called 'one *yen*,' is at the bottom of the rise in the value of paper money; if one only of these coins had existed, the rise would not have taken place."

Let us suppose then that no silver coin called a *yen* had existed, but that the currency had consisted solely of gold *yen* and of paper money, purporting indeed to be *yen*, but not convertible into gold, and varying from day to day in its relations with gold, sometimes approaching to a parity of value, occasionally touching that parity, but more often 4, 5 or 6 per cent below it. And let us further suppose that a large quantity of Mexican dollars had been received in payment for silk at a moment when paper *yen* was 5 per cent below gold. Under such a combination of circumstances a demand would set in for Japanese currency. But for which form of currency, paper or gold? For paper, and for these reasons:

1. Because paper *yen*, while a legal tender like gold, are yet cheaper than gold.

2. Because paper *yen* are more easily transported, and circulate with at least as much facility.

It is quite evident, that the demand would be for paper, and that paper would, as a necessary result, rise in value and tend to approach par as compared with gold. The efficient cause of the rise in this case would be the demand for paper *yen*. Precisely the same thing would occur if the currency consisted solely of silver *yen* and inconvertible paper of lower value than the coin. The efficient cause of the rise in paper money, then, being invariable when either gold or silver is present, we hold that it is the same cause that operates when both are present, namely, excessive demand. That certain evils do attend the existence of a gold coin and a silver coin each named a *yen*, we have no doubt, but we must not now widen the area of the discussion by considering these evils; suffice it to say that the writer in the *Hiogo News* has not shown that the recent rise in paper money is one of them.

In all countries periods occur when more currency is required than at others. In England, for example, at harvest time, an expansion of circulation almost invariably takes place. There is then a sudden increase of transferable commodities, and more instruments are required to effect the transfers. When the activity of business passes over, the currency again contracts. The whole operation occurs with as much ease as the dilatations and contractions of the pupil of the eye. The currency of this country, as at present constituted, is wanting in this expansile and contractile power. At a time when large quantities of silk are sold, the money paid for it is, if we may so speak, projected in the direction where it is wanted. But it never fulfils its errand. Before it has gone a mile its circulatory power ceases; it cannot mingle with the ordinary currency, which therefore remains fixed in quantity at the time when its quantity should be increased. It ought at such a time to be expansile, but it is not expansile; it is of cast-iron. The same number of instruments exist, but with more work to do. And consequently the work is not so well done. The instruments of exchange are drawn away, by the temptation of a premium over Mexican dollars, from places where they are wanted to other places where they are more urgently wanted, and which are therefore willing to submit to a loss in exchanging the non-circulating coin. It is true that expansive power can be imparted to the currency at such a time by the intervention of the Government, which can draw off the superabundant dollars and substitute the scarce paper, but such an intervention is necessarily clumsy and irregular. Or again, when the Mexican dollar falls to a certain point, relief may be obtained by turning them into silver *yen*, but this operation will not be entered into until the evil becomes extreme, that is, until the dollar has fallen to a discount which will cover the seigniorage and interest, and will yield a profit besides. Both these methods of procuring expansion are uncertain and jerky. Easy, natural, and rapid expansion can only be procured by the adoption of a single circulating medium.

The errors of the *Hiogo News* arise from two sources.

1st.—The assumption that paper *yen* are "practically

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

gold," "as good as gold," "represent gold," when facts show that it continually varies in value with reference to gold.

2nd.—The assumption that the "double standard is at the bottom of the mischief."

On neither of these points has he produced any proof.

With regard to the operation of the Government in supplying the market with paper money against dollars, we cannot look upon it with the *Hiogo News* as a voluntary depreciation of its own paper. There does not exist in Japan any large store of paper money from which supplies can be obtained in exchange for coin. If there had been,—one such large store, or many small ones—they would have furnished the required extra quantity of paper, taking Mexican dollars in exchange, and the Government would have remained passive. But, there being no such store, or stores, the Government came forward to relieve the pressure. Depreciation of the paper money would ensue if the increased quantity were to remain in circulation, but it will of course be withdrawn as the price of paper falls. The paper currency will thus gradually shrink to its old volume, and the question of its ultimate redemption will remain precisely where it was.

SUPPLEMENTARY TREATY WITH COREA.

ARTICLE XI of the Treaty of the 25th February 1876 made between Japan and Corea is as follows :—

"Friendly relations having been established between the two contracting parties, it is necessary to prescribe trade regulations for the benefit of the merchants of the respective countries.

Such trade regulations, together with detailed provisions, to be added to the articles of the present Treaty to develope its meaning, and facilitate its observance, shall be agreed upon at the Capital of Chosen or Kok'wa *Fu* in the country, within six months from the present date by special commissioners appointed by the two countries.

The supplementary Treaty and Trade Regulations contemplated in the above article of the original Treaty, are now placed before our readers, and the three documents taken together embrace and indicate the conditions on which the future intercourse between the Japanese and the Coreans will be carried on. We also publish a translation of an article from the *Nichi Nichi Shimbun*, which forms a good commentary and criticism upon the engagements respectively undertaken by the two countries, and which may fairly be presumed to represent the satisfaction which the Government and the country generally have derived from the results of the negotiations now perfected.

It is curious to observe how very closely the Japanese, in drawing up their own treaty with Corea, have conformed to the precedents furnished by the treaties made between themselves and the western nations. The flattery involved in the imitation need produce but a transient sense of pleasure, but it certainly constitutes a tribute to the good sense, the care and moderation with which our own treaties were drawn up. It should be remembered that this was done without any precedents to guide the western envoys who negotiated them. They had to work very much in the dark. They were but slightly acquainted with the character of the people with whom for the first time they then came into relationship. They could only proceed on very general principles deduced from universal experience of the operations of commerce and the course of human affairs. Yet the lines they then drew are now acknowledged by the Japanese themselves to be those which they desire to follow in their own intercourse with a nation standing on something of the same relation to them as they stood to us at the outset of our mutual intercourse. In one respect, indeed, there is a very distinct departure from these lines, in the fact that no tariff is attached to the Treaty or Trade Regulations, nor is it impossible that this is intended as a silent protest against the tacking on of the tariff to our own treaties. Of course a perfectly free commercial intercourse between nations is that which constitutes the ideal of the economist, and if any thing can foster a trade with so poor and unpromising a country as Corea, this may be the best means of doing so. But it may be doubted whether the Japanese hope for very much commercial activity from this trade. Rather perhaps their action has had political bearings, partly internal, partly external: first, to place the Government well with its own people; the second, to make an impression upon eastern Asia, and exhibit before the world the first fruits of the newly adopted civilization. Both objects are legitimate, both have been more or less attained by the policy adopted towards Corea, and such duties as a small trade might have yielded have been willingly waived in favour of more real as well as more showy advantages.

The 10th clause in the Supplementary Treaty is so creditable to the Japanese Government that we reproduce it here *in extenso*.

Although no relations as yet exist between Corea and foreign countries, yet Japan has, for many years back, maintained friendly relations with them. It is therefore natural that in case a vessel of any of the countries of which Japan thus cultivates the friendship, should be stranded by stress of weather or otherwise on the coasts of Corea, those on board shall be treated with kindness by Corean subjects, and should such persons ask to be sent back to their homes, they shall be delivered over by the Corean Government to an Agent of the Japanese Government residing at one of the open ports of Corea, requesting him to send them back to their native countries, which request the Agent shall never fail to comply with.

This is thoughtful, humane, and, as the *Nichi Nichi Shimbun* very justly observes, "truly in accordance with universal principles."

Passing from the Treaty and the Trade Regulations to the comments made upon them by the journal just referred to, we may glance at the ambition shewn to effect "a hitherto unknown balance of power amongst the nations of the East"—an ambition not unnatural under all the circumstances, but certain, unless very carefully guarded in future ages, to lead to serious and embarrassing entanglements. "Grand schemes" and "wide projects" are well enough if they afford a rational promise of real prospective advantage to ourselves, or, through ourselves, to others. We would not have either men or nations live by bread alone. Every scheme which is truly grand, or project which is truly wide, deserves its place and all due respect in the mind of the world. But it must give proof of noble parentage and beneficent intention, otherwise both its origin and tendency are open to suspicion.

Lastly, the article under cursory comment is not devoid of one amusing feature. The writer is filled with admiration for the Treaty and those who negotiated it, but he cannot conceal from himself the *aliquid amari* from which there is no escape in human affairs—the pot of Agathocles, the fly in the ointment. Japan, he says, has obtained from Corea all that the Foreign Powers have obtained from Japan, but the latter has not yet secured the *surrender* of those same conditions from the Foreign Treaty Powers. In other words, he does not at all like the burden his nation has to bear, but is in high spirits that a similar one has been buckled on to the back of the Coreans.

SUPPLEMENTARY TREATY BETWEEN JAPAN AND COREA.

NOTIFICATION, No. 127.

It is hereby notified that Supplementary Articles to the Treaty of Friendship and Trade Regulations have now been agreed upon with Corea, as in the enclosure.

SANJÔ SANEYOSHI,
Daijô Daijin.

October 14, 1876.

APPENDIX TO THE TREATY OF AMITY AND FRIENDSHIP.

Whereas, on the twenty-sixth day of the second month of the ninth year Meiji, corresponding with the Corean date of the second day of the second month of the year Heishi, a Treaty of Amity and Friendship was signed and concluded between Kuroda Kiyotaka, High Commissioner Extraordinary, Lieutenant General of H. I. J. M. Army, Member of the Privy Council, and Minister of the Colonization Department, and Inouyé Kaoru, Associate High Commissioner Extraordinary and Member of the Genrô-In, both of whom had been directed to proceed to the city of Kokwa in Corea by the Government of Japan; and Shin Ken, Dai Kwan, Hanchoosoofuji, and In Ji-shô, Fuku Kwan, Tosofu, Fukuso Kwan, both of whom had beenduly commissioned for that purpose by the Government of Corea :—

Now therefore, in pursuance of Article XI of the above Treaty, Miyamoto Okadzu, Commissioner despatched to the Capital of Corea, Daijô of the Foreign Department, and duly empowered thereto by the Government of Japan, and Chio Inki, Kôshookwan, Gisheifudôshô, duly empowered thereto by the Government of Corea, have negotiated and concluded the following articles.

Article I.

Agents of the Japanese Government stationed at any of the open ports, shall hereafter whenever a Japanese vessel has been stranded on the Corean coasts and has need of their presence at the spot, have the right to proceed there on their informing the local authorities of the facts.

Article II.

Envoys or Agents of the Japanese Government shall hereafter be at full liberty to despatch letters or other communications to any place or places in Corea, either by post at their own expense, or by hiring inhabitants of the locality wherein they reside, as special couriers.

Article III.

Japanese subjects may, at the ports of Corea open to them, lease land for the purpose of erecting residences thereon, the rent to be fixed by mutual agreement between the lessee and the owner.

Any lands belonging to the Corean Government may be rented by a Japanese on his paying the same rent thereon as a Corean subject would pay to his Government.

It is agreed that the Shumon (watch-gate) and the Shotsumon (barrier) erected by the Corean Government near the Kokwa (Japanese official establishment) in Soriokô, Fusan, shall be entirely removed, and that a new boundary line shall be established according to the limits hereinafter provided. In the other two open ports, the same steps shall be taken.

Article IV.

The limits within which Japanese subjects may travel from the port of Fusan, shall be comprised within a radius of ten *ri* Corean measurement, the landing place in that port being taken as a centre.

Japanese subjects shall be free to go where they please within the above limits, and shall be therein at full liberty either to buy articles of local production, or to sell articles of Japanese production.

The town of Torai lies outside of the above limits, but Japanese shall have the same privileges as in those places within them.

Article V.

Japanese subjects shall, at each of the open ports of Corea, be at liberty to employ Corean subjects.

Corean subjects, on obtaining permission from their Government, may visit the Japanese Empire.

Article VI.

In case of the death of any Japanese subject residing at the open ports of Corea, a suitable spot of ground shall be selected wherein to inter his remains.

As to the localities to be selected for cemeteries in the two open ports other than the ports of Fusan, in determining them, regard shall be had as to the distance there is to the cemetery already established at Fusan.

Article VII.

Japanese subjects shall be at liberty to traffic in any article owned by Corean subjects, paying therefor in Japanese coin. Corean subjects, for purposes of trade, may freely circulate among themselves at the open ports of Corea, such Japanese coin as they may have possession of in business transactions.

Japanese subjects shall be at liberty to use in trade or to carry away with them the copper coin of Corea.

In case any subject of either of the two countries counterfeit the coin of either of them, he shall be punished according to the laws of his own country.

Article VIII.

Corean subjects shall have the full fruition of all and every article which they have become possessed of either by purchase or gift from Japanese subjects.

Article IX.

In case a boat despatched by a Japanese surveying vessel to take soundings along the Corean coasts, as provided for in Article VII of the Treaty of Amity and Friendship, should be prevented from returning to the vessel, on account either of bad weather or of the ebb-tide, the headman of the locality shall accommodate the boat party in a suitable house in the neighbourhood. Articles required by them for their comfort shall be furnished to them by the local authorities, and the outlay thus incurred shall afterwards be refunded to the latter.

Article X.

Although no relations as yet exist between Corea and foreign countres, yet Japan has, for many years back, maintained friendly relations with them, it is therefore natural that in case a vessel of any of the countries of which Japan thus cultivates the friendship, should be stranded by stress of weather or otherwise on the coasts of Corea, those on board shall be treated with kindness by Corean subjects, and should such persons ask to be sent back to their homes, they shall be delivered over by the Corean Government to an Agent of the Japanese Government residing at one of the open ports of Corea, requesting him to send them back to their native countries, which request the Agent shall never fail to comply with.

Article XI.

The foregoing ten articles, together with the Regulations for Trade annexed hereto, shall be of equal effect with the Treaty of Amity and Friendship, and therefore shall be faithfully observed by the Governments of the two countries. Should it however be found that any of the above articles actually causes embarrassment to the commercial intercourse of the two nations, and that it is necessary to modify them, then either government, submitting its propositions to the other, shall negotiate the modification of such articles on giving one year's previous notice of their intention.

Signed and sealed this twenty-fourth day of the eighth month of the ninth year Meiji, and two thousand five hundred and thirty sixth since the accession of H. M. Zimmu Tenno; and of the Corean era, the sixth day of the seventh month of the year Heishi, and of the founding of Corea, the four hundred and eighty-fifth.

[L.S.] (Signed) MIYAMOTO OKADZU,
Commissioner, and Daijô of the Foreign Department.

[L.S.] (Signed) CHO INKI,

Regulations under which Japanese Trade is to be conducted in Corea.

I.

Within three days after the arrival in a Corean port of a Japanese ship, (Japanese men-of-war, or ships exclusively used for the transportation of the Japanese mails excepted) to establish her nationality the owner or captain shall exhibit to the Corean authorities the receipt of the Agent of the Japanese Government, showing that he has deposited, as required by the Japanese regulations now in existence, all the ship's papers, the register, sea-letter, etc., in the hands of the said Agent, which documents shall remain in his custody during her stay in port; he shall then make an entry of his ship by giving a written paper, stating the name of the ship and the name of the port whence she comes, her capacity in tons or in *kokus*, the name of the captain, the names of passengers, if any, and the number of her crew, which paper shall be signed by the owner or captain; he shall at the same time deposit a written manifest of his cargo, setting forth the marks and numbers of the packages, if mentioned, and their contents, with the name of the person or persons to whom they are consigned; a list of the stores of the ship shall be added to the manifest.

The manifest and all other papers shall be written in the Japanese language and shall not be accompanied by a Chinese translation.

II.

The owner or consignees of any goods desiring to land them, shall make an entry of the same at the Corean Government office, setting forth the names of the goods, the quantity and number of packages thereof, and their original cost; on receipt of the entry, the Corean authorities shall immediately give a permit to land the goods.

III.

The owner or consignee may land his goods after he has received the permit referred to in Regulation II. The Corean authorities may examine any or all of the packages, but such examination must be made carefully without any injury to the goods.

IV.

All goods intended for export shall be entered at the Corean Government office before they are placed on shipboard. The entry shall be in writing and shall state the name of the ship by which the goods are to be exported, with the number of packages and description of their contents, as in an entry of import described in Regulation II. On receipt of the entry, the Corean authorities shall give a permit immediately, but the owner shall not refuse, if required, to have the goods examined by the Corean authorities.

V.

Ships wishing to clear, shall give notice to the Corean authorities before noon of the day previous to their intended departure; on receiving notice, the Corean authorities shall issue a clearance and at the same time shall return all the papers belonging to the ship deposited in their hands.

Ships carrying the Japanese mail may clear without observation of this regulation, but shall give notice to the Corean authorities of their sailing.

VI.

Exportations of rice and other grain shall hereafter be allowed in any of the open ports of Corea.

VII.

The following tonnage duties shall be levied on Japanese ships.

For merchant sailing ship with more than one mast	5 *yen*
For merchant steamer...	5 *yen*
For one masted merchant ship of more than 500 *kokus* capacity	2 *yen*
For ditto of less than 500 *kokus* capacity ...	1½ *yen*

Boats attached to the vessel free from duty. Ships belonging to the Japanese Government shall pay no tonnage duties.

VIII.

Japanese merchant ships may be chartered by the Corean Government or by individuals for the transportation of goods to any of the non-open ports of Corea. When chartered by individuals, they shall only be employed under conditions specified in a permit to be given by the Corean Government for the purpose.

IX.

Japanese ships found to be engaged in smuggling or in attempting to smuggle goods into any non-open port of Corea, shall be seized by the Corean local authorities and delivered to the Agent of the Japanese Government residing at the nearest port; such goods to be confiscated by him and to be handed over to the Corean authorities.

X.

The sale of opium is strictly prohibited.

XI.

The above Regulations having been agreed upon by the two contracting parties shall come into effect from the present date, and may be revised, whenever it may be found necessary, by Commissioners appointed by each country.

In witness whereof, the Undersigned have hereunto set their hands and seals, this twenty-fourth day of the eighth month of the ninth year of Meiji, and the two thousand five hundred and thirty-sixth since the accession of H. M. Zimmu Tenno, and of the Corean era, the sixth day of the seventh month of the year Heishi, and of the founding of Corea, the four hundred and eighty-fifth.

[L.S.] (Signed) Miyamoto Okadzu,
Commissioner and Daijô of the Foreign Department.

[L.S.] (Signed) Cho Inki,
Kôshoo Kwan, Gisheifudoshô.

Notification No. 128.

Hitherto the trade with Corea has been confined to Japanese of the island of Tsushima. In accordance, however, with the Treaty of Friendship published in Notification No. 34 of March last, and the supplementary articles and trade regulations now made known by Notification No. 127, permission will be granted to any Japanese subject who wishes to proceed to the port of Fusan. Such persons must obtain a foreign passport, with the necessary ship's papers from the office (or branch office) of their Shi, Fu, or Ken before sailing. If persons who have started on a journey wish to proceed there immediately, they should apply personally for permission to the local office where they may be travelling, stating clearly the jurisdiction to which they belong.

The above is hereby notified. As soon as the ports additional to Fusan have been decided on, notification will be made of them.

(Signed) Sanjô Saneyoshi,
Daijô Daijin.

October 14th, 1876.

Notification No. 129.

Henceforward the Import and Export of merchandize to and from Corea will be considered in the same light as the transport of goods between different places in Japan. In the case of goods which it is desired to export, the Custom House at the open ports or the ship's clearance office at other places must be applied to for their stamp on the invoice of goods. This invoice must be produced to the Japanese Consul residing at the open port in Corea, and receive a stamp certifying that the goods have been imported into Corea. On the ship's return to Japan the invoice is to be returned to the place from which she originally sailed. In exporting goods from Corea the stamp of the Consul must be obtained, and when it is desired to land them at any place in Japan, permission will be given to do so on production of the stamped invoice to the Custom House or office of the place.

The above is hereby notified.

(Signed) Sanjô Saneyoshi,
Daijô Daijin.

SPIRIT OF THE JAPANESE PRESS.

SUPPLEMENTARY ARTICLES TO THE TREATY WITH COREA, AND TRADE REGULATIONS.

THE TREATY OF KOK'WA (COREA).

("Nichi Nichi Shimbun" of October 16, 1876.)

Our Government by their notification dated the day before yesterday, the 14th instant, have made known the Supplementary Articles to our Treaty of Friendship with Corea, and the Trade Regulations, and in addition have notified the formalities necessary for ships proceeding to the port of Fusan, and the rules under which are to take place the export and import of merchandize from and to Corea. We have the honour to publish, in our issue of this day's date, the proclamation in question, and we believe that our readers will thus fully understand it.

In accordance with the provisions of the 11th clause of the Treaty of Friendship previously signed at Kok'wa by our High Commissioners Kuroda and Inouyé in concert with the Corean Plenipotentiaries, these Supplementary Articles to the Treaty of Friendship, and these Regulations were discussed and settled by Mr. Miyamoto Okadzu, who proceeded as our Commissioner to the capital of Corea and there met the Corean Kôshuku'an, both parties receiving due powers to act on behalf of their respective Governments. They contain Articles that are of the greatest importance as regards the future commercial relations between the two countries, and it will not therefore be unprofitable to give them a careful perusal.

The "consular officers" mentioned therein would appear to be consuls, and their duties too would seem to bear a strong resemblance to those of consuls. Although these consular officers are not clearly allowed the right of travelling in the interior of Corea, still by Article I of the supplementary clauses it is newly settled that if they should receive information that a Japanese ship is in distress on the Corean coast and that there is urgency, they shall be allowed to pass along the roads to the place in question. Thus they possess a partial right to travel. Article II states that no expense is to be caused the country of Corea in forwarding letters from our diplomatic or Consular officers. Article III stipulates that it is perfectly reasonable that land-taxes or land-rents shall be paid for sites for dwellings of Japanese subjects, and that this must therefore be done. It also states that the gates maintained at the Japanese factory of Sôriô at Fusan shall be pulled down, and posts set up at the newly-fixed boundary, and this would seem to be a method of marking off the Japanese settlements at the open ports of Corea. With regards to Article IV, we are not as yet possessed of precise information as to the Corean rules of measurement. As, however, the limits within which Japanese may make excursions are fixed as being ten *ri*, in a straight line, in every direction, it will be seen that even supposing one *ri* to consist of but six *chô*, the distance from east to west and from north to south will extend over one hundred and twenty *chô*, which cannot be termed a very short limit. The insertion, in the text, of the words "in a straight line" is far better than the vague expressions in our own Foreign Treaties. In these latter it is only stated "ten *ri*," and thus, owing to its not being known whether the ten *ri* were measured by the line of road or else in a straight line, different arguments were set on foot on both sides, and it was only seventeen years after the opening of the ports that it was at length determined to mean in a straight line. Article V relates to the employment of Corean subjects. Article VI grants a place of burial for Japanese. Article VII states that Japanese coins shall also be in use,—and forbids, by the laws of both countries, the unauthorized manufacture of coin. Article VIII permits the free use of articles purchased or received as presents. All these Articles which were formerly demanded of us by foreign countries are now converted into demands of our own upon Corea. The agreement made in Article IX, that protection shall be given to Japanese boats that may survey that Corean coasts, is certainly of benefit to Japan. By Article X the Coreans are bound by us to treat with kindness any foreigners who may be driven on the shores of Corea, and Japan undertakes the task of sending them back to their own land. This is an arrangement that cannot but be praised as being truly in accordance with universal principles. Article XI states that if it shall at a later date be found necessary to alter any of the clauses contained in the foregoing Articles, one year's notice thereof shall be given and consultation held. We feel confident, then, that no very great inconvenience will be caused to Corea.

Upon looking over the Trade Regulations, we fail to perceive any difference between the formalities respecting the entering and clearing of vessels and those at present in force at the open Ports of Japan. The one point, however, deserving of careful attention is the remission of export duties, harbour dues alone being levied. The 7th clause appears to limit these to merely tonnage dues, which amount to a very small sum. This would appear to extend to the utmost limits of free trade. If our readers will consider these Trade Regulations in connection with the Government notification No. 129, this fact will be fully proved. Did this granting of duty-free exports and imports, however, originate from the desire of the Corean Government, or is it, again, a plan of the Japanese Government laid beforehand with a view to future contingencies?

That these supplementary Articles to the Treaty of Friendship, and the Trade Regulations form an agreement that is from beginning to end thoroughly and substantially drawn up, and that confers boundless benefit upon the people of our country, is a fact that does not admit of the slightest degree of doubt, and we therefore give the highest praise to the meritorious exertions of our Commissioner, and, in concert with the people of Japan, felicitate ourselves upon the fact that we shall reap the benefit of this commerial gain. Thus, then, we ought here to lay down our pen, but we are nevertheless unable at once to do so without advancing a step further and glancing at the points wherein is contained the benefit to be reaped by the Japanese people. Now, if we are to believe what we have heard stated by others, the point most important to us at the present moment from trade with Corea is to be found in the fact that the old custom, on the part of the people of Tsushima, of procuring rice from Corea is still in existence, and thus the gist of the whole Convention would appear to us to be the statement in clause VI that "henceforward the "import and export of rice and other grain will be permitted "at all the Corean ports." Although there may be many other articles of merchandize there besides rice, still, upon giving attention to this fact, we are unable at the present moment to deny that we cannot form a definite conjecture as to whether any large profits will accrue to our people therefrom, even though three ports may be opened. Let the question be put to our merchants as to what they deem to be the most profitable kind of merchandize to export from Japan to Corea, or to import from Corea,—and we think that, as a rule, they will assume a thoughtful appearance, and find some difficulty in giving a reply. Except in the case of bold merchants who do not fear to incur risk, and who go steadily on in their ventures, there certainly will not, even though no duties be levied at the open ports of Corea, be brought to actual light any source of profit proportionate to the provisions of the Treaty.

Under the above circumstances will it be said that the most important object of our friendship with Corea consists in the grand scheme of effecting a hitherto unknown balance of power amongst the nations of the East, by publishing to the whole world, through the might of Japan, the national independence of Corea, and is not founded upon a desire to reap some slight commercial advantage? The scheme mentioned is indeed a wide project, and we certainly wish it success. But in proceeding to actual measures, there must be no want of the full and complete preparations necessary for setting on foot this grand scheme, for bringing to light this wide project. For should those preparations be incomplete, even this excellent Treaty that has been drawn up with so much labour will be but a petty accomplishment in the eyes of the world. For even supposing that in Corea Japanese subjects can make excursions within 10 *ri* from the open ports of Fusan, foreigners can act as they please. Though Japanese coin is to be allowed to pass current in Corea, still the exchange of our coinage fluctuates in accordance with foreign silver. Though the Corean coasts be surveyed by Japanese vessels, still navigation on our coasts is guided by English printed charts. Though the supplementary articles to the Treaty with Corea may be altered upon a year's notice being given beforehand, still our own Treaties remain unrevised even up to the present date. Though the harbour dues in Corea are properly fixed, still the custom-house duties of Japan have not yet come under our sole management. While all these things continue so, it is impossible for us to believe that there exist the full and complete preparations necessary for effecting a hitherto unknown balance of power amongst the nations of the East.

Thus, then, let the benefits to be derived from the Corean Treaty be commercial, or let them consist of national schemes, we certainly cannot call such results real gain unless we duly observe and adhere to that Treaty. To turn then these Supplementary Articles and Trade Regulations, in concert with the Kok'wa Treaty of Friendship, into a source of real gain,—is not this the most

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

important duty of both the Government and the people of Japan? Do our readers agree with us, or not?

Loochoo.

(Hôchi Shimbun.)

We earnestly desire to know what are the relations between this country and Loochoo. In May last an official from the *Naimusho* went over to Loochoo, but the object of his mission was never made known. At the same time it was generally believed that it was to induce the Loochooans to acknowledge, not the joint sovereignty of China and Japan, but the sovereignty of Japan and Japan alone. And, if the statement made at that time in the *Nichi Nichi Shimbun* was correct, the matter stood thus, that the Loochooans persisted in regarding Japan as their father and China as their mother, and no persuasion of Mr. Matsuda's could get this idea out of their heads. They said that they had received many acts of kindness from China, and could not bring themselves to comply with the demands of Japan; and it is clear that though they show external signs of subjection to us, they have as much respect for China as for ourselves.

We heard too that when Mr. Matsuda urged them to acknowledge our sole sovereignty, they replied that they would obey us in every thing else,—in this alone they could not possibly do so, because for hundreds of years they had received favours of various kinds from China, and could not now step forward and sever relations which had existed so long. Mr. Matsuda did not fall in with the views of the Loochooans, but returned home without accomplishing his object. Very soon afterwards he was followed by some envoys from Loochoo, who presented a memorial to our Government expressive of their desire to remain subject to the joint suzerainty of Japan and China, and, if this could not be permitted, praying that the Chinese authorities might be prevailed on by Japan to declare that Loochoo was free from all obligations towards China.

This is all that we have heard concerning Loochoo, nor do we know exactly how our Government has dealt with the question since that time. But judging from what we have seen already, it would appear as if our Government were treating the Loochooans as if they were subject to Japan alone. It has presented them with money and steamers and undertaken an expedition to Formosa, and entangled itself in a quarrel with the Chinese for their sake. Are not these act of kindness, and is it not very perverse of Loochoo to refuse to sever its connection with China and persist in this double allegiance?

Before taking further steps, we must examine the position the Loochooans are in.

The islands produce about 90,000 *koku* of rice, and the population amounts to about 17,000 of all ages. They have no means of protecting themselves, and therefore lead but a humble life. Obedience is the great duty inculcated in association with other countries. They stand in great awe of China, and many among them desire to use the Chinese calendar.* But when they come face to face with the Japanese, they pretend that they owe obedience to Japan and are subject to her. They are utterly devoid of all feeling of self reliance. So primitive is their condition that when some three years ago there was not a single person in prison throughout the whole country, the fact was celebrated by a grand ceremony, which shows how simple-minded they are.

Our Government is naturally anxious to show the Loochooans that they are wrong in their views and must abandon this idea of joint sovereignty. But they obstinately adhere to it, and thus their course and ours are diametrically opposed to each other.

Of course our Government and foreigners generally believe that Loochoo is the tributary of Japan, but, if so, why has no settlement of the case ever been arrived at? We have now heard that the Viceroy of Fokhien in China has sent a message to Loochoo to claim that it is subject to China and must pay tribute as hitherto, because, as he says, "it is nothing more than natural that you should pay this tribute."

We cannot tell whether this is true or not, but judging from the past attitude of Loochoo the probability is that there is some truth in it. If so, it is probable that Loochoo has already informed our Government of the fact, for it is powerless to decide by itself what it should do, and must look to us for advice. But our Government has created the group into a *Han* and set up an official establishment there, and this must have been done with the idea of severing all connection between it and China.

We had much more to say on this subject, but think that perhaps silence is most discreet at this moment, and shall wait and see how the question will resolve itself. Is it not strange that China should demand tribute from Loochoo? Leaving aside all the simple-mindedness of the Loochooans, we must first enquire why the Chinese have made these demands, and it is possible we may understand this better after some correspondence has passed between our Government and them. They have decided upon having a Minister resident in Japan, who is expected to arrive within this year. We can therefore determine on our line of action at no distant date, but first of all we must know the intentions of the Chinese Government.

* The Chinese attach special importance to this usage as a token of subjection.—[*Trans.*]

The Same.

(Akebono Shimbun.)

Many are heard saying:—"Our Government treats the Loochooans with abundant care and kindness, and they are very blameworthy in not showing the smallest gratitude for this conduct, but wish to continue under the joint sovereignty of China and Japan."

They say this with much excitement and we shall expect them to say next that the Government ought to deprive the Loochooans of their country altogether. But in dealing with such simple-minded men as those who reside on the Island of Loochoo, we must do so with mildness, patience, and due consideration, and we should not by any means express such excited views without weighing or being well aquainted with the general facts of the question. We hear that an Envoy was sent from Loochoo formerly to China every other year, and after presenting himself at Peking he returned to Fokhien where he awaited the arrival of the ships laden with tributes to China from Loochoo. When the tribute vessels arrived, he passed the tribute over to the Chinese authorities and then returned home with the vessels.

Loochoo sent an envoy to Peking the year before last, and when he had returned to Fokhien to await the arrival of the tribute, the trouble arose between China and Japan, and Japan then ordered Loochoo not to send any more tribute to China. The Loochooans obeyed the order and did not send any ships laden with tribute to China, and owing to this the envoy and his suite who were waiting at Fokhien could not return or even send a letter to their homes, for no ships were sent thither from Loochoo. At the Loochooan offices at Fokhien there were also some Loochooans who were wrecked on the coast of China.

The Loochooan envoy and suite did not of course go to China with the intention of making such a prolonged stay, and in all probability they were not provided with their necessaries and supplies for such a long time. Without doubt, however, the Chinese authorities at Fokhien provided them with these.

We now hear that a certain part of the Loochooan officials who were remaining at Fokhien awaiting the arrival of the tribute were recently sent back to Loochoo by the Chinese authorities with a message from the Governor of Fokhien to the King of Loochoo, to the following effect:—"Why have you not sent the customary tribute? Is it on account of the stormy weather and the rough state of the sea?"

We give this rumour for what it is worth; but if true, the Loochooans are not to blame, so it cannot be said that they have wronged us. Judging from the above it seems as though the Loochooans made their petition to us from their utter inability to act otherwise. They are not doing this from any ill-feeling which they harbour against our Government, so it would not be just to press them by saying that they show a feeling of ingratitude—and we ought most decidedly to relieve the envoy and the part of the suite that are retained at Fokhien from their lamentable plight. We think a vast want of consideration has been shown by China in sending that letter to Loochoo. We hear that the fact of Loochoo belonging to Japan has been frequently stated in the Chinese newspapers, and it is a strange act on the part of the Chinese to send such a message to Loochoo without even noticing what appears in their own press. But thoughtless as China is, there is no reason to believe that she is not acquainted with the facts, so this letter must have been sent through carelessness of the Chinese officials, owing to either a great stress of business or some other cause. All hold the opinion that the petition presented by the Loochooans to our Government was to the effect that they were desirous of being under the protection of China and Japan at he same time. But we have heard that this is not the real fact. It now said that the petition referred only to some internal affairs in Loochoo, and on our Government rejecting their petition they showed no desire to urge it afresh. In every respect they seem to obey the orders of our Government, and if this is really so then Loochoo is decidely a part of the Japanese Empire.

But when we see that an envoy and suite are still remaining in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Fokhien, it seems as though the Loochooans did not perform their duty, and if our Government were to press them about this fact, they would without doubt, fail to make a reasonable excuse.

We hear that Tomikawa and Yonahara, two head officials of Loochoo, will shortly come to Tôkiô in the steamer *Taiyu Maru*, which our Government gave the Loochooans some time ago, and they are, it is said, coming over for the purpose of consulting with our Government about this Fokhien affair. Should this be so, our Government must then take the question in its own hands. The Chinese Government will without doubt take a long time to give any definite reply, yet it cannot be said that our Government has discharged its duties if it leaves this question alone. The despatch of the message to Loochoo by the Chinese affords a very good opportunity, and we must not let it pass. We must negotiate with China.

If Loochoo abandons the idea of belonging both to Japan and China at the same time, but adheres to us faithfully, then she is a part of our country and it is only proper that we should look after our mutual interests, so as to advance in civilization hand in hand.

We therefore do not think it right to accuse the Loochooans yet awhile, without first thoroughly understanding the facts of the case.

Law Reform.

(Nichi Nichi Shimbun.)

We all know that the Governnent has ruled that criminal cases are hereafter to be decided upon the evidence adduced, and not upon the confession of the accused. This, we think, is an excellent step, and will prevent men under mere suspicion from being tortured for crimes of which they never were guilty. The Government received very general and deserved praise for this measure when it was passed, and all hoped that it would be enforced without a day's delay.

Some two months after the publication of the measure the Minister of Justice made known six classes of evidence and proof to be observed by the judges in trying cases, and to each judge was left the discretion of employing whichever of these classes he deemed proper for the special occasion. As the public is not admitted to criminal trials, we cannot speak with certainty, but we fully believe that the bad custom of making accused men confess will very soon be abolished.

But now that the above measure is being put into force,* it appears to us that a law should be passed to deter men from giving false witness. There is a clause in the New Code to the following effect :—"If any witness shall give false testimony he shall be punished two degrees less severely than the convicted person." But would it not be too great a negligence to say that laws against false testimony are not required because this clause exists in the New Code? We hear that the *Genro-In* is now discussing this question, and we trust soon to have the pleasure of seeing it satisfactorily settled.

Another important point concerning the question of evidence is that none shall be taken which is not given in presence of the accused. To do otherwise is to open the door to great injustice towards accused persons. And, as evidence must be given in the presence of the accused, we must permit lawyers to act as counsel for them as is done in civil cases. Should he be unable to procure a lawyer, the judge may permit one of the lawyers of the court to act for him, or the lower officials of the court may do so, and the people may depend that no true justice can be obtained without the aid of lawyers.†

But, from the outset of the time when the trial begins to the time when judgment is given, is the accused to be presumed to be innocent or guilty?

We shall throw light on this by adducing the examples of England and France. In France, whenever a person is accused of a crime either by the Government or any other person, the judge acts as if he were plaintiff and examines the accused. If the Judge concludes that he is innocent, he is released; otherwise he is treated as guilty.

In England it is the reverse. Whenever either the Government on any person suspects a man of guilt, evidence is brought forward, and if he is proved guilty he is punished. But until convicted he is treated as if innocent. In other words, in France an accused man has to prove himself innocent: in England it is his accuser's business to prove him guilty. At first there seems to be no difference between the two, but a closer examination proves that there is a wide difference between them resting on natural rights. It is easy to propose to establish the English system in this country, but the practice of it lies far in the future. We think that the notification issued by the *Daijokwan* and the *Shihôsho* already referred to points in that direction, though undoubtedly at present the French system prevails, for the accused is deemed guilty until proved to be innocent.

Now, were the law of evidence reformed, the assistance of counsel permitted to prisoners, all evidence given in presence if the prisoner, and our course gradually directed towards the English system :—above all, were trial by jury and the custom of permitting bail to be adopted, there would no be longer any fear of innocent men being punished as guilty. Arguing from many European and American cases, some may come forward and say all this is too mild a course to pursue towards the accused. But a sage of antiquity has said, "It is better that a guilty man should escape than that an innocent man should be punished."

The Mitsu Bishi Company.

(Hôchi Shimbun.)

Precaution after one victory is the secret by which a second may be won. To sink back into careless ease is to court defeat.

The Mitsu Bishi Company has already overthrown two rivals without exhibiting the smallest feeling of pride. It has kept to its low fares, carried on its business with great industry and circumspection, and has sought no new means to recoup itself for the losses it had to bear during the trying time of competition. This is what we call using a victory prudently, and it certainly is a policy little calculated to provoke competition. We cannot, however, endorse the policy now pursued. Of course, personally speaking, and in view of the probability that we might be passengers or shippers by the Company's vessels, we prefer to see the present low rates. But, from a more general point of view, we greatly sympathize with the Mitsu Bishi Company in the exhausted state in which it finds itself after the heavy losses sustained by the late severe competition. Thus we were anxious to treat the question, when the *Nichi Nichi Shimbun* took the initiative, and said that the Company should now raise its fares, first, in order to recoup itself for the losses incidental to the late competition; second, to prepare for future competition.

But if the Company pretends to make preparations against possible future rivals, as the *Nichi Nichi Shimbun* says it ought, we cannot see wisdom in this policy. Did the Company lower its fares knowing that it would lose by such a course, or did it think that its rates would still yield a profit? If the latter, it may be well to make preparations against future rivals the excuse for raising its fares; but if the former, we cannot think the excuse a just one, for people will say that the Mitsu Bishi Company is but a mercantile firm, and, if so, it must strive to please the general public. Though the Company may think that this preparation against competition is a reasonable excuse, yet such is not the fact. The Mitsu Bishi is in all respects a mercantile enterprise; it must please its patrons, and unless it does what is right, it cannot last. Every one knows that the fares are low and that the company is losing money, and though it may have a large goods and passenger traffic, this traffic is not large in proportion to the rates. At the same time it cannot decrease the wages of its people nor keep its ships and machinery in good coudition. Everyone knows that the reduction of fares was the result of competition, and when the competition ceased it was only natural that the Company should raise its rates in order to recoup itself for former losses. Of course it need not keep these rates unchanged now that its rivals have left the field. It should speak out plainly and say that it has raised its rates in order to recover from former losses, and should not do as the *Nichi Nichi* recommends (*i. e.* say that it does so in anticipation of future competition).

But apart from the losses the Company has to bear, there are other evils incidental to the low rates now ruling. Its ships are crowded with passengers some of whom have no need to travel but are incited thereto by the lowness of the fares, and as the Company wishes to make as much money as possible, the steamers are overcrowded and some want of care and comfort is inevitable. We question whether the vessels are sufficiently furnished with life-preservers in view of the number of passengers usually carried. Then again, many who would naturally go in the steerage travel in the saloon, and thus gentlefolks and common people are inconveniently mingled together. All these evils arise from the excessive lowness of the fares, and thus,

though we agree with the *Nichi Nichi* that fares should be raised, we do not think the Company should act as that journal recommends and resort to a false pretence in doing it.

A Fracas in Corea.

("Nichi Nichi Shimbun" of October 20, 1876.)

It is reported that there has lately taken place a slight disturbance at Fusan in Corea, and although it may not be true, we publish the account as we have ourselves heard it. In the neighbourhood of the Castle of Fusan are the graves of those Coreans who were killed in fight when it was beseiged by the Taikô Sama in ancient days, and a festival is held in their honour every year at the time of the autumnal equinox. This is stated in the neighbourhood to be a great festival only held once a year, and therefore very numerously attended. At the Japanese factory, however, on account of the rule hitherto prevailing that exit beyond the enclosure should be prohibited, no one has yet witnessed it. But as a treaty of friendship and commerce has this year been concluded, some two or three persons, with the intention of going to see the festival, set out from the Japanese factory at Sôriô, and were about to proceed in the direction of the castle, when they found a rope drawn across the centre of the roadway, apparently in order to stop Japanese from passing along it. The persons in question took no heed of this, but strode across the rope and passed on. They had only gone a short way, when suddenly from the dark shadows of several objects, small stones were flung at them, and gradually as if the number of men were increasing, the stones came pouring down like rain from all sides. The Japanese, therefore, thought that as they were unable, being but few, to cope with large numbers, it would be best to withdraw quickly before any injury was done to them, and so ran back to the Japanese factory. For that day the affair ended here. On the morrow, however, having made some slight preparation of an ambuscade, they again issued forth, and, on arriving at the locality of yesterday, found that the roadway was closed by some pieces of straw matting fastened together. "What a strong barrier," they laughingly exclaimed, and, kicking it down, passed through, when, just as they had expected, stones were thrown at them. They halted and gave a signal, whereupon the ambuscading force that they had previously got ready all came running up together. They gave a shout, and flung back stones like hail, the actions of the throwers being almost too rapid to follow. The Coreans appeared to be about to give way, when all at once a crowd of other natives appeared in sight on the rear of our countrymen, who were thus attacked both from front and rear. The foes in front here plucked up their spirits, and made the spot the scene of a desperate fight, so that our people were more than half overcome. Seeing this, a young man quickly ran back to the Japanese factory, and gave information, whereupon a certain person, saying, "This is a fearful affair," mounted his horse, armed with guns twenty or thirty people who happened to be at hand, and ordered them to follow him. While calling on them, he gave his horse a blow with his whip, and hastened up to the place. Facing the foe, he gave a shout of defiance, and the Coreans, seeing his appearance, scatttered like a pack of spiders dispersing. The person in question, determining that the affair should not be left in that condition, but that he would meet the local officials and hold an interview with them, pressed on his horse, and gallopped up to the Castle of Fusan. He found, however, the Castle gate closed, and therefore he pulled up his horse, and shouted aloud, "Open this gate!" As it then appeared that a large number of men inside the Castle were holding the gate closed, he called out, "It would be an easy matter to us to "kick down such a tumble-down Castle as this, and so pass "through, but from the very first we have not had any inten-"tion of proceeding to hostilities." While waiting, there came up a guard boat containing some of the Corean soldiers termed "braves." These soldiers he seized, and asked, "Who were the persons who flung stones at my countrymen?" Upon their replying that the persons who did so were all men belonging to the war-vessels, he said, "What hateful scoundrels!" And brandishing his whip struck (the prisoners) blow after blow. The men keeping the Castle gate closed, dismayed at this display of strength, fled away in some unknown direction. The "certain person" therefore hastened into the interior of the Castle, met with the local officials, and held a conversation with them. The only explanation they gave was that "it was "an ancient usage dating from 300 years back." Could this have arisen from the fact of the recent alterations in the Treaty being not yet fully known? But this is ordinarily stated to be the primary condition of affairs where a Treaty of Friendship is drawn up with an uncivilized country!

A TALE OF A CAT.

Love.

(Continued.)

If the world had suddenly turned upside down, and Koharu had found herself obliged to pick her steps amongst the twinkling stars, she could hardly have felt more utterly bewildered than she did when she left her mistress' presence. That Mubatama should so easily have discovered the existence of a love which as yet she had scarcely dared to avow even to herself, filled her with dismay, and made her fancy that every body in the Castle must also have found her out, and with the shamefacedness produced by first love, she felt as though irrecoverably disgraced and inclined to wish she never had been born. Her name was surely in every body's mouth, she thought, a thing to be jeered and laughed at—anguish intolerable to a shy and modest maiden. What had she done to be so evilly entreated? No greater misfortune had ever hitherto befallen her than, it might be, a scolding from her mistress, a rent in her silk jacket, or the breaking of a favourite hairpin, or such like little affairs—trifles to be sure to older folk, but crying matter to such sweet innocents as Koharu. It seemed but a moment before that her sky was cloudless and serene, and now, look which way she might, she could not see her way for the thunderous murky atmosphere which surrounded her on every side. Oh! it must be a dream, a hideous, ghastly dream. But, if so, from whence this dagger, and how came she by the letter in her hand? Ah! yes, that letter,—and the shameful tragedy to be enacted in Nedzutarô's room, rushed back into her memory with redoubled force, and took away her breath and froze the blood around her heart. "I shall surely carry out my lady's wishes and kill myself outright,"—she mentally resolved—"for when he scorns me, I can never look upon his face again, and what to me has life in such a case? If I die not before his eyes for very shame, I'll end my misery quickly. I fear not death, but it maddens me to think that he'll never know the real reason why I killed myself."

My lady, it will be seen, had laid her plans against Nedzutaro right cunningly, for she knew full well that his honest, upright disposition would be shocked and recoil before a proposal so devoid of modesty upon the part of one who, she was certain, was very dear to him, and she hoped fervently that he would accordingly spurn with indignation a girl who could thus thrust herself upon him before he had so much as whispered to her of his preference. Moreover, she felt satisfied that in such case Koharu, overcome by shame and disgust at the false position in which she would have placed herself—independently of the fealty which she owed her mistress—would certainly make away with herself, and thereby bring about a catastrophe which could easily be laid to Nedzutarô's charge and be sure to result in his execution as a murderer.

Now whilst this nefarious plot was being organised for his destruction, Nedzutarô was quietly engaged in study. Aware that his father's absence from the castle would leave his evening at his own disposal, and being, moreover, somewhat fatigued with fencing, he had early sought his apartment, where, having laid aside his garments and habited himself in a sleeping dress for greater ease and comfort, he had thrown himself down upon the mats beside the lamp, and was buried for the nonce in a book of ancient poetry. So eagerly was he wrestling with Chinese characters and old-fashioned forms of speech, that he heard nothing of a knock upon his door repeated thrice—each time more faintly than before, as if the knocker's heart were dying out within him—nor was it until the sliding back of a paper screen, drawn by a hesitating hand, attracted his attention, that he was sufficiently aroused to look up from his book and perceive that his mother's favorite waiting maid, the pretty Koharu, was timidly advancing towards him. Overcome with astonishment and a certain fluttering at his heart, he had hardly time to faulter out, "What do you here, Koharu? Has my mother sent for me, or what?" when the girl, bracing herself up to perform her part, and speaking with great rapidity as if fearful of breaking down before her task was finished, replied,

"My mistress has not sent me here. Taking advantage of the absence of my lord and the knowledge that you would

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

be disengaged, I have come of my own free will to talk with you on many subjects. But first permit me to present you with a scroll of verses which I have written in your honour. They are but badly executed, I'm afraid, but will disclose what my feelings towards you are, for all that"—saying which, with face averted, and concealed in the long hanging sleeve of her dress, and a voice broken with emotion and so unsteady towards the end of the speech as to be almost unintelligible, she pushed into the hands of the wondering youth a perfumed billet, which, having mechanically opened, he found to be inscribed with the following lines :—

Who that dearly loves a young man would not rather die
than be neglected by him?"

Stunned by the wholly unexpected nature of the communication, Nedzutarô continued to gaze upon the letter for some moments before he succeeded in fully realizing its contents. Then, the blood mounting to his forehead for a moment and leaving him deadly pale the next, as he thought of his shattered hopes and withered love, he tossed back the billet to the girl he dared not look at for very shame sake, saying,

"What means this foolery, Koharu? Do you know that you have handed me a love letter and disgraced yourself and me thereby?" Ah! cruel, cutting words for a little maid to hear addressed to her. But doubly, trebly, cruel when the little maid is a tender, loving, trembling, modest little maid, whose wretched fate it is to be herself the instrument by which her happiness is shattered. Have a care, Nedzutarô, despair is busy with her heart, and despair is dangerous company for a woman with a dagger concealed beneath her dress. "What means this foolery, Koharu?" Small wonder that even the second time of asking was as unsuccessful as the first, for, adjured to speak in accents of such severity, Koharu, for all her fortitude, was unable to utter a word in reply, but, forcing her sleeve into her mouth in a vain attempt to conceal her emotion, burst into a flood of tears and was fain to lay her forehead upon the mat—poor child!—and sob as if her heart would break. Such an unlooked-for turn of events as Koharu's very evident distress, so at variance with the forward words and actions which went before, was by no means lost upon Nedzutarô, who, for all his youth and ignorance of intrigue, was yet quick-witted enough to perceive a want of harmony in the proceedings, and to suspect in consequence that Koharu was acting under compulsion a part which she abhorred; was in fact an unwilling tool in the hands of another, and that other, it as quickly flashed upon him, could only be his mother. So, snatching back the unlucky letter, and scanning it carefully by the light that such conclusions cast upon it, he had little difficulty in recognizing in the writing, although disguised, his mother's hand! Here was indeed a discovery. That there was mischief of a deep and deadly kind intended, it might be for both of them, certainly towards himself, he felt fully persuaded; and he felt certain, moreover, that his mother was at that very moment lying hidden behind the paper slides which made up three sides of his room, a silent and eager witness of all which passed within, and it behoved him therefore to act decisively and with caution, and as though he suspected nothing.

In the mean time poor Koharu, frightened perhaps at the silence which seemed unending, or anxious to terminate what to her was becoming every moment a more painful and intolerable situation, stifling her sobs as well as she was able, began again her piteous story, repeating in a monotonous and unnatural sort of way—as a child wearied out by punishment and misery might say by rote a lesson—the words which her mistress had put into her mouth. How that, judging from the sweetness of his countenance and the smiles which he was so good as to bestow upon her when they met,—here a choking sob interrupted her for a moment—she was emboldened to tell him of the love with which he had inspired her, and that fancying he loved her in return,—here she wrung her hands in agony—and fancying perhaps, as she had said, that he did not feel unkindly towards her, but feared to tell her so, owing to the shyness of his disposition, she had resolved to break the ice and———. Here Nedzutarô, torn with pity for her, and anxious to save her from future self reproaches and above all mindful of the listener behind the paper slides, feigning a rough and angry voice, commenced to upbraid her for her forwardness in no measured terms, and ended by saying, "Here, take back your immodest letter, brazenface, give it to some one who'll appreciate it, and get you out of my room, for I'll have none of you." The words were hardly spoken, when Koharu, leaping up, produced the *wakizashi* from beneath her dress, and saying "Then nothing more remains for me but death," drew the gleaming weapon from its sheath, intending to bury it in her throat.

Were ever two unhappy young lovers placed before or since in so a terrible position? Each of them, unknown to the other, loving one another to distraction, and yet unable to come to any understanding for an unseen fate in the shape of a malignant woman behind the door. Each of them upon the borders of the promised land—so to speak—where all is peace and love and plenty, and yet prevented by an evil spell from joining hand in hand and entering in. Nay, more than that, obliged in fine to take their stand on either side of an ever widening gulf, they seemed to one another to become gradually separated beyond recall. For, ever and anon as Nedzutarô made shift to scold her, Koharu, taking all he said for earnest, felt her desire to fly away and be at rest momentarily to increase, until at last she could stand it no longer, and seizing the dagger she ——.

On what small trifles do great destinies depend! A flight of birds, a shower of rain, a jackdaw—what not. The scabbard of the *wakizashi* clung to the blade when Koharu tried to draw it; in fact it was too small, and stuck, and in tugging at it when at last it leaped out with a jerk, Koharu cut her dainty finger. Now what maiden ever cut her dainty finger yet who did not scream a little? Koharu's nerves were shaken and she screamed; and that scream saved Koharu, and in saving Koharu saved her lover too. For he, until then engaged in tearing into fragments the letter of which he had repossessed himself, grumbling and scolding the while, but chiefly engaged in anxious thought, had not looked up but for the scream, and so perchance had been too late, for the dagger's point was already in contact with her lovely neck when he did look up, and he had barely time to seize her wrist and wring it from her grasp before the deed which would have set her spirit free and put a period to her troubles in this world, had been accomplished.

More than ever convinced now that Koharu was acting under compulsion, her present extraordinary conduct being so much at variance with her previous life and character, and her well-known gentleness and timidity, Nedzutarô's only thought was how to save her from the consequences of the failure of her mission, and also at the same time to devise some means by which he could let her know, without being perceived, that he fully understood the painful position in which she was placed and loved her no whit the less for it. It was above all necessary that he should act so as to be unperceived by the angry watcher outside. So, raising his voice loud enough to be distinctly heard, he continued to abuse Koharu, and ended his harangues by telling her that, in acting as she had intended, she would have been guilty of the grossest ingratitude and disrespect to a good and noble mistress who had brought her up with care, with a view to employing her about her person ultimately, and who would miss her services if she were no more; and that, moreover, she would have placed his life in the greatest danger if her dead body had been discovered in his room, as no human being who had known her would believe for a moment his story of what had just happened. Saying which, he pushed her out of his apartment, slamming angrily the slide upon her, but not until he had contrived to drop into her bosom a crumpled piece of paper on which, whilst appearing to be alone engaged in rating her, he had yet managed to scrawl a hasty line.

(To be Continued.)

He will never accomplish anything as an artist who can represent nothing except his own experiences, his favourite objects; who cannot prevail on himself to study with diligence, and represent with care, objects that be foreign to his taste, and even quite uninteresting to him. The artist must be able and willing to represent everything. From this arises the great style of the artist which is so much and so justly admired in Goethe.—*Novalis.*

TEMPERANCE HALL.

A meeting was held at the Temperance Hall yesterday evening to receive the Annual Report from the Committee and a statement of the finances of the institution. Notwithstanding the wretched state of the weather there was a fair attendance of members and visitors.

The Revd. G. Cochran was in the chair, and after some preatory remarks, called upon Mr. J. Y. Henderson, the Hon. Secretary, to read the following report, etc.:—

Annual Report 1875-76.

In presenting their third annual report to the members and friends of this Society, your Committee have much pleasure in testifying to the great progress made in the past year, and in calling attention to the fact that the Temperance Hall is now thoroughly recognised by the community of Yokohama as a public necessity, and as an efficient means among others of checking, to some extent, evils which all must desire to see diminished.

During the year temperance meetings and entertainments have been sustained almost regularly once a week, and nearly two hundred persons have appended their names to the Society's pledge book. These meetings, and more especially the larger entertainments, have been well attended by the floating and resident population, on several occasions there not being even standing room for those who came. At Christmas a dinner was partaken of by about one hundred and twenty sailors and others, and your Committee would acknowledge with gratitude a timely gift of money collected by a lady to defray the expenses. The concerts given by the men and band of the U. S. flag-ship '*Tennessee*' and by the men of H. M. S. '*Modeste*' are especially worthy of notice and praise. On the 4th of July a double festival was held in honour of the centenary of the United States and the second anniversary of the opening of the Hall. The addresses and music were worthy of the occasion, and the thanks of the Society are due to Admiral Veron and officers for so courteously permitting the magnificent band of the '*Atalante*' to contribute so much to the evening's enjoyment.

The Good Templars have met regularly every Saturday, and by their thoroughly organised system have done much to extend and confirm the work carried on in the Hall. The meetings of the Young Men's Christian Association have also exercised a good influence, and have proved to be a valuable auxiliary in furthering the objects of the Society.

The treasurer's report shows a deficit of $429.30, but, when it is taken into consideration that a large sum, part of which might otherwise have been contributed to the general account, has been collected to reduce the debt on the Hall property, it will be seen that the matter is not so bad as it at first appears. In regard to the deficit in the accounts of the late Manager, your Committee, in justice to the character of the man, would state that they believe he did not wilfully defraud the institution, but that, having become confused in his own private accounts with boarders who had lodged money with him for safety, and finding himself short in his cash, he was weak enough to decide on running away, rather than choosing boldly and honestly to meet the difficulty. During the past year the Hall books have been kept by the Secretary, but owing to the confusion in which the late Manager left his accounts and some receipts and other documents being missing, it is believed a few accounts have unfortunately been paid twice, and certain monies due the Hall have also been lost.

Since April a careful note has been kept of the amount of board and lodging and other assistance given to people out of employment, or otherwise in temporary distress, and the result has shown, that while the sum of $450 has been expended in this way, only $230 have been received to meet it. It is hoped, however, that this will not happen in the future, as the subscriptions for this object for the current month show a very considerable increase. Particular attention is called to the necessity of keeping up to the mark this monthly subscription book, as, owing to the dulness of the times, there are many requiring a helping hand.

In the begining of the year arrangements were made with the U. S. Consul General and British Consul, whereby any men taking their discharge from the merchant shipping could choose between going to the place known as the 'Sailors Home' or taking up their quarters at the Temperance Hall. Many have availed themselves of the latter privilge, the result of which has given the utmost satisfaction to masters and men. When the Manager of the Hall visits new arrivals in port he endeavours to dissuade the men from applying for their discharge here, as at the best they would only spend their money without gaining any advantage to themselves, and most probably at the expense of those depending upon them for support at home. Still, if they insist upon being discharged, the advantages of coming to this Institution are pointed out to them. As there is no class of men more exposed to temptation and more easily imposed upon when on shore than merchant seamen, your Committee trust that the guaranteeing of seamen at the different Consulates will, at no distant date, fall into the hands of the the Temperance Hall, which, indeed, is now far more of a Sailors Home in the true sense of the word than any other building, or buildings, in Yokohama which affect that name.

It was with much regret that your Committee lost the valuable aid and counsel of the Revd. Henry Loomis, who last spring was forced, on account of bad health, to return to America. His enthusiasm in the cause, and stirring appeals on its behalf to the hearts of his hearers, will long be remembered by many of the frequenters of temperance meetings.

The cordial thanks of the society are due to the friends who so generously contributed to the reduction of debt; to the regular subscribers; to the donators of papers, books, etc.; to the proprietors of the local newspapers for their much valued contributions; and to the ladies and gentlemen who have assisted again and again at the musical entertainments and tea-meetings.

In conclusion your Committee would add that they have felt their labours more than amply repaid by the consciousness that the Institution for which they have cheerfully worked has been an undoubted success; that the advantages which it offers, and the rational pleasures which it affords, have had a good and lasting effect on those who have wisely partaken of them, while it becomes more and more apparent that the extension of such benefits is increasing day by day, affording satisfaction not only to those who participate in them, but also to those who do what little they can to assist in conferring them.

Knowing, therefore, how much good is done by the Temperance Hall, your Committee feel sure that their successors in office will find their duties pleasant ones, and heartily wish them, and this Institution, all possible success.

JOHN Y. HENDERSON,
Hon. Secretary.

TREASURER'S STATEMENT.

From October 1st, 1875, to September 30th, 1876.

Dr.

To Cash,	Board, Refreshments, &c.	$6,470.12

The Revd. J. Piper, after analysing the report and the Treasurer's statement, moved their adoption, which was seconded by the Revd Dr. Gulick and carried unanimously.

Mr. Cargill then moved a vote of thanks to the retiring Committee, which was seconded at some length by General Van Buren, and replied to by Mr. Henderson. Mrs. Piper added to the interest of the evening by singing two hymns, and the whole proceedings wound up by the presentation to Mr. Henderson, on the occasion of his leaving Japan, of a handsome volume of photographic views, the gift of a number of subscribers, whose names were appended to a farewell address to Mr. Henderson which accompanied the album.

YOKOHAMA RACING ASSOCIATION.

AUTUMN MEETING.

PROGRAMME.

FIRST DAY.

Thursday, 16th November, 1876.

1.— .—For China Ponies that have never won a flat race here. Weight for inches. Entrance $5. One mile.

2.— .—A Sweepstakes of $10 each (with $50 added) for Japan Ponies, being *bonâ fide* Griffins. Weight for inches. Five furlongs.

3.— .—For All Ponies. Weights as per scale. Entrance $5. Three quarters of a mile.

4.— .—For Japan Ponies. Winners of any open race excluded. Weight for inches. Entrance $5. Five furlongs.

5.— .—For China Ponies. Weight for inches. Entrance $5. One mile and a half.

6.— .—For Japan Ponies. Weight for inches. Entrance $5 Three quarters of a mile.

7.— .—For all Ponies that have never won a flat race in China or Japan. Weights as per scale. Entrance $5. Half a mile.

8.— .—For China Ponies. Winners at this meeting, 12 stone; other ponies weight for inches. Entrance $5. One mile and a quarter.

9.— .—For Japan Ponies. Winners of two races in any previous meeting, 12 lbs. extra; other winners, 8 lbs. extra. Winners at this meeting excluded. Weight for inches. Entrance $5. Half a mile.

SECOND DAY.

Friday, 17th November, 1876.

1.— —For all Ponies. Winners of two races at the meeting 7 lbs. extra Weights as per scale. Entrance $5. Once round.

2.— —For Japan Ponies that never won a race. Weight for inches. Entrance $5. Half a mile.

3.—THE CHALLENGE CUP.—Value $—. For China Ponies. Weight for inches. Entrance $5. One mile and three quarters.

4.— —For all Ponies. Winners of Nos. 3 and 7 on the first day excluded. Weights as per scale. Entrance $5. Half a mile.

5.— —For China Ponies. Winner of No. 1 this day and winners of two races at this meeting st. 11.7: other winners 7 lbs. extra. Weight for inches. Entrance $5. One mile and a quarter.

6.— —For Japan Ponies. Winners of any open race excluded: other winners 8 lbs. extra. Weight for inches. Entrance $5. Three quarters of a mile.

7.— —For China Ponies. Winners at this meeting excluded. Weight for inches. Entrance $5. Three quarters of a mile.

8.— —For Japan Ponies. Winners at this meeting excluded. Weight for inches. Entrance $5. Five furlongs.

9.— —For all Ponies being *bonâ fide* Hacks and not otherwise entered except on the third day for Nos. 1. 6. and 7. Weights as per scale. Entance $5. Three quarters of a mile.

THIRD DAY.

Saturday, 18th November, 1876.

1.— —Value $. For all Ponies. Over six (6) hurdles. Weights as per scale. Entrance $5. Once round and a distance.

2.— —For China Ponies. Compulsory on winners at this meeting. A Sweepstakes of $10 with $5 extra for every race won at this meeting. Open also to Ponies placed second, at an entrance fee of $5. Entries to be made at the close of the second day's racing. Weight for inches. One mile and a quarter.

3.— —For Japan Ponies. Compulsory on winners at this meeting. A Sweepstakes of $10 with $5 extra for every race won. Open also to Ponies placed second, at an entrance fee of $5. Entries to be made at the close of the second day's racing. Weight for inches. One Mile.

4.— .—Value $.—For all Ponies. Weights as per scale. Entrance $5. Three furlongs.

5.— .—For all ponies, being *bonâ fide* Hacks. Winner of hurdle race and of number 9 on the second day excluded. Weights twelve stone. Entrance $5. Half a mile.

6.— .—For all beaten China Ponies at this meeting. Weight for inches. Entrance $5. Once round and a distance.

7.— .—For all beaten Japan Ponies at the meeting. Weight for inches. Entrance $5. Five furlongs.

8.— .—A Handicap for all Ponies. To be handicapped by the stewards at the close of the second day's racing, when entries will be received. Winners of Nos. 2 and 3 of this day excluded, and winners of any other race after the publication of the handicap 3 lbs extra. Entrance $10. One mile.

Correspondence.

THE RACE-COURSE.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 21st October, 1876.

DEAR SIR,—The absence of matters of real importance gives prominence to a local dispute of very small proportions, nothing more serious in fact than a personal quarrel about a jockey.

The tactics of the disputants seem at first to have been very simple—the minority of the Race Committee resigned office and then began a law suit against the body they had left; spreading meanwhile their alleged grievances far and wide.

As is common in such cases sympathisers were not wanting, and these were joined by others who had no grievances to ventilate, some of old date, some conjured up for the occasion.

Law being uncertain and detraction easy, recourse was meanwhile had to the latter process, which had the additional merit of greater cheapness, besides enabling the complainants to make a noisy appeal to the ignorant and unthinking. The retiring minority of the Race Committee charged the remaining members with an unfair use of their powers, and the mob subsequently added the allegation that their very existence was an anomaly and a usurpation.

Now the Race Club, as a matter of fact, consists of every member of the community who cares sufficiently for racing to spend money in its support. How few these persons are may be seen from the published lists of its subscribers, and how difficult it is to maintain the Race Course at all, may be gathered from their inability to pay the original ground rent and to meet the current annual expences from the ordinary receipts.

The Race Club is a mere creation of the community—with their support it exists, without it, it disappears. With the formal assent of the community it has already existed for over ten years, has assumed the yearly tenancy of the Race Course from year to year, taking upon itself the liability for the ground rent and paying the same up to the end of 1876.

Whether a new Club, or an additional Club or Association with or without Consular or other Trusteeship,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

make better provision for the maintenance of a Race Course remains to be seen. Whoever, after the present year, is permitted to assume charge of the Course must pay the rent, must keep it in repair, and must regulate the use of it so as to render it serviceable for the purposes of racing. If any such new body of lessees can do all this on smaller subscriptions and without any restrictions as to membership, it may perhaps prove a benefit to the racing public, but for my part, as an old resident, I take leave to suggest through your columns to those concerned, that it would be more prudent to adjourn the differences now made so much of until after the approaching meeting, and then to allow the "community," on whose behalf the disputants profess to be acting, to take into their own consideration the questions raised with so much heat and recrimination.

Foreign Ministers, Foreign Consuls and Racing Associations have all taken too much upon them up to this time. Let us now hear what the community itself has to say on the subject, and when that is made known, then the Japanese who own the soil which forms the course may be appealed to for a suitable lease of the ground from 1st January next.

I remain,

Yours truly,

A SCANDALIZED OUTSIDER.

TRAINING NOTES.

To the Editor of the "Japan Weekly Mail."

Yokohama, 21st October, 1876.

Dear Sir.—The training of the Autumn Meeting of the Yokohama Race Club has been more interesting than usual during the past week, and every thing seems to promise well for a pleasant and successful meeting. The post entries for the 'Griffins' only brought one more competitor into the field—Mr. Saville's *Saladin*—a rather dangerous antagonist for those already entered. All the ponies in this stable are evidently so well looked after and carefully trained that they may truly be placed first on the list as regards condition. *Saracen* is even better than his old form, and had a gallop this morning which must have been highly gratifying to his owner, 'once round being accomplished on a bad outside course in 2.22½, the pony being apparently able to keep on at the pace for a much longer distance. *Crusader* is looking better than ever, and goes very strongly, while *Drift* may certainly be classed as the best Japanese pony on the course for short distances. The owner certainly deserves to meet with great success at the coming meeting for the excellent manner on which his ponies are brought out.

Mr. Morrison has a strong stable, notwithstanding the loss of *Hereward*, who is, I think, too far gone to be of any use this meeting. *Lintie* is in fine form, but his time was 3 seconds longer than *Saracen's* with a lighter weight up. *Andante* bolted with his rider this morning and made a very creditable half mile. *Braemar* has not yet done much galloping. Every one knows what he can do when required. *Mavis* will be this stable's best pony for the short distances, but is hardly up to the pace of some he will meet. The Japanese griffins *Deserter* and *Dignity* both take their exercise according to their own liking. The latter would stand a good chance for the plate if he had a little less liking for the outside rail.

Mr. de Benter favoured us with a gallop by *Mongolian Chief* and *Mongolian* this morning, the ¾ mile being done in 1.42½, which may be classed as *good medium*. *South Mongolian* has recovered from his lameness, and though hardly fit, I expect to see him carry off more than one race. *Chief Mongolian* was undergoing an operation this morning aided by numerous blankets and "Homura Square-oh." I hope Mr. de Benter was satisfied with his experiment.

Mr. John Peel has a stronger stable than could have been expected last week. Both the griffins have pulled up considerably in condition, and show good signs of being able to go. In a five furlong spin they did the distance on the outside course in 1 30, *McTavish* being the better pony of the two, and carrying much heavier weight than *Ta Phairson*. *Grey Friar* is in beautiful order, a credit to any stable, and should certainly be able to win for his owner some of the laurels he so well deserves. *Allandale*, the Japanese representative, is too young to race yet, and it is almost a pity that he is not held over till next meeting.

Little Fish has somewhat improved, but has a very ugly style of going, and by his occasional spins with *Good Medium* (late *Monymusk*) does not show an overpowering turn of speed. Col. Forrester's *Sirocco* and *Grayling* are both in fair order, and but for the post entry for the griffins I should have selected the latter as favourite for that race. He is, however, not so advanced in condition as the new pony, and will probably have to take a back seat.

Sirius and *Sandboy* occasionally make their appearance, and the latter should stand a good chance of more than one race. *Typhoon* was led away from the course quite lame on Tuesday, and has not since made his appearance there. By the dint of strong binoculars I detected him being walked in his compound in bandages, but not so lame as he was. His stable companion *Jim Hills*, (which by the way is I think meant for *Tom Hills*) had a gallop on his own account to-day, a proceeding not approved of by his owner.

The attendance at the course has been much larger than usual, owing to the presence of some of the members of the Yokohama Race Association. The Combined Stable is in daily attendance, and seems to increase in number and quality. I am sorry I cannot give your readers any record of their doings, as I am not acquainted with the names of the various animals, and to attempt to describe them so that they would be recognized would be simply a *reductio ad absurdum*.

I hope next week to be able to send you a prophecy, which, if acted upon with discretion, will doubtless be as remunerative to you readers as I expect it will be to

Yours obediently,

TRITON.

INQUIRY INTO THE LOSS OF THE AMERICAN SCHOONER *OTSEGO*.

Before General T. B. Van Buren, Consul-General.

and

H. P. Lillibridge, G. Van Hovenburg } *Assessors.*

B. W. Johnson, sworn:—I was master of the *Otsego*. She sailed from San Francisco on the 18th March and from Honolulu April 4th, on a sea-otter cruise. We made the Island of Chiaskotan one of the Kuriles, on the 5th of May, then continued running along the coast till the 9th September, when we sailed for Chikotan. We made a successful voyage, capturing one hundred and fifty-seven skins. We remained in Clam Bay, Chikotan Island, till the 23th September drying the skins. These are not the names on the charts, but merely the names by which these places are known. We then sailed for South-west Bay to get some men from the schooner *Caroline* lying there. We discharged five men at Clam Bay at their own request. They came down on the schooner *Jupiter*. All hands shipped on lay wages. We went to sea on the evening of the 23rd; on the 24th we were hove to in a storm and lost one boat. We anchored before dark in Christmas Harbour. On the 25th we called all hands at six in the morning. All incidents are entered in the mate's log, which is witnessed by Charles Brown, gunner, Antonio Maurines, seaman, Samuel Kennedy, seaman, Joseph Martin seaman, J. Lennard, captain of the American schooner *Banner*. He came in to render assistance. All these are witnesses of the signatures of the log. The signers of the log are myself, the mate, John Jopez, Edward H. Coe, seaman, John Austinson, pilot of the schooner *Lottie*, and T. H. Hall, of Yokohama, who was on board at the time of the wreck. The others named are witnesses of the signatures. I hold in my hand the log and read from it. "1 a.m. 26th September:—All hands called. Heavy swell running in, and breaking across the passage. (Christmas Bay) Wind N. W. Got under weigh to get under the S. end of the Bay, 1.30. Found the swell increasing and breaking all over, very dark at the time. Tried to tack ship but missed stays on account of the swell. Hove round and let go big anchor in five fathoms, lying apparently two lengths off the rocks. Water breaking all around. Close reefed sails, and got a large spare anchor on the port bow. Shackled on large chain. Got two parts of a coir-hawser on the starboard chain and took it to the mainmast to ease her riding. While employed in getting another anchor ready, with the inten-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

tion of making sail, to sheer her for letting go her port anchor, she was struck by a sea and part of the starboard chain, about 18 fathoms of chain ran out. Hoisted immediately main-sail, fore-sail and head of jib, trying to tack; but on account of sea missed stays, and before we could wear, the centre board struck and she paid off and went broadside on the rocks. This was about three in the morning, very dark. She was beaten up in a short time, so that the sea at low water left her almost dry. Got a line ashore at 5 a.m. She was heeling on shore. Hove her taut and with the tide rising got her standing upright with head down. At 9 o'clock her bottom amidships was broken through by the rocks. Rudder and keel gone, decks starting 10 a.m. Sea moderated, watched a chance and launched a boat, sending William Garron, Hall and John who acted as pilot, belonging to the *Banner* and *Lottie*, to South Bay to inform the masters of all vessels lying there of my disaster, and to ask them for assistance in saving stores and to hold a survey on the vessel. There was no Japanese authority within 40 miles of the Bay. Forecastle being full of water, sent all the men's clothes and cooking utensils ashore. But it being too rough to land our provisions waited till the sea went down." I know the foregoing to be true. We got assistance. The next two days we were landing cargo and saving stores. 5 a.m. the schooners, *Lottie*, *Jupiter* and *Banner* came down and offered assistance. On the 29th we tried to heave her off. We parted all our tackles and hawsers but it did not move her. Survey was held by masters of the schooners. (Survey report produced.) That is the report. Our furs were shipped on the 25th on board the *Jupiter*. This was done because we intended staying the winter there. We held an auction on the 30th and sold the stores. As to the vessel it was withdrawn from sale. The stores sold brought about $500. The vessel was sold at auction to-day here and brought $130. On the 1st October we divided our crew between the *Jupiter* and *Caroline* to be brought to Yokohama.

Walter Hoffner, sworn:—I was mate on board the *Otsego*. The log is signed by me. I know that the contents are true.

E. H. Coe, sworn:—I was seaman on board the *Otsego*. My name is attached to the log. I heard it read before I signed it. The facts stated in it are true to my knowledge.

Frederic Hoffmann, sworn:—I am master of the German schooner *Jupiter*. I went down to Christmas Bay on the 27th at the request of the captain of the *Otsego* to render him assistance. I was then in Clam Bay. I set sail immediately and reached Christmas Bay next day. I found the sailors on the rocks. They asked assistance. This I rendered to my utmost power, as did my men. I recommended that an attempt be made to get her off if possible, and to place her in the lagoon for repairs. We tried to do this but found it impossible to move her. We cleared away all the gear, but she did not move. We came to the conclusion that she was a perfect wreck, and surveyed her all over, finding that the description given in the survey was correct.

To the Assessors:—We could have managed to float her if we could have got her off. We had fourteen or sixteen large casks lashed to her sides to assist her. We considered her as a total wreck. The bay this schooner was in is considered safe. The entrance is narrow.

Captain Johnson to Court: Christmas Bay is in Chikotan Island, one of the Kurile Islands. It is the usual anchorage for vessels there. We put in that night on account of the gale.

JUDGMENT.

The Court is of the opinion that the wreck of the *Otsego*, which occured in what is known as Christmas Bay, Chikotan Island, one of the Kurile group, during the night of the 25th or early morning of the 26th of September last, in the midst of a violent gale and high sea, was caused without any fault or failure of her master or crew, and that everything possible was done before she was lost to prevent the catastrophe, and afterwards to get vessel off, but without success. We also find that the log was satisfactorily kept, and we believe the captain has acted wisely in in his conduct of matters, connected with the wrecked vessel.

Law & Police

IN H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

Wednesday, October 18th 1876.

Richard Henry Smith, a native of Calcutta, was brought up on a charge of vagrancy.

Constable Jones, sworn:—Yesterday afternoon prisoner was brought to the station by a Japanese sergeant. He had been begging about amongst the Japanese farm houses in the neighbourhood of Yokohama. He was pointed out to me as vagrant.

Kimura Yoshitoshi, a Japanese police sergeant, stated:—Some time ago I was told that a coloured man was lying ill at a temple in a village near Homoku. He had been staying about that village for some three years, doing odd jobs for people now and again, but having no fixed employment or place of abode. I went to see him, but he had left the place. I informed the superintendent of this. I met him afterwards in Honmura and asked him to come with me to the station.

Prisoner said:—I have been in Japan for twelve years and most of the time working for my living. I am a native of Calcutta and am now 43 years of age. I admit having lived in the village of Nishiga for three years, but deny ever having begged. I have several Japanese acquaintances there, for whom I have done an occasional little job, and they have taken care that I do not altogether starve. I was sick of cold for some time and lay at the temple. I suppose my friends were afraid I would die and bring trouble amongst them, and so told this officer of my state. When I met him in the street, he stopped me and spoke very civilly asking me if I would like to return to my own country. I said "yes," so he took me to the station, saying my Consul would see that I returned to India very soon. I went with him very willingly. I can't say that I have any permanent habitation. I stay perhaps for three days in one place and then my friends take me to another. But I am always about the same spot. I mean I never leave the village altogether.

Committed to jail for one month.

Thursday, October 19th, 1876.

AH-SUNG *v.* E. L. B. MCMAHON.

This was a claim for $10.

Defendant said this sum had already been paid into court.

Ah-Sung, plaintiff, deposed:—I made the signboard, of which this is a copy, for Captain Purvis, who acted for Mr. McMahon and it pleased him very well. The bill was $10. This was on the 28th August. I went on the 8th September and presented the bill. I was told to come back on the 11th. On the 18th I was again requested to come back in the following month, October.

Defendant denied these assertions.

Plaintiff continued:—At last I grew impatient and put my bill into Mr. Hall's hands for collection. Defendant then asked me to strengthen the signboard by planking it behind. I did so, but after all, defendant said it was not up to the mark, and refused to take it. The signboard was "Universal Parcels Express Office." (Plaintiff here handed in a statement of his case. He said Mr. Hall had written it.)

E. L. B. McMahon, sworn, stated:—I ordered two signboards, through Captain Purvis, some time in August. They were brought to my office, and in a day or two the Chinaman called for his money. I wished to test the boards before I paid for them, and asked him to call again after a little while. In a few days the office boy informed me that one of the boards was begining to warp. I asked the Chinaman to counteract this by putting stays on behind. He did so, and again called for his money. As it was the American Mail day and I was very busy I asked him to call again. I did not hear from him again till I received a letter from Mr. Hall, asking immediate payment of the account. I answered that I thought the Chinaman quite able to collect his own accounts, and that I therefore could not recognize his interference in the matter. I then received a summons to Court; but since then the Chinaman has finished his work on the signboards.

John W. Hall, sworn, stated:—I applied to Mr. McMahon for payment of a bill of $10 on account of Ah Sung. He did not pay this, so I called on him myself, but he was not in. I sent Mr. Davidson some days afterwards to know what was to be done with the board, and he brought back an unsatisfactory reply from Mr. McMahon. I advised Ah-Sung to sue Mr. McMahon personally.

Defendant's office boy now corroborated his master's deposition as to the warping of the signboards. The second signboard is hung at No. 149.

Verdict in favour of plaintiff, with costs.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

IN THE U. S. CONSULAR-GENERAL COURT.
Before General T. B. Van Buren, Consul-General,
and
C. D. Haeman, } *Assessors.*
G. Hurlbut, }
Tōkiō *Fu v.* J. M. Bachelder.
Monday, October 16th, 1876.
(Continued from the 12th instant.)

Kanuma Tsunekatsu appeared for the Tōkiō *Fu*; defendant appeared personally, and resumed the examination of his witnesses.

W. H. Doyle, sworn, deposed:—I came to Japan in July 1875. I resided in Tōkiō in the latter part of March and the beginning of May 1871. I lived at the Grand Hotel, Tsukiji. I was in the service of the Foreign Department. The *Gaimusho* did not give positive orders as to my place of residence. It was generally understood that foreigners could only stay at the Tsukiji Hotel. At that time I was not aware of any foreigner living outside the Foreign Concession, either in the employ of the Japanese Government or otherwise. There were only three Legations in Tōkiō at that time; the American, French and English. The Dutch and German Ministers lived in Tōkiō, but had no establishments that I am aware of. The English and French Legations were down at Shinagawa and the American near Mita. Had foreigners been obliged to live in Tsukiji wholly, the Concession would now be quite different from what it is. Instead of being utterly paralysed and inanimate it might be prosperous and full of the elements of commercial success. But that is a matter of opinion merely. Tsukiji might be considered a near approach to the business centre of Yedo. It has the benefit of Bay frontage and good drainage. It leads on the one hand immediately to the rich part of the city, and on the other to the great retail centre. The business carried on in Tsukiji is practically nothing. I know Nos. 1, 2, 21 and 22 as marked on this map. In my judgment, the cost value of the improvements on those lots must be in the neighbourhood of ten or fifteen thousand dollars; but it is hard to swear positively. The improvements are of the most efficient character. I would not consider it possible to estimate the now selling value of that property without knowing under what conditions it is held, &c., but I feel certain that it would not bring 25 per cent. of the cost value. I should say $4,000 would be a good price for it. In my judgement a fair ground rent for the property now in question, would be equal to that of the Bluff lots in Yokohama, which I consider excessive. I do not know exactly the ground-rent on property outside of Tsukiji, but it is very trifling compared to that in Tsukiji or Yokohama. I believe that the ground rent in Kobe is less than in Yokohama. In the latter part of 1874 I lived at Mita. I was a partner in the concern there, and interested. We paid some small sum by the way of ground rent to the Government. We had about 7,000 *tsubos*. I am not engaged in the paper manufactory there now. I have disposed of my business, conditionally.

Examined by the Court: I know several foreigners living out of Tsukiji. Of my acquaintances there are probably from 75 to 100 living in Tōkiō outside Tsukiji. Some of them hold property in the names of Japanese. I have built in the name of Japanese and so has Mr. Hill. I know the French restaurant in Ginza. It is kept by a Frenchman and his wife. It is held according to the system generally adopted in Tōkiō, viz., that of holding it in the name of Japanese. I knew the Yorinda Co., under the management of Messrs. Gilbert and Eyton. I should say probably nine-tenths of the foreigners who lives in Tōkiō live outside Tsukiji.

By the assessors: The French arsenal people were not obliged to live in Tsukiji that I am aware of.

John Hartley, sworn: I am a general merchant. I have been 12 years in Japan. I own property in Tsukiji for which I pay ground rent amounting to 37½ cents per *tsubo*. I bought under the terms of the Yedo conventions of 1866 and 1870. I understood that the concession was to be restricted to foreigners residing in Tōkiō, in the same manner as those living in Yokohama and elsewhere. I understood that foreigners were to live there exclusively. I held ground in Osaka at 25 *bun* cents per *tsubo*. When I first went to Osaka, I lived in the native city but was prohibited soon afterwards by the authorities. After the land sale in Tōkiō, foreigners were obliged to live within the limits of, or quite close to Tsukiji. I am not permitted to live beyond the foreign concession in Yokohama. My business in Tokio is carried on under my own name. Between 1868 and 1870 I held property in the Main street of Tōkiō between Kiyo Bashi and Nihon Bashi. I paid 300 *yen* for the house, godown and land. I should say it occupied about 16 *tsubos*. I paid no rental. I purchased from a Japanese, he paying all the dues to the Government. I own it now, but am out of possession. I put a Japanese in the place, but when I went there to have some bills collected I found he had sold the property and it was advertised "To Let." I have mentioned the matter casually to the British Consul, but allow the fellow to rusticate till he may have attained some property. I can hire property in Tsukiji for about $80 per month, exclusive of ground rent. I resided in Yedo some time before the land sale, and my brother about two years. He was compelled to live in the Hotel, because it was considered the only safe place for foreigners at the time. They said our lives and property were unsafe beyond Tsukiji. My property may be worth $700 without a tenant. The land cost $800, the buildings and so forth about $1,400 more. I know Lots 1, 2, 21 and 22, and have seen the buildings on them. They are first class. I have only particularly looked at the buildings on Nos. 1 and 2, and should consider them worth $10,000, cost value. In my judgment the property would not be worth more than $2,000 exclusive of the ground rent. I would not give more than that for it myself. I should consider, had foreigners in Yedo, as in other places, been obliged to live in Tsukiji, the lots would now be worth $3 per *tsubo*. As they are, I consider them of no value, on account of the enormous rental and foreigners not being obliged to live there. If the property were destroyed by fire I would rather give the ground away than pay rent.

C. D. Moss, sworn:—I am part proprietor of the *Japan Gazette*. I have made a Hong List of the foreigners residing within the limits of Tsukiji in 1874, 5 and 6. In 1874 I think the foreign population in Yedo was from 370 to 400. In 1875 a little over 450. In 1876, over 600. I think about one-fifth lived inside Tsukiji. Had foreigners been obliged to live in Tsukiji it would have increased the value of property, at least double.

Adjourned till 1.30 P.M.

Resumed at 1.30 p.m.

J. Clataud, sworn, deposed:—I live at No. 33 Tsukiji. Business was prosperous formerly, but it is not so good now because foreigners live so much outside the concession. The property has much depreciated on account of the Japanese allowing foreigners to live outside Tsukiji. I built a house but can get no tenant. The Japanese can get better rents than I can for their houses. Foreigners rent houses in the names of their servants. The French restaurant pays $105 a month for rent. I know about six or seven foreigners living outside Tsukiji. I know Mr. Garwood who was in the Government employ three years ago. He went into a dispensing business with a foreign partner under a Japanese name. The establishment is outside the concession, and he carries on a general business. There is also Mr. Perpigna who is in Government employ. Another gentleman, who is a tramway contractor, lived in Tokiō for twelve months. I know Mr. Biguex of the restaurant, and Mr. Galle who has been in no employ for six months. I know also Mr. Geboin, living near Shiba, and Mr. Verry who lives in the same house as Mr. Geboin. He was with me in former times but now does business by himself. He teaches two or three Japanese. I knew Mr. Dallas, in Ginza. He was an Insurance and Commission Agent. His family lived in Shiba. There is the barber, Mr. Hoebens, in Ginza, who keeps house under a Japanese name. A Frenchman named Venciennes lives near the English Legation, and sells goods now and then. Monsieur Louis lived with me five months ago, but now stays near Mr. Venciennes and tries to get a position with the Japanese. Property in Tsukiji is now almost worthless, scarcely one fourth its former value.

Arthur Blockley, sworn:—I am a hotel proprietor at No. 17 Tsukiji. I have been in Japan for seven years. I have lived in H. M.'s Legation for two years. I then entered into a contract with the Japanese Railway Department. Part of the time I lived at Shinbashi Station. I then compradored for about a year at Irifunechō, Tsukiji. Then at the hotel, Tsukiji. There were four Legations in Yedo in 1870, the English, America, French, and German. The English Legation then had six attachés; the American, one; the French, two; the German, one. There were no foreigners living outside Tsukiji except those attached to the Legations. They were forced to live at the Government Hotel in Tsukiji, and round about there. Foreigners who passed the boundaries were accompanied by mounted guards till their return. There are several other hotels in Yedo; the Seiyōken, the French restaurant in Ginza, and the Uyeno hotel. Most foreigners go to the Japanese hotels because they are nearer the Station than those in Tsukiji. The action of the Government in not enforcing the residence of foreigners in Tsukiji has greatly deteriorated the value of land there. I know quite a number of foreigners living outside Tsukiji without contracts with the Government for their services. G. Harris, A. Campbell, A Thompson, J. Davidson, T. B. Glover, C. A. Pfoundes, the Hare Brothers and formerly H. Reeve, who was

Original from UNIVERSITY OF CALIFORNIA

agent for the "Bavarian Brewery." In proof of this I can show a summons against him for a sum of money by the Bavarian Brewery in 1873. He is now deceased. He had also a private store at Kojimachi. Also W. P. Kent, editor of the *Tokio Journal* in 1874, resided outside the foreign concession. J. R. Black and E. H. House lived outside also. J. L. O. Eyton, Commission and Insurance agent, now resides at Ginza. Lane, Crawford & Co. have a store in Ginza. It is managed by Mr. Ouston, though it has a Japanese sign. I buy my milk from the Tōkiō Dairy at Ishikawa. It is managed by Lord.

Adjourned till Thursday, the 19th instant at 11 A.M.

Thursday, October 19th, 1876.

Defendant's evidence continued.

William Rangan, sworn. I reside on the Bluff in Yokohama. I bought ground at the sale in 1870 in Tsukiji. I bought it on the same conditions as others bought. I do not own the lot now, nor do I remember the premium paid. I kept it about four years. When I parted with it I had expended over $1,600 on it for premium and rent. I gave it to Captain Batchelder for $1. It was a bad speculation and an expensive one. The people whom I expected would rent it from me obtained ground outside the settlement, at far lower rates that anyone on the concession could afford to let for. I offered Domoney & Co. to build a place for them for $50 per month, but during the negociation they got a place within a stone's throw of the boundaries at very little expense. This was accomplished by merely using their servants' names.

Caspar Brennwald, sworn: I have owned property in Tsukiji. I bought it at auction in 1870, on the terms or the Yedo Convention of that time. I understood that Tsukiji was to be the foreign concession. This has not been the case, as foreigners are not all compelled to live there. I took a house in Japanese town shortly afterwards as other people did. The action of the Government in allowing foreigners to live outside the red line in spite of the Convention, has affected the value of the land bought at the auction of 1870. I intended to build a bungalow for renting on lot No. 5 on the bund, but when I entered into calculation I found that I should hardly be able to meet the expense of ground rent, the way matters stood. I found it more profitable to build in Japanese town. I have a godown now on my Tsukiji ground. I have never offered it for sale, knowing how useless it would be, considering the condition of Tsukiji now. I do not consider property of any value there now.

Everhard Schmid, sworn:—I reside at Nos. 41 and 23 Tsukiji. I am interested in property in Tsukiji. It has cost me about $40,000 in improving the property bought at auction in 1870. The land has depreciated greatly in value since that year, on account of the Government allowing foreigners to live outside the concession, contrary to the terms of the Convention. I should say the selling value of the property is now about ¼ its original cost. I know lots 1,2, 21 and 22, but do not consider they have any marketable value, though to an intending purchaser they might be worth our fourth their cost.

To Court:—Were all foreigners in Yedo obliged to reside within the limits of Tsukiji, I consider that my investment would be of much more value.

Frank Escombe, sworn:—I have resided in Yedo for eighteen months, in different parts outside the concession. Whilst living outside the concession I had no employement under the Government, or with any Japanese. I was doing business for myself. I recognise many of the names mentioned in the papers as those of persons living outside of the concession.

This closed the evidence for the defence.

Joseph M. Batchelder, sworn:—I bought the lots 1,2,21 and 22 on the foreign concession, Tōkiō, with the intention of making them places of business, and with the distinct understanding that foreigners were to live within the limits. I had been living in the Tsukiji hotel for some time waiting for the sale, and had before this attemped to lease property outside the red-line, as I was doing a considerable business with the Government. I, along with others, was told that the sale would occur shortly, but we could not lease land outside. At that time very few foreigners were connected with the Government. There were some few army men; but soon after the land sale, the Government commenced to employ foreigners, and allow them to live outside the boundaries. The property has cost me over $22,000. (Tender handed in.) It has no present market value. Should it become the foreign concession, it might recover its worth. I have a letter from the former *Chiji* of the Tokiō *Fu*, dated 1872, admitting that foreigners were allowed to live outside the concession. (Handed in) That is only a copy. Mr. Brennwald has the original.

The Court requested plaintiff to obtain, if possible, the original of this letter.

In the meanwhile the Court adjourned till 1 p.m.

Court reassembled.

Defendant produced the letter referred to above, and a copy thereof in Japanese. It was from the *Chiji* of the Tokio *Fu* to Mr. Brennwald, Senior Consul in Yokohama. This was handed for persual to plaintiff, who said that it did not concern the present case, and therefore he had nothing to say about it. Defendant then offered in evidence the four original leases of lots 1, 2, 21, and 22 Tsukiji, dated 1st July, 1870, with receipts for payment of first year's rent. Also a note from the Custom House, Tōkiō, dated July 12th, 1872, asking payment of ground rent. Since then defendant had received no other accounts, except those sent through the Consulate. He had a copy of a petition signed by the 24 original purchasers of land in Tsukiji, addressed to the Minister of Foreign Affairs, which had been placed in the American Minister's hands in March 1875, calling his attention to wrongs and injuries done to their property by the Government permitting foreigners to reside without the boundaries of Tsukiji. So far as he knew, no action had been taken in the matter.

Having no further evidence to adduce, defendant now summed up his case.

Judgment was reserved.

THE EARL OF BEACONSFIELD.

(Spectator.)

We do not understand all this newspaper incense offered to the new Peer,—these assertions that he has attained the fitting crown to his exceptional career, these eulogies of the country which permits such a man to rise by sheer force of intellect to such a height of grandeur. Mr. Disraeli has moral and intellectual defects of the gravest kind—such defects that his permanent removal from power would be a cause of thankfulness alike to Great Britain and to the world—but he is not the poor stamp of men to whom a peerage is a culminating honour. The Premiership of England must have been lowered indeed when any Premier gains rank by accepting a title, and to Mr. Disraeli who has created an Empress, and tossed coronets to followers to console them for exclusions from substantial power, an Earldom which he can hold only for life, is but a decoration, less valuable than the Garter to a great noble or Dukedom to a King. If he is what his followers think him, if he is even what the electors at the last election declared him to be, the House of Lords receives by his entrance an honour which, in admitting him within their circle the Peers have not the power to bestow. Mr. Disraeli deified by an Earldom! Why he has had Dukes for henchmen! He has not, as vulgar eulogists are now repeating in every tone of admiration, cut his way to the Peerage. He cut his way long since to the Leadership of the House of Commons, and is now, for reasons of his own, leisurely stepping down to a less illustrious, though also less fatiguing post. Mr. Disraeli takes his title, he does not receive it, and the only honour done in the case is to the somewhat dull assembly in which he does not think it unworthy of his position, in the evening of his strength, to relax himself with a seat. We do not believe in Mr. Disraeli as a fitting guide for the policy of Great Britain, but we will do him the justice to believe that no scorn of ours for his adulators could equal the scorn that he must feel for the ill-bred sycophancy which could throw adulation into such a form as this. In spite of the vein of delight in tawdriness which is so perceptible in his books, his speeches, and his policy, and to which the *Times* of this week makes so many sardonic allusions, Mr. Disraeli, who has poured such scorn on the Peers as upstart plutocrats, as men "who didn't conquer the land, and who do not defend it," who has never lost an opportunity of telling them that, as compared with himself, they are barbarians of yesterday, who reverences nothing but the "race" which he denies them to possess, and the intellect which he contemptuously strikes from the list of their qualifications, has not, we may be sure, given himself a British title as a crowning honour. He has not bartered, knowingly, a sceptre for a coronet. He has but taken ermine as comfortable flannel for his old age. We may be certain that he has acted now, as ever, on calculation, and the only business of politicians is to inquire whether or no his calculation is well founded.

Allowing always for Mr. Disraeli's one possession, "the flash of lightning in his brain," which has so often shown him a way out of an impossible position, we conceive him to have made a mistake alike for his party and himself a very great mistake. He has calculated that he could retain power, the ultimate authority

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

which should rest in a Premier's hands, without undergoing the labour inseparable from the leadership of the Commons, and with certain men this would have been the case. When a man's force in Council is so great that any Cabinet in which he sits becomes a Committee for the execution of his decisions, it matters little whether he places himself in the Commons or the Peers. He cannot be excluded from the governing Committee, and once within it, he is by right of innate capacity the ruling spirit. It would have mattered little to Lord Palmerston, though much to his agents in the Commons, if, before his last Administration, he had transferred himself to the softer seats and heavier atmosphere and earlier hours of the Upper Chamber. He could have addressed England from a cushion as easily as from a bench, and in the Cabinet he would still have been supreme. That will not be the position of the Earl of Beaconsfield. His ascendancy in Council has never been unquestioned, he has been beaten in this very Session on his Egyptian policy, and where he has succeeded he has succeeded because he was the necessary man, the one man who could manage the source of all real power, the sensitive, unruly, all-powerful public meeting which expresses the will of the United Kingdom. He is not necessary to his colleagues any longer. He is not wanted to manage the House of Lords, which can be guided much more easily by men of half his intellectual capacity, and if he resigned to-morrow would leave no void that in accepting a peerage he has not already left.

That void, no doubt, is a great one. Mr. Disraeli, though he never understood England, and sometimes mistook even the House of Commons, had rare capacity for managing that body, and a positive genius for controlling the stubborn impulses, the sudden movements, as of herds in terror, the frantic rushes of his own party within its walls. No one could pilot them to pasture so well, no one so coolly head them off when a stampede led them towards a precipice, no one so clearly convince them, even while they shook their manes with rage, that they had reached an impassable wall. As leader of the House he has had many superiors, as leader of the Tories no equal, and it was the conviction of this truth, the certainty that with Mr. Disraeli discontented no Tory Cabinet could live, that made him the necessary man to men whose instincts would have led them to look to any other quarter for a leader. He has resigned this position. He is no longer indispensable, and he will feel that truth with every hour of the official day. He may flatter himself till Parliament meets that he has another power in reserve, a hold over the people equal to that which he possessed over the Commons, a power like Palmerston's, but he will wake to find himself deluded. The power of Mr. Disraeli over the people was very considerable, and did without a doubt affect the result of the last election, but it was not power of the kind which will continue to attach to the Earl of Beaconsfield. The secret of the power was admiration,—admiration for the intellectual gymnast, the political Leotard who could fly through the air so far, and who so seldom missed his tip. The householders enjoyed his audacity, smiled at his tergiversations, and delighted in turns of policy which suggested something of political frolicsomeness in the chief man in the State. All men love surprises in politics, as all men enjoy surprises in their theatres or their novels. They were as amused with him as with Palmerston, though in a very different way, the two admirations being as different as admiration for an acrobat and admiration for a great comedian. Disappearance kills that kind of confidence, and Mr. Disraeli as intellectual gymnast has retired. The Earl of Beaconsfield cannot disport himself in that way in the Upper Chamber. The air is too dense, the immediate audience too averse to such displays, the machinery too heavy to be trusted. The new Peer believes, it is said, that he has a style of eloquence, unrevealed as yet, which will impress the Peers; that while in the Commons they appreciate "Don Juan," in the Lords they will have admiration for "Paradise Lost". He may be right and may be able at seventy to exchange the ottava rima for blank verse, but he will find that if the Peers admire his epics, which we doubt, their real taste being for the laughing humour and simple narrative of Chaucer, the English people will not; that in altering the form he has altered also the impression of his verse, to which that form materially conduced. Unless the Earl of Beaconsfield can not only make himself but show himself necessary to some course of policy on which the nation has set its heart, he will find that, no longer leading the Commons, no longer exciting daily admiration, he will, like every predecessor who has set him his example, be forgotten by the people whom, except when in carrying household suffrage he threw over the traditions of his party, he has never served. Bread is no cheaper, taxation no lighter, Britain no grander for Mr. Disraeli. And what chance is there of his propounding such a policy? We should say simply none. When straining for a cry in home affairs, he found none better than *Sanitas sanitatum, omnia sanitas*, and when eager to lead in foreign affairs has only to offer to a people who pray every week for deliverance from Turks the Turkish *status quo*. You cannot make a great policy out of a mere refusal to believe disagreeable evidence. No man in England grudges Mr. Disraeli ease, if he desires it, "honours," if he cares about them, social rank, if he thinks that Britain has it to give, but among all Englishmen, those who grudge them least are those who most desire that his authority should end.

And if Mr. Disraeli in receding into the perfumed but non luminous atmosphere of the Peers has injured himself, he has also injured his party, which, whatever Conservatives may think, does not rule now as Toryism, but as Toryism tempered till England can bear it by Mr. Disraeli. The Tory party may rule again; whenever it can find a great administrator it will rule; but this party which is ruling is not that, but a party whose first element, the Earl of Beaconsfield, has withdrawn from the labour of the place where substantial power in England permanently resides.

BY THE REVD. H. BOLTON.

REPORTS.

The German schooner *Bonita* sailed from Hamburg May 19th. Had pleasant weather in the North Sea and down Channel. Passed the Lizard on the 26th. Had light N. E. trades, and crossed the Equator 28 days out in 26 degrees 30 minutes West. Thence towards the Cape fine weather, and the same while running the Easting down. Entered Lombock Strait September 3rd, and came up through the Eastern passage. Had light fair winds up to 14 degrees North; afterwards variable winds and calms till sighting Fatzisu on the 12th instant. Thence rough and stormy weather into port this morning, being 149 days from Hamburg.

Blankets, scarlet & green 7 to 8 lbs.	per lb.		0.40	to	0.45	

Sugar.—We have to note an improvement in rates for all classes of Sugars, though business continues on a limited scale.

Sugar:—Takao in bag	per picul	$3 95				
,, in basket	,,	$3 70				
Taiwanfoo in bag	,,	$3 80				
do. in basket	,,	$3.55				
China No 1 Ping-fah	,,	$7 70				
,, No. 2 Ching-pak	,,	$6 80				
,, No. 3 Ke-pak	,,	$6 10				

China No. 4 Kook-fah	per picul	$5.50				
,, No. 5 Kong-fun	,,	$5 00				
,, No. 6 E-pak	,,	$4.20				
Swatow	,,	$3.30				
Daitong	,,	$3.40				
Japan Rice		$2 30	to	$2 35		
Kerosene Oil		$3.80	to	$4.00		

Kerosene Oil.—The market rate is fluctuating between $3.80 and $4.00.

EXPORTS.

Silk.—During the past week, the unfavourable news received from Europe and the scarcity of dollars have limited transactions; exchange has further risen and we have to report a fall in prices of about $100.

Since the 11th instant arrivals are 990 bales, and settlements 600 bales of Hanks and 300 of Oshiu and other sorts.

	At Exchange 4/1½ in London.		*At Exchange 5.20 at 6 m.s. in Lyons.*			
Hanks.—Extra to No. 1	$1,000	to 1,030	35 10	to 36/11	100	to 103
,, Best No. 1 & 2	$ 960	to 980	34 6	to 35 2	96	to 98
,, Good No 2	$ 940	to 950	33 10	to 34 2	94	to 95
,, Medium No. 2½	$ 900	to 930	32 6	to 33 6	91	to 93
,, C'mon. No. 3	$ 850	to 880	30/9	to 31/10	85	to 88
,, Inferior No 4 & 5						

	At Exchange 4/1½ in London.		*At Exchange 5.20 at 6 m.s. in Lyons.*			
Oshiu—Best	$ 980	to 1,000	35/2	to 35/10	98	to 100
,, Medium to Good	$ 920	to 960	33/2	to 34/6	92	to 96
Sodai.—Good to Best	$ 800		29/1		81	

Silk-worms' Eggs.—No settlements. Total arrivals are 940,000 cards against 680,000 last year at the same date.

Tea.—The market is irregular and fluctuating, native dealers being apparently much divided in opinion as to its probable future course. *Fine* Teas are in fair demand, but business is checked by the extreme rates asked. Settlements for the closing week amount to 2,500 piculs, and arrivals being large, stocks in hand are increasing.

Common	$12.00	to 14 00				
Good Common	15.00	to 17 00				
Medium	18 00	to 20.00				
Good Medium	22.00	to 25.00				
Fine	$27.00	to 33 00				
Finest	34.00	to 39 00				
Choice	43.00	to 48 00				
						[scarce.

EXCHANGE AND BULLION.

Exchange.—There has been only a small business doing during the past week, but for the next United States mail there has been a fair amount of Bank Paper settled at 4/1 @ 4/1¼, though at the close rates are again weaker, and there are ready buyers of Bank Bills at quotations.

Rates close as follows:—

STERLING—Bank 6 months' sight	4s. 0¼d.
,, Bank Bills on demand	3s 11¼d.
,, Private 6 months' sight	4s. 1d.
ON PARIS—Bank Sight	4 95
,, Bank 6 months' sight	5.05
,, Private 6 ms. sight	5.15
ON HONGKONG—Bank sight	3 % dis.
,, Private 10 days' sight	4 ,, nom.
ON SHANGHAI—Bank sight	77
,, Private 10 days sight	78½
On New York—Bank Bills on demand	94
,, 30 days sight Private	97½
ON San Francisco—Bank Bills on demand	94½
,, 30 days sight Private	98
Kinsatz	398
Gold Yen	386

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VII.—No. 44.] YOKOHAMA, SATURDAY, OCTOBER 28, 1876. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

At the Imperial College of Engineering, Tōkiō, on the 25th instant, the wife of HENRY DYER, Esq., of a son.

Notes of the Week.

An *émeute*, which may prove serious, has broken out at Kumamoto, a garrison town in the Higo *ken*, in the Island of Kiusiu. The fullest particulars regarding it which we have been able to gather from various sources, will be found elsewhere. Considerable anxiety regarding it exists in the capital, but all good opinion is in favour of the Satsuma men proving loyal.

We would draw particular attention to a remarkable translation which appears in our columns to-day, of an article from the *Chōya Shimbun*, written by its editor who has just been released from prison. During this confinement he has evidently thought carefully over the relations existing between the Press and the Government and people of this country. And, with an union of good sense and courage which, in our opinion at least, does him high credit, he frankly admits that the course pursued by many of the public writers is wholly incompatible with the true interests of the country. Arguing alike from his own former line of conduct and that now pursued by many of the public writers, conscious that his own motive was pure and patriotic, and willing to credit his fellow journalists with equal conscientiousness, he still sees and declares that both he and they have pursued a line of action calculated to do more harm than good. In other words, they have not known how to use even such measure of freedom as the Press-laws conceded to them. Of course, it may be argued by those who have opposed the views which we have from the first held on this subject, that all this violence which we have seen in the Press,—incitement to assassination &c., would have had no existence but for these very Press-laws. But men who have been at any pains to study history, and have traced the effect of arbitrary government upon the character of a people, will hardly hold such views. In this Empire we have the curious juxtaposition of two sets of ideas, as antagonistic to each other as ideas can be. One consists of the old traditions on which all authority rests here: the other is the free political thought of Europe, taken into the Japanese mind through foreign books or translations of them. So soon as this free thought begins to work in the mind of a Japanese, he is naturally impelled to write, and every word he writes becomes a solvent to the fabric of government in this country. A perfectly free Press, under such circumstances, would destroy far faster than any other constructive power could repair or rebuild, and nothing but the demolition of the whole fabric of authority could be expected from such a process. If foreigners have learned anything about the character of the Japanese mind, it is that it easily flies towards a new thing, ardently pursues it for a short time, but relaxes in this pursuit too easily, and therefore does not attain to any perfect fruition of its labour. No nation can afford to break too easily with its past, and a free Press in the hands of a number of men each one of whom is animated by new ideas, is an engine every blow of which has the effect of destroying some part of the foundations of an old polity. To set such an engine at work in a nation like this, which requires to make good the successes of the past ten years before proceeding to further conquests, seems, and has always seemed to us, sheer madness, and on this account we have always recognized the necessity for the Press-laws, much as we have deplored the occasional excessive severity with which they have been administered. The mind of the Japanese people is not yet able to estimate newspaper writing at its true value. The people of the west, long accustomed to a Press wholly or partially free, estimate it very accurately, and hence what produces only a legitimate effect on one side of the world, produces a most dangerous effect on the other. The journalists here, too, are guided by none of those traditions of journalism which exercise so wholesome an effect among ourselves, and the deposit or formation of these is a very slow process. We are so much accustomed to free writing that we can hardly fairly place ourselves in the position of men unused to it, either as writers or readers, and hence many of us regarded the Press-laws here as a crowning instance of a most arbitrary *régime*. But, in real truth, they were the proper guardians of a new measure of liberty—a far greater measure than had hitherto been known in this country, and all that it would have been wise to concede when those laws were passed. With experience is coming a more serious sense of the responsibility attaching to public writing, and the first fruits of it are apparent in the article we publish to-day. It deserves the most attentive consideration of the native journalists, and no foreigner who has taken any interest in the question to which it refers can fail to see that it marks an approaching advance in the character of the native Press.

We attach but small value to the charge of inconsistency made against the Yokohama Racing Association (the new Race-Club) for excluding grooms, bettoes, and persons paid to ride, from the privilege of using the course during the races. The Club is charged with inconsistency on this account because it claimed the right of riding for the whole community. But the admission of professional jockeys has everywhere been found incompatible with such racing as alone can be decently carried on in these eastern settlements, and their exclusion is, as it were, and therefore, a condition without which racing cannot exist. The new Club has done a service to racing in presence of which any such inconsistency as this—if indeed it can be held as such—is of very small account. It has framed a set of laws and bye-laws which, if carried out sternly, will do very much towards abolishing many of the evils inseparable from, and directly traceable to, the race lotteries. One of these bye-laws obliges the owner of a horse

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

entered for several races on the same day to declare to the committee, not later than 6 p.m. on the previous day, the first event for which the horse will compete; and another makes it compulsory for the horse to run for the first event for which it is entered, or be disqualified from running in any race during the day. This, to a great extent, and perhaps as far as circumstances permit, protects the public against the withdrawal of a horse for reasons which are purely personal to the owner. It obliges the card betted on to be in the pack. It recognizes the obligation to keep faith with the public—one altogether too little insisted on hitherto. It is idle even to dream of abolishing the practice of betting on events of chance, and, except with the assistance of law, the lottery system will never be put down. It is therefore important that the evils inseparable from both should be limited as much as possible, and that if play is to exist, as it must exist, it should at least be fair. The card should be in the pack. No one dares pretend that its known absence has not been made the means of profit to those in the secret. Of course there are men who would never be suspected, and are wholly incapable of any such act. But many others are quite capable of it, and those who are not are bound for the protection of their own names and in the general interests of fair play, to close every door by which such an advantage may be snatched.

Party feeling runs so high on this subject, and it is so difficult for an indifferent outsider to appreciate the value attached to the various issues involved in it, that we may easily be altogether at sea in what we are about to say. But cannot common cause, if not now, at least after the autumn meetings, be made by the two Clubs on this ground? That the old Club wishes to perpetuate any practice inconsistent with fair play, no one believes. That the new Club has made a good rule in the interests of fair play, no one can doubt. The new Club asserts its right of enjoying the privilege of the use of the course on paying its share of the expenses. The old Club admits this right. Eliminate all feeling from the question, and does it not seem that a fusion of all the interests could take place on these general grounds? We cannot but deprecate very strongly the agitation of the whole settlement on a question which we shall not indeed call trivial, but which certainly ought not to cause all the bitterness at present associated with it. It might be difficult, but would not be impossible, to find arbitrators between the two parties wholly free from the prepossessions or prejudices of either, and we are at a loss to know why some intervention of the kind should not be sought.

We shall hardly be very prudent in exhibiting severity towards blunders made in connection with the language or literature of this country, for all but very advanced scholars are liable to them. It is well, however, to point out such as do occur from time to time in print, lest they should take root. Thus the Daigaku and Chuyo were lately spoken of as expounders of the doctrines of Confucius, which is much like saying that Genesis and Exodus are expounders of the doctrines of Moses.

Some remarks have also been made on the incorrect spelling of Japanese words by foreigners. But mistakes are pointed out which are hardly ever made now-a-days, for instance, *sima* for *shima*, and the like. Documents of ten years old can be pointed to in which the correct spelling is observed in all these cases.

An amateur concert was given in the Masonic Lodge, by the kind permission of the Masons, on Monday evening last, in aid of the funds of the Temperance Hall. The room is well adapted for musical purposes, and had been tastefully decorated for the occasion. It lacked but a fuller attendance to produce the effect of completeness.

The first part was opened with the performance, as a quartett on two piano-fortes, of the first movement of Mendelssohn's symphony in A major (the Italian, *Op.* 90). No form of concerted music lends itself so well to piano-forte arrangement as the symphony, on account of the breadth of the ideas of which it is constructed. The form and outline, the light and shade, of the original, can all be reproduced, something also of the weight of the symphony can be given, through this excellent medium. What cannot be given is the colouring imparted to the original by means of the various instruments of the orchestra. Arrangements of this nature are to orchestral compositions what engravings are to pictures, and convey to thousands who have not the opportunity of hearing or seeing the originals, the forms to which the genius of the artist has given birth. To interdict such arrangements, therefore, would be like interdicting the art of engraving, and thus depriving the majority of mankind of the pleasure of making themselves familiar, in the only manner open to them, with the masterpieces of pictorial and musical art. Nor are we without excellent warranty for resorting to this form of musical entertainment. The reader of the Mendelssohn letters will hardly have forgotten the account given by the inspired youth of his visit to Goethe at Weimar, and his playing the first movement of Beethoven's C minor symphony to the poet, who sat the while in a dark corner, "like a Jupiter Tonans, his old eyes flashing on me," or, as he writes in a previous letter, "his eyes looking like those of a drowsy old lion." Small wonder that Goethe exclaims, "It is very noble, very wild, it makes one fear that the house is about to fall down"—he might almost have said that it was like the summons of mankind to judgment—"and what must it be when played by a number of men together"! "*Ganz stupend*"! he exclaims at another time.

The Italian Symphony was commenced at Rome in the latter part of the year 1830. The first we hear of it is in a letter addressed by Mendelssohn to his sisters, in which he writes; "After the new year I intended to resume instrumental music, and to write several things for the piano, and probably a symphony of some kind, for two have been haunting my brain." Towards the middle of January in the following year he writes again, "The two symphonies also begin to assume a more definite form," and later on in February he says, "I have once more begun to compose with fresh vigour, and the Italian symphony makes rapid progress; it will be the most sportive piece I have yet composed, especially the last movement. I have not yet decided on the *adagio*, and think I shall reserve it for Naples." In April he writes again, "If I continue in my present mood I shall finish my Italian symphony also in Italy," and so he continues to work at it, his mind the while stirred to its inmost depths by the beauties of nature, and the monuments of human genius by which he was surrounded. "Thus I may for the present continue to enjoy nature and the blue sky, during the months that still remain for me in Italy, without thinking of anything else, for *there* alone lies true art, now in Italy—there and in her monuments; and there it will ever remain; and there we shall ever find it, for our instruction and delight, as long as Vesuvius stands, and so long as the balmy air, and the sea, and the trees do not pass away." And so the work takes more and more definite form, amid the fragrance of orange flowers and citron-hedges, and beautiful islands in the lakes, the terraced slopes of which, with their quaint statues and old fashioned decorations, their rich foliage and verdant luxuriance, enchant the young musician, make every one of his letters a delightful idyl, and add colour to the enchanting symphony which forms the musical record and reflection of all this beauty. Mendelssohn left Italy, however, before completing the work; but the impress given to his thoughts sufficed to preserve in it, in perfect vigour and freshness, and with their true appropriate local colouring, all the glowing fancies which his stay in Italy had aroused. It was the same with his Scotch symphony. The ideas first excited in his mind by his visit to Scotland could not be restrained, and took form in the overture to the "Hebrides," sketched during that visit, but not completed until he had been some time in Rome. But the symphony itself took definite shape in his mind during his stay in Italy: the two streams of thought flowed side by side, or, perhaps rather, flowed, one north and the other south, from one common watershed. And how wonderfully did Mendelssohn's mind seize and reproduce the character and genius of the people, the country, or the subject which he illustrated by his music! Whether we take the overture to A Mid-summer Night's

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Dream, in which, at eighteen years of age, he seized, even through the veil of a foreign tongue, the whole body and soul of the ideas of that exquisite creation; or the Reformation Symphony, written not long afterwards, in which the severe religious character and movement of the German mind of that age is perfectly reflected; or the Scotch symphony, in which the stern physical aspects of nature in Scotland, the character of the people, their art, their ardour of mind, their national history almost, are seen as plainly as in their poetry; or the Italian symphony, in which the genius of the Italian race, their religion, their enchanting country, their national dances, their enthusiastic yet unstable temperament, are all seen as plainly as in Italy itself:—whether we take one or the other or all of these, we find the same power of seizing and reproducing in an ideal form the nature and essence of the subject sought to be illustrated. The symphony was ultimately brought out in the year 1833—we rather think in London. It is classed and numbered among the works of that year, though the only sentence which can in any way refer to it is the following in a letter to Schubring:—"I have also conducted my new symphony in England, and people were pleased with it." Not a word more of a poem worthy of Tasso!

We wish we could add that this movement, and the *Saltarello* which brought the concert to a close, had been well played. But they were not—and this is quite punishment enough to those who undertook to interpret them. We will engage to say that they suffered more than their audience, for they knew that it might have gone better, and had spared no pains to make it do so.

The concerted vocal music, in which the Choral Society took part, went very nicely, and the cause of the Temperance Hall may be deemed fortunate in having secured the willing and efficient services of many of the lady residents.

The first part of the concert was brought to a brilliant close with the *Adagio* and *Presto Scherzando* of the piano-forte concerto in D minor—called inadvertently F minor in the programme—with the orchestral accompaniments arranged for a second piano, as is usually, and ought always to be the case where no orchestra can be collected. This beautiful work was written by Mendelssohn in the summer of 1837, which he chiefly spent on the Rhine. It was a commission from the committee of the Festival intended to be given at Birmingham, and at which, much to Mendelssohn's satisfaction, the Queen was to be present. He writes a pleasant gossiping letter to his mother on the subject, describing the position of the inn where he was staying, and his satisfaction in getting, after a great deal of trouble, a Bible and a piano into his rooms. With these adjuncts he went to work, and who knows how many of the best thoughts he produced for the one had their origin in the other?

It is no part of our office to pass criticisms upon the performances of the ladies who are so gracious as to lend their assistance on occasions of this kind, but the homage we here venture to present has in it at least as much admiration for musical powers of an altogether exceptional excellence, as for the good-will and grace with which they were placed at and employed in the service of Monday evening.

The second part of the concert demands little more remark than to say that the vocal part-music went with fair precision, and that the solo music fell below the fair standard even of requirements from amateurs. Sometimes it will be so, in spite of all effort to the contrary. A fairy in a mischievous mood comes in, and mocks every attempt to repeat what has gone well enough at the very last rehearsal. If Puck is in a humour to say

> Then those things do best please me,
> That befal prepostorously,

what can men do?

Among the instrumental performances of the evening was one on the violoncello by a gentleman attached to the German corvette *Vineta*, whose full tone and correct intonation were the theme of much and well deserved praise.

Mr. H. S. Wilkinson, H. B. M. Acting Vice-Consul at Tôkiô, has been appointed Acting Law Secretary for the Supreme Court of China and Japan.

Telegrams have been received from England dated as late as the 25th instant, in which no mention is made of serious political complications in Europe. It may therefore be fairly presumed that no apprehension exists of any immediate disturbance of peace among the great powers. But all public and private intelligence by the last mail bears testimony to the intensely strong feelings excited throughout the whole of Europe against the Turks for their conduct in Bulgaria.

It will be observed that the supplementary Treaty with Corea published last week is dated "the four hundred and eighty-fifth year of the founding of Corea." By this is signified the date of the union into one kingdom, under the name Chôsen, of the three kingdoms previously existing in the country. It may be doubted whether the Coreans usually reckon in this way. They commonly use the Chinese calendar, but as it is one of the marks of subjection or vassalage to China, they avoided introducing it into a treaty in which their independence was for the first time publicly acknowledged. It is possible that the expression 'founding of Corea' is copied from that of the Japanese 'the accession of Zimmu Tennô.'

From the "Japan Mail Daily Advertiser."

Monday, 23*rd*.

From the *Akébono Shimbun*.

Although the Railway between Osaka and Kiôto has been working for many days, Mr. Ito, the Minister of the Public Works, will shortly visit the line and preside at a formal and official inauguration.

From the *Hôchi Shimbun*,

Four new workshops are to be erected at the arsenal at Koishikawa, Tôkiô, three of which will be 500 feet long by 50 feet wide, and built of brick.

THE ÉMEUTE IN HIGO.

IT is quite impossible at this moment to estimate the importance or proportions of the rising in the province of Higo of which the first news reached Yedo on Wednesday last. Nor shall we do our readers much service by speculating upon the inciting causes which have produced it, further than by saying that, in all probability, the measure for the capitalization of the incomes of the nobles and gentry stands at their head. It will be better perhaps to place before the public such information as can be collected on the subject from the Japanese Press, and we shall easily be excused for filling the columns usually devoted to comment or speculation, with the most trustworthy accounts we have been able to gather of this untoward movement. The information published in our daily issue yesterday and this morning will be found elsewhere under an appropriate heading, together with translations from the *Nichi Nichi Shimbun*, which we would here supplement with the telegraphic information published in the *Chôya Shimbun*.

The *Kencho* officials and about forty military officers and men have been killed by the insurgents.

General Taneda, the commander of the garrison, lies in a very precarious condition.

Fukuoka *Kencho*, 26th instant, 3.30 p.m.

A report has arrived that about fifty *shizoku* of Akidzuki are ravaging the town (of Akidzuki,) and a force of police has been sent to arrest them.

From the same place 10. 20 p.m., 26th instant.

As there are symptoms of a disturbance breaking out at Toyotsu among the *shizoku*, a telegram has been received from Kokura ordering part of the garrison to go and suppress it.

From the same place, 11.05 p.m., 26th instant.

Some eighty *shizoku* have assembled at Amagimachi near Akidzuki, and a portion of the garrison has been despatched to encounter them.

During the night of the 26th instant, (says the *Chôya Shimbun*) we received seven telegrams, six of which were of such a character as to warrant the hope that affairs were near a peaceful termination, but the seventh was of a warlike nature, for it reported that the insurgents had taken up positions on the hill sides.

Kumamoto, 5.30 a.m., 27th instant.

The insurgents of Akidzuki are rendering assistance to those of Kumamoto, and amount together to a body of 500, and there are signs of the movement spreading. Send troops as early as possible.

From Fukuoka, 7 a.m., 27th (?) instant.

There are many here showing a strongly disaffected spirit; also at Akidzuki, Hakata and Kokura (all in the Fukuoka *ken*).

The garrisons now stationed at Kokura, Nagasaki and Hiroshima will first be called out, and are to be followed by the Osaka garrison. Preparations are also being made to send men from the Tôkiô garrison. The troops belonging to the latter garrison who have gone on a grand parade to Narashimo-hara have been recalled to the capital.

The *Hôchi Shimbun* says :—

We hear that 400 of the officials of the *Kencho* and officers and men of the garrison at Kumamoto have been killed. Many merchants also have lost their lives, for the insurgents have fired the houses and created disturbances.

The *Nichi Nichi* says :—

By the Mitsu Bishi Mail of to-day several police officers and 100 policemen were despatched from the capital for Kumamoto.

Elsewhere :—

The Kumamoto insurgents are composed of three parties, one of which is discontented on account of the recent measure for the capitalization of the incomes of the nobles and gentry ; the second, because the officials have suppressed a representative institution* which had been formed in the Kumamoto *ken*. The other consists of men who had become angry because a large sum of money which had been lying for a long time in the *ken* (from the time of the feudal system) without any special owner, and which in other *kens* had been paid over to the *shizoku*, was handed over to the Okurasho (Finance Department).

The *Chôya Shimbun* says further :—

It was intended that H. H. Arisugawa-no-Miya should start for Kumamoto, but, for certain reasons, he has not yet left.

The same paper of the 27th inst. has the following :—

When the news of the disturbance at Kumamoto first arrived, people generally were taken by surprise. It was said that the Government had received a telegram to the effect that the insurgents had attacked the Kumamoto garrison and that the troops had been scattered. Though we did not know whether or not this report was true, we published it in our issue of yesterday for what it might be worth. We have since sent reporters to various places and find that it is true.

The insurgents having cut the telegraph wires at Kumamoto before commencing their attack, the report of the disturbances first reached the Government from the Fukuoka *Kencho*, on the morning of the 25th instant. We hear that since this the barracks and the residences of the Governor and Vice-governor have been burnt, and that the insurgents have obtained possession of the arms stored in the arsenal. It was reported, too, that the Government had sent Kabataya, a *Chiusa* of the army, with troops to Kumamoto on the evening of the 25th instant in the *Genrio Maru*. This was what we heard up to noon of yesterday (the 26th instant), and though we cannot guarantee the credibility of all these reports we believe them to be true.

The outbreak of this insurrection was very unexpected to all, and as the telegram from the Fukuoka *Kencho* only stated that "the insurgents have attacked the garrison," we were unable to determine who these insurgents were. Thus both the officials and the people thought that an insurrection had broken out among the men of the southern extremity of the Empire.†

But we were almost confident that such was not the case, because we had heard that a society called the *Kei-Shintô* had been formed in the Kumamoto *ken* and had shown a vast deal of discontent, and that it has been sending some of its members to the Yamaguchi and Kokura *kens* (in the Provinces of Choshiu and Buzen) in order to gain adherents among the *shizoku* of those provinces. While trying to obtain further information on the subject, we heard of this insurrection and immediately concluded it was among these men and not among the "men of the southern extremity."

Since the passing of the measure of the capitalization of incomes, the *shizoku* of the island of Kiushiu have shewn a great deal of discontent. But owing to the fact that Mr. Oyama, the Governor of Kagoshima, has put before the Government a scheme by which the *shizoku* of the Kagoshima *ken* may retain their bonds as property for ever, we were sure the *shizoku* of that *ken* would not make any disturbance, and Messrs. Saigo, Kirino and others of the *ken* are said to be in a different mind towards the Government to what is usually believed. Thus though the spirit of rebellion may spread throughout the island of Kiushiu, we incline to believe that the Satsuma men will remain staunch, and have no fear whatever that they will rise in insurrection.

We have heard suspicious reports regarding the Yamaguchi and Choshiu *kens*, and also that the *shizoku* of the Kôchi *ken* (Tosa) are making warlike preparations, so that we fear if a speedy end is not put to this trouble we shall see the spirit of insurrection spread throughout the islands of Kiushiu and Shikoku. We trust therefore the Government will quell it before worse comes.

But, after all, what do these risings amount to? Though they may occur, they will last but for a moment, and we will guarantee that they are put down in a short time. We advise the *shizoku* not to be led away and excited by these rumours. Remember the Saga affair! Is not that warning enough?

It is with great satisfaction we record an illustration of true charity as practised by a native gentleman in the most unostentatious manner. While still young he left his native land for America, where he remained fifteen years. During this period he graduated at a college and theological seminary, and subsequently took a full medical course, making the eye and ear his speciality, in which department we understand, he attained great skill. He has lately returned to this country, and although his principal duties lie in quite a different direction, yet he finds time to extend to his countrymen the benefit of the healing art as practised in the West. Every Sunday morning he is to be seen at one of the missionary establishments hard at work surrounded by a large group of patients. It would be well for China if such rare examples were more common.—*Celestial Empire.*

* Thus called by the translator. Doubtless some place where discussions on public affairs used to be held.—[Ed. *J.W.M.*]

† Obviously, Satsuma men.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

THE DISTURBANCE AT KUMAMOTO.

Rumours reached Yokohama on the 26th of a serious outbreak in Higo. It is known that the southern clans are very strongly opposed to the late measure of capitalising the incomes of the nobles and gentry, and have been purchasing arms freely. The Satsuma men especially are said to be violently irritated at it. The Governor of Higo is reported as missing, and the barracks of the Imperial troops were carried after many hours of fighting. Further news is anxiously expected, and for the present we extract the following account of the disturbance from the *Hôchi Shimbun*.

"At dusk yesterday, the 25th instant, a large band of ruffians forced their way into the barracks at the camp of Kumamoto. It seems that they set the place on fire, and fired shots,—and that there was a great disturbance. The Kumamoto telegraph wires were cut by the rioters, and so Mr. Kabayama Sukénori, a *Chiusa* of the War Department, set sail (from Yedo) at 6 o'clock yesterday evening, on board of the *Genrio Maru*, while some officials of the Home Department are setting off in great haste by a Mitsu Bishi steamer.

The above is currently reported in the streets, but no particulars are known, nor is the truth or falsehood of the rumour as yet ascertained. We, however, publish the above just as it has come to our ears."—(*Japan Mail*, 27th October.

(*"Nichi Nichi Shimbun"—27th October.*)

We gather from the telegrams that have recently come to different quarters respecting the disturbances at Kumamoto, that on the night of the 24th instant, at a little after 11 o'clock, about 200 of the Kumamoto *samurai*, on a preconcerted signal, suddenly made a simultaneous attack upon the several barracks, killed the sentries, and then made a confused entry into the barracks from all sides, cutting down and slashing at whomsoever it was their fortune to meet. They riotously traversed all the rooms without exception, and as the soldiers were entirely taken by surprise they either fled in different directions, being unable even to get possession of their arms, or were cut down as they were endeavouring to rise from bed, some of them hemmed in and prevented escaping were cut in two. At the same time signs of fire appeared in different places, the sky was illuminated by a great conflagration, the sparks fell from all sides, and the loud reports of artillery that in the midst of it were heard showed that the ruffians had probably got possession of the guns and other weapons. The Government office had also been set on fire by that time, as well as the houses of the *Rei* and *Sanji* and other civil and military officers, and the disturbance altogether assumed very serious proportions. Public and private telegrams have been incessantly passing to and fro on the matter. The *Rei* and *Sanji* have received serious wounds, General Taneda having also received such as may prove fatal. According to the telegrams that came from Kokura the day before yesterday, the ruffians have gradually increased in strength, and the numbers that may still continue to flock to them cannot be estimated. We despatched a special correspondent to the scene yesterday and shall therefore soon be able to give some definite information.

The disturbance above described commenced at 11 minutes past 11 o'clock, and notice of it at once was sent from the head telegraph office in Kumamoto to Yedo. Eleven of the ruffians with drawn swords, however, soon cut their way into the office, broke two of the machines and communication was thus interrupted. A fresh machine was got ready by the following morning, but it did not work well, means to repair it were therefore sent by steamer from Nagasaki the day before yesterday and it was again in working order yesterday.

A further telegram arrived yesterday at about 9 o'clock from Kumamoto, saying that the ruffians numbered about 170 men, and that quiet was gradually being restored.

Another telegram from the Nagasaki *Koncho*, dated about eleven o'clock yesterday, says that the names of the riotous *samurai* are known, that out of the 170 some have been killed or arrested, others have committed suicide or run away, and little over one hundred are now left for whose chastisement measures are being taken. Those who ran away did so at about five o'clock on that morning.

The following officers left yesterday for Kumamoto in the *Kasuga Kan*—Hayashi Yukitome, *Shoyu* of the Home Department, Oyama Iwao, *Shosho* of the War Department, Miura Goro, *Shosho* of the same office, Masuda, *Hanji* of the *Shihôsho*, and about ten other officials of the two higher grades. Kabayama, *Chiusa* of the War Department, also left in the *Genrio Maru* the day before yesterday, taking 100,000 *yen* for war expenses.

THE ÉMEUTE IN HIGO.

(*"Nichi Nichi Shimbun" of October 28th, 1876.*)

By the Mitsubishi steamer which leaves to-day at 4 o'clock, there will be despatched, for the purpose of suppressing the Kumamoto riots, seven superior and ten inferior officers from the Police Department, with more than one hundred of the police force. Some say that they are for the protection of Nagasaki.

We have been thinking over the state of the Kumamoto troubles, in the light of the telegrams which have been received to-day and yesterday from different parts of Kiushiu, and it appears that it is not simply an excitement of the Kumamoto *shizoku*. An urgent telegram from Fukuoka states that there are signs of riot among the Akidzuki *shizoku*,—over a hundred of whom, armed with swords and rifles, have marched up and down the streets of Akidzuki, and have encamped since the day before yesterday at a place called Amaki-machi about a *ri* from Akidzuki. They appear to have communication with the Kumamoto brigands. According to repeated communications from Kokura, the *shizoku* of that place appear excited, and preparations have consequently been made at the branch garrison. It appears that afterwards the number of the Akidzuki brigands was over five hundred, but their number was still increasing,—and their power becoming stronger. It is said that in consequence of this an urgent message was sent to the Government for troops. On account of this trouble the Nagasaki *ken* have applied that a man-of-war should be sent there for the protection of that port, and that the police should be provided with arms, so as to be prepared in any sudden emergency.

By these accounts, the work of pacification would appear to be yet far from complete. It is really a very anxious moment.

One account has it that there are three parties among the Kumamoto brigands. One is a party which complains of unfairness in regard to the certificates of Pensions, one is called the "Advantage Society," and is indignant at the abolition of the Assembly of the people. A third party imagines that there were stored up in the *Kencho* many tens of thousands of *yen* belonging neither to the Government nor to the people,—in fact, to nobody,—and that in the *ken* money of this kind has been given to the unemployed *shizoku*, and invested in cultivating new land, whereas in this *ken* the money was paid to the Finance Department. One party consists of those who are dissatisfied on this account.

Another account states that among the *shizoku* of Kumamoto there has always been a society of Shintô worshippers (probably the same which is termed Kei-shin-tô, or party venerating the *kami*, by the *Chôya Shimbun*). Their conduct seems to be very pure, but on the other hand they are extremely bigoted. They have their hair tied up in the old-fashioned way, wear mantles and trousers of the old Japanese cut, and since the Notification forbidding the wearing of swords carry a sword and dirk about with them in a bag. In the morning they visit the Shrine of Hachiman (the War-god) at Fujisaki, and in the evening they worship the Shrine of Katô.. They say that inasmuch as Japan is the true country of the gods, and excels all the other countries in the world, no intercourse whatever should be held with the fifty outer barbarians. They say that we have been deceived by these wretches, and the whole scheme of Government since the revolution is displeasing to them. They look with horror on the European clothes worn by the *Kunrei*, *Sanji*, and other officials, and also by the troops of the garrison; and when they meet them in the streets, turn away their faces, and spit out, and hurry past, exclaiming "Ah! What pollution!" This having been the state of things, these men no doubt must be added to the others and form a fourth party.

This class of men, however, is simply actuated by a horror that the Divine country should be polluted in this way, and may be said to have displayed the old Yamato spirit by cutting down these fellows in European clothes, and then ending their lives bravely like warriors by disemboweling themselves. Such men are surely incapable of any wicked scheme of wide scope.

The men who were mentioned in yesterday's telegrams as having committed *harakiri* probably belonged to this class.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

("Hochi Shimbun" of October 27th, 1876.)

The disturbance in the Kumamoto *ken* of which we made a slight mention in our 'miscellaneous news' yesterday, consisted entirely of a riot on the part of the *shizoku* of that *ken*, on account, so it is alleged, of matters connected with the Income Bonds. At about 10 p.m. on the 24th instant, they forced their way, each man being armed with sword or spear, into the various barracks of the camp at the place in question, and set fire to the same. At the same moment the houses of the commandant of the camp, the *Kanrei*, and the *Sanji*, were set on fire, and every one they met was cut down or laid low by a spear thrust. As the night was as black as a crow's wing, it was impossible to see clearly the number of the ruffians, and as it was also a sudden affair, the troops belonging to the camp were thrown into great confusion. The commandant, *Kanrei*, the *Sanji*, and many of the soldiers received wounds, while of the *ken* officials about ten were killed on the spot. The corpses of both parties were lying about the streets. The ruffians carried their violence and slaughter to the utmost extent, they seized upon all military weapons and warlike implements, and then withdrew to the temples in the neighbourhood, while the camp itself was once more occupied by the garrison troops.

A telegram despatched from Kumamoto at 5.50 yesterday, the 26th inst., states that the ruffians were merely about 170 in number, that their names are known, and that a large number of them have been killed, captured, or have committed suicide by disembowelling themselves. The remaining one hundred or so who have fled are now having measures taken against them for their punishment.

Again, in a telegram despatched from Nagasaki at 10 a.m., it is said that the ruffians fled at 5 a.m. that morning, and that the *Kenchi* is unharmed; and another telegram from Fukuoka states that the place is safe, and that in consequence of the ruffians having fled, a military commandant has proceeded to the spot, and a vessel of war has been sent round to Nagasaki.

On account of the above some officials of the Accountant's Department of the War office set sail from Yedo on the evening of the day before yesterday, with an amount of public money stated to be 100,000 *yen*. Mr. Kamiashi, a *Gonshokuchi*, also set out yesterday for the *ken* in question, in order to carry on investigations on the actual spot. Mr. Hayashi Tomoyuki, *Shōjo* of the Home Department yesterday was ordered to proceed thither to bring the matters into a state of tranquillity, and directions were issued for Murata, a *Daiji* of the Home Department, charged with the additional duties of Police Superintendent, Sakabe, a *Gondaiji* of the same office, and Hatana, a *Gondaiji* of the same, together with five officials of inferior grade, to accompany him. They are said to have sailed from Yokohama, on board of a steamer belonging to the Naval Department, at 7 o'clock yesterday morning.

Upon the receipt of further information, we will at once publish it.

Minor Notices.

From the *Chōya Shimbun*.

His Highness Arisugawa-no-Miya, with other officials, started for the scene of the disturbance in the *Kasuga-kan* at 7.30 p.m. on the 26th instant.

From the *Hōchi Shimbun*.

From the same.

The Navy Department has made all preparations to send men-of-war to Kumamoto at a moment's notice, when orders are received to that effect.

From the *Eiri Shimbun*.

Three battalions of the troops belonging to the Tōkiō garrison will, it is stated, leave for the south to-day (27th).

From the *Akébono Shimbun*.

On the 26th, at 6.30 p.m., a telegram was received stating that the rebels were ravaging the town and neighbourhood of Akidzuki with fire and sword.

The *Chōya Shimbun* says that report has been received that during the outbreak at Kumamoto the Governor of that *ken*, with many other officials were killed.

According to a telegram from Rome, the cardinals have unanimously agreed to the proposal to omit ceremonies in the conclave that will be held when the election of a successor to the Pope shall be necessary. The object of this proposal (the telegram says) is to hasten the election of a new Pope, and to keep the conclave free from all foreign influence.

SPIRIT OF THE JAPANESE PRESS.

The Press—The Fruit of Calm Reflection.

(Chōya Shimbun.)

An ancient Chinese classic says that it is easier to quell an insurrection than to free a state from a malignant party.

But how can rebellion be subdued unless the malignant party is crushed? In all worldly affairs there is a certain proper order which ought to be followed out, and in instituting reforms, we must first deal with old internal evils, after which we may proceed with new improvements.

When the journalists take up their pens, there is practically no difference of object between that which they pursue and that which animates the officials of the Government in discharging their appointed duties. In trying to reform the condition of our country, we must first deal with that which touches us most nearly, and when this has been done we can proceed further.

We are desirous of drawing attention to the condition of our Press, and at the outset would ask, what is present aim of the people of this country? Surely, civilization. And, as we advance in this direction, the number of newspapers increases, in order to afford scope for the working of the intellect of the country. They criticize the action of the Government in order to render it assistance, and endeavour to lead the people on the road to advancement. The Press also is of great advantage to the scientific and commercial world. Thus the first duty of the Press is to lead the people from barbarism to civilization, and our contemporaries should therefore exercise the greatest care in regard to the matter they publish, because the vast power wielded by the Press will otherwise be used to evil instead of to good purposes.

We ourselves are willing to confess that through carelessness we violated the laws of the State, and have undergone the punishment of imprisonment in consequence. We now have to express our full contrition. We are entirely convinced that we not only failed in our duty, but that we disregarded important teachings with which we have been familiar from our earliest days, and are now covered with shame and confusion at the recollection of this conduct. We wrote indeed in this culpable manner with no other intention than to benefit both the Government and the people. But we are now convinced that we played a wrong part towards both.

We have a saying that a man becomes an experienced surgeon after he has broken his own arm three times, and we have undergone imprisonment for two hundred days. Out of this experience we hope we may draw some lessons for our contemporaries of the Press as to what course it is best for them to pursue. What we have now to say is unadorned truth, and comes from our heart.

If we regard the Press of this country impartially, a very lamentable fact strikes us. There are many subjects which the Press may discuss profitably—what is calculated to be beneficial, what injurious to us, what profitable, what otherwise, &c. All our officials are not men of the highest intellect, and our laws are not yet so perfect that they need no amendment. It is therefore our duty so to write that we may give some assistance in guiding the Government and thus help to promote the welfare of the people. But we are bound to be faithful in using only straightforward and conscientious arguments. Should we approach our subjects with a partial mind, with personal prepossession or prejudice, we should mislead men and do evil rather than good.

Some of the writers in contemporary journals are in the habit of using such expressions as "Ferocious and bloody spirits hovering round us," and, "We are now at a critical conjuncture, and fearful perils impend over us." Doubtless these expressions have their origin in a real sense of despair, and when such writers give vent to their feelings in respect of the Government or the officials, they do so with unconscious rashness. They boldly clamour that bad men should be exterminated, and all the evils which surround the Mikado's throne should be at once swept away. Is not this monstrously visionary? Yet these writers are men who undoubtedly desire the welfare of their country, and this very desire prompts them to express their feelings in this manner. Nor do we believe for a moment that, under the pretended cover of public opinion, they conceal hatred and envy, or make complaints of personal discontent in which the country has no share.

Then, why should the journalists write as though they were about to take up arms? Cannot this Government be gradually reformed without bloodshed? Is civilization to be the fruit of so much exhibition of muscular force? We think those most mistaken who would use such means for such ends, and none know

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

this better than the men who write thus. We believe that they give expression to these monstrous ideas because they do not see the people in possession of their full rights, and thus it is that so many of them incur punishments. They also think that they must not let slip what they consider a good opportunity for obtaining these rights, and all their loud denunciations spring from this source. But, with good intentions, they produce bad results.

The fact that writers of this character find employment in the Press leads the Government to imagine that there is much discontent among men of the higher classes, and the people are led to believe that the *joi** party still exists and that assassinations are contemplated in these more civilized days.

When the question of representative institutions was under discussion, the minds of all men were turned in this direction, and the writers fought under cover of criticisms on the conduct of officials, or some weak point in the position or action of the Government, and thus they came within reach of the laws against slander and sedition. But this only arose from their conviction that the country is in a state of weakness, and that the people are in a slavish condition, and they were so excited that they wished to see Japan rivalling Europe and America in a day. Not having any insight into the true condition of affairs, they offended the Government and became its prisoners. Most of their arguments were taken from the works of Mill and Buckle and other eminent writers, and had they confined themselves to the judicious use of these, all might have been well. But the truth is that they became intoxicated with the ardour of their enthusiasm, they thought to promote general reform by the institution of a Representative Assembly, by means of which all men were to obtain their full rights. The ancient authors differ widely from these men, who write as though they had their hands on the hilts of their swords. Would those who are now undergoing punishment be pleased to see the writing which fills the columns of some of our contemporaries, and hope that the authors will soon be their companions in prison? No, most assuredly they would not.

All men of learning should be possessed of reasonable ideas, and when any one places himself in the position of a man of learning, that is, if he becomes a journalist, he must discard all thought of killing and cutting-down, or he will prove that he has not the slightest acquaintance with the ideas of the men of the western nations whom he is most anxious to be thought to resemble. The practice of cutting down prevailed among the rash young men of the Tokugawa times, who claimed that they thus freed the country from worthless men. But we did not imagine until we saw the writings which have appeared lately that any such men existed now-a-days, when we are advancing fast, and when every one should endeavour to the utmost of his ability to promote the education of the people. It is this that we lament as so extremely wrong, and we grieve deeply to see such a spirit afoot.

Yet, as we have already said, we do not think the motives of these men are bad. The are undoubtedly moved by the sight of the slavish condition of the people, and are desirous to witness their advance towards civilization. But they have become unduly excited by these aspirations, and have turned their wrath against certain officials of whom they have spoken as if desirous to shed their blood. Do they imagine that by keeping the Government in a state of alarm and taking the lives of two or three officials, all the ills of the country can be cured? This is a prodigious mistake. It can never be so. It must be borne in mind that liberty does not mean personal license, nor do the people, by obtaining their rights, acquire the privilege of acting at random. If we wish to have a right understanding with our Government, and gradually to escape from the evils of arbitrary power, we must seek it by right methods in a right order, or we shall never attain it. If we journalists lose all sense of our own important duties, and do and say exactly what pleases our humour, the officers of the Government will say "So long as the writers for the Press proceed in this manner, it is absurd and a sheer impossibility to think of granting a free Press, and if the Press is any exponent of public opinion, the Japanese people are yet in so barbarous a state that it is idle to suppose that they can be governed by the system under which the English and Americans are ruled." And, on this very account, we shall be more oppressively governed, until there will be no way of defending ourselves. With a Government so arbitrary in its nature above, and a people so ignorant below that they imagine liberty is the licence to do exactly what pleases them, the Press cannot possibly be right in urging the the Government to proceed on the methods of administration of England or America, before the evils hitherto inseparable from Oriental Governments have been eliminated from it.

If our contemporaries desire the Press of Japan to become powerful and influential, they must use the greatest circumspection in regard to the matter they publish, and not write like a body of swordsmen. They must cease to clamour at random without any thought whether advantage or injury will accrue to the country from what they write, for the endeavour of all of us should be to promote the national welfare, living, as we do, in times when all our aspirations are towards a higher civilization.

We therefore earnestly entreat our contemporaries to abolish from among themselves the evils to which we have drawn attention. If we leave these uncured, and occupy ourselves with affairs, however important, which are less personal to us, we shall fall and all be involved in one common destruction.

A Strong People a Strong Government.

("Hôchi Shimbun" 20th October.)

Oppressive Governments rule their people through fear, and the people obey because they are afraid. When this fear has been dispelled and lost its efficacy, the people begin to disobey.

We will glance at the manner in which the Tokugawas ruled the people.

From the year Ônin (A.D. 1467) many men of the military class held positions in various parts of the country and were perpetually at war with each other. It was rare that we had any interval of entire peace. Taikosama then came into power and succeeded in controlling this military class. By means of his Corean expedition the liability to internal war was greatly diminished; and the fighting men began to feel that war was not the best policy after the capture of the castle of Osaka. Yet Iyeyasu thought that the only way in which tranquillity could be preserved in the country was by employing fear instead of the legitimate instruments of Government. This began to show itself in the public offices, in social life and in the courts of justice. And it was carried out in something of the following manner. Whenever an official spoke to a person who came to him on business, he would do so in a loud, harsh manner calculated to frighten him, and if the latter was so unfortunate as to say anything which was distasteful to the official, the latter rejoined in a manner which utterly deprived him of the power of speech, although he may have had ample reason for the complaint which he wished to make.

Worst of all was what took place in the courts of justice. When an accused or suspected man entered the court, he was first set upon by the gate keeper, who said "What business have you to do anything which gives the authorities the trouble of bringing you here"? On entering the court, he found the judges sitting in an elevated position, and the manner in which he was examined from first to last was so overbearing that he became terrified and lost all presence of mind, so that innocent men were constantly punished for crimes of which they had never been guilty.

And again, the Shôguns of the Tokugawa dynasty used to send spies to the various *daimios* to pry into their affairs, and whenever the *daimios* presented themselves to the Shôgun, he would show himself intimately acquainted with their circumstances in order to frighten them by a pretended sagacity which, of course, had no foundation. This was thought to be a fine method of governing, and whatever the Government had to do with the people was done through a similar process of terrorism. So that at all times the people were in dread of their rulers. Thus they lost their rights and contracted habits of slavish subserviency. By employing these methods, the Tokugawa dynasty kept the people in peace for three hundred years.

Now we do not think that these means are employed by the ruling class at present. But we do think that this method is employed in the dealings between the powerful nations of the West and the weaker nations of the East. Why should these powerful nations treat the weaker ones in the manner in which oppressive Governments treat their people? We have been greatly moved by the existence of this fact. In the last days of the Tokugawa dynasty, Commodore Perry came over here and said to our Government:—"It is the nature of man to trade, and if you do not agree to trade with us, we will make war upon you."* There is no mistake that this was a threat used for the purpose of frightening us, and there have been many other occurrences of a like nature. Moreover, the Chinese are always dealt with thus by foreigners. Whenever any troubles arise, war is at once threatened, and, being terrified, they accede to the demands of the foreign powers.

The Tokugawa Shôguns frightened the people in an open manner, and did it so systematically that the people became at last ac-

* 'Expulsion of foreigners' party.

* The really is a very gross misrepresentation of the facts of the case. [Ed *J. W. M.*]

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

customed to it and it lost its effect. But the foreigners carry the same thing on in a more secret manner. They do not imitate the example of the Tokugawas by open terrorism, and thus we are almost always caught in their toils, and even though we see that a trap is laid for us, we often fall into it, so judiciously is it baited. They are civil and meek with us openly, but they inwardly know they can frighten us. This is not like the way of the Tokugawas which was haughty and open, though, in reality, they were afraid of the *daimios*.

Now it seems to us that the relations existing between ourselves and foreigners are very similar to those which existed between our ancestors and the Tokugawas. The externals may differ, but secretly the same force is at work.

Now a government which rules a people possessing less power than itself cannot associate on equal terms with other governments (ruling free nations). However fine a thing the government itself may be, if it does not govern a body of sturdy free men who compose the nation, it will be practically powerless. We consider that it is easier for the people to attain to equal power with that wielded by government, than for our government to associate on equal terms with other governments.

We trust therefore that our people will soon possess as much power as our government, and then we shall be able to meet foreigners on equal terms.

The "plain man" on political Economy.

(*"Hôchi Shimbun"* 16th October.)

If we would promote the industries and develope the resources of our country in such a manner as to enable it to compete with others in manufacturing skill, we must follow the true method of proceeding. If we do first what should be done last, or *vice versâ*, there is but small prospect of success. In illustration of this, if a wheel will not revolve, we must oil it, and if we postpone making a new wheel until the oiling proves of no use, we should be following the right order. But if any one were to set about making a new wheel because the one he had refused to move, instead of first trying the effect of oil, he would be justly laughed at as a fool. We can easily see the mischief which arises from not following the true method in these everyday matters, but how is it that we fail to perceive it in matters which affect our national interests?

Our economists ought to give the utmost attention to the articles of daily necessity used among us which are imported at a great expense from abroad. In order to promote the national resources we must try to check this importation by every means in our power.

Our manufacturers ought by no means to endeavour to produce goods with a primary view to exportation. If we set about doing this without first making articles of daily necessity, we are evidently following the wrong order.

The lower and by far the most numerous class of our countrymen use cotton for clothing almost exclusively. If we go on importing these goods of first necessity the country will soon fall into a sad state.*

Of this article, in such extensive demand in this country, more than one half is imported from abroad, and in all cotton cloth manufactured in Japan, foreign yarn is more or less mixed. If imported goods prove cheaper than our own, they will soon be used by the whole nation, and this will produce the greatest distress among our manufacturing classes.

On examining the Trade Reports we find that cotton goods stand foremost in our demands on foreign countries. The quantity of cotton cloth imported duirng August represented a value of 32,400 *yen* and cotton thread 45,000 *yen*; total 77,400 *yen*; and as the importations always increase during the autumn months, more will probably come in September, October and November. Moreover, it is said that whenever our exports are active importation is very active also, so that we may expect that the imports this year will be larger than usual. Up to two or three years ago woollen cloth was imported to a large extent, but as the article is not one of daily necessity with us, the demand for it must have arisen from the mania of the moment, and as the mania disappeared, so did the importation of this article. The consumption of this material will doubtless gradually decrease, and therefore we need not greatly trouble ourselves about the importation of an article which is not one of primary necessity with us. With cotton it is otherwise. The continued importation of this is a matter of the greatest importance and demands our closest immediate attention.

We trust, therefore, that our economists will encourage our native manufactures and prevent these enormous importations. At all events let us work to this end as much as possible, and if we fail, let us set about making goods for foreign markets, and export as much as we can, and so restore the equilibrium which has been disturbed.

We certainly think it very wrong to be making goods for export without reflecting upon the distress we produce among our own manufacturers, and until we have proved that it is useless to try to compete with foreigners in the manufacture of articles of daily necessity. This, moreover, is following the wrong order of proceeding.

We grieve to observe that our people do not perceive the true mode of procedure and make investments in articles which are of no use to the country. Thus it is that we have written, and should be glad to hear some expression of public opinion on the subject.†

Colonization.

(Hochi Shimbun.)

We are greatly interested in the colonization and development of the island of Yezo, and grieve to see that other writers are indifferent to the question. We propose now to make a few remarks upon it, and at the same time shortly to review the history of colonization generally, and trace some of the effects which colonizing enterprise has had upon the condition of nations.

Colonization has its origin in the feeling that a man would rather go abroad and make his living there, than remain at home. This feeling has animated men in all nations from ancient times downwards. Now what effect does colonization produce upon a people?

For the sake of illustration, we will divide the people of a nation into three classes, viz. :

1.—Those who are able to choose and follow their own callings, and, independent of others, can carry out their object with ample energy and sagacity.

2.—Those who follow in the footsteps of the first class, and who have intelligence enough to observe, but not enough to originate and contrive.

3.—Those who possess neither the faculties of the one nor the other, who are ignorant and cannot work their own way in the world.

The men of the first class are few in number, being possessed of great talents. The second are prompted to action by what they read in books and newspapers. The third are very numerous, and, if capable of being schooled at all, are so only by observing the example of others.

Now it should be known that the effects upon a nation of making these various classes of men colonists are very different. How is the welfare of a nation best served by the selection of its colonists?

The loss sustained by the emigration of the third of these classes, is but slight, if indeed it be any loss at all. But the men of the first class constitute the soul and sinew of a nation, under whatever form of government, and the loss of such men cannot be repaired.

No great changes took place in Europe from the time of the overthrow of Rome by the northern tribes, to the time of Charlemagne, and even then the changes were comparatively small compared with those which have taken place of late years. The crusades caused a general movement in Europe towards Asia, one of the results of which was a great advance in the intellectual acquisitions of Europeans. Since the discovery of America by Columbus, the mind of Europe has been constantly turned towards the new world. Prior to and long after this, the majority of the governments of Europe went but a slight distance in the recognition of the rights and liberties of the people, and, above all, the liberty of conscience. Thus men looked across the ocean to a land which appeared to them like a mountain of treasure rising from the sea, and wistfully gazed on it, yearning for the free air which surrounded it. In Spain, especially, the desire for emigration assumed a powerful form, and Spain sustained a serious loss by the departure of so many men of the first class. But these men played a most monstrous part in the new world, and, fired by the lust of land and gold, massacred vast numbers of the aborigines. The vengeance of the Almighty, however, has overtaken their country. Spain is now suffering from the effects of the steps then taken. And what became of the Spaniards of the first class? They died

---

* Will the writer of this article please to reflect on the following fact? The English people regard wheaten bread as the first necessary of life. They last year imported wheat to the value of £30,000,000! Next to bread they took beef. Of this they imported a vast quantity. The whole of this article perfectly reflects the absolute nonsense which uninstructed men talk when they approach economical science.—[Ed. *J.W.M.*]

† Here is a chance for some of the many young gentlemen in this country who are always reading and talking about Political Economy.—[Ed. *J.W.M.*]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

prematurely and their bones whitened the soil of America. The present position of Spain proves that the loss of so many men of the first class cannot be repaired.

The emigration which takes place from England consists chiefly of men of the second and third classes, and none of the first class have gone even to India, which is regarded as the treasury of England.* The Englishmen who are scattered over North and South America, Australia, New Zealand and other countries have not been the flower of English society, because they had to construct roads, build towns, &c., and open up the way to trade.

Men enjoy such freedom in England that the nobility and the wealthy classes can do much as they please there (*i.e.* they suffer no tyranny from the Government) and thus they have no need to go to other countries. It is for this reason that both England and her colonies are in such a flourishing condition.

If we turn now to the case of this country, we shall see that all our emigrants are of the third class—men devoid of intelligence and self-reliance, and it is for this reason that our colonies do not flourish.†

We do not by any means urge an imitation of the example of Spain. But successful colonization demands a certain amount of capital and the poorer classes do not possess this. Nor can the possessors of capital by any means always be placed among the men of the first class. But if these capitalists, whose future welfare certainly depends upon the manner in which they employ their fortunes, were to imitate the English, they would greatly promote the welfare of the country. We therefore urge upon them the bold step of emigration.

A TALE OF A CAT

SUICIDE.

(Continued.)

When Koharu had regained the solitude of her chamber, after having been so unceremoniously dismissed by Nedzutarô, she sat herself down and tried to collect her scattered thoughts. Nor did she find this by any means an easy task, for so bewildered was she by the events which have just been related, and which had passed so rapidly, that it was some moments before she was able fully to realize what had happened. She felt, indeed, like some poor sleeper just aroused and as yet dizzy from the heavy slumber which has temporarily relieved her of consciousness, and who, although feeling that a black and lowering cloud of care is brooding over her, is unable immediately to remember from whence it came, nor to make out its outline for the mist of sleep which still obscures it. Her state of confusion, however, was not of very long duration. It is in the nature of these lulls of mental pain that the anguish which they relieve seems to gather strength during the interval of their continuance, and when it is at its culminating point to invade the sufferer again suddenly and with redoubled energy. When the storm of sobs with which the recollection of the interview with her lover was accompanied, had somewhat subsided, she became conscious as she lay upon her face on the mat, of a curious and unwonted sensation about the region of her heart,—a slight physical discomfort, as if some unknown substance had found its way into her bosom, and on introducing her hand to ascertain the cause of this sensation, she felt and drew forth from its hiding place a crumpled piece of paper. In a moment it flashed upon her that this was the paper which Nedzutarô had dropped into the bosom of her dress as he pushed her out of his room, and which she had completely forgotten in her agitation and distress. With a wild throbbing at her heart which sent back the crimson blood into her pale and tear-stained face, she unfolded and smoothed it out, and drawing up the slide of the lamp in order that not a line, or character, of its inscription should escape her for want of sufficient light to decipher it by, she read as follows:

"Fear not, though rivers roll between us now, and enemies divide us, we'll yet be happy together."

Here was joy unspeakable for the poor persecuted little maid. There was no mistaking the meaning of these lines, and yet she read them again and again as if she could never read them often enough, and had to dash some tears from her eyes on each occasion too. But what mattered that? They were tears of joy now, that would well up in spite of her, and would distort the letters, and magnify them, and blur them so, that there was nothing for it but to begin all over again, to make sure there was no mistake in her interpretation. Ah! foolish little Koharu, why give yourself so much trouble when you knew full well that you had learned them off by heart at the very first reading? She had no difficulty now in realizing the fact that Nedzutarô not only loved her—hadn't she his own word for that?—but also that he fully understood the difficult and dangerous part which she had been constrained to play. It was quite evident, too, that his ready wit had stood him in good stead in helping him to foresee the presence of Mubatama behind the screens, and had dictated to him the cautious policy which he had adopted all through the painful and humiliating affair. How kind and clever of him to restrain his feelings, she thought, and make believe to scold her, in order to put her spying mistress off her guard, and blunt her anger at the failure of her scheme! The more she thought upon the matter the clearer each event became. Nedzutarô's words about the discovery of her dead body in his room and the charge of murder which would surely follow, were by no means lost upon her; and now that she had time to reflect upon them, gave her a clue, by the aid of which she was enabled to thread the mazes of the whole plot. She saw now how her mistress, relying upon her unreasoning fidelity, had with a rare refinement of cruelty intended her to be the instrument of her lover's destruction; and how to make the execution of her purpose doubly sure, she had cleverly turned to her own account, as a further auxiliary, that very love which would have suffered all things,—had she known beforehand—to save him. And even should that fail, she had likewise enlisted in her service humiliation and despair, and such like emotions, which it is unwise to teach a timid and gentle maiden have a lodging in her bosom. That she should have so easily fallen into the scheme when it was proposed to her, amazed her, now that she could see the consequences which would have followed upon its fulfilment, and it only afforded her a ray of comfort to think that the diabolical enchantress had so agitated and confused her, by the conversation which she had with her, that she hardly knew what she did, before she was required to carry out her orders. In any case, too, until Nedzutarô had made it plain to her that her death would involve him in trouble, it never occurred to her that any human being could be directly concerned about it but herself, and so much had her feelings been worked upon by her mistress, that she half believed herself deserving of some heavy punishment for having allowed her affections to stray from their legitimate object—her benefactress—to Nedzutarô.

So Koharu went round and round and in and out of the labyrinth of her recollections, with the aid of Nedzutarô's clue of thread, every moment drawing nearer and nearer to the final conclusion that her mistress was a wretch, and that she loved Nedzutarô with all her heart and was beloved in return. And it would have been well for her, perhaps, if she had kept her conclusions to herself. But who can blame her after all if the reaction from grief to joy had impelled her to give utterance to her thoughts, and so unconsciously to share them with a silent and attentive spectator, whose stealthy entrance she had not noticed in her preoccupation, and who had made herself acquainted with the contents of the crumpled paper which lay upon her knee in the full glare of the lamp, whilst Koharu was busy with her heart?

The hour was growing late and the night waning apace, it was surely time that all little maidens who had a care for their complexions were abed, and yet Koharu sat and thought, and read her precious letter, occasionally shaking her head and muttering a half formed sentence to herself, and still the figure of a malignant woman, half in shadow, stood behind her. But that she now and then bent towards her, or inclined her ear to catch Koharu's mutterings, she might have been an evil spirit, so still and silent was she. A strangely assorted pair were they, and with somewhat of the outlines of an allegory about their grouping. In front, and in a sitting posture, a pure and child-like girl, with her face brightened by the lamplight, into which she looks with a hopeful gaze and reads a brilliant future: behind, and impending over her, the form of a woman

* This is a most serious error. In one form of employment or the other, and for longer or shorter periods of service, India has had the benefit of some of the best blood in Great Britain.—[ED. *J.W.M.*]

† The writer presumably refers to Yezo. The Kuriles can hardly be called colonies.—[ED. *J.W.M.*]

somewhat indistinctly seen, whose features are stirred by a whirlwind of passions, an embodiment of the storm of emotions which the girl had just passed through and left behind her. Alas! that they had not disappeared from sight altogether, and that their embodiment was not indeed an unsubstantial shadow, but a spiteful enemy, whose harsh and angry voice has disarranged our allegory and destroyed the illusions of Koharu, who, wandering in imagination with her lover, had been babbling of her love, and in order, doubtless, to increase her joy by contrast—as a bitter on the palate is said to enhance the sweetness of the honied draught—exclaimed aloud, "And how I hate and loathe her now." Was ever ruder waking than Koharu's when her words were echoed in a croaking voice, and accompanied by a blow upon the face:—

"And so you hate and loathe her, do you.? Is this the way you have carried out my orders, you shameless slut?" hissed Mubatama, accentuating with a blow each word. "Lives there another maid who could survive the infamy you have acquired by throwing yourself before a man who loves you not, and who has rejected you with scorn?—nay, who, but a moment or two after he had flung you from his room, was convulsed with laughter at the ridiculous position you had placed yourself in?" Continuing in such a strain for some time, and beating her the while, Mubatama's passion at length obtained such mastery over her that she seized Koharu by her hair and dragged her about the room, until from very exhaustion she was obliged to desist and leave her for the night.

From that day forward Koharu found that she was to be a prisoner in her own apartment—seeing nobody who could give her news of what was passing in the castle, and being visited by her mistress only, who never ceased to revile and upbraid, and who lost no opportunity of repeating daily her enquiry whether she had yet summoned up courage and self-respect enough to avenge herself upon the man who had insulted her by killing herself before him. This brutal treatment, repeated regularly for five days, had so broken poor Koharu's spirit, that a profound melancholy began to seize upon her; she seemed as if deserted by everybody; and so weakened had she become, that she scarce was able to wrestle with the lying stories that my lady filled her ear with. How that Nedzutarô had made a mirth-provoking tale out of her disgrace, and had even sketched a life-like portrait of her making love to him upon the wall of the fencing school, and how that nothing else was talked of in the castle from hall to kitchen.

Five weary days and nights, each an age to a lively and love-sick girl, dragged their slow length along without bringing hope of change. It began to grow upon her that this state of things was doomed to last for ever, nay, that it had already lasted for ages, so long ago did it seem since she had been a quiet, happy, contented girl, smiled upon by every body, going and coming at her will, and unacquainted with trouble. Now and then a gulf seemed to separate past and present, across which her thoughts refused to travel. She could scarcely realize that affairs were ever otherwise, and she was beginning to care little whether they changed or not. At times, however, an uncontrollable longing to escape from her present position at whatever cost took possession of her. Anything for a change, no matter what. Better to be dead a thousand times than endure the misery she was put to—with the prospect, too, of going mad. And so by slow degrees it came to pass that a horrid thought took shape and form in her mind that she would destroy herself, and if possible, come back in ghostly raiment to haunt my lady. She had read and heard of many a case where such things had taken place, and she fully believed them, as indeed did all her countrywomen. She had struggled against the thing and turned her mind upon her lover, but it would return. Tossing feverishly upon her bed on this last night it had complete possession of her. She tried to read, but she could not fix her attention for the thought which flitted up and down the page, insinuating itself between a sentence here, blotting out a whole paragraph there, but always full and legible itself before her. She thought to drive it away with a look at Nedzutarô's letter—but no, there it was again, obscuring her lover's writing with its presence. She tried to count, to remember Chinese characters, to think of a tune upon the *koto*, but all of no avail; the idea had so filled the chambers of her mind as to leave no space for any other growth. She would take a look into the night, she thought, perhaps the air would cool her burning temples, and so, rising from her uneasy couch, she noiselessly undid the wooden shutters of her room and stepped out on the verandah. What a lovely night, she thought, how calm and quiet everything in nature is except this throbbing heart of mine! It was indeed a glorious night, such as is sometimes seen in early Autumn, before the genial south-west wind has retreated before the rude attacks of winter's boisterous northern blast; ere yet the leaves, though changed in colour mayhap, and somewhat crisped and curled, have commenced to fall, and when a strange, scarce earthly, perfume, as of bruised leaves and far off wild flowers, the last expiring breath of parting summer, is borne on the night wind. A splendid moon, just in her prime, looked down from a cloudless sky, and flooded with her silvery light the scene before her, throwing fantastic shadows from the mimic hills and valleys of the quaint and pretty garden, lighting up the little lake in which the lazy gold fish slept beneath the shadow of the westeria, until it shone like a burnished mirror and reflected back her face, touching as if with snow the moss-encrusted heads of the old stone lanterns, so weird and human-like in the uncertain light—more especially weird and human-like when the shadow of a neighbouring tree is slightly stirred across them, imparting for the moment a strange semblance of motion, so that they appear to pass to one another a grave and solemn nod. It had been a favorite idea of Koharu's that these old stone lanterns were each inhabited by some former resident of the house,—stately personages who kept watch and ward upon its fortunes, and whose fate it was to see it pass from hand to hand, and to take note of passing events without the power to interfere. Many a time had she communed with them in her childish way, holding fanciful conversations with them, mightily pleased with the idea that they heard her and inclined themselves towards her on moonlight nights, when the branches of the pines behind them were gently agitated by the wind. To-night they are quiet and seem to regard her fixedly. How still it is but for the croaking of the frogs, and how strange that they should spend their night in croaking "come, come, come!" Hark! what was that? It sounded like a long drawn sigh. 'Tis but the night wind playing with the bamboos by the verandah pillar. The wind is rising and the tree-tops are in motion. The lanterns, as if touched by an enchanter's wand, have started into life. Why do they beckon? See that old pine tree, too, beside the ornamental well, how it seems to crane its neck and try to look into the depth beneath it, and how it waves its knotted arms about and beckons too. * * * * * *

Aye! the wind is rising, sure enough, and the bamboos, tired of sighing, have taken to whispering, whispering! Whispering of what? Perhaps they are telling one another of a pretty little maid who lies face downward in a well hard by, with one hand pressed upon her heart—a hand with a crumpled scrap of paper in it! Who knows? Perhaps the frogs can tell, who a short time since were silent for a moment from their everlasting "come, come, come." Perhaps a tall and ragged pine tree is in the secret,—a tree which stands beside an ornamental well and waves its skinny arms aloft and cranes its neck, and bows and bends its head as if it fain would peer into the gloomy depths beside it.

Aha! the wind is rising. It has risen. The moss-grown lanterns are strangely moved to-night. A murky cloud has sailed across the chaste and placid moon, another, and another. How they hurry up; and it seems as if the moon herself made haste to meet them and hide her sad, pale face beneath their friendly shadow, from the contemplation of a dainty childish little figure which lies face downwards in an ornamental well, with one hand clasping a piece of paper pressed tightly to its bosom.* * * * And now great raindrops fall. The night has changed, and the blackness, as of a pall, is over everything.

The Alexandria correspondent of the *Standard* telegraphs that the Abyssinian Envoy at Cairo is arranging for peace. He has brought to the Khedive three horses.

ASIATIC SOCIETY OF JAPAN.

A general meeting of the above society was held in the Imperial University *(Kai Sei Gakko)* on Wednesday, the 25th instant, Sir Harry Parkes, President, in the chair.

The minutes of the last annual meeting, as given in the new volume of the Transactions, were then read; also those of the Council meeting in which it was notified that Professor D. H. Marshall was appointed Recording Secretary for Tôkiô in place of Professor Summers, whose resignation was necessitated by his removal to Niigata.

These minutes having been approved of by the society, the names of three new members were announced, Professor Dixon, J. H. Longford, Esq., and Professor Milne.

Sir Harry Parkes then called upon Mr. McClatchie to read the paper for the evening—"Japanese Heraldry," which thereafter called for some very complimentary remarks from the President on the erudition in Japanese literature as well as knowledge of the science of Heraldry displayed in the paper. He thought that the crusades, tournaments, and wearing of shields and armour would account for the great advance Heraldry had made in the West in the middle ages. He did not know whether so much value was attached to pedigrees in the East as in the West, but if so we must look to China for very long pedigrees. Mr. McClatchie had said that Feudality was productive of Heraldry. China, like Japan, had her feudal system, but he did not remember seeing any Heraldry there. The figure called the *tomoye* was, he thought, probably derived from the Chinese figure, painted in black and white, standing for the origin of all things.

Dr. Geerts asked whether Mr. McClatchie was quite sure that the three leaves in the Tokugawa crest were holyhock, and that they were not three leaves of *Saishin* or *Hazarum Sieboldii*. Mr. McClatchie said that the Japanese name of these leaves in the badge was certainly the holyhock.

Professor Ayrton thought that different members of the same family, having different badges, might be parallel to the custom of some English families whose members adopted different mottoes although the same crest. He observed that it apparently was the modern fashion to wear three *mons* instead of five on the *haori*, one on the back and one on each sleeve. Mr. Ayrton also thought that the study of badges lead to the study of shop signs. The well-known sign of the bush outside a *saké* shop is the same as that used in England, which gave rise to the proverb "Good wine needs no bush."

Dr. Faulds, remarking on the doubt whether the Mikado's crest represented the sun or the crysanthemum, suggested that it might represent the sunflower, which certainly is seen growing in Japan now, but whether or not it did formerly he did not know.

In answer to one remark of Sir H. Parkes', Mr. McClatchie observed regarding Heraldry in China, that he had noticed that at the change of guards at the gates of cities, each commander had his own special standard.

The meeting was then brought to a close.

A *Standard* telegram from Madrid says that all the foreign and native Protestant missions, chapels, Bible societies, and schools received an order from the Home Office on Monday to take down before sunset all the external signs, placards, inscriptions, and every visible mark of faith. The parties interested (the telegram says) have protested to their respective embassies. At the same time we are told in a Reuter's telegram that a semi-official contradiction has been given to a report that some Spanish families had emigrated from Port Mahon to Algiers on account of religious intolerance, and it is declared "that the Government everywhere respects religious liberty."

The Madrid *Official Gazette* publishes a convention concluded by the Government with several Spanish capitalists for an advance of fifteen to twenty-five million piastres, to be devoted to the expenses of the war in Cuba. The bonds are redeemable in ten years, and are guaranteed by the customs of Cuba. They will bear interest at the rate of 10 per cent per annum, plus 2 per cent. for expenses. The Governor of Porto Rico has received official notification of the Royal decree ordering the issue of indemnity bonds to the proprietors of liberated slaves.

AMATEUR ATHLETIC ASSOCIATION.

Friday, 27th October, 1876.

A dull, raw and uncomfortable morning gave little promise of a favourable day for the Autumn Meeting of the Association, but fortunately the weather cleared up about mid-day, and by the time the first race began the air was genial and pleasant on the course. The arrival of the *City of Peking* interfered in some measure with the attendance both of competitors and spectators, though the scene was enlivened by the welcome presence of several ladies. Still the sports greatly lacked the spirit and go of former meetings, and it seems sadly and strangely apparent that athletics are declining in Yokohama. Why this should be the case it is difficult to say, and in the interest of all concerned it is to be hoped that the Committee will make strenuous efforts to provide a well filled programme for the next meeting, and that the community will respond in a proper manner to such efforts. The Germans have no *Turn-verein* here, numerous as they are, and fond as they undoubtedly are of athletic sports. How is it, therefore, that athletics here are left as a rule to Englishmen and Americans? We trust an alteration will be made in this respect, and such meetings held for the future as shall reflect credit on the athletes of the port, and form a sterling attraction to spectators and visitors.

1.—Flat Race. 100 Yards. Handicap. Two Prizes.

1st Heat.

A. T. Watson, scratch	1
D. Scott, jun, 9 yds.	2
A. Brooke, 10 yds.	0

A good and very close race, won in 11¼ seconds.

2nd Heat.

C. P. Hall, 7 yds	1
H. J. Snow, 6 yds	2
F. Walker, 5 yds.	0

Hall won rather easily, as Walker did not do so well as expected. Time 10⅞ secs.

2.—Throwing the Cricket Ball. Handicap.

H. J. Snow	1
Geo. Hamilton	2
A. J. Smith	0
F. Walker	0

This was won by a throw of 91 yards.

3.—Flat Race. 150 Yards. Handicap. Two Prizes.

1st Heat.

D. Scott, jun, 11 yds.	1
A. Brooke, 14 yds	0

Brooke gave up about half way, leaving Scott to finish as he liked. Time 16⅛ secs.

2nd Heat.

C. P. Hall, 11 yds	1
A. T. Watson, scratch	2

This was an easy certainty for Hall, who won in 17 secs.

3rd Heat.

F. Walker, 6 yds. ..... W. O.

Snow gave up soon after starting, so that Walker came in at a leisurely pace.

4.—Throwing at Wicket.

H. J. Snow	1
A. T. Watson	0
J. J. Dare	0
D. Scott, jun	0
A. Smith	0
Geo. Hamilton	0
C. P. Hall	0
F. Walker	0

Snow was the only one who succeeded in hitting the wicket, the competition among the others being simply a waste of time.

5.—High Jump. Handicap.

H. J. Snow, 7 in	1
J. J. Dare, 6 in	2
Geo. Hamilton, 10 in.	0

Dare and Snow both cleared the same height, but the latter won by his handicap allowance.

6.—Ladies' Purse. Flat Race. Half Mile. Handicap.

F. Walker, scratch	1
A. T. Watson, 15 yds.	0
H. J. Snow, 25 yds.	0
J. J. Dare, 25 yds	0
Geo. Hamilton, 50 yds.	0
D. Scott, jun, 60 yds.	0

This should have been, in justice to the fair donors of the purse, the best contested race of the meeting, but unfortunately Walker could get none of the others to contend against him, as one after another they retired from the race. The winner had, there-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

fore, the poor satisfaction of a virtual walk over for the prize. In consequence of this, Mrs. Walter's kind congratulations when presenting the purse seem to have struck the recipient with remorse, as he rightly and emphatically said he was ashamed of the other competitors.

7.—Flat Race. 100 Yards. For Boys under 12. Three Prizes.

E. Brooke	1
Tommy	2
E. Martin	3

Twelve boys ran for this, with the above result.

8.—Flat Race. 100 Yards. Final Heat.

C. P. Hall	1
A. T. Watson,	2
D. Scott, jun	3

This was a good race, which Hall won notwithstanding a bad start. Time 11¼ seconds.

9.—Flat Race. One Mile. Handicap. Two prizes.

F. Walker, scratch	1
A. Brooke, 90 yds.	2
D. Scott, jun, 100 yds.	0

Only the three named above started for this. Scott retired at the second lap, leaving the race between other two. Brooke had taken the lead at the start and made a plucky effort to keep his advantage, but Walker's far superior style told when coming down the straight for the last time, as he spurted and passed Brooke about 100 yards from the goal, and won with moderate ease. Time 5 m. 17¾ secs.

10.—Hopping Race. 75 Yards. Handicap.

A. T. Watson, scratch	1
A. J. Smith, 1 yd.	2
F. Walker, 1yd.	0

This was an easy victory for Watson, in 13½ seconds.

11.—Flat Race. 150 Yards. Final Heat.

F. Walker	1
C. P. Hall	2
D. Scott, jun.	0

Scott started off with the lead but could not keep it, as the other two soon passed him, and Hall won a well contested race in 16½ seconds.

12.—Flat Race. 440 Yards. Handicap. Two Prizes. 1st Prize, Bushoona H'to Cup. Presented.

D. Scott, jun, 40 yds.	1
H. J. Snow, 10 yds.	2
F. Walker, 10 yds.	0
J. J. Dare, 15 yds.	0
Geo. Hamilton, 25 yds.	0

Scott took all the advantage of the start allowed him and was never headed, winning with plenty to spare. There was a good race for second place between Snow and Hamilton, the former winning just on the post. Time 60½ seconds.

13.—Consolation. Once Round. For all who have started but not won a prize at this Meeting. One Prize. Presented by the winners at this Meeting.

J. J. Dare, scratch	†
Geo. Hamilton, scratch	†

For this only the above two veterans started, and seemed to have come to an agreement to make a dead heat of it, with the object of leaving the Cup which they won in the hands of the Committee, to form a prize for a Griffin's race to be run for at the next meeting. Time 1 m. 18 secs.

14.—Steeple Chase. Handicap. Two prizes.

H. J. Snow, 50 secs.	1
A. J. Smith, 60 secs.	2
J. J. Dare, scratch	0
Geo. Hamilton, scratch	0
A. Brooke, 80 secs.	0

This race caused the usual excitement among the spectators, a rush being made to the first water jump in order to obtain a good situation from which to see the various competitors come to grief. It also presented the usual formidable water-jumping, hill-climbing and cliff-descending difficulties, which were overcome by all except Brooke, who gave in. Hamilton came in first, having passed Dare during the descent of the cliff close to the finish, which he took with a rush, but Snow was declared the winner by his time allowance, Smith securing second place for the same reason.

Mrs. de Ojeda afterwards presented the prizes to the various winners, making a few congratulatory remarks to each, to which in most cases an extremely brief and muttered reply was made. Mr. Snow was the only marked exception to this rule, as he appropriately thanked the fair distributer of the prizes, and regretted that the young men did not show a juster appreciation of the interest the ladies kindly took in the sports, by coming forward in greater numbers to compete for the events on the programme.

Proceedings concluded with three cheers for the ladies.

Correspondence.

SATOW AND ISHIBASHI'S ENGLISH-JAPANESE DICTIONARY.

To the Editor of the "Japan Weekly Mail."

London, 4th September, 1876.

Sir,—The thanks of Mr. Ishibashi and myself are due to Mr. Bramsen for having pointed out, in his letter of the 29th June, certain mistakes and misprints in our English-Japanese Dictionary. The Lexicography of the Japanese language is as yet in its infancy, and only by the co-operation of many will it be possible to achieve a moderately good dictionary in the present generation. Every student who finds errors, omissions or misprints in our work will lay us under a great obligation by communicating his discoveries to us, or, better still, by making them public in your columns, so that all who use it may be able to make the necessary rectifications at once.

I am, Sir,
Yours very faithfully,
ERNEST SATOW.

TRAINING NOTES.

To the Editor of the "Japan Weekly Mail."

Dear Sir,—In my last I hinted at a prophecy, but on mature reflection I have resolved to send you a short *resumé* of what the various ponies have done in the dark—and otherwise—trials, and your readers must take for their mark "*Chacun à son gout*," and they will then have only themselves to blame if they don't do well. The following return has been carefully compiled from results which have been recorded by the most intricate of "matti tokis," specially imported for the occasion, and I place them before your numerous and fashionable readers with that confidence which one can only assume when perfectly certain he is correct.

Mr. J. Peel's *Ta Phairshon*, 5 furlongs 1.30.—Going well; carrying over weight.
Mr. J. Peel's *Mactarish*, 5 furlongs 1.32½, once round 2.33.—Light weight; has not had time to get into condition.
Mr. J. Peel's *Grey Friar*, once round 2.30.—Full weight; good staying power.
Mr. J. Peel's *Bonito*.—Rather lame; thrown out of public training.
Mr. J. Peel's *Annandale*, ½ mile 1.09.—Light weight.
Mr. Walter's *Little Fish*, ¾ mile 1.46.—In a spin with *Good Medium*.
Mr. De Benter's *Mongolian Chief*, ¾ mile 1.43.—Bad condition, but improving.
Mr. De Benter's *Chief Mongolian*, 5 furlongs 1.29, 1¼ miles 3.05½.—Very good form, but too fleshy.
Mr. De Benter's *North Mongolian*, once round 2.28½, 1½ miles 3.41.—Lazy, and wants a strong rider.
Mr. De Benter's *South Mongolian*, ½ mile, 1.07⅔, 5 furlongs 1.23½.—Going easy; in better form than could be expected.
Mr. De Benter's *Last O'Mongolians*.—Reserved for the "Scurry."
Mr. Morrison's *Hereward*.—A little off. Tenders invited by "Junk Stores."
Mr. Morrison's *Maris*, 5 furlongs, 1.22⅔, ¾ mile, 1.41½, once round 2.28¼.—Does not go well, but gets over the ground and will make *South Mongolian* travel.
Mr. Morrison's *Braemar*, 1¼ miles 3.09½, 1½ miles 3.39⅔.—Will be *there* when wanted.
Mr. Morrison's *Tallipoosa*, once round 2.27, 1½ miles 3.39.—"The early bird is worth two in the bush."
Mr. Morrison's *Lintie*, ¾ mile 1.41½. once round 2.26, 1¼ miles 3.08⅔.—Full weight up; good form.
Mr. Morrison's *Distemper*, 5 furlongs 1.36.—Part of this pony will arrive for next meeting.
Mr. Morrison's *Dignity*, 5 furlongs 1.29.—Very quick at starting; wants riding.
Col. Forrester's *Sirocco*, 5 furlongs 1.32½.—"Old fiddles play good tunes."
Col. Forrester's *Grayling*, ½ mile 1.07½.—Wants condition.
Mr. Reid's *Drizzle*.—Has been too much hacked.
Mr. Savile's *Saladin*, 5 furlongs 1.31.—Can see 1.30 and go 5 better.
Mr. Savile's *Crusader*, once round 2.29½, 1¼ miles 3.01¼.—Goes with fine motion.
Mr. Savile's *Saracen*, ¾ mile 1.43, once round 2.27½, 1½ miles 3.38.—"Britannia Cup." *Verbum sap.*
Mr. Savile's *Drift*, ½ mile 1.05—Weight up; heavy course.
Mr. William's *Picayune*.—Shows careful treatment. Kept for "Scurry" and *Last O'Mongolians*.
Mr. Marlborough's *Typhoon*.—Lame. "Ingenuas dedicisse fideliter artes emollit mores nec sinit esse feros."

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Mr. Marlborough's *Jim Hills*, 5 furlongs 1.28½.—"I know a Maiden," &c., &c.
Mr. Marlborough's *Andante*, 5 furlongs 1.27⅝.—Bandaged, but shows speed still.
Mr. Pringle's *Sirius*, *Blackthorn* and Mr. Osbornes. *Sandboy*.—Being trained *dark*; no time known, but * * * * *.
Mr. Lessey's *Good Medium*, ¾ miles 1.45⅝.—May be classed 4 to 4½ Hanks.
Mr. Campbell's, *Despair* ½ mile 1.06, ¾ mile 1.47.—More or less.

The Lotteries held at the Grand Hotel on the evenings of the 26th and 27th were decidedly slow, and the ponies with one or two exceptions fetched very low prices. For the "Trial Plate" *Mongolian Chief* was made a strong favourite, and Mr. Savile's *Saladin* commanded attention as the probable winner of the "Griffins Plate," as did also the same owner's *Saracen* for the "Britannia Cup."

Having given the times made by the different ponies, there is little else to remark regarding the animals themselves beyond the fact that most of the m—the China ones at least—are well forward in condition, and the racing ought to be up to the average of past meetings, although in consequence of the unfortunate division among the racing community, the fields must of necessity be smaller than formerly.

The "Tartans" are all up to their old form. *Lintie* is especially good, and would have made short work of his old opponent *Dibs*, had the latter been entered.

Mr. Savile's *Saracen* is also undoubtedly a good pony and at his favourite distance of one mile to one mile and a quarter, will be very hard to beat. *Crusader* has seldom made his appearance on the course of late, but owners would do well to beware of him in the "Club Cup."

The "Mongolians" had the finishing touch put on them this morning, but with all due deference to Mr. De Benter, I think he had better have commenced as he has left off unless he means to run them at the Association Meeting. The two Chiefs are undoubtedly good ponies, though some knowing ones hardly think them in so good condition as they should be. Still, however, if there is any merit in Doctors' stuff, *Mongolian Chief* ought to come to the front, as he has been physicked without stint. If report speaks truly of Mr. De Benter's stable, it is very unlike the apothecary's shop which Romeo speaks of, as there are not

"about his shelves
A beggarly account of empty boxes,"

but on the contrary "such mortal drugs" has he there as would suffice to kill or cure all the ponies of both Clubs.

Mr. John Peel's late arrivals want further training, more especially *Ta Phairshon*. *Grey Friar* has quieted down, and should retrieve his character. I am somewhat afraid, however, that what he has gained in staying power has detracted from his speed, so that he will scarcely be in the first rank for the short distances.

Mr. Walter's *Little Fish* has greatly improved during the past week, and on the second day, with winners excluded, should come to the fore.

The Japanese ponies as a class are decidedly below the average; none of the griffins seem to be first class ponies. *Distemper*, although a weed, will probably outstay the others; *Grayling* is a good animal, but lacks racing spirit; *Typhoon* has not been seen on the course during the past week, but even with three legs ought to make small work of winning a race. Neither *Sirius* nor *Sandboy* have improved since last meeting, and the others are all so much of a class that, although the time may not be good, the competition should be fair.

Yours truly,

TRITON.

The anniversary of the battle of Sedan was celebrated throughout Germany on Saturday by festivities of various characters. The newspapers printed articles in honour of the day, most of them pointing out that the Germans celebrate not so much a victory over the French army, but rather the restoration of the German Empire, which dates from that day. A tone of conciliation towards France was said to be remarkable in almost all these articles.

The Duc Decazes, the *Moniteur* states, has refused to be a candidate for the Senate, the position of deputy for the eighth arrondissement of Paris being too honourable to allow of his exchanging it even for a senatorship.

Law & Police

IN H. B. M.'s PROVINCIAL COURT, KANAGAWA.

Before RUSSELL ROBERTSON, Esq., *Consul.*
Tuesday, October 24th, 1876.

THE JAPANESE GOVERNMENT, BY NOMURA YASUSHI, GONREI OF KANAGAWA KEN.
Versus
WILLIAM H. SMITH, ALFRED JOHN WILKIN, and MARTIN DOHMEN, Defendants.

JUDGMENT.

The title deeds of Lots 61 and 63 having been surrendered by the defendant, Alfred John Wilkin, as Trustee for the estate of William Henry Smith, joined as defendant to this suit, it is unnecessary that I should pronounce on the question of their forfeiture.

In respect to lots 63 and 66 the ground rent in arrear has been paid into Court by the defendant, Martin Dohmen, after tender to and refusal by the plaintiff.

I hold that by such payment the lease of these lots cannot be decreed forfeited and void, notwithstanding any interpretation to the contrary that may be sought to be attached to the conditions of these leases by the plaintiff.

RUSSELL ROBERTSON,
Consul.

IN H. B. M.'s CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.
Tuesday, October 24th, 1876.

EMILE MOULRON *v.* D. SCOTT.

This was a claim for $286.55. Defendant brought a counter claim for $23.25 against plaintiff.

Mr. Dickins appeared for plaintiff, Mr. Lowder for defendant.

Defendant asked that the evidence of the defendant's witness Mr. Krause be taken at once, as he was obliged to join his ship, the *Kearsage*, before sailing at 1 p.m.

Oscar Krause, sworn, deposed:—I was employed by Captain Scott in tallying the cargo of the *Cashmere*. I went on board on the morning of the 15th August, and was engaged till the 26th. I remember some glass-ware being landed. The first quantity was landed on the 15th; that was 58 cases, marked double triangle V. M. The next lot was of the same mark; 79 cases on the 17th and 15 more on the same day. On the 16th, 6 cases glass-ware marked M. B. were landed and 20 more on the same day; 9 cases and 19 on the 17th, also an odd one. On the 22nd, 46 cases; again 17 cases on the same day, and 1 odd one. 15 cases on the 26th August, and 8 cases on the same day; again 8, in another boat, and 1 case.. I remember landing some casks of cement.

Mr. Dickins objected to this, saying no cement was mention in plaintiff's claim.

Mr. Lowder answered that it was in his counter-claim.

After a lengthened discussion the answer was allowed.

Witness continued:—I found out afterwards to whom they were consigned. It was the Railway Department. I do not know whether the three parcels of glass, glass-ware and cement were on the Kobe manifest. I had conversations with the master and the mate about landing this cargo.

Mr. Dickins objected to mere conversation being brought up as evidence.

Witness continued:—The answer was to the effect that cargo was to be re-shipped after having discovered if any had been landed by mistake, or to be transhipped to Kobe, charging the expenses to the ship. I found out after I had been on board three days, and after the 48 cases had been landed, by looking in the mates book that they were destined for Kobe. I observed to the mate that it ought to be reshipped to Kobe; he answered "Oh, never mind," or something to that effect. According to my book other packages of Kobe cargo were landed after the 48 cases, and subsequent to that conversation. I do not think that the Kobe cargo was separated from the Yokohama cargo. This cargo was landed by mistake of the mate.

Cross-examined by Mr. Dickins:—Captain Scott told me to go on board and tally cargo. He did not give me any manifest or list of what was to be landed here. I was to land whatever cargo the mate chose to give me. My conversation with the captain must have taken place on the day on which the 48 cases were landed or the day after, on board the *Cashmere*. Very likely I told the mate cargo had been landed by mistake; that is to say that of which I have spoken, I found from the mate's book that this cargo

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

was destined for Kobe. I looked at this book during the first three or four days I was on board the ship. I can swear that I saw the book on the day after the 48 cases were landed. I won't swear to the 16th of August. I never received orders from Mr. Moulron or Mr. Moulron's clerk to land any of this cargo. I never received any orders whatever from plaintiff. The mate kept a tally. I gave receipt for our lot only. I was not there at the re-embarking of cargo. I have heard that some of the cargo landed was afterwards re-shipped. I know that once or twice Kobe cargo was landed in order to get at Yokohama cargo.

To Mr. Lowder: I was sent on board to take delivery of cargo from the captain or mate, and, of course, to keep tally.

Mr. Dickins now opened the case for plaintiff, saying: The American ship *Cashmere* arrived here in August last, consigned to plaintiff. She had a general cargo, partly for Yokohama, partly for Kobe. Mr. Moulron employed Captain Scott to land (and his orders were precise) the Yokohama cargo. There were three manifests, one for Yokohama, another for Kobe, and the third for optional cargo. The original, or a copy of the original manifest for Yokohama cargo, was given to Captain Scott, and he was told to land this only. Notwithstanding this, he has landed cargo not on the Yokohama manifest, and after the ship had sailed and arrived at Kobe, it was found that the goods specified in the petition had been landed here and not reshipped by Captain Scott. The agents in Kobe called upon the agent here to forward the goods to Kobe, and plaintiff now claims to have the expenses incurred in reshipping this cargo to Kobe refunded by Captain Scott, by whose negligence this had come to pass. An arrangement had been arrived at between the captain of the ship and Captain Scott, to land certain Kobe cargo which was in the way of the Yokohama cargo, here; but to reship it again at the expense of the ship. The greater part was reshipped in this way, but these parcels have to be accounted for.

Emile Moulron, sworn: I am director of the Comptoir Belge. I remember the ship *Cashmere* arriving in Yokohama, about the 10th or 12th of August. She left about the 10th September for Kobe, whence she sailed for the coast of America. I was the consignee of the ship here. My duty as consignee of the ship was to attend to all business connection with her whilst in port. I employed Captain Scott to land the cargo. The ship had three manifests, one for Yokohama cargo, one for optional and the other for Kobe cargo. Captain Scott was instructed to land the Yokohama cargo, and as regards the optional cargo he was to be notified which of it was to be landed here. I handed Captain Scott either the original, or a copy of the original manifest for Yokohama. I never instructed him to land this glassware. I first discovered that it had been landed here as soon as the ship arrived in Kobe. I speak of the cases mentioned in the petition. As the Kobe consignees of these goods called upon me to send them on to their destination, I had to pay the expenses of landing, reshipping, and freight to Kobe. The captain told me that some of the Kobe cargo was lying on the Yokohama cargo, and the shortest way would be to have it landed here and reshipped at expense of the ship. No special arrangement was made with Captain Scott about this cargo. I paid for the reshipment of Kobe cargo landed for convenience here, $60.60. Captain Scott never informed me that this part of the cargo was lying at the Custom House, nor did my clerk. It was advertised that the ship was to leave on the 7th or 8th September, and all claims were to be presented before that date. Captain Scott sent in his on the 6th, but no mention was made of this cargo. When I found that it had been landed, I asked Captain Scott why such large cases of glass had been landed. He never made any claim for landing either the glass or cement. He gave no explanation of his reason for landing the glass. He said he had told my clerk that it had been landed, but my clerk denied this. I wanted to confront the two, but Captain Scott objected. The landing of Yokohama cargo was placed entirely in Captain Scott's hands.

To Mr Lowder:—I am the Belgian Vice-Consul, besides being a general merchant. My instructions to Captain Scott were given verbally, in the presence of the captain of the ship and my clerk, in my office. I told him at first to land nothing but the Yokohama cargo; afterwards, when the captain of the ship informed me that some of the Kobe cargo was lying above that for Yokohama, I confirmed the captain's orders to have it landed for convenience's sake, and then re shipped. These instructions were given in my office. I did not give further verbal instructions to Captain Scott. Captain Scott re-shipped one part of the cargo. This arrangement between the captain of the ship and Captain Scott was known to me. This was two or three days after the ship came into port. I saw Captain Scott about five or six times. My clerk was principally engaged in transacting business with Captain Scott. I was obliged by the Kobe consignees to reship this cargo. Assuming for a moment that I do not recover from Captain Scott, I shall be the loser myself. I do not know that I can make any claim against the captain of the ship. In my opinion I cannot claim anything from him. I was agent of the ship and had to attend to all business connected with it here. I was ordered to re-ship this cargo by the consignees at Kobe; I cannot claim anything from them. Being the consignee of the ship here, and this cargo being landed here by mistake, I thought that the agent in Kobe had the right to charge me with the expenses of carriage to Kobe, and the consignees the right to enforce my sending down this cargo. Assuming that it has been proved that these goods were landed through negligence or error on the part of the captain, I still hold that I am in a position to sue Captain Scott for recovery of these expenses from him. I would hold myself responsible for the expenses incurred in re-shipping cargo landed by mistake. When the ship left this port, there were still some accounts to settle. My accounts with the ship are now closed. This claim is not included therein. It seems to be impossible to admit that these goods, as mentioned in the petition, were included in the instructions given by me conjointly with the captain. Had the arrangement arrived at between the captain of the ship and Captain Scott been different from what was subsequently told me, either would have raised some objection, as they were both present. Short-delivery accounts were sent me by the ship. Captain Scott recovered his expenses for landing cargo from the various consignees in all cases, not from me. Were he unable to recover these charges from the consignees, I should pay him for his trouble, and afterwards take possession of the goods and endeavour to recover by other means. Captain Scott had undertaken the discharge of the ship.

Adjourned till 2 p.m.

Court re-assembled.

E. Videau, sworn, stated:—I am clerk to Mr. Moulron, the defendant. I remember the arrival of the *Cashmere* in August last. Captain Scott was engaged to land the cargo here. I know that some of the Kobe cargo was landed here; but the goods in question were landed without my knowledge. I was not notified of the fact. I did not know of any arrangement having been made between the captain of the ship, Mr. Moulron and Captain Scott, nor was I present at any conversation between them. I put the advertisements in the papers. It said that as the Cashmere would sail on the 7th September, all claims must be sent in before that date. (Document shown.) That is a correct copy of the manifest. I wrote it myself.

Cross examined by Mr. Lowder:—I was in pretty nearly continual intercourse with Captain Scott. I did not take tally of the cargo; Captain Scott employed two Chinamen to do that, whom I saw every day. I had a conversation with Ah Koa once or twice about some damaged cases. The ship arrived about the 12th August, but I do not know when the discharging finished. I usually saw what cargo was being landed, but I never saw the goods in question, nor did I ever have conversation with Captain Scott that some Kobe cargo which had been landed by mistake had to be re-shipped. I speak of some glass and other merchandise, not of the goods in question, for I did not know they were here till Mr. Moulron received a letter from Kobe.

Ah Koa, cautioned, stated:—I am in the service of Captain Scott, and remember the cargo landed from the *Cashmere*. I had a manifest of the Yokohama cargo only. Some glassware landed was not on the manifest and I told Mr. Moulron's clerk of it, about the 28th or 29th August. He said "I will see about it."

Cross-examined by Mr. Dickins:—I did not require to open any of the cases. I easily recognised the glassware packages. I informed the clerk and gave Captain Scott a list of the packages over-landed. I stored the glassware in the Bonded Warehouse. I told Captain Scott on the 5th September, that this cargo had not been re-shipped.

D. Scott, sworn, stated:—I had no instructions whatever from Mr. Moulron. The clerk and the captain of the ship instructed me to land the cargo. Some goods which were not on the manifest were landed and I re-shipped them at the captain's request. I speak of some 250 packages. I had no authority to re-ship any cargo. I could not do so without special orders. I took the note the Chinaman gave me to Mr. Moulron's. (Paper produced.) That is not a copy of the note; it did not include cargo re-shipped. I made no such contract as mentioned in evidence this morning. I had conversations with the clerk about the goods in question. I told him they were in the Bonded Warehouse and he had better look after them. I have no recollection of any such arrangement

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

as mentioned in this morning's evidence. I thought the goods had been removed long before I received Mr. Moulron's note. I engage to fetch cargo from the ship's side, land it on the hatoba and take charge of it for 24 hours afterwards. From that time my responsibility ceases. (Paper shown.) That is a bill in the handwriting of my son against the Railway Department. It is endorsed in red ink by Mr. Smith "These charges are not payable by the Railway Department. The cement was landed by the ship for its own convenience."

Cross-examined by Mr. Dickins:—I received no orders from Mr. Moulron about landing the *Cashmere's* cargo. I have a claim against somebody for landing the cement. The manifest was given me so that I might know to whom the cargo landed belonged, and in order to know the exact quantity in each lot. I cannot admit for a moment that the manifest being given to me was equivalent to an order to land Yokohama cargo only. I had a man on board the ship to tally the cargo as it was put into the boat. I have not the slightest notion why any Kobe cargo was landed here. I was aware that Kobe cargo was stowed above Yokohama cargo. I informed the clerk that some Kobe cargo had been landed by mistake. In the first instance the clerk instructed me to land the *Cashmere's* cargo; the captain never gave me orders about landing any cargo whatever. On the 5th September he gave me a list of goods he wished to have re-shipped. I did so and was paid for it by Mr. Moulron. The Chinaman gave me a paper about the 2nd September, enumerating goods overlanded. I took it to Mr. Moulron's office. I swear that I made no arrangement with the captain to land Kobe cargo to get at Yokohama cargo. I did not deem it necessary to address Mr. Moulron by letter; our agreements had been verbal all through. I would not have re-shipped any cargo without express orders from the captain. Even though it had been necessary to remove cargo in the way of Yokohama goods, it would not have been a natural arrangement for me to re-ship it again. I never give a list of cargo short landed till the ship is finished. When Mr. Moulron asked me for these expenses, the reason I gave for refusal was simply that I had given due notice to his clerk. I consider it my duty to give notice, either verbal or written, when cargo is overlanded. This I did.

To the Court:—Ships frequently come here with cargo both for Yokohama and Kobe. I do not discharge all of them, but a good many. Were Kobe cargo landed here by mistake, I should, for courtesy's sake, inform the agent of the fact; but I would not undertake to re-ship any cargo without express orders.

This closed the evidence both for prosecution and defence.

Mr. Lowder now summed up the case for defendant, saying:—My client's defence in this case is very simple, and is practically conveyed in one of his letters to plaintiff, as read by my learned friend. "In reply to yours of last night, I can only repeat what was stated in my note of yesterday morning to you,—that your clerk was informed of the landing of the packages of glass, both by myself and my Chinaman, and that when all the cargo was landed a note was put into his hands stating what goods had been landed that were not on the manifest, the 295 cases in question being included. You must bear in mind that there were other goods for Kobe landed here, some of which were returned to the ship either by your clerk's or the captains orders. Why the 295 cases of glass did not go back I cannot tell. The captain knew they were landed here; if he did not it was not my fault." This in itself being so comprehensive, I do not think that more need be said on his behalf. His errors of omission and commission as set forth in the petition have not been proved. It has not been proved that my client neglected to perform any part of the contract he had undertaken, nor that, in any way, had he done anything wrongfully. Courtesy had lead him beyond his bounden duty in notifying plaintiff of this overlanding, though plaintiff may deny this. I need hardly call your attention to the confusing and contradictory evidence of Mr. Moulron himself. It is very evident that he is not quite certain of his duties as agent for a ship. That he could have expected my client to do more than he did, seems quite unnatural.

Mr. Dickins, in reply, said:—My learned friend has hinted at contradictions in the evidence of plaintiff, but has not clearly shown were these contradictions lay. Plaintiff had once appeared to make contradictory statements, but subsequently these were cleared up. It must be very clear to the court, after considering the evidence on both sides, that the expences now sought to be recovered by plaintiff were incurred through the negligence of defendant, who did not, as be ought to have done, give notice that these goods had been landed. Defendant advertises himself as a "landing, clearing and shipping agent." Now, it is ridiculous to assert, as he does, that his duty is merely to act as a sort of boatman, taking goods from the ship and landing them on the hatoba. He made a contract with plaintiff to land Yokohama cargo only, and was given a manifest of that cargo; should be not therefore he responsible for what is landed over the Yokohama cargo? It was his duty either to see these goods re-shipped, or at least to notify the agent that they had been landed. He has done neither of these. He says that the manifest was merely given him to be a memorandum of the marks and numbers of the goods landed. I maintain that it equalled an order to land Yokohama cargo, and no other. On these grounds, I therefore ask judgment in favour of plaintiff.

His Honour said that a decision was difficult to be arrived at in a case like this where evidence is so contradictory. He could not hold with the learned counsel for the prosecution that defendant was bound to re-ship any cargo whatever without express orders either from the captain or the agent of the vessel. Had he undertaken to do so on his own authority, it must have been at the risk of being charged with expenses should he have been mistaken.

Judgment in favour of defendant, with costs.

THE PRESS IN JAPAN.

(S. C. & C. Gazette.)

The difference between the Press and the Government in Japan seems to be as far as ever from accommodation. There are always a number of editors in gaol, and newspapers continue offending against the Press laws, and subjecting themselves to punishment. It is true the punishment is said to be often undergone vicariously, and it is possible that herein is found a ground of compromise. Having put forth a certain code of laws, the Government will have them enforced, but finding that they would operate too harshly if enforced against the educated men who really conduct the newspapers, it may be content to wink at the substitution of deputies. In any case the fact is said to be that the putative editor who is supposed to be undergoing three months' imprisonment, is often a man paid to incur the responsibility by the real editor, who is all the while in his bureau. We can quite understand that it is necessary to exercise some degree of supervision over the utterances of the Press, among a people to whom free discussion of the acts of Government is so novel as it is to the Japanese. We have, ourselves, been so long accustomed to complete freedom of utterance that criticisms have no more than their due weight. Where the practice is novel however, and not well understood, censure of Government acts is very apt to have an exciting effect on the popular mind, and to weaken authority. Still we cannot but think the censorship of the Press is exercised with unnecessary harshness, in Japan, when we see such constant punishments inflicted. A few months ago, eighteen editors were said to be in gaol at the same time, for infractions of the code; yet the very fact that the provisions are so constantly infringed without political harm following, would seem to imply that the Government is over apprehensive. The probability is that the officials appointed to carry out the censorship do not know how to exercise discretion in administering the law. For many infractions of the letter may be quite harmless practically, and could wisely be overlooked.

A strict enforcement, for instance, of the clause discussed by a Japanese writer, in the article we reprint elsewhere, would be to place people in a worse position than in China, where memorials accusing officials of heinous misdeeds are published in the Gazette with marvellous frankness. The provision that memorials must not be published without the consent of the Censorate, may be a very useful one to hold in suspension over the heads of newspapers as a check on undue license; but to carry it out rigidly would be simple folly. It might be quite right and convenient out for the Censorate to pass. What the latter has really to do is to put the law in operation when it is broken in a manner likely to do harm. But it would be too much to expect officials imbued with the more or less despotic notions that pervade Asiatic Governments, to tolerate willingly a free criticism of their actions. It is only a very pure magistracy, in fact, which can tolerate such criticism with impunity. The frequent criticisms which appear, in English newspapers, of judicial sentences and the acts of Government officials, never imply unworthy motives; and people never assail them. It is well-known that our judges are immaculate, and whatever political errors are committed are attributed to error of judgment. But the Japanese magistracy, though much superior to the Chinese, has not yet attained to that condition, and is therefore, we can well believe, very much open to criticism and proportionately afraid of it. The censorship of the Press is the best remedy for the defect. The exposure of acts of oppression or corruption, and the struggle between the Press and the Government

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

will gradually lessen in intensity as the effect of criticism is wrought out. Free discussion will be allowed, in proportion as the purification of high places leaves less and less opening for blame.

THE AMERICAN DEBT.

(The Spectator.)

The chief financial event of the present week has been the publication of the prospectus of the new American Funding Loan. At an issue-price fractionally over par, this form of security will, beyond any doubt, find much favour with the British investing public, who are already largely interested in the Government Bonds of the United States. But the new Funding Loan has more than a money-market importance. It bears testimoney to a remarkable advance in the financial policy of the Union, and with the maintenance of that policy the highest political interests are bound up. Only ten years ago the opinion of the shrewdest European financiers was that the United States, when the excitement of the war had spent itself, and the pressure of taxation only was felt, would be impatient under an unaccustomed burden, and would incline to rid themselves of it, or at least to lighten it at the expense of others on the first available opportunity. Never was there a miscalculation of motives more unjust, and at the same time more consistent with ordinary experience. The truth is that the European financier wholly misapprehended the view of the National Debt that was taken by the mass of the American people. The American view was simply this,—we almost quote the words in which an eminent American citizen once expressed his individual conviction:—"We are as impatient of this Debt as your European peoples are of taxation. From our childhood we have been taught to believe that a heavy national debt is an oppression, a monarchical, a European institution, and we cannot bear to contemplate it as a permanent imposition upon American society. It is contrary to our political ideal, and we intend to pay it off, however hard the task may be. We feel it as a private gentleman feels a crushing mortgage on his estate." In this spirit the Americans and their Government faced the difficulty of the Debt ten years ago. Its magnitude and the rapidity with which it had been piled up might have appalled the most stout hearted of financiers. In 1860, when the national balance-sheet was made up, a few months before Lincoln's election, the whole of the Federal liabilities were stated to be about £12,250,000; two years later, after fifteen months of war, the Debt had been multiplied more than eight fold, and stood at 514,000,000 dollars, or £103,000,000. The average annual addition to the Debt during each of the four years following was close upon £120,000,000; and in 1866 the total burden was not less than 2,783,425,879 dollars, or nearly £580,000,000 sterling. The greater part of this immense Debt bore interest at 6 per cent., and its actual pressure was therefore considerably heavier than that of our own indebtedness, though the nominal capital was about one fourth less.

The Americans, however, were not going to submit, as we have said, to such a permanent imposition upon their national energies. The reduction of the Debt became one of the principal and most popular elements of the Republican policy. During the first three years succeeding 1866, when the policy of paying off the Six-per-cent. bonds was initiated, the average yearly diminution of the burden was over £26,800,000, and in July, 1869, the aggregate Debt was a little under £500,000,000. In the following six years the rate of reduction slackened, the average amount paid off yearly being from £5,000,000 to £6,000,000. Towards the close of last year the debt was computed to be something over £450,000,000, showing a gross reduction since 1866 of about 140 millions sterling, or £14,000,000 a year. And this reduction is seen to be a much more considerable effort than at first appears, when we look at the section of the Debt with which only it was concerned. Of the whole of the American Debt, as it is generally stated, the note-issues and other secondary obligations make up about one-quarter in nominal amount, and upon these neither the policy of repayment nor that of refunding has worked. The Debt, of which the interest is payable in coin, is the mass at which the Washington Treasury has unflinchingly and doggedly quarried away, and with the most notable results. After 1869 the Debt bearing interest was £520,000,000, and now about £335,000,000, of which over £180,000,000, are six-per-cents., and the rest five-per-cents. At the close of the war almost the whole of the interest-bearing Debt consisted of six-per-cents., and it was not until 1870, when the character of the American Government for honesty had been established by its large repayments and its exactitude in meeting current obligations, that refunding began to be thought of as a practicable measure.

At that time, however, it seemed certain that the securities of the United States could be placed upon the European markets at or above par, and that, by a judicious financial policy, these bonds might be substituted, within a reasonable time, for such of the Five-twenties as would not be paid off. Legislative power was given to the Treasury to issue £100,000,000 of 5-per-cent bonds, payable at the pleasure of the United States Government after 1881; £60,000,000 of 4½-per-cent. bonds payable after 1886, and £140,000,000 of 4-per-cent, bonds payable after 1901. The first issue under this legislation is well known in all the European money markets as the American Funded Loan, and its Five-per-cent. bonds have lately attained a very high price. Some ten months ago the Secretary of the Treasury disposed of the last portion of the authorised five-per-cent issue, calling in an equivalent amount of six-per-cent Five-twenty bonds. The Five-per-Cents. Loan now established themselves as one of the soundest of investments, and the Washington Treasury Department was lately advised by the highest financial authorites in the United States that the issue of the 4½-per-cents. might be profitably undertaken, in the present state of the money-market. Accordingly, arrangements were made with a "Syndicate" of financial firms for placing the new loan in Europe, and subscriptions have been invited at 103½, the price at which the Five-per-cent. bonds were currently quoted in Europe less than a year ago. There is little doubt that the whole of this issue of bonds will be speedily taken up, and will replace about one-third of the unredeemed Five-twenties. The credit of the Union will then be near the point at with the remainder of the "Five-twenties" will be refunded in 4-per-cent. bonds. This is a magnificent result of persistence in a fixed purpose, for American finance has been wretchedly unscientific, and its only quality which deserved, as it has won success, was the dogged perseverance with which people and Treasury alike insisted that a National Debt should not be a permanent institution.

MIVART'S LESSONS FROM NATURE.*

(Saturday Review.)

The essays which Mr. Mivart has here brought together from various quarterly and monthly periodicals are mainly devoted to two broad lines of philosophical inquiry, distinct in themselves, though at times touching each other as they trench upon problems of common interest. One class is concerned with the general aspect which nature presents to the scientific intellect of the day, the other with the critical discussion of weak points in the special theory of Mr. Darwin. In reviewing another publication of Mr. Mivart's, *Contemporary Evolution*, we pointed out certain logical weaknesses on the writer's part, and his tendency to paradoxical extravagance. We cannot say that the present work is free from these faults, but they are at any rate less conspicuous and ingrained in his argument. The principal and most mischievous defect in the philosophy of the day is to be traced, Mr. Mivart begins with saying, to an incomplete or erroneous conception of what is meant by the term Nature, which is too often taken to denote exclusively the total assemblage of phenomena external to and apart from the human mind. But here an essential factor in nature is at once excluded. The mind of man is itself, he urges, one of the most important objects which present themselves to our perception. Although it is the subjective instrument or agent in the inquiry, it is not the less truly the objective matter of analysis and observation. But a worse evil follows upon the primary fallacy. Nature, taken in the limited sense of that which is external to the percipient mind, is often held to explain that which has been tacitly excluded from it. Thus the facts and processes of reason are apt to be first ignored, in order that they may be afterwards treated as if they were to be sufficiently measured and explained by the mere phenomena of irrational nature. The first step to a true philosophy, Mr. Mivart pleads, is to conceive nature as a great whole, of which the mind of man forms part. For us the mind forms the inevitable starting point from which we must set out in order to study logically the phenomena of irrational nature, and to investigate, if we may, their cause and purpose. Mr. Mivart does not shrink, it will be observed, from using terms which the positivist habit of thought so widely prevalent of late has tended to banish from the language of philosophy. The idea of causation is with him as real and indispensable a first step or postulate in knowledge as that of the reality of truth, or the trustworthiness

* *Lessons from Nature, as manifested in Mind and Matter.* By St. George Mivart, Ph. D., F.R.S., &c. London: John Murray, 1876.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of our faculties. One and the other are equally involved in the very attempt to dispute their reality. To shake and bring them down we have nothing but themselves to stand upon. Hence the absurdity of agnosticism, in its crude and extreme form at least. Our mental states, our logical intruments, must at all events be held good for their purpose; else why use them to break the chain of illusion itself? Bare nescience then being set aside, there ensues the struggle with the relativity of all knowledge, which its upholders with some inconsistency lay down as absolutely true. Here too, argues Mr. Mivart, the reasoner saws off the branch on which he himself sits. Among the things which are forced upon us with every process of thought is the certainty of an objective or external reality. We make the mind itself external by thinking of it. Now to account for this conviction by experience is simply futile, for in each and every case we begin with the certainty in question, nor could the utmost number of cases we could experimentally test in a life-time give us a tithe of the certainty which we all of us feel at every moment of our conscious lives. Among such first truths our author rightly classes our recollection of our own continuous past existence, and the existence of things and persons external to ourselves. The consideration of the first of these carries with it the conviction of the truth of the other, so inextricably is our memory of ourselves in the past bound up with the being and the action of others around us. Thus simple self-consciousness reveals to us the existence of a boundless range of exterior existence, and of conscious beings like ourselves. Our intellect carries us at once by a process, not of demonstrations, but of intuitive and necessary perception, from subjectivity to objectivity, from the world of our conscious being to the world of existences outside our consciousness. The two realms are inseparable save in thought, like the κυρτον and κοιλον of Aristotle.

In an able criticism on the inconsistency of Mr. Mill in conceiving the natural world as made up of "permanent possibilities of sensation," while yet admitting the reasonableness of the belief in some kind of an external world beyond consciousness, including some threads of conscious being like our own, Mr. Mivart includes in his protest those teachers who, like Mr. Spencer, disguise an intrinsic idealism under realistic professions. What, he asks, is Mr. Spencer's "transfigured realism" but a scepticism the more disappointing in that it cheats us with the hope of a substantial sphere corresponding to and stimulating our cravings? If what we represent to ourselves as properties of matter, even down to its weight and resistance, are but subjective affections produced by objective agencies which are unknown and unknowable, what kind of footing does this quasi-real world afford us—a world in which no single element, relation, or law, is like any element, relation, or law as it exists in our consciousness? At the most, what is real is feeling, not intellectual perception or certitude. In his statement that we "know nothing of the objects, but only know the feelings they excite in us," Mr. Spencer has the support of Mr. Lewes, who, while protesting against Mr. Spencer's system, comes fundamentally near it when he speaks of our cosmos as the universe of feeling, our postulate of which is the experience of ever-fresh accessions from the unknown to the known. What Mr. Lewes has to postulate, urges Mr. Mivart, is no more than the possibilities of fresh feelings. What our reason rightly consulted really leads us to, Mr. Mivart ends by saying, is that we not only know our own existence, and that of other beings, but that the qualities we attribute to them are really theirs, not ours, and that higher intelligences than our own, did they exist, however many additional properties they might perceive in the objects of sense and thought, would recognize the identical properties that we recognize, and would know that things are the very things which our senses declare them to be.

It is surprising to find Mr. Mivart, in his controversy with Mr. Darwin, harping over and over again upon two faults which he thinks he has discovered in Mr. Darwin's method of advocacy. The first is a "too great tendency to dogmatic assertion." The second is simply begging the point at issue, "a habit of quietly slipping in, or assuming in his arguments, the presence of some power or quality when its existence is the very point in dispute." If there are any two qualities in which Mr. Darwin seems to us, and we believe to most impartial critics, to stand far above the ordinary run of controversialists, they are his diffidence in propounding new views or proofs of any kind, and his prudent hesitation in driving home his conclusions. He seems for ever on the look-out for weak or unguarded points in his own defences, and it is indisputably from the armoury of difficulties provided by himself that objectors to his system have drawn most of their weapons. Never was a philosophic inquirer more suspicious of undue bias or illogical haste on his own part, or more prompt and patient in listening to objections and weighing additional evidence. From the first he has held the fundamental idea of his system as provisional only, declaring his readiness to give up the whole position of natural selection if one of its outworks can be successfully stormed—that is, if any special organ or function which has been acquired by virtue of the principle he lays down can be shown to be other than beneficial. Here it is that Mr. Mivart now considers that he has his rival on the hip. Mr. Darwin, in later editions of his *Natural Selection*, as well as in other writings of more recent date, speaks of himself as having fallen into "serious and unfortunate error" in tracing to his primary process sundry phenomena relating to the sexual differences of animals. He admits the possibility of the external condition of life or *other unknown cause* (words which Mr. Mivart exultingly italicizes) having helped to get rid of specific markings, like the juvenile stripes in grown-up tapirs and pigs, and hints that the cause of many a slight variation, and many a monstrosity, may perhaps lie much more in the nature or constitution of the organism than in the nature of the external surroundings. Most glaring of all contradictions, we are told, is the admission that man, like other animals, presents points of structure for which we fail to see any use, either now or in time past; which consequently cannot be accounted for by *any form of selection* (Mr. Mivart's italics again), or by the use and disuse of parts. In a word, this terrible dogmatist has been guilty of a vacillation and a confession of ignorance which should make us all pause before we trust ourselves unreservedly to a guidance which thus again and again declares its own fallibility. Now we are not aware that Mr. Darwin had ever put forth natural selection as the sole cause or agent in the origination of specific differences to the exclusion, on the one hand, of any power residing in the organism, or, on the other, of conditions in the outward surroundings. Nor, indeed, can we even understand such a proposition. Life, even in its lowest form, is not inert matter, devoid of indwelling forces. And what is natural selection but one mode whereby the external surroundings and the internal or organic agencies interact upon each other? They are only to be dissociated in thought. Mr. Darwin is not compromising his position, as his critic complains of his doing, "without the ingenuousness of avowing it," when he admits, as Mr. Huxley has done, that species may here and there offer residual phenomena which are not explicable by natural selection; but is there, it seems to us, "unscrupulous audacity" in retaining his theory as the *most* important means of specific differentiation, instead of discarding it altogether, as Mr. Mivart would have him do.

When we look through Mr. Mivart's pages for the alternative hypothesis which he would put in the place of Mr. Darwin's discredited theory, we become aware how entirely negative is our author's critical method. It is not that he is opposed to evolution. He has shown himself throughout a zealous evolutionist, and he has ever upheld that view as in entire accordance with the teaching of that Church which has been popularly regarded as the most rigidly orthodox in its abhorrence of materialism. In his *Genesis of Species* he set himself the task of treating the evolution of the manifold forms of life upon the basis of a strict accord between nature and revelation in respect to the prime agency of an originating mind, guiding it by fixed teleological designs or lines of agency; finding secondary or subordinate causes in the vital forces implanted in the organism, and the external conditions which formed no less essential factors in the growth of the individual and the determination of species. Now that we find him admitting, in Chapter IX. of the volume before us, that Mr. Darwin's theory by no means involves irreligious or anti-teleological conceptions, but that in full accordance with it we can still speak of Divine intentions, the views of the rival philosophers seem to be drawing appreciably nearer to each other. Still closer approximation would, we think, be the result were our author brought more severly face to face with the problem as grappled with by Mr. Darwin. It is easy to start from vague phrases like the "unfolding from potential into real existence of constantly new forms of animals and plants," or "presence in man of a substantial and persistent soul which distinguishes him from the brute." What we nowhere find Mr. Mivart facing is the mode wherein, or the stage whereat, this potentiality had its origin, or this transcendent form of being took its subsistence and the dawn either of animal or of human life in the mystery which has for ages shrouded it, may befit a cautious or a reverent mind. But a scientific mind may with no less caution and reverence seek

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to penetrate the gloom, and reduce to order and law what had been held to be the inscrutable realm of miracle. Mr. Darwin is not, we think, to be fairly charged with lack either of modesty or reverence in pushing his inquiries into the ultimate and primary recesses of life. In breaking down, as the result of his researches, the barriers between the human and the inferior races, he has not robbed man of aught of his glory as a member of a Divine order of creation; while he has extended to a wider realm of phenomena that unity which it is the task of science to verify and to establish throughout nature. There is no reason why theology should not rest as tranquilly under the shadow of thorough Darwinism as under that which Mr. Mivart claims to put forth as a safer and more orthodox shelter, but which the strict tests of logical proof fail to find substantial. For the origin of man, as for the dawn of articulate speech, there is nothing for it with Mr. Mivart but to refer us to a state of things where law is swallowed up in miracle. He is content to take up man when arrived at his full estate, in the plenitude of his powers as a specially created, highly endowed, thinking and talking agent. How man came by these powers it has been Mr. Darwin's aim to trace. He may not have attained to demonstrative, or even approximate, proof. Nor does he pretend to have exhausted the inquiry, or to have clinched every link in the chain of proof. But he has not shrunk under a burden which Mr. Mivart seems in comparison scarcely to have touched with one of his fingers. As a naturalist and a conscientious collecter of the facts of biology, Mr. Darwin is not in fairness to be held responsible for the extremes to which his conclusions may have been pushed by eager speculators in the direction of agnosticism or even of nihilism. Against negative or destructive theories such as these Mr. Mivart does battle with a vigour and an acutness of criticism worthy of all praise. In special parts of Mr. Darwin's own armour he also finds vulnerable points. The theory of sexual selection, in particular, as developed in the *Descent of Man*, meets with much genuine and powerful criticism, which forms indeed the most successful part of the present volume. Not a few of the facts of natural history brought forward against Mr. Darwin are after all derived, as usual, from the copious admissions of that most candid of writers, leaving us the more bewildered at Mr. Mivart's charges of forcing conclusions, or the "conspiracy of silence." His own special knowledge moreover supplies our author with a strong array of further objections, which suffice to show that the hypothesis must at all events be reconsidered. Mr. Darwin's wide resources must still leave us at all times prepared for a rejoinder which may possibly roll back the tide of war, and it is not true that he has over staked the whole of his system upon the single issue of his theory any more than upon that of natural selection itself. In its bearing upon the human race the hypothesis is certainly seen at its weakest point. It is here that we hope to see the great naturalist able shortly to break ground once more; supplementing, strengthening, or modifying what he has himself propounded as a tentative or provisional theory rather than as the fixed and dogmatic scheme which Mr. Mivart would have us regard it.

The following position gained the first prize in the London Chess Congress of 1862.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—We have to report a general collapse in the demand, and a quiet feeling is now prevailing throughout for *Cotton Goods*. This, no doubt, is chiefly owing to very large contracts previously made to arrive, and which are now in course of delivery; an unfavourable turn in the native exchange, and further the rice harvest, which keeps many consumers in the fields, may additionally account for the change. *Grey Shirtings* and *Yarns*. The large contracts made during the preceding weeks seem to have satisfied the demand, and lately little business has been done, while prices must be given as lower and nominal. For *T. Cloth* there is no enquiry, *Drills* are dull, and *White Shirtings* neglected. There have been small sales of *Turkey Reds, Velvets* are lower, and *Taffachelass* in moderate demand.

Grey Shirtings :—					White Shirtings:—			
7 lbs.	38½ yds.	39 in.	per pce.	$1.62½ to $2.10	60 to 64 reed 40 yds.	35 in.	per pce.	2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	2.00 to 2.55	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb.	0.77½ to 0.87½
8 lbs. 4 to 8 lbs.	38½ ,,	39 in.	,,	1.90 to 2.55	Black Velvets			8.25 to 9.25
9 lbs.	38½ ,,	44 in.	,,	2.40 to 2.90	English Drills 15 lbs. 40 yds,	30 in.		2.80 to 3.00
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.45 to 1.70	Taffachelass	12 yds,	43 in.	2.00 to 2.40
,, 6lbs.	24 ,,	32 in.	,,	1.20 to 1.30				

Yarns.—

No. 16 to 24	per picul...	$30.50 to 35.00	No. 38 to 42 ... per picul... $39.00 to 42.50
No. 28 to 32	per picul...	$31.50 to 39.00	Reverse Twist 16-24 ,, .. $33.50

Woollens.—Since our last we have to report a much quieter state of things, owing principally to an unfavourable turn in the native exchange, which causes deliveries to be very slow. There is still a very fair enquiry for this staple, but as stocks are mostly reduced business is less active, especially as dealers advance only slowly in making fresh contracts to arrive. There is, however, a fall in prices to report on several articles, which will be seen in to-days quotations below. Plain *Mousseline de Laines* have declined half a cent, whilst printed must be quoted 2 @ 3 cents lower, according to assortment. A considerable demand exists for very best *Black Italian Cloth* and 6 lbs. *Blankets* at further advanced rates, but at present there are no stocks of these articles on hand.

Plain Orleans	40—42 yds.	32 in.	5.55 to 7.75	Figured Mousseline de Laine	30 yds.	30 in.	0.27 to 0.33
Figured Orleans	29—30 yds.	31 in.	4.25 to 5.75	Multicolored ,,	30 yds.	30 in.	0.30 to 0.40
Shimagoro	30 yds.	30 in.	4.50 to 5.75	Cloth, all wool plain or fancy	48 in. to	52 in.	0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0.25 to 0.39½	Presidents	54 in. to	56 in.	0.75 to 0.82
Camlet Cords	29—30 yds.	32 in.	5.75 to 7.00	Pilots	54 in. to	56 in.	0.45 to 0.60
Camlets Asstd.	56—58 yds.	31 in.	16.50 to 17.50	Union	54 in. to	56 in.	0.60 to 0.82
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green	6 to 8 lbs.	per lb.	0.42 to 0.48
Plain Mousseline de Laine	—30 yds.	30 in.	0.19 to 0.20½				

Sugar.—There is a good enquiry for both *China* and *Formosa Sugars*, and quotations continue to advance, but owing to advices received from China holders are unwilling to sell even at present prices.

Sugar:—Takao in bag	per picul..	$3.95	China No. 4 Kook-fah ... per picul.. $5.60
,, in basket	,,	$3.70	,, No. 5 Kong-fun ... ,, $5.10
Taiwanfoo in bag	,,	$3.80	,, No. 6 E-pak ... ,, $4.90
do. in basket	,,	$3.55	Swatow ... ,, $3.40
China No 1 Ping-fah	,,	$7.80	Daitong ... ,, $3.40
,, No. 2 Ching-pak	,,	$7.00	Japan Rice ... $2.30 to $2.55
,, No. 3 Ke-pak	,,	$6.30	Kerosene Oil ... $3.80 to $4.00

Kerosene Oil.—Japanese are only supplying their wants by purchases as required for daily consumption, at quotations as given in our last.

EXPORTS.

Silk.—Our fortnightly report dated 26th instant, was to the following effect:

The scarcity of dollars, a rise in the exchange, the depreciation of the native currency, liberal supplies from the interior, and, above all, the growing uneasiness caused by the threatening aspect of political affairs in Europe, have increased the intensity of a reaction, the commencement of which was adverted to in our last. We have now to report a heavy fall in prices resulting in a reduction of about 12 per cent. on cost.

Since the 11th instant, settlements barely amount to 500 bales, including a few small parcels of "filature," and the unsold stock is estimated at nearly 3,000 bales.

The shipments of the fortnight are 953 bales, making the total export since 1st July 14,880 bales, against 5,084 last year for the corresponding period.

	At Exchange 4/1 in London.	At Exchange 5.15 at 6 m.s. in Lyons.		At Exchange 4/1 in London.	At Exchange 5.15 at 6 m.s. in Lyons.
Hanks.—Extra to No. 1	$950 to 980	33/10 to 34/10	94 to 97	Oshiu—Best $900 to 930	32/2 to 33/2	89 to 92
,, Best No. 1 & 2	$920 to 940	32/10 to 33/6	91 to 93	,, Medium to Good $850 to 880	30/5 to 31/6	84 to 87
,, Good No. 2	$900 to 910	32/2 to 32/6	89 to 90	Hamatski.—No. 1 & 2 nom. $770 to 800	27/8 to 28/9	77 to 80

,, C'mon. No. 3	$790 to 840	28/5 to 30/1	79 to 83	,, Medium to Good $900 to 930	32/2 to 33/2	89 to 92
,, Inferior No 4 & 5				Sodai —Good nom $780 to 800	28/ to 28/9	78 to 80

Silk-worms' Eggs.—Holders kept on asking from $2.50 to $5.00 till the departure of the French mail of 23rd instant. Now they seem disposed to commence business, and we hear of $2.10 having been paid for an assortment of annual green. The market is, however, anything but settled, and we are unable to establish regular quotations.

Total arrivals are 950,000 cards against 725,000 last year at the same date. Total shipments amount to 68,000 cards, delivered under the contracts which were made at the beginning of the season.

Since the above was written there has been a somewhat better feeling, but business in much hampered by the difficulty of selling bills and the uncertainty about the rate of exchange. Arrivals are 300 bales, and deliveries about 600 piculs, now in course of inspection. There is scarcely any change to report in prices, except perhaps for Best Kakeda, which are held at over $1,000, and Extra at $1,050 to 1,000.

In Silk-worms' Eggs there is as yet but little doing. A few assortments have changed hands at from $1.80 to $2.10, but there are few sellers at these prices, and it is expected that no very large settlements will take place before the middle of November.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tea.—Business in this article has been rather restricted, as advices received per wire from New York tend towards lower prices being offered, and buyers rather keep aloof unless they meet with decided bargains.

Settlements for the week amount to 3,000 piculs.

Common	$12.00 to 14.00	Fine	$27.00 to 33.00
Good Common	15.00 to 17.00	Finest	34.00 to 39.00
Medium	18.00 to 20.00	Choice	43.00 to 48.00
Good Medium	22.00 to 25.00		[scarce.

EXCHANGE AND BULLION.

Exchange has been very quiet during the week and rates at one time showed signs of weakness, but at the close there has been a sudden reaction, and it is difficult to place Private Paper at all unless against Bank.

Rates close as follows:—

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says:—"I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment, which "gave some to the people, and nothing could exceed their gratitude "and, in consequence, milk, fowls, butter, and horse-feed poured in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The disaffection which first broke out in the southern provinces at Kumamoto has shown itself elsewhere to a rather disquieting extent, and it is evident that a large class throughout the country is in a restiff, and angry, if not actually disloyal state of mind. The infection has spread northward, where, however, it can hardly prove very dangerous, but seems at its worst among the Chōshiu men, who have certainly been listening greedily to Mayebara's accounts of the nation's grievances. The Satsuma men are too much exasperated by the massacre in cold blood of the many of their people who formed part of the Kumamoto garrison, to join any party concerned in the revolt. But, even apart from this, their attitude is said to be one of loyalty, and if they maintain it, there is nothing more to fear than small local collisions here and there—bad things, of course, but not very dangerous.

A translation will be found elsewhere of an article published by the *Chōya Shimbun* deprecating the tendency which the Government shows to withhold all news about the insurrection. That the officials of the public departments should be interdicted from sending reports to the newspapers, is perfectly correct. But, beyond this, as much publicity as posisible should be permitted and even encouraged. The disposition to "keep things dark" is rather a small and mean one, and a Government which is frank and open with its subjects certainly gains more by this course of conduct than it can possibly lose by diffusing the information that some or even many of its subjects show signs of disloyalty. This frankness is always a sign of strength and produces the impression of strength. But, as a simple matter of fact, no Government in the world shows more of it than it is forced by popular opinion to show. It is the *Daily News* and the *Times* which have really furnished the facts on which the present opinion of England on the Turkish question has been moulded. The Government has been miserably ill-informed by its own agents, and sadly stultified by having to acknowledge that reports which characterised as inventions or exaggerations, have proved to be quite true.

So far as the public is concerned, it is impossible to conceive a better argument for the amalgamation of the two opposing Race-clubs than the grievous dulness of the meeting of this week. As a general rule, it is not easy to yawn before dinner, on week days at least. But a large fund of good manners was required to prevent it during the progress of the sport. There was a "tired-eyelids-upon-tired-eyes" look about every one, and half the ponies seemed in no livelier mood. The interval between start and finish invited to repose. All the scenery of the "Lotus-Eaters" rose in the mind unbidden. The grand stand might have been in Sleepy Hollow, for all there was to the contrary to dispel the suspicion. One was reminded—dreadful thought!—of sitting next to X. at dinner. All kinds of slumber-songs and lullabies seemed to float past the ear. The air was heavy as with the breath of poppies, and, when all was over, new arguments against the opium trade were found in the mind. The time passed like the last ten minutes of a sermon. The paddock was like the court of Morpheus. There was no security against falling asleep and waking up in love with the wrong person, like Lysander or Demetrius.

Pray, gentlemen, settle your differences, and let us have some life in the next Spring Meeting. The bare idea of another like this is too dreadful.

It is not easy to imagine a more appropriate fate than that which has overtaken the Race-lotteries. Justice may have tarried, but it has at last put its hand on the shoulder of the culprit.

Nice, respectable things, these! So full of humanities and amenities, so productive of good sport, fair play, and the seemly interchange of gentleman-like courtesies; so graceful, so redolent of nice punctilio, so dainty and choice in attitude and surroundings!

Yet is there some order in things. Somehow or another, and sooner or later—often later, but always at some time—these pretty combinations go wrong and addle. And then what a noisome smell of sulphur comes about! "Odds, noses and perfumes," as Bob Acres might say, where is the chloride of lime?

Well, well, let's say no more about them. They were what they were. There is no necessity to hold a *post mortem*. We know how they lived and why they died. It is well, too, that they died when and as they did. And now, goodman delver, get them away and out of sight. Their remains are not savoury.

Our latest news of the southern insurrection is that the insurgents of the Yamaguchi *ken* set fire to the castle at Hagi, and the town itself. The fire lasted three days and expended itself on the 2nd instant. There are also reports that a fierce struggle took place on the same day between the Imperial troops and the insurgents under Mayebara—with what result is not stated, but it is said that the former suffered very severe losses.

Information has been received from the Telegraph Office here that communication between this port and Nagasaki has been interrupted since 9.30 this morning, and news has also been received by Reuter's agent that the line between Shanghai and Hongkong is broken.

INSURRECTIONARY MOVEMENTS.

From the *Chōya Shimbun*.

NOTIFICATION 136.

It is hereby made known, that as an insurrection has broken out in Kumamoto *ken*, His Majesty the Mikado has given orders for its suppression.

SANJŌ SANEYOSHI,
Prime Minister.

28th October, 1876.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The following telegrams, &c., referring to the progress of the insurrection in the south, are taken from the *Chôya Shimbun.*

A telegram was received from Fukuoka at 5.10 a.m. on the 27th instant, asking if the police might be armed, as many of the *shizoku*, all carrying swords, were assembling together.

Fukuoka, 6 p.m. 27th instant.—The insurgent *shizoku* at Akidzuki have routed the police who were sent against them. Two companies of the garrison troops have been sent to Ishibitzu, as there are signs of the *shizoku* of Kurume and Yanagawa joining the insurgents.

Kumamoto, evening of the 27th instant.—Some eighty-four of the insurgents, including several of their leaders, have been killed. The others show signs of yielding. The insurgents at Akidzuki show intentions of attacking Kokura, and it is reported that the *shidzoku* of Yamaguchi *ken* (Choshiu) may also break out in insurrection.

Eight telegraphic messages was received by the Army Department at Tôkiô from various places in Kiushiu between 11 p.m. on the 27th instant and 2 a.m. on the 28th, advising that at Akidzuki, Toyotsu, Fukuoka and other places, some 500 to 1,000 *shidzoku* are in rebellion.

A telegram has been received from the Governor of Fukuoka *ken* that notwithstanding all possible care had been taken of the wound of the Governor of Kumamoto *ken*, it was of no avail, as he died at 11.40 a.m. on the 27th instant.

It is reported that the *shizoku* of Saga have broken out in rebellion. Since yesterday (28th) afternoon no message could be sent through the telegraphic wires further than Hiroshima, it is therefore feared that the *shidzoku* of Chôshiu have also risen in rebellion and destroyed the communication.

The following from an extra published by the *Hôchi Shimbun.* There is ground for fear that the rising is assuming grave proportions, but it is satisfactory to observe, by one of the *Hôchi's* paragraphs, that the Satsuma clan is assisting and not opposing the Government.

A large number of young *shizoku* of Saga who came to Tôkiô as students returned to their province as early as the report of this disturbance reached the capital.

On the evening of the 27th instant some person cut the telegraph wires in the capital.

On the 27th at 11 p.m. a telegram from Yamaguchi *ken*, announces that Mr. Mayebara, of Chôshiu, has reported to the authorities that he has received 3,000 rifles and 8 large guns which had been sent to him by Saigo of Satsuma.

A message was received from Yamaguchi *ken* on the 28th instant, that the *shizoku* had assembled in large numbers at Hage. Officials were to be sent to treat with them and to endeavour to persuade them from creating any disturbance. It was reported that the *shizoku* intended attacking Yamaguchi, where a force was ready to oppose them.

The following were published yesterday morning in an extra of the *Chôya Shimbun.*

His Highness Fushimi-no-Miya, who has been absent from Tôkiô for some time on a tour of inspection of provincial garrison troops, has returned in haste to the capital. This leads to the supposition that he will be appointed to the command of the troops sent against the southern rebels.

A telegram which was despatched from Kurume at 11 a.m. on the 29th, says that the present insurrection is widely spread, but it has not yet become so serious or extensive as that which took place at Saga some time ago.

A telegram from Kokura dated 29th instant, 9.30 a.m., says:—As the insurgents fail to find adherents to their cause at Akidzuki, they show signs of abandoning all further opposition.

The following telegraphic advice was received from Kumamoto at 2.15 p.m. on the 29th instant:—Some of the Kumamoto insurgents have fled, others have been killed, and there is every appearance of their force being disbanded. The rebels at Akidzuki have also been defeated. Still the *shizoku* of other places are taking alarming interest in the progress of the rising, which can, however, be easily suppressed, if assistance is sent at once, without it requiring any great force for the purpose.

It is rumoured that the *shizoku* of Kôchi *ken* (Tosa) have also broken out in rebellion, and it is further supposed that the members of the Risshi Society have joined them.

The telegrams received by the Government since the 28th intant having been sent in cipher, the public in general have been unable to comprehend them.

[We are quite at a loss to understand this announcement. Surely the contents of a telegram, either on Government or private business, are not divulged by the employés of the Telegraph Department.—Ed. *J.M.D.A.*]

Some alarming reports have arrived from Wakamatsu and Yonezawa.

From the *Nichi Nichi Shimbun.*

The following telegram was received from Kumamoto, dated 8 a.m. on the 28th:—As the insurgents at Kumamoto have been suppressed, two companies of this garrison have been sent to Kurume.

A message from Hiroshima dated at 7.25 a.m. on the 29th instant says:—As there are no signs of disturbance at Hiroshima a company from this garrison has been sent to give assistance to that of Yamaguchi.

A telegram was received from Yamaguchi, dated the 29th instant, and stating that a party of Mr. Mayebara's volunteers assembled at Hagi, in Chôshiu, and ordered the country people to provide them with rations, as they had mustered with the intention of suppressing the rebellion. The Governor of Yamaguchi *ken* (Chôshiu) sent and requested these volunteers to disband, but his orders were taken no notice of, and accordingly, he himself, backed by two companies of the garrison troops, proceeded to Hagi to try and disperse them.

From the *Chôya Shimbun.*

The troops of the Hiroshima and Osaka garrisons have been sent out to suppress the insurgents of the Yamaguchi *ken* (Chôshiu.)

From the same.

There is the rumour abroad that Mr. Mayebara of Chôshiu had got together some 200 men, and the Governor asked him with what intent this had been done. Mr. Mayebara, replied that he was preparing for an attack by the Kumamoto garrison. But as his attitude seemed suspicious, the Governor put his party to rout by some of the troops of the garrison and they have fled to Sekishiu.

From the same.

It is said that an order has been given by the Government to the Governor of Yamaguchi *ken* to deprive Mr. Mayebara of his rank.

From the same.

It said that some skirmishes have taken place at Tokumaya in Chôshiu.

From the same.

Since the 29th instant we bear that certain disturbances have taken place Fukuyama in Bingo.

From the same.

Yesterday the 30th instant, 102 police constable and 16 police officers of Tokio were despatched in the *Korio Maru* to Yamaguchi.

From the same.

We hear that between the night of the 29th and 30th instant, some 200 policemen are said to have sent from the capital to the North Eastern Provinces.

From the *Nichi Nichi Shimbun.*

On the insurgents of Akidzuki hearing that the troops of the garrison were pursuing them, some threw away their arms and fled, while others submitted to the Imperial forces, and there is no more fear of their rising again.

From the *Hôchi Shmibun.*

The men-of-war *Amagi*, *Hôshô* and *Unyôkan* left Yokohama for the south yesterday, the 30th instant.

From the same.

A message that left Saga 5 a.m. on the 28th announces that the insurrection at Kumamoto has had no effect in that part of the country, and that the *shizoku* are peaceful.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

From the same.

A telegraphic report which was sent from Fukuyama, in Bingo, yesterday the 30th, announces that some forty rioters rose and set fire to the district office.

From the *Akebono Shimbun*.

The province of Tosa is quiet and there is no apparent disposition to rebellion.

From the *Nichi Nichi Shimbun*.

NOTIFICATION No. 103.

(To Shi, Fu and Ken.)

The Government has been informed by telegraph that on the 28th of this month Mayebara, Yokoyama, Okudaira and others, numbering about one hundred, banded together, and when the Governor of Yamaguchi ordered them to disperse they refused to do so, but after obtaining possession of certain Government money they retired to Sekishiu, and on this account the Government has ordered their arrest by the authorities of Yamaguchi *ken*. Therefore whenever any of this party are found in any other *ken*, they must be arrested after identification.

SANJÔ SANEYOSHI,
Prime Minister.

30th October, 1876.

From the *Chôya Shimbun*.

It is rumoured that the reason that Mr. Mayebara went to Sekishiu was not that he might proceed thence to Shimane *ken*, but that he might embark thence to Niigata, and for this reason the Government is sending a strong police force to the latter place.

From the same.

The insurgents at Fukuyama, in the province of Suwô, are about 150 in number.

From the same.

At 3 p.m. on the 31st ulto. a telegram arrived from Kumamoto, which reported that most of the insurgents in that *ken* had been taken prisoners and peace was restored.

From the same.

A request has been made by the Kagoshima *ken* to permit the police of that *ken* to wear swords while on guard, so that they might be prepared for all contingencies, but Government has not given assent to this request.

From the *Hôchi Shimbun*.

One battalion of infantry and a company of artillery from the Osaka garrison, left by steamer from Kobe for Mitajiri, in Choshiu, on the 31st ultimo.

From the same.

Messrs. Sasaki and Nakashima, both members of the *Genro-In*, have started for Kôchi *ken* (Tosa) to warn the *samurai* there against rising in rebellion.

From the *Nichi Nichi Shimbun*.

The authorities of Kagoshima *ken* have prohibited the admission of the men of any other *ken* within its boundaries. This step has very likely been taken to prevent strangers from stirring up a revolution there, and the regulation is stringently enforced, as residents of other *ken* are not allowed to pass even on business.

From the same.

The following order has been given by the *Daijôkwan* to the Yamaguchi *ken*:—*Jushi** Mayebara of your *ken* has been gathering together a party and planning an insurrection, he has therefore been deprived of his rank.

From the same.

Many *shizoku* and their families of the Saga, Kumamoto and Kagoshima *ken* are returning to their homes from Tôkiô, but it is believed that anxiety about their property is the only cause for their so doing.

From the *Chôya Shimbun*.

With the exception of those in the Kagoshima *ken*, there exists a general discontent among the *samurai* of the island of Kiushiu.

From the same.

In the provinces of Inaba and Hôki there are certain *samurai* who are exciting the people. It is believed that they are members of Mr. Mayebara's party.

From the same.

Again, yesterday, the 1st, ten police officers and 100 police constables started from Tôkiô for Yamaguchi *ken*.

From the *Hôchi Shimbun*.

On the 30th ultimo, at about 9 a.m., a company of Mayebara's party was advancing from Sekishu towards Hiroshima, and the insurgents of Matsuye in Unshu were also preparing to make an attack on the branch *Koncho* of Shimane *ken*. They are about 600 in number.

From the *Hôchi Shimbun*.

It is rumoured that some thirty *samurai* of the province of Aidzu have lately disappeared from that locality.

From the same.

We hear that a telegraphic report was received yesterday, the 1st instant, to the effect that a disturbance has arisen in Awomori *ken*.

From the same.

Some thirty men were discovered holding a meeting at the Awoyama cemetery at 2 a.m. on the 1st instant, but when some of the police force made their appearance they immediately dispersed. Since then all the powder stores in the neighbourhood of Tôkiô have been very strictly guarded.

From the *Chôya Shimbun*.

Meetings which were held at Niigata were dispersed by order of the Governor, but notwithstanding this they have been resumed since the 29th instant.

From the *Nichi Nichi Shimbun*.

An order was issued by the *Daijokwan* to the different Departments in the 1st instant, to the following effect:—

The Departments are strictly prohibited from publishing in the newspapers any facts concerning the insurrection of Kumamoto *ken*.

From the *Mainichi Shimbun*.

Since the evening of the 31st ultimo, police sergeants and constables have visited all the native ships entering the harbour, in order to inspect the passengers arriving by them.

From the "Japan Mail Daily Advertiser."

Monday, 30th.

A launch took place on Saturday last from Messrs. Whitfield and Dowson's yard of a small steamer, named "La Mouette," which has been built by that firm for the Messageries Maritimes. The vessel will have ample accommodation for passengers proceeding on board the Company's steamers, and for valuable cargo, such as silk, &c. The length of the vessel between perpendiculars is ft. 96.10; beam inside planking ft. 14.2, and depth of hold ft. 6. 1. She carries a single engine, the cylinder of which is 10½ in. diameter with 8 in. stroke, and is expected to steam 7½ knots.

It is rumoured that the Government has ordered the Mitsu Bishi Company not to run their usual steamers to Shanghai viâ the ports.

The capital is patrolled by troops to prevent signs of disaffection.

The *Shinagawa maru*, with a large quantity of munitions of war on board, left Shinagawa at 6 p.m. on the 28th inst for Nagasaki.

Tuesday, 31st.

From the *Hôchi Shimbun*.

The Mikado has sent a high official of the *Kunaisho* and a medical man to visit the wounded General, Governor and Vice-Governor of the Kumamoto *ken*, and His Majesty has also sent presents to them through the officials who will leave in the Mitsu Bishi Co.'s steamer *Tôkai Maru* to-day, the 30th instant.

* Denomination of rank.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

From the *Akébono Shimbun.*

On the 29th instant the *Ôkurasho* paid over 300,000 *yen* to the Army Department, which sum will be forwarded at once to the Kumamoto garrison.

The foreign residents of Hakodate have all been thrown into a state of alarm by the issue of the following notification.

"As birds of the crow tribe do enormous injury by ravaging the fields, the Branch Office of the Bureau of Agriculture will set poison for these birds and for bears and wolves about its experimenting grounds. Should the carcases of any animals which have died from the effects of poison be found, they must at once be burned or deeply buried.

Make this generally known."

SUGIURA MAKOTO,
Official of the 3rd rank in the Kaitakushi.

The Hakodate residents, both native and foreign, very naturally fear that the poison may have a wider range than that intended by the notification, and are restricted in the meantime to a diet of beef and fowls, which certainly forms a "*cuisine un peu bornée.*" There is no security against untoward accident so long us this notification remains in force, and it demands the prompt attention of the Head of the Department.

From the *Hôchi Shimbun.*

The Government has forbidden the transmission of all native messages by the telegraph any further than Okayama in Bizen.

From the *Akébono Shimbun.*

At nine o'clock on the evening of the 28th instant a fire broke out at Asakusa, Tôkiô, which destroyed about 200 houses.

From the same.

Although the 29th instant was a holiday, business was actively carried on in the Departments for Home Affairs and the Army, and at the head-quarters of the police.

From the *Mainichi Shimbun.*

The Government has informed the Mitsu Bishi Company that it will probably require the use the *Shinagawa Maru*, *Tôkai Maru*, *Kanagawa Maru*, *Tamaura Maru*, and *Taihei Maru*, bolonging to the above Company, and therefore orders them to have above vessels ready for Government service at a moment's notice.

We have much pleasure in publishing the following correspondence, copies of which have been handed to us by the U. S. Consul-General.

Yokohama, October 10th, 1876.

T. DAVIDS, Esq.,
Tôkiô,

DEAR SIR,—I have been requested by T. Kawaji, Esq., Japanese Chief of Police, Tôkiô Police Department, to express to you the cordial thanks of the Department, for the kind and brave act performed by you in rescuing from drowning a Japanese subject named Miydji Kichitaro, on the evening of the 28th September ultimo.

I have great pleasure in fulfilling the request of Mr. Kawaji, and to add to his thanks the expression of my high appreciation of your manly and courageous conduct.

I am, Sir,
Your obedient servant,
(Signed) THOS. B. VAN BUREN,
U. S. Consul-General.

Tôkiô, October 13th, 1876.

General THOS. B. VAN BUREN,
United States Consul-General,
Yokohama, Japan.

SIR,—I have had the honor to receive your favour of the 10th instant, whereby you convey to me the thanks of the Tôkiô Police Department, through its Chief Mr. Kawaji. In reply, I beg that you will tender to the Department my sincere acknowledgements for its kind appreciation of a simple act of duty to a fellow-creature; and, at the same time, allow me to offer you my persona thanks for your generous recognition of the same.

I have the honor to be,
Sir,
Your most obedient servant,
(Signed) THADDEUS DAVIDS, Jr.

Wednesday, 1st.

M. Berland gave his first entertainment at the Gaiety Theatre last night, which was not so well attended as the nature of it merited.

The performance commenced with a show of legerdemain by Madame Berland. All the tricks were neatly and cleverly done, but too much time was occupied with them. These were followed by the *Legend of Madame Angot* sang by Miss Helene Berland, aged seven, with a confidence and appropriateness of gesture quite beyond her years. After a short interval M. Berland appeared in his representation of different characters. The various changes were made with great rapidity and the impersonation of well known public characters assumed with wonderful truth. The great command of facial play which M. Berland possesses was particularly well shown in his representation of "A gentleman reading his newspaper". Then followed the comedy of "*Le Talisman du Père Francois*, which was capitally acted by M. and Madame Berland, and concluded a performance which is extremely well worth seeing.

M. Berland was assisted by the Amateur band, who not only played during the intervals but at such other times as the entertainment required, rendering most effective service throughout; but it is in no spirit of detraction that we recommend that they should practice more together, and that special effort should be made to play more correctly in tune.

We are afraid that M. Berland has fixed the price of admission too high to secure full houses in these hard times, and think that a reduction for at least some part of the house would secure a better attendance, which the entertainment offered fully deserves.

From the *Hôchi Shimbun.*

As there are signs of a fall in the market for silk and silkworms' eggs, the First National Bank and Mitsui's Bank are prepared to place one million of *yen* at the disposal of those who will deposit these commodities as securities.

Thursday, 2nd.

From the *Chôya Shimbun.*

The Store house of the Army Department at Kajibashi, Tôkiô, was destroyed by fire at 9 p.m. on the 30th ultimo.

From the same.

Mr. Oyama, the Governor of Kagoshima *ken*, is still at Tôkiô.

From the same.

Ten police officers and 104 constables started overland from Tôkiô for Niigata at 2.10 p.m. on the 31st ulto.; and on the same day five police officers and 50 constables left the capital for Chiba *ken* (Province of Kazusa).

From the *Hôchi Shimbun.*

The Government has given orders that not even those who are duly licensed, will, for the present, be permitted to buy, sell or transport any fire arms or munitions of war excepting on service for the Army or Navy Department.

From the same.

Mr. Kondô, a seventh class official of the *Gainushô*, has been appointed to the office of agent for the Japanese Government at Fusan in Corea.

From the same.

Since some eleven *samurai* cut down two policemen at Tôkiô the police are paying the strictest attention to the streets and rivers of the capital. Three suspicious looking fellows were arrested on the 30th ultimo at Akasaka, Tôkiô.

Original from UNIVERSITY OF CALIFORNIA

From the *Hôchi Shimbun*.

The *Chugai Hiôron* (formerly the *Hiôron Shimbun*) having been suspended, the proprietors of the same intend to publish another newspaper during this month, to be called the *Bummei Shinshi*, ten copies of which are to be issued monthly.

Friday, 3rd.

To-day being the birthday of the Mikado, His Majesty will review the Imperial troops at the drill grounds near Hibiya-gomon. In the evening His Majesty will receive the foreign representatives at dinner at Hamagoten. The Consuls, both at Tôkiô and Yokohama, will also be entertained at dinner by the *Fu* and *Ken* officials.

The telegraphic news received from Europe within the last forty-eight hours is perplexing and conflicting. On the one hand it is said that Russia has sent an ultimatum to Turkey, and, on the other, that the Manchester market is strong, if not rising. We give both reports for what they may be worth, but place most credence in the latter.

We have been advised this morning by the agent of the Great Northern Telegraph Co., that the cable between Shanghai and Amoy is interrupted.

Various telegrams have been received at Tôkiô advising that disturbances have broken out among the *samurai* of Niigata, Awomori and Sendai, who have probably been emboldened by the Southern *émeute* to rebel. The Government is doubtless fully able to cope with these risings, and it is reported that H. I. H. Higashi Fushimi no Miya has left Tôkiô to take command of the troops in the North.

Saturday, 4th.

Yesterday being the birthday of His Majesty the Mikado, salutes were fired by the men-of-war in harbour and by the fort at Kanagawa. The native town was decorated with flags, and at night the *Machigaisho* was illuminated. In consequence of the day being a general holiday there was no issue of native newspapers.

THE INSURRECTION.

THE news regarding the insurrection in the South does not improve. Last Sunday evening there was good ground for hoping that the worst was over, but the week was but a day or two old when it became evident that the men of the Yamaguchi *ken* (Chôshiu) were making common cause with their not very distant neighbours of Higo. The movement in neither of these *ken* was unexpected; indeed, nothing can be more certain than that the Government has long anticipated something like the trouble which has now broken out. MAYEBARA, who is taking a prominent part among the Chôshiu men, has been regarded with great suspicion for many months, and his dissatisfaction must be deep-seated, for he took an active part in the operations which resulted in the Restoration, and was willingly and prominently identified with most of the men now in power. The leaders of the movement at Kumamoto seem to have been three fanatics of no great note or position, whose chief apparent grievance consisted in the innovations made by the Government in the old customs of the Empire. First deprived of their swords, then ordered to dress their hair in foreign fashion, and, lastly, threatened with the extinction of their pensions, they devoted their lives to a headlong protest against the Government of the day, and, after doing a considerable amount of mischief, fell by their own hands or the weapons of their pursuers. Their adherents allege three special grievances as reasons for their own course of action. First, the capitalization of the pensions of the nobles and gentry; second, the closing of some place of assembly where they were in the habit of discussing local or imperial affairs; and, third, the transmission to the Finance Office of a considerable sum of money, which had long been lying in the provincial chest, and which, they pleaded, ought to have been expended, according to the custom of other *kens*, for local purposes. How far these grievances afford sufficient justification for taking up arms against the Government, is a question which will be answered by each man according to his views of the obligations which constituted authority imposes upon the individual. But it is obvious that no administration can carry out a policy involving a wide departure from consecrated but obsolete practices, if the use of fire and sword is to be regarded as a proper or pardonable protest against its orders.

The energy displayed by the Central Government in dealing with the insurrection at Kumamoto contrasts forcibly with the supineness of the local civil officers, and the culpable laxity of military discipline which permitted a surprize wholly impossible under proper, or even ordinary, vigilance. It is certain, as we have said, that the Government anticipated more or less trouble to arise from its measure for the capitalization of incomes and pensions, which is the true cause of all the present disaffection; and how, under these circumstances, a garrison of some thousands should have allowed itself to be surprized, thrown into absolute confusion, and decimated by a hundred and seventy undrilled, though, perhaps, desperate men, is utterly inexplicable except on the hypothesis of a lamentably loose military discipline. Be this as it may, however, troops, policemen, ammunition and money have been despatched to all the districts in which disaffection has shewn itself in overt acts, and it is not easy to imagine a cause more hopeless and desperate than that which has arrayed several small bodies of undisciplined men, recognising no one leader and following no preconcerted and unifying plan, against a military organization like that which is wielded by the Government,

Digitized by Google
UNIVERSITY OF CALIFORNIA

Not the less grievous, however, is it that civil strife should again have burst out in the Empire. All appearances warranted the belief a few months ago not only that the power of the *samurai* was thoroughly broken—which indeed, it may be still said to be—but that their loyalty could be relied on, and that the Empire was for ever free from the danger of such disturbance as they have hitherto known only too well how to create when their pride was wounded or their interests were threatened. But the late measure for capitalizing their incomes has touched them to the quick, and they are in no humour to recognize the fact that their former claims on their masters, or on the state which has taken over the obligations of their masters, are no longer what they were. The *samurai* were maintained by their masters on condition that they did such military service as was required of them, and from the performance of this service they are now freed. The changed conditions under which the Empire now exists demanded that the whole power of the state should no longer be, in the last appeal, in the hands of a class which was absolutely uncontrollable so long as it held the power of the sword, and it was a most wise and far-sighted measure which recruited the army from the ranks of the people. The measure which made the incomes of the *samurai* terminable instead of perpetual, was a harsh one; indeed, no pleading can free it from the taint of spoliation. But, on the other hand, no one can plead that a state is to be held in perpetual bondage by any one class of its subjects, and that every scheme of reform, progress, and improvement is to be thwarted on account of claims which lost half their validity when the services which they implied were dispensed with.

The travail of this Empire in its struggle between the old and the new order of things is yet far from being terminated. The marvel is that it has not been more severe, and more full of lamentable incident. It is easy for us who have worked out all these problems, in hundreds of years of strife and bloodshed, amid the arbitrary acts of sovereigns and desperate struggles of their subjects, to see how much the Japanese have yet to learn and to do before they are even safely on the road which has led Europe to her justly boasted triumphs of civilization. Nor is it less than right that foreigners should call attention, as occasion demands, to what seems unjust or irrational in the conduct of this Government towards its people. But not the less is it our duty, if we pretend to sit as judges, to administer a strict justice, and to acknowledge that epigrams are one thing, and judicial sentences other and very different things.

The following Notification has been issued by the Prime Minister.

NOTIFICATION No. 106.

(To Shi, Fu, and Ken.)

It is hereby notified for your information that the Minister for War has reported that the insurgents of the Kumamoto *ken* having been pursued, in compliance with His Majesty's commands, by the troops of the garrison of that place, have been either taken prisoners, or have put an end to their own lives, and order has therefore been restored in that *ken*. He has also reported that information has been received from the garrison at Akidzuki, that the insurrection at that place has also been suppressed.

(Signed) SANJÔ SANEYOSHI,
Daijô-daijin.

30th October, 1876.

SPIRIT OF THE JAPANESE PRESS.

A PLEA FOR PUBLICITY.

(Chôya Shimbun.)

When the spirit of strife arises and begins to diffuse itself among a people, when the report of cannon is heard, and rumours of war are afloat, men wonder, and doubts and fears arise in their minds. These reports being followed with shadowy surmises, the exact truth becomes difficult to ascertain, and the apprehension and confusion which they cause trouble men's minds and disturb that calm in which we all delight to live. Under these circumstances the Government may issue notifications to dissipate this anxiety yet they produce but a slight effect. There surely must be some other way of dispelling all these apprehensions!

Yes, there is! It is to permit the press to make known the actual state of affairs.

When Spain sent the Invincible Armada—the famous fleet which consisted of 130 ships—it was thought that its might was sufficient to conquer the whole of England. And owing to the fear caused by the expected attack, the English were in such a state of confusion that they could hardly take food, rest, or do any work.* In this crisis various rumours went abroad in England, such as, the enemy had destroyed the English fleet, or they had landed at Dover, or they were sailing up the Thames and about to attack London, etc. These reports caused the greatest confusion in the minds of the English, and the Government sought some plan to prevent the rumours from spreading. And this is what it did. It permitted newspapers to be established and to publish all the facts connected with the intended invasion, and this greatly relieved the minds of the people. Can it be doubted then that newspapers are of great service to a nation?

Three years ago, on the outbreak of the Saga insurrection, the Government, fearful that the rumours regarding it might cause anxiety, prohibited the publication of all news of it in the newspapers. But, for this very reason, the people were all anxiety, doubt and confusion, and many untrue reports were put in circulation. Shortly afterwards the Government notified that all true reports could be published in the papers, and the anxiety of the people at once disappeared. This step was similar to that taken by the English Government under the circumstances already mentioned.

There is now unfortunately an insurrection in the South, but it is not of such a nature as to cause any apprehension, and will be quelled in a few days. But we fear that false reports will get abroad among the people if our Government fails to act like the English Government, and prohibits the publication of actual facts. We say this, although we believe that the men now in power have their eyes upon this point.

THE ÉMEUTE OF KUMAMOTO.

(Hôchi Shimbun.)

No war carried on without a definite appellation has ever been successful.

Why do men appeal to fire and sword at the risk of their lives! Either to advance their personal interests, or from the excitement produced by anger, which bids them forget the love of life. Or, again, from a strong determination to follow the dictates of reason, regardless of consequences. From the remotest times all insurrections have had their origin in one or other of these causes.

Now to the men who carry on hostilities for the first cause, there is always a danger that they will lose their lives, so that they seldom encounter danger with courage, and all men who possess common sense, or enough of it for the conduct of their own affairs, would be ashamed to join them. Thus they would stand alone, would gain no adherents, and would inevitably fail in their attempts.

Rebellions which originate in feelings of anger are usually characterized by great haste, and thus no time is given to the formation of good plans in order to carry out the desired object.

* While we entirely agree with the writer's argument, we have to tell him that he is utterly wrong in his facts. The English met the danger which threatened them with the greatest spirit and enthusiasm. Fifty thousand men guarded the person of the Queen. London alone supplied ten thousand, and every town in England furnished its quota. One hundred and eighty vessels were fitted out to encounter the Armada, and long before the storm dispersed it, Drake and Howard had given the Spaniards some lessons they have never forgotten. The heart of England never failed or quailed for one moment under fear of the Spanish fleet, and if the Spaniards had landed, not one of them would ever have returned home. Of this the writer may be entirely sure.—As regards the newspapers, there were no such things in those days. The whole population of England could hardly have numbered more than five millions, very few of whom could read or write.—ED. J. W. M.

Original from UNIVERSITY OF CALIFORNIA

And though the first advance may be violent, still, as the movement rests on no solid foundation, its force is soon spent; and further, the object being to gratify the passion of anger, the cause attracts no adherents. Thus wars originating only in anger cannot succeed.

But rebellions succeed which originate in a strong disposition to follow the dictates of reason. All the adherents are convinced that justice and reason are on their side, and thus they fear neither fire nor sword nor death, and so weak men become as lions, and no sacrifice is considered too great for the cause at stake. The more instructed join them because it is the cause of reason, and the ignorant in order that they may acquire honour. Thus there is no fear of collapse from want of sufficient external assistance, and when men move in such a cause, the matter cannot be dismissed with a sneer, nor can the movers be regarded as traitors.

When a revolution originates in the desire to follow reason, a good name clings to it, and a good title is a mode of making known to the world that the cause for which the standard has been raised is a good one. Thus a war without a name is one either waged on the ground of personal interest, or of the excitement of anger.

Now, has the present insurrection in the south any name? We know of none, and this being so, it must have had its origin either in the attempt to gratify some present interests, or to give vent to sudden anger, and we are strongly inclined to think it has its origin in the latter cause. We repeat that a revolution which is not based on reason never succeeds and one which is the mere vent for anger never lasts.

We have published the reports of the insurrection as they have arrived, and some of them have doubtless been false. Among these is that of Saigo's sending 3,000 small arms and 8 large guns to Mayebara of Choshiu. In all probability this was invented for the purpose of inflaming the minds of people, for Saigo is a man of great sagacity and doubtless knows that as this insurrection bore no name it would not succeed. Under these circumstances our readers would do well not to believe all these reports until they come from better authority.

The Kumamoto Emeute—The Leaders.

(Nichi Nichi Shimbun.)

As we mentioned in a previous issue, the men who headed the rebellion at Kumamoto, are members of the *Jimpu* society. Their leader was a man of some seventy years of age, Uyeno by name, and under him, as seconds in command, were two men named respectively Kaya and Ono. All were fanatical adherents of the cause *Sonno joi* (Honour the Emperor and expel the foreigners). They argued in this manner. Our country differs from all other lands, in that it is the country of the gods, and for this reason it should not even for a moment be held to rank below any foreign land. But diabolical spirits now prevailing are bent on abolishing customs which have been cherished and observed from the time of the gods, and on having our people imitate foreigners. These facts cause us the deepest sorrow. Some time ago we were deprived of our most precious swords, and now we are ordered to cut off our top-knots of hair, a fashion which has come down to us from the divine era, and to wear our hair in the foreign style. It remains for us therefore as the best thing we can do, to use our swords in the houses of the officials who imitate foreigners. This alone is worthy of men of our class."

Holding these views, Uyeno and Kaya dressed themselves in the style of the old Japanese warriors, armed with sword and halberd, having previously assembled large numbers of the *samurai* on the night of the 24th inst. They attacked boldly, struggled hard throughout the contest, and died in the manner which they thought beseemed them best. Ono fought throughout the night and, with many others, committed suicide on the following morning. The remainder of the insurgents fled to Akidsuki and Kokura.

These men were amongst the most obstinate of those who clung to the old customs, for the members of the *Jimpu* Society used to say "An eagle will not eat grain even when starving, nor will a *samurai* pursue trade or any like calling even to save his life." Before engaging in any enterprise they always consulted the oracles of such gods as Ten-sho-ko, Daijingu, Hachiman and others, and doubtless did so on the present occasion before leading the insurrection. Yet, being such men as we have described them, they had no great objects in view, and simply led this insurrection as a vent to their own anger, and we can now only express our concern at the death of those officers and men of the garrison who lost their lives in resisting them.

JAPANESE HERALDRY.

By Thomas R. H. McClatchie,
H. B. M.'s Consular Service, Japan.

Read before the Asiatic Society of Japan, on the 25th October, 1876.

In almost every land where feudalism has existed, Heraldry has enjoyed distinguished honour and careful attention. The annals of every European country, at least, will show conclusively that the "nobyl and gentyl sciaunce," as old Heralds delighted to term it, has become so bound up and intimately connected with History, that the two are hardly separable. Although the fanciful symbols of Heraldry have not as yet been regarded, in Eastern climes, with the same amount of consideration as amongst the nations of the West, it is nevertheless well known that the germs of the science exist, and perhaps have only lacked the fostering influence of advancing civilization in order to attain to a full growth. Japan, where the feudal system has flourished for an extraordinarily lengthy period, is no exception to this rule, and it is of Japanese Heraldry that this paper proposes to treat.

In comparing Japanese with European Heraldry, it will, as might naturally be expected, at once be seen that the former is remarkably deficient in rule, variety of style, and general character of treatment. So meagre, indeed, is it that it can hardly be deemed worthy of comparison except with the very earliest Heraldry of the West. It is allowed by Heralds that before the adoption of regular coats-of-arms there existed in Europe merely what were termed Badges, that is, "figures or devices assumed for "the purpose of being borne either absolutely alone, or "in connection with a Motto, as the distinctive cognizance "of an individual or a family." Up to the present time Japanese Heraldry has advanced no farther than this primary state. No such thing as a coat-of-arms proper has ever been known in the country, and the only distinctive marks hitherto in use have been Badges and Crests. This is, in a great degree, owing to the fact that the shield, on which in Europe the arms of the bearer were blazoned, has never been in vogue in Japan. The only piece of defensive armour at all resembling it used in Japanese warfare was a large screen of wood, fixed in an upright position by a moveable rest at the back, so as to form a protection for archers. The smaller shield for the arm would have proved a serious encumbrance to a warrior, as the long Japanese sword is two-handed. Thus, then, the only place where the distinguishing mark could be borne was either on the helmet or on the breast-plate, and in this way crests and badges are the only Heraldic insignia here known. The deficiency, however, has partly been remedied by the frequent instances of these devices being marked upon flags or banners of different colours, and it is a curious fact that a large number of these flags could be accurately described by any European Heraldic scholar, in the set phraseology peculiar to his art, so that the shape, colour, etc., of the flag and the device could be correctly delineated from the mere written details. But as a general rule the Japanese do not adhere to those strict laws regarding the combination of metals and tinctures observed in Western lands; they care but little how often the colour of their symbols may be altered, provided only that the general outline of the device be preserved; and this alone is quite sufficient to show that their system of Heraldry is as yet far from perfect. In spite, however, of their deficiency in regard to these most essential points, they still possess various rough laws and are guided by certain usages which show that there exist, without doubt, the rudiments of a system that may eventually be matured into something approaching more closely to regular Heraldic art.

How and when Badges first came into use in Japan is a matter enveloped in considerable obscurity. The popular tradition seems to be that they took their origin from the patterns embroidered upon, or woven into, the state garments of the old court nobles at Kiyoto, and in support of this theory there is adduced the fact that the Chinese character used in writing to express the word Badge or Crest (no distinction being made between the two) is a compound of two other characters signifying "thread-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

pattern" or "thread-writing." The embroidered patterns alluded to were generally circular, and hence it comes to pass that nearly all Japanese Heraldic devices are more or less circular in shape. At the very first, a difference was made in the size of the Badge, according to the rank of the wearer. Those of nobles and officials of high position were no less than three inches in diameter, while subordinate officers and persons of lower rank used smaller ones, down to the ordinary gentry, in whose case the diameter was but one inch in length. In latter times, however, the Badges were very seldom borne larger than the size last-mentioned, except when blazoned on flags or on breastplates. A miniature facsimile of the Badge was generally worn on the helmet as well, being placed in the front, and often between the horns of a crescent shaped piece of metal called *tatémono*, used as an ornament thereon. Thus it would appear that the Japanese owned no distinction between a Crest and a Badge. According to the colour of the flag or the breastplate, so did the tincture of the device vary. On a dark-coloured ground it would be blazoned in gold, white, or red; while on a lighter ground, black or red were generally used. Sometimes families of rank assumed to themselves, as a kind of livery, a special colour for their banners or war-surcoats. The "Nihon Gu'aishi," a standard history of Japan, states with regard to Taira no Takamochi that "his "descendants for generations were military vassals (of "the Crown). They used a red flag." And again, speaking of Minamoto no Tsunémoto, it is remarked in the same work that "his descendants were military vassals "from generation to generation, and they used a white "flag." The two warriors to whom allusion is here made lived in the early part of the 10th century, and were the founders of the two rival families of *Hei* and *Gen*, or *Taira* and *Minamoto*; and these colours were constantly displayed, in after years, in civil conflicts that caused as much bloodshed as the English wars of the Red and White Roses. It is, too, a well known fact that these two families had also their distinctive cognizances, and the Badges of many of their chief retainers have likewise been handed down to posterity, so that it would appear to be a perfectly reasonable conjecture that a kind of rude Heraldry had existed in Japan far earlier than the year 900 A.D.

In Japan, as in European countries, the badges were at first assumed at will by anyone wishing to select for himself and his family some distinguishing mark. In later times, apart from such assumption, there are to be found instances of badges being conferred by a chieftain upon such of his retainers as had distinguished themselves by bravery in fight or by some other deed of merit. As a general rule, however, each man selected his own, and this custom has continued until the present date, so that it is by no means uncommon to see members of the same family wearing different badges. A good instance of a badge being "conferred" is to be found in the history of the family of Kumagae Naozané, one of the chief-retainers of the Minamoto clan. At the battle of Ishibashiyama, near Hakoné, in 1181 A.D., Minamoto no Yoritomo was signally defeated by the Taira forces, and fled away, hotly pursued, accompanied by only two or three of his followers. He concealed himself in a hollow tree on the mountain, to avoid the enemy's scouts, and it is said that one of the latter actually thrust his bow inside the tree to ascertain if any one were hiding within it. It is narrated in the "Gempei Sei-sui-ki," or "History of the rise and fall of the Gen and Hei," that "the bow touched the sleeve of Yoritomo's coat of "mail, whereupon he prayed fervently to Hachiman (the "god of war), when as if for a sign, there flew forth from "the hollow tree two wood-pigeons, clapping their wings "loudly." The pursuers, on seeing the birds, gave up the idea that anyone could be concealed in the tree, and a heavy shower of rain coming on at the moment they abandoned the pursuit. The guide-book to the Nakasendô says, in speaking of the town of Kumagaé,—the residence of Naözané,—through which that road passes, that "as a reward for his (Naözané's) services at the "battle of Ishibashiyama, when he concealed Yori-"tomo in a fallen tree, he received from the latter a "curtain marked with the mistletoe and pigeon "badges." It may be mentioned in this connection that a badge so conferred was not always worn by the recipient in preference to the one which might already be possessed by himself; but could be used at option either as the real or second badge. As an instance of the "assumption" of a badge, there may be quoted the origin of that borne by the family of Niwa, holding one of the Northern daimiates. It is said that an ancestor of this family once went out to battle, bearing as a distinctive mark what was termed a *sashimono*, that is, a small rod, fastened into a socket at the back of the cuirass, which was usually adorned with a small flag bearing the badge of the wearer suspended from a slender cross-bar fastened at one end to the main staff. That of Niwa, however, was only ornamented with eight thin strips of metal hanging from it. When the fight was over it was found that no less than six of these had been hewn away, while the remaining two were bent one across the other in the form of the letter X, or a "cross saltire,"—and this figure was consequently assumed by Niwa as his family badge. Another version of the tale, however, has it that the warrior in question killed so many of his adversaries that after wiping his sword, according to Japanese custom, upon the left knee of his wide trousers after each several encounter, the stains of blood eventually left upon the garment two broad lines in the shape just described. This latter explanation is given by some of the former retainers of the Niwa family, and therefore is probably the more correct of the two. Again, the badge borne by a family named Narita, formerly adherents of the above-mentioned house of Niwa, represents two parallel lines drawn through a circle, and extending for some distance beyond the circumference. The founder of this family, so the tale runs, was once engaged in one of the frequent wars on the Eastern marches of Japan, and his provisions having failed, was put to great straits to obtain food,—a battle being imminent at the time. Casting his eyes around, he espied in the mountains a small shrine, and entering this, found laid therein as an offering a bowl of rice and a pair of chopsticks. The pangs of hunger overcame any religious scruples that Narita may have possessed; he seized the bowl and devoured the rice, and refreshed by this timely sustenance, went forth and bore himself gallantly in the fight. In it he earned considerable distinction, and ascribing this to the favour of the deity whose shrine he had invaded, he took for his badge the circle and two lines, as a rough delineation of the rice-bowl and chopsticks. The above quoted instances will suffice to give a general idea of the manner in which crests or badges were conferred or assumed in the ancient days of Japan.

Most of the great nobles, as may be seen by a glance at any Japanese list of *daimiôs*, possessed three badges, whilst those of lower rank had two, and ordinary *samurai* but one, except in some few instances. Of these, one was always termed the *jô-mon* or "fixed badge" of the family, the others being styled *kaë-mon*, or badges worn instead of the chief one, and these were used on occasions when it was not absolutely necessary to appear in full dress. In time of war, the soldiers in Japan always fought in full armour, and then the crest or badge was of course a conspicuous mark whereby to distinguish friend from foe in the battle-field. It was then displayed on the breastplate, the helmet, and the small flag attached to the *sashimono* as mentioned above. It was also marked upon the curtains usually fastened to upright posts so as to form an enclosure around a military encampment. In time of peace, the badge was as now, generally worn in five places on the upper garment, namely, at the back of the neck, on each sleeve, and on each breast. In some instances, however, the number was increased to seven, by the addition of two upon the collar or margin of the garment just over the chest, and in a line with those on the breasts. Apart from the clothing, nearly every article of common use was marked in like manner. The badge appeared on the lacquered hat, the fittings of the swords or spear-shafts, the *norimono* or planquin, travelling boxes, lanterns, etc., of every Japanese gentleman; and, in the case of a *daimiô*, these distinguishing marks were noted down with such accuracy in the lists of nobles, that by the insignia of a train or retinue on any of the highroads, the name and the rank of their lord could at once be determined. Of so great importance was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

this deemed in a country where etiquette required the observance of various details of ceremony when two nobles and their followers met on the road, that there were generally placed in the van of every procession two or three well-informed retainers,—a kind of Heralds, as it were,—whose special duty it was to take note of the insignia of any train coming from an opposite direction, and pass word down their own ranks as to the due ceremony to be observed under the circumstances. These heralds had by no means an easy duty to perform, for they fell into great disgrace if they failed in what was required of them. It was customary in these trains for the whole of the inferior attendants to wear their lord's badge on their mantles, to facilitate recognition by other travellers. On the castle residences of Japanese nobles in the country, and also on their *yashikis* or fortified mansions in Yedo or elsewhere, the badge of the owner was conspicuously displayed. It was placed over the large gateway, the 2nd badges, if such existed, being placed alongside in many cases;—the large tiles at the extremities of the roof-ridge and end beams also were marked with it, and in some cases the whole of the smaller tiles along the edge of the roof were ornamented with the 2nd badge. It was not very usual to place the chief badge on these smaller tiles. If a *Daimiô* changed his residence, these tiles, so marked, were generally removed, but if not, the badge was always carefully erased, the space being left blank if the new occupant did not care to fill it with his own cognizance. Sometimes, as an especial mark of favour, a feudal chieftain would permit one of his retainers, whom he wished to highly honour, to make use of his own badge; but in such rare instances there was always given to the retainer a *haôri*,—the upper mantle worn by the military class,—marked with the badge, and the privilege lasted only so long as that particular garment was in existence. Nor was the recipient of this favour permitted himself to mark the badge upon any other part of his clothing, and it does not seem that any *hereditary* honour was attached to the gift. From the above remarks it may be be seen that in the case of nobles, at least, there existed some kind of restriction preventing the assumption of a family badge belonging to another house. No badge was worn by the principal during the ceremony of the *harakiri*; nor again, at funerals, was any marked on the white mourning garments. At marriage ceremonies, in very high families, neither the bride nor bridegroom wore a badge on their clothing. The regulations as to women's badges have always been rather vague, but as a general custom it would seem that they commonly wore that of their own family, even retaining it after marriage, though then the badge of the husband's family was occasionally taken in preference.

It may here be interesting to note the devices borne by some of the chief families of Japan, as selected from the list of nobles. But firstly the badges of the Imperial line claim our attention. They are two in number. The first is a representation of the *kiku*, or chrysanthemum flower, and is usually delineated by sixteen petals, conjoined, and rounded at the outer extremities, issuing from a small circle in the centre. Some Japanese, however, state that this is not the chrysanthemum, but is intended as a representation of the sun, so as to bear some connection with the red sun on the national flag, of which mention is made below. But this latter theory seems wholly unworthy of credence, as the *kiku* is frequently represented as a *double* flower,—that is, with the rounded extremities of sixteen other petals showing, from below, in the interstices at the ends of those drawn in the foreground. It is, nevertheless, a fact worthy of remark, that in European Heraldry, when the Sun is blazoned as "in his splendour," *i.e.* irradiated, the rays are nearly always *sixteen* in number, though they are then always drawn with *pointed* extremities. The *kiku* is used as a mark on the hilts of the swords forged by the Emperor Go-Toba, who ascended the throne in 1186. The second of the Imperial badges is a representation of the leaf and flower of the *kiri*, or *Paulownia Japonica*, as it is termed in botany; it displays three leaves, and three flowers, each of the latter consisting of a slender stem with the buds attached. The central stem bears seven buds, and those on the sides five each;—thus this badge is termed in Japanese the "*go-shichi no kiri*," or "five-and-seven *kiri*." Many other families bear the *kiri* badge, but, as a general rule, the buds are but five in number on the central stem, and three on each of the others,—such a one being styled "*go-san no kiri*," or "five-and-three *kiri*." This law regarding the difference in the number of buds is not, however, observed very strictly. The small square banner usually borne before the Mikado when he drives out in public, bears the *kiku* badge in gold upon a ground of red and gold brocade. Thus allusion is made, in a popular song written at the time of the expedition against Chôshiu in 1866, to the "Imperial Standard of Brocade," and during the troubles in Yedo in 1868, the "loyal troops" earned the nickname of *kingire* from the *shreds of brocade* which they wore as a distinguishing mark upon the right shoulder. The *kiri* badge, embroidered in gold, is now every day to be seen upon the uniforms of Japanese officials. But, to speak of the badges of some of the nobles, the following short list will suffice as a sample :—

I.—Tokugawa, (late *Shôgun*): Three leaves of the hollyhock, within a circle; the points of the leaves meeting in the centre.

II.—Maeda, *daimiô* of Kaga: A plum-blossom of five petals,—each of circular shape.

III.—Shimadzu, *daimiô* of Satsuma: The ring of a horse's bridle bit.

IV.—Yamanouchi, *daimiô* of Tosa:
1st.—Three leaves of the *kashiwa* (a kind of oak) within a circle.
2nd.—Two horizontal and parallel lines.
3rd.—The same as the 1st, but without the circle; the stems of the leaves being in each case joined in the centre, the ends pointing outwards.

V.—Kuroda, *daimiô* of Chikuzen:
1st.—A black ball.
2nd.—Three flowers of the *fuji*, or wisteria, conjoined in the centre, and flexed in circular form.

VI.—Hachisuka, *daimiô* of Awa, in Shikoku:
1st.—Same as Tokugawa, only of different colour.
2nd.—The figure called a *manji*, within a circle.
3rd.—The same without the circle.

VII.—Arima, *daimiô* of Chikugo:
1st.—The gentian leaves and flowers, arranged in a peculiar circular form.
2nd.—The figure called *mitsu tomoyé*.

VIII.—Ikeda, *daimiô* of Bizen:
1st.—A butterfly "displayed," or, with wings spread open.
2nd.—Two similar butterflies, fronting each other.

IX.—Nambu, *daimiô* of Morioka, in the province of Mutsu:
1st.—Two Cranes, with wings extended, fronting each other, within a circle.
2nd and 3rd.—Four lozenge-shaped figures, arranged so as to form one large lozenge.

X.—Môri, *daimiô* of Chôshiu:
1st.—The leaf and flower of a water-plant called *omodaka*.
2nd & 3rd.—A horizontal line, with three balls, or stars, arranged underneath it in a pyramidical form.

XI.—Date, *daimiô* of Sendai, in the province of Mutsu:
1st.—Two sparrows, with wings extended, fronting each other, within two branches of the bamboo arranged in circular form.
2nd.—The peony leaf and flower.
3rd.—A circle, enclosing three perpendicular lines.

XII.—Asano, *daimiô* of Aki:
1st.—The feathered ends of two arrows, crossed, within a circle.
3rd.—The same, without the circle.

The Tokugawa badge above-mentioned was delineated on flags as either gold or silver upon a blue ground. This badge is stated in the "Nihon Guaishi" to have been adopted by Kiyoyasu, father of the famous Tokugawa Iyéyasu, in the year 1529. Kiyoyasu, returning from a successful expedition against the eastern portion of the

[illegible] "[illegible]" was [illegible] "[illegible]" [illegible] "[illegible]" [illegible] "[illegible]"

flag to be visible. The delineation of the badge itself was, however, identical in the whole four cases. Other instances might be quoted, but the above is sufficient to illustrate the Japanese idea of "difference."

In Japan, also, as in Europe, there is found many an example of what is termed "Canting Heraldry," consisting of devices which have an allusion to the name of the bearer, thus forming a kind of rebus. One instance is that of a family called Hashimoto, whose badge, the buttresses or "foundation" of a "bridge," gives an exact rendering of the name. The free use of Chinese characters as badges of course gives rise to many opportunities for such punning allusions, and thus we find the families of Ii, Honda, Kuki, Okubo, Inouyé and others, bearing as their cognizances characters the reading of which gives the sound of the first syllable of their name. Again, in the *Hakubutsu-kw'an*, or Exhibition Department, in Yedo, there is exhibited a beautiful specimen of a *sashimono*, as above described, to which no description is attached, but the badge marked thereon,—a "temple gate-way,"—together with a second device displayed below, serve at once to make known the fact that it belonged to some member of the house of *Torii*, a family formerly holding the daimiate of Mibu, in the province of Shimotsuké.

Flags and banners of various shapes have been in use in Japan from the earliest ages. They are first mentioned, in the history called "Nihonki," as having been borne by the army of the Empress Jingô in her expedition against Corea, in 201 A.D.; and from the year 900 A.D. onwards frequent allusion is made to them in Japanese works. The very earliest kind of standard was the *setsu*, the original insignia of a Commander in Chief, which consisted simply of a bundle of hair from a bull's tail, fastened to the end of a staff. In later times the favourite forms of flags were those called *fuki-nagashi*, and *hata*. The latter of these was an oblong-shaped banner, generally several feet in length and breadth, which was suspended from a small cross-bar affixed to the staff; the *fuki-nagashi* was a smaller edition of this, very narrow, and terminating in two long streamers. In one of the shrines at Enoshima there is still shown an old specimen of a *hata*, said to have belonged to a member of the family of Hôjô, a powerful house that was for a long time a hanger-on of the Minamoto clan, and itself held supremacy in Japan during the 13th and 14th centuries. This *hata* is about 5 feet in length by 3 in breadth, and is made of coarse stuff of a blue colour, embroidered with gold. At the top are broidered two *mino-game*, or fiery-tailed tortoises, and at the foot a large five clawed dragon. Towards the centre appears the Hôjô badge, consisting of three equilateral triangles arranged in the form of a pyramid, a central space of similar shape being left vacant. This is called the *uroko* badge, supposed to represent a fish's scales, the legend being that Benten-sama, the Sea Goddess worshipped at Enoshima, appeared to Hôjô no Tokimasa (b. 1137—d. 1216) and bestowed this upon him as the cognizance of his family. The narrow *fuki-nagashi* were ordinarily used to mark out the bounds of military encampments, and it was in Japanese warfare a common stratagem to change or alter them so as to deceive the enemy and lure them into an ambuscade. During the civil wars in the period O-nin (1467—1469 A.D.) two brothers of the Hatakéyama family were ranged on opposite sides, and it is narrated in the "Yamato Ji-shi," a small encyclopædia published in Tenwa (1681—84) that confusion was caused by the fact of their both displaying the same kind of white flag, and that one of the brothers therefore invented and used a different style of flag, called *nobori*. This *nobori* was but an enlarged *sashimono*, as already described, and is now always to be seen on the occasion of a Japanese festival. In recent times, the Japanese have adopted the European style of flag for use on ship board and also in the field.

The national flag of Japan, so well known to every foreigner resident in this country, displays the device of a red ball on a white ground. This red ball is termed in Japanese *hi-no-maru*, or "circle of the sun," in allusion to the fact of Japan being the most distant Eastern country. The adoption of this as the national flag was only notified by the Government in 1859, but the *hi-no-maru* had been for centuries before that time a very favourite badge. At the *Hakubutsu-kw'an* there is to be seen an old standard, described as the "sun and moon standard." This curious specimen consists of a staff, on the end of which is fixed a large white crescent, with the horns upwards, surmounted again by a small red ball: from below the crescent hangs down what appears to be a bunch of white horse-hair. In the 19th volume of a work entitled the "Yedo Meisho Dzuyé," or "Pictorial Guide to the celebrated localities of Yedo," there is given an illustration of a *sashimono* bearing a precisely similar device. This *sashimono*, it is stated, belonged to one Chiba no Tanémichi who was in charge of the hamlets in the department of Kokubu, Shimôsa, in the period Jinyei (1182-85). It is possible that the old standard above mentioned may date from about the same period. Prior to this time, the Emperor Takakura (acc. 1169, abd. 1180) presented at the shrine of Itsuku-shima, in the province of Aki, thirty fans, which, as the "Gempei Seisui-ki" narrates, "were all pink fans, bearing the *hi-no-maru*." When Takakura's successor, the Emperor Antoku, was carried away to the West by the Taira family, when they fled from Kiyôto before the Genji forces in 1182, he visited the shrine, when one of these fans was given to him by the priest in charge, who asserted that "the sun thereon was the spirit of the late Emperor,—"and that the arrows of the foe would be caused by it to "recoil upon their own persons." Confident in the efficacy of their sacred talisman, the Taira troops, at the battle of Yashima, in Sanuki, in 1185, placed this fan upon a pole in a boat, which was rowed to within fifty yards of the beach, in full view of the Genji, who were mockingly challenged to shoot at it. Nasu Munétaka, a Minamoto warrior, accepted the challenge, shot, and struck the fan, upon which the hostile army were greatly dismayed. In memory of this feat, Munétaka's descendants, the Sataké family, till lately lords of the castle-town of Akita, in Déwa, adopted for their badge a fan marked with a ball. They, however, "differenced" this device by changing the colours of their chief badge to a black ball on a white fan, their 3rd badge shewing a white ball on a black fan. We next meet with the *hi-no-maru* at the time of the invasion of Kiushiu by the Mongols in 1281. Whilst the Kamakura Shôgun, Koréyasu, was collecting forces to march against the enemy, he sent on, as leader of the vanguard, Utsunomiya Sadatsuna, to whom he gave two sacred banners, on which were portrayed respectively the sun and the moon. Both these devices were inscribed with the names of Buddhist deities. Upon Sadatsuna's arriving on the sea-coast at the scene of action, he unfurled these banners, when a sudden whirlwind arose and destroyed the Mongol fleet. The two flags were bestowed upon Sadatsuna as a reward, and were by him presented to the temple of Minobusan in Shinshiu. Subsequently the one marked with the sun (*hi-no-maru*) was transported to Saikiyôji, a temple near the village of Kamédo, close to Yedo, while the moon banner (*tsuki-no-maru*) was left in its original place. The banner brought to Saikiyôji is described in the "Yedo Meisho" as being 6½ feet (Japanese) in length by 5½ in breadth. Around the edges were marked eight dragons, within which, again, were portrayed the "Four Tennô" (four Buddhist guardian deities), while in the very centre was the *hi-no-maru* inscribed with the names of other Buddhist deities. A banner of this description is styled *hata mandara*. It was suspended, like the ordinary *hata* above-mentioned, from a cross-bar fastened to a staff. Of late years, it may be remarked in passing, this word *hata* has been used in a much wider sense, and is the name at present given to *all* flags or banners, of no matter what shape. The suit of armour worn by Toyotomi Hidéyoshi, better known to foreigners as Taikô sama, (b. 1540—d. 1598), now on view at the *Hakubutsu-kw'an*, also bears the *hi-no-maru* in three places, namely, on the breastplate, and on the two shoulder-flaps. In this connection, it is interesting to note that on the Taikô's breastplate and gauntlets there are marked no less than eleven different badges, amongst others the Imperial *kiri* and *kiku*. From the above may be learned the antiquity of the present national device of Japan.

Nearly every public department in Japan now possesses its own special flag. That of the Board of Works bears the Chinese character *ko*, 工, ("works") in red on a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

white ground, and that of the Survey Department is divided diagonally from right to left, red and white, with the same character, in black, at the base. The War Department uses a white flag with the *hi-no-maru* adorned with 16 red rays, and the Marine Department a deeply indented horizontal red line, surmounted by an anchor of the same colour, the whole on a white ground. It will be observed that in every instance the Imperial colours of Japan, red and white, are strictly preserved.

So much importance has always been attached to flags by the Japanese, that we find the Christians who revolted at Shimabara in 1639, adopted and used as their war ensign a white flag marked with a red cross, as narrated in the "Shimabara-ki," a history of the revolt in question. So hateful in the eyes of the Japanese was this Christian symbol that in 1673, at Nagasaki, the crew of an English vessel named the "Return" were advised not to hoist the English flag with the cross of St. George. Fraissinet, who mentions this circumstance in his work "Le Japon," further quotes a passage from the journal of the voyage of the "Return," in which it is stated that a special flag had been made, *without the cross*, in order not to give offence to the prejudices of the Japanese, who took the cross to be a distinguishing mark of the Portuguese who had been expelled the country some 30 years previously. On one occasion, we are told, there was hoisted by mistake the flag containing the cross, and this was at once detected by the Japanese authorities, who sent off to enquire the reason. This little incident shows clearly what attention was paid in early days at Nagasaki to even so small a matter as a change in a Heraldic device. The cross does not hold here the honourable position that Western Heralds give to it; it is exceedingly rare as a Japanese badge, and amongst the many suits of armour at the *Hakubutsu-ku'an* there is but one bearing this device,—as a Crest, on a small circular piece of metal.

Before leaving the heading of flags, it will not do to leave unmentioned that of the Mitsu Bishi Company, the Japanese Mail Steamship Company running between China and Japan. This well-known flag displays the device of three red diamonds, conjoined in the centre, on a white ground, thus bearing a "canting" allusion to the name of the Company. The diamond-shaped figures are said to represent the seed-vessels of the water-plant called *hishi* (the Water Caltrops) which is found in large quantities in the province of Tosa, to which province belonged the merchants who started the Company. It is not improbable that there is likewise contained an allusion to the badge of the former *daimiô* of Tosa, the three oak-leaves being "differenced" and changed into diamonds.

Of Monumental Heraldry there do not exist very striking examples. Indeed, with the exception of the devices shown upon the mansions of the former *daimiôs*, hardly any exist save those on tombstones. The badge is generally sculptured in relief at the head of the stone, the inscription coming immediately below it. In some instances it is gilded. In temples, many of the *torii* or gateways are ornamented with Heraldic devices carved upon them, and in other places small plates of metal marked in similar manner are affixed to the posts or beams of the buildings. The tombs of the Tokugawa Shôguns at the temples at Nikkô, in the province of Shimotsuké, and at Zôjôji, in Yedo, furnish many beautifully executed specimens of these devices.

In imitation of Foreign Orders of Knighthood, etc., the Japanese Government, in February 1875, instituted an "Order of Merit." This consists of eight classes, to each of which is assigned its own peculiar decoration. The decoration, in the case of the First Class, consists of an eight-pointed star of thirty-two white enamelled rays, issuing from a red enamelled ball (the *hi-no-maru*); this is worn on the right breast, while a badge consisting of a smaller star of similar description, surmounted by a "five-and seven *kiri*" in green and purple enamel, hangs from a white ribbon with red edges worn across the right shoulder. By the Second Class the star alone is worn, on the right breast, while for the Third Class a narrow white and red ribbon round the neck supports a smaller facsimile of the badge of the First Class. Below the Third Class the small badge only is worn, on the left breast, from a small ribbon of the colours, and some difference is made in the enamel and also in the number of flowers on the *kiri*. The seventh and eighth classes wear the *kiri* only, without the irradiated *hi-no-maru* below it. The design is a good one, and the decoration compares very favourably with many of those seen in Europe. It would, perhaps, have had a better effect had the red ball in the centre been smaller, and surrounded by a circle of white enamel. This would not only have relieved the dark colour of the *hi-no-maru*, but would also have been in accordance with the strictest Heraldic usage, as showing likewise the *ground colour* of the national flag. A good precedent for this may be observed in the case of the star of the English order of the Garter, where the red cross of St. George has a narrow white edging, the better to represent the device of the English "White Ensign." The Japanese War Medal, which was likewise instituted in February 1875, is of silver, and hangs from a white ribbon edged with green, worn on the left breast. The obverse bears the Chinese characters for "War Medal," while the date is engraved on the reverse.

For the sake of pure Heraldic art in this country, it is to be regretted that several of the Japanese officials who have visited Europe have carried their imitation of foreign usages so far as to invent and make use of Supporters for their Badges. This arises from ignorance of the fact that in Heraldry it is only a *shield*, not a *badge* or *crest*, that can have supporters, and it should likewise not be forgotten that in the West it is only to persons of a certain rank that Heralds accord the right to bear supporters to their shields. But, in the absence of any definite rules of Heraldic art in Japan, these anomalies are likely to continue.

It does not, however, seem very probable that any perfect system of Heraldry will arise in this country. With the fall of the feudal régime passed away the most favourable opportunity for its establishment, as in the case also of the countries of the West. In Europe, Heraldry is at this date little more than an interesting study of the past, as a companion to Historical research; and in Japan there does not appear any reason to hope for a revival of an art which has long since seen its most palmy days in other lands. The above notes may, however, prove of some interest to any one who has studied Western Heraldry, and at least give rise to a comparison between the old system of our own middle ages, and that followed during the late feudal times of the Empire of Japan.

A TALE OF A CAT

MURDER.

(Continued.)

Yes! there was no doubt that a terrible thing had happened at the castle. The world was less by one dainty, bright faced, innocent little maid, and that the world was none the better for it may safely be affirmed. Many portents were said to have occurred that night, and amongst others it was averred that my lady, tossing and turning and muttering in her uneasy slumbers, awoke with a shiver and a shriek, declaring that somebody had laid an icy hand upon her shoulder, in proof of which assertion she pointed out that it could not have been a dream, inasmuch as the icy hand aforesaid had left a large wet mark upon her garment. It is true that the story has not obtained that implicit credence which incontrovertible facts deserve, for some see nothing in it but the dews of terror, whilst others affect to disbelieve it altogether. But, be its value what it may, one thing at least is certain, that placed side by said with after events, the authenticity of which has not been questioned, it will bear a very favourable amount of probability indeed.

It must not be supposed that whilst engaged in putting together the chain of circumstances which led up to the death of Koharu, we have been for one moment unmindful of the claims upon our attention of Nedzutarô's little rival. The fact of the matter is, that whilst entertaining all the respect and admiration to which a scion of a family so distinguished is entitled, we have been prevented from narrating all the adventures which befel him by one trifling consideration, namely, that hitherto nothing whatever of an unusual or an adventurous nature had befallen him at all, unless, indeed, it be considered worth the recounting that he had been all the time steadily surmounting

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

those little ills and ailments which are incidental to infancy, and seemed in a fair way of becoming in process of time a handsome and intelligent youth. He was now in his fifth year, and was truly a very engaging little fellow, full of merry pranks and playfulness, and, if his parents' opinion went for aught, of prodigious cleverness. He delighted every body he came in contact with, and was well nigh worshipped in the castle. He had arrived at the dignity of a name since we busied ourselves with his affairs, and was known as Midorinosuke.

Now it happened that a night or two after that fatal one on which Koharu sought a respite from her sorrows, beside a virgin sister at the bottom of a well, young Midorinosuke, it was remarked, exhibited a strange and unwonted wakefulness. In addition to this he seemed so fretful and peevish that his faithful nurse was consumed with a not unnatural anxiety upon his account. To pass an indifferent night meant to have an indifferent day, she reasoned, and here was her little master drifting along towards the morning without so much as having closed an eye. What will my lady say of his out of sorts when she comes to see him in the morning? And yet he awake he would, prattling all manner of old fashioned things, and just as deaf—although naturally an obedient child—to his nurse's oft repeated injunctions to "go to sleep," as if the imperative mood of the verb 'to sleep' had no meaning at all.

Now what was to be done in this extremity? Already the little fellow's colour had risen to a fever glow, and worse might come if further time were lost. The nurse—with hesitation, we avow it,—as has been the custom with ignorant but well meaning nurses from time immemorial to the present day, perceiving an indifference amounting, it might be said, to insubordination in her charge, and despairing of attaining her end by love, determined to appeal to the powers supernatural to enforce her authority, and in fact, to make a long story short, threatened to call a ghost to compel him by the agency of fear to go to sleep.

How often do our evil deeds recoil upon our own heads! This foolish woman, intent upon the invocation of a ghost, dropped off to sleep herself with the word upon her tongue. Slipped into unconsciousness, so to speak, in company with a ghost, and not approving of her fellow traveller in that misty region, she retraced her steps and woke the household and herself with a piercing shriek, declaring that Koharu had stood beside her bed with pale face and dishevelled hair, and clothed in ghostly white.

Nor could she be persuaded that her vision was a dream, the natural result of a circumstance the minds and tongues of everyone had been busy with for many hours past. The apparition was so very real, she insisted, and moreover had, horrible to relate, indulged in goblin laughter. How could she have been mistaken, she begged to be informed by her master—whose anxiety upon his boy's account, to whom she still performed the duties of maternity, made him most desirous of calming her agitation—how could she be mistaken when she had heard, as plainly as she could hear my lord and lady now, that infernal laughter?

This unanswerable logic would no doubt have clinched the matter if it had had been pursued further, but inasmuch as it was found that his nurse's terror had communicated itself to Modorinosuke, the entire attention of his parents was directed towards reassuring him. But in vain did they put forth all their endearments, for the dawn of day found him so ill and feverish from fright and want of sleep, that the family physician had to be called in to prescribe for him.

The most vigorous treatment, however, proved of no avail, so that when on the third day since the apparition certain ominous little spots proclaimed the ailment to be small-pox, the good people of the castle and the worthy doctor himself, with a curious inversion of cause and effect, were unanimous in declaring that of a surety the ghost of drowned Koharu must have appeared and wrought this mischief, inasmuch as the disease confined itself to the nursery where the manifestation took place.

And, indeed, there was no mistake about it. It was the small-pox, sure enough, and a bad and malignant form of it too. So bad and malignant, that although Midorinosuke recovered from it with his life, he lost his eyesight in the struggle.

Who can describe the anguish of his loving parents at this overwhelming affliction? To think that the son, on whom depended all their hopes of a worthy succession, and on whose account his mother had endured so much, should have been so hardly dealt with, was truly heartrending. But they wouldn't believe it, that they wouldn't. They'd leave such silly fears to croakers. Let proclamation be made forthwith to far and near that rewards the most liberal, to the half of all their worldly substance, if necessary, would be cheerfully bestowed upon whoever would lift, if even by ever so little, the veil which disease had hung between Midorinosuke and the light of day.

But when, one after another, the crowd of quacks and mountebanks who had been attracted by the hope of gain—professors of every art and science under the sun, each more pursed and puckered, and more confident and pompous with his weight of ignorance than his predecessor—departed, shaking their heads, and blaming the child's constitution, or the stars, or the season, or, in fact, anything and everything except their own stupidity and want of power to perform a miracle, by degrees it became apparent to even such unwilling believers as his parents, that their boy's case was indeed a hopeless one, and that for the future they must content themselves with the maimed and mutilated resemblance of what has once their hope and joy.

Why, it continually occurred to them, had not this evil, happened to Nedzutarô, who could have well been spared, nay, whose death would have been an actual relief to all concerned? But it was always so in this world. Nobody ever got their deserts, and to set a value upon aught was to court destruction for it. In fine, they came to regard poor Nedzutarô's health and strength as an injury continually inflicted on them, and hated him accordingly. Nor was this unreasonable dislike the less severely felt, it may readily be believed, when they were constrained to acknowledge to themselves that Nedzutaro would, of a surety, more worthily fill his father's place when the proper time arrived than his poor blind foster brother. Perhaps, however, the severest trial to their equanimity was the discovery that their boy undoubtedly gave promise of exceptional abilities. And that he was not likely to be behind-hand in accomplishments was guaranteed by the learned Furukawa Kenyo, who discovered in him a wonderful talent for music and the probability of a fine voice.

Nedzutarô, meanwhile, pursued the even tenor of his way, having apparently delight in nothing but study, and seeking seclusion as often as possible to gratify his passion for self-improvement. There were many, however, who believed that a profound melancholy which had taken possession of him since his lover's suicide, had more to do with his retiring habits than the pursuit of learning. In support of this conjecture they were wont to draw attention to his abstracted air, and the irrelevant answer which it was remarked he so often returned to a question. It was said by those who knew him best, that Koharu's ghost was always with him, inviting him to diligence and helping him with her counsel. He had been heard to talk aloud as if to another person, when it was well known that there was no one in his room beside himself, and he had of late acquired a strange way of looking over his shoulder, when perplexed or in doubt, as if asking for advice.

Notwithstanding that these peculiarities may have been explained by the habit that he had of reciting poetry aloud when alone, and thinking twice before he spoke, there was no gainsaying the fact that Nedzutarô was greatly affected by Koharu's death, and did really prefer the solitude of his chamber to the society of his fellows, whose mirth and levity had grown distasteful to him.

More especially did he avoid the society of his parents, and particularly that of his mother, as he could not acquit them of being the cause of that horrible event which he mourned. He was obliged, however, much as he may have disliked it, to attend his father as usual whenever he felt inclined to play his favorite game of checquers.

[illegible] the [illegible] [illegible] [illegible]

in insisting unconditionally upon its acceptance. And it is right, perhaps, for on it many of the after events are suspended.

And now our task is finished. Good Critic! Patient Critic! Gentle Reader! Only whatever name it is the fashion now-a-days to address that impalpable and unseen entity for whom stories are written, what do you think of our tale? We promised you love, suicide, and murder, and have we not given you good measure, pressed down and running over? And lest you should feel dissatisfied or hypercritical, have we not also given you over and above the bargain a liberal sprinkling of every emotion which finds a lodging in the human heart?

But, Mr. Showman, what about the cat?

Most insatiable and unreasonable Sir! We vow and protest that we said nought about a cat. There is no cat in the contract.

But stay, we are not unmagnanimous. We are minded to gratify thy curiosity about the cat. Our compliments to thee, then, and we place in thy hands the remaining fifteen volumes of the veracious history, of which the first has been imperfectly translated for thy amusement Through them the cat frisks and gambols to her heart's content. And, hark ye! We wish you much joy of them—those fifteen other volumes!

But, Mr. Showman, why is——?

Nay! nay! We refuse to be questioned further. Ring down the curtain, Mr. Prompter, if you please.

Correspondence.

DEATH OF MR. HATAKEYAMA, DIRECTOR OF THE *KAISEI-GAKKO*.

To the Editor of the "Japan Weekly Mail."

Dear Sir,—Mr. Hatakeyama Yoshinari, the Director of the Imperial University, who was yesterday followed to his grave by a large number of Japanese friends, by the Professors and students of the University, and by many others, was so well known to many in England and America, as well as to most of the foreign community here, that a brief notice of him may not be out of place in your columns.

Mr. Hatakeyama was among the first to leave his country for the purpose of becoming acquainted with foreign methods of war, education, and such other matters as seemed to be identical with civilization, in the minds of the Japanese ten years ago. As a mere youth in company with the present Minister to China, the former Minister to England, and others now holding important positions in the Government, when the penalty of death for leaving the country was not yet removed, he assumed the name of Soogiwoora—a name familiar to many in England and America—and sailed to England, where he remained during a few years as a student. Subsequently he went to the United States, entering Rutger's College, and although he did not complete his course of study, he made such advancement that this institution recently conferred upon him the honorary degree of Master of Arts. When the late Embassy sent by His Majesty to the various Treaty Powers reached Washington in 1872, they sent for Mr. Hatakeyama to join them as a Secretary. In this capacity he visited all the Courts of Europe. After the return of the Embassy to Japan Mr. Hatakeyama was at once appointed to the responsible position of Director of the Imperial University, which had just been opened. This position he continued to hold until his death, though failing health compelled him to withdraw from active duties almost a year ago. In the hope of regaining strength he sailed for America six months ago, but his disease was past human skill, and when all hope failed, he hastened to return (that he might die in) his native land. But this was not granted him. He died October 20th, on board the P. M. steamer *City of Peking*, when almost within sight of home.

As a man, Mr. Hatakeyama was possessed of a large heart, generous impulses, and that liberality which is supposed to come with education and travel. He was of a noble family by birth, and also by adoption

As Director of the Kaisei Gakko he was beloved by all. He will be sorely missed in the University, and there are few in this country who could take his place. Indeed, in any land there would be found few who have reached a completer freedom from those small prejudices that infest little souls. He was a cosmopolitan, and took wide views on all questions that concerned the welfare of his people.

As a Japanese he was most patriotic.

In his study and travel he was constantly reducing everything to the one thought,—How can this be made helpful to my own people? He never forgot that here in these islands was his place; he never was tempted to lie down idly in the midst of an ease which a high civilization showed him. He was always busy, ambitious, and patriotic. If there was one word which was on his tongue more often than another it was the word—*Patriotism*. With a weak body he yet accomplished much, endured much; the fatigues of travel, the demands of business and friendship were wearing upon him, still he was ambitious to be doing more. Many a time have I found him long after midnight deep in study over his work, or in consultation upon business which he deemed urgent.

He is an example worthy of imitation by the young men of Japan That one who had reached a point where he might have been so useful in the Department of Education, or indeed in any Department of the Government, (for Mr. Hatakeyama had the unbounded confidence of the men who are ruling in Japan, including His Majesty, the Emperor), should be removed at so early an age as thirty-three years, and in the time of so great a dearth of men like him, is one of the deep mysteries of Providence.

Your correspondent, who had the pleasure of knowing Mr. Hatakeyama intimately for nearly five years, during which time a warm personal friendship was maintained, would not write all his mind if he did not mention something concerning the Christian character of him whom he mourns almost as a brother. His was one of the sincere and devout souls. I have walked with him frequently to the house of God, have talked with him about the simplicity and the mystery of godliness; and I think that the sincerity, the truthfulness, and the gentleness, which mark a true child of God, were a real and ruling part of his life. He did not identify himself with any single organization here in Japan, but that only proves that he had good and sufficient reasons for not doing so. I know, as a matter of fact, that he pleaded the cause of toleration in places where his plea was heard, and more, that his seeming withholding was not from any fear of evil results to himself, but rather from a following of his own judgment in the matter, which was probably not a wrong one. He was known and recognised as a believer in Christianity by all who knew anything of him. I could not but feel, as his friends laid him away according to the simple Shintô rites, that the last offices were not altogether what Mr. Hatakeyama would have wished; but as he left no expressed wish in the matter, it was only for his friends to do as they deemed best. He sleeps the sleep of the just; and though buried without what is distinctively known as Christian burial, he certainly was as deserving of it as are many in Christian lands unworthy of it.

The Faculty of the University at a meeting held on Saturday, October 28th, unanimously adopted, by a rising vote, the following:—

"We have heard with deep sorrow of the death of Mr. "Hatakeyama, who for the past three years has filled the "post of Director of this University, and for whom as a "man, an officer, and a friend, we have entertained "so high a regard, and so great respect.

"Resolved—that in testimony of our sorrow for the "loss we have sustained by his lamented death, we wear "the usual badge of mourning for thirty days.

"Resolved—that the Secretary of the Faculty be re-"quested to convey to the aged mother, and family of "Mr. Hatakeyama, this expression of our deep sympathy "in their bereavement."

I am, very respectfully,

W. E. PARSON.

Tôkiô, October 31st, 1876.

THE AUTUMN RACE MEETING.

The heavy rain of Wednesday which necessitated a postponement of the first day's racing, was succeeded by beautiful weather yesterday, and by the time that the races commenced the course was in fair condition. Unfortunately there was a great falling off in the attendance of foreign and native spectators, and though a large number of ladies kindly graced the Grand Stand with their presence, it cannot be denied that a feeling of dulness prevailed to a great extent, and notwithstanding that really good racing was shown in some of the events on the programme, the whole proceeding sadly lacked the pleasurable excitement of former meetings. The band of the *Vineta* was in attendance and played during the intervals between the races.

First Day.

Thursday, 2nd November.

1. The Trial Plate.—For China Ponies that have never won a flat Race here. Weight for inches. Entrance, $5. Once round.

Mr. Morrison's *Maris*, 10st. 8lbs... 1
,, De Benter's *Mongolian Chief*, 10st. 8lbs..... 2
,, John Peel's *Ta Phairshon*, 10st. 5lbs..... 3

This was a very slow race, as the three ponies which came to the post took matters in a comparatively leisurely way until they entered the straight, being led up to that point by *Mongolian Chief* and all running well together; but at the distance *Maris* came well up and won cleverly by three quarters of a length, despite all the efforts the *Mongolian* could make. *Ta Phairshon* was a good third. Time 2 m. 29 sec.

2. The Griffins' Plate.—For Japan Ponies *bona fide* Griffins. Weight for inches. Entrance, $5. Five Furlongs.

Mr. Morrison's *Distemper*, 10st. 6lbs..... 1
,, Savile's *Saladin*, 10st. 2lbs..... 2
Col. Forrester's *Grayling*, 10st. 4lbs..... 3
Mr. John Peel's *Annandale*, 10st. 6lbs..... 0

This brought but a field of four who got away well together without any difficulty, *Grayling*, pulling hard, taking the lead. *Amandale* soon fell astern, while *Grayling* and *Saladin* raced hard together, with *Distemper* lying well in the rear. On entering the straight the latter was set going, passed the leaders at the distance, and won the race through downright good riding by about half a length. Time 1 m. 23½ sec.

3. The Celestial Cup.—For China Ponies. Weight for inches. Entrance, $5. Three-quarters of a Mile.

Mr. De Benter's *Chief Mongolian*, 10st. 11lbs..... 1
,, Morrison's *Lintie*, 10st. 2lbs..... 2
,, Savile's *Crusader*, 10st. 5lbs..... 3
,, John Peel's *Grey Friar*, 10st. 5lbs..... 0
,, Walter's *Little Fish*, 10st. 11lbs..... 0

Grey Friar showed his usual temper at the post, but after one false start a field of five got away well together, led by the above named, being closely followed by *Crusader*, *Chief Mongolian*, *Lintie* and *Little Fish*. This order they maintained to the straight, where *Grey Friar* dropped behind, leaving the three next named to make a good race down the straight, which resulted in a victory for the *Chief* by a length, *Lintie* beating *Crusader* by the same distance. Time 1 m. 41 secs.

4. The Akindo Cup.—Presented. For Japan Ponies. Winners of two Races at the last two meetings here 12lbs. extra. Weight for inches. Entrance, $5. Five Furlongs.

Mr. Osborn's *Sandboy*, 10st. 4lbs..... 1
,, Morrison's *Distemper*, 10st. 6lbs..... 2
,, Savile's *Drift*, 10st. 2lbs..... 3
Col. Forrester's *Sirocco*, 10st. 4lbs..... 0

This race was supposed to lie between *Distemper* and *Sandboy*. They all got off without any delay, *Drift* leading, and being closely followed by *Sandboy* and *Sirocco*, while the *Tartan*, who had a bad start, lay far behind. At the trees *Drift* was done; at the distance *Sirocco* shut up, leaving *Distemper*, who was fast coming up, to challenge *Sandboy*, and the two made a good race in, finishing a capital struggle with the advantage to *Sandboy* of only a neck. Time 1 m. 24¼ secs.

5. The Challenge Cup.—Value $150. For China Ponies. Weight for inches. Entrance, $5. One mile and three-quarters.

Mr. Morrison's *Hereward*, 10st. 11lbs. ..... W.O.

This, which should have been the race of the day, was a miserable failure, as failing any opponents *Hereward* had a walk over.

6. The Britannia Cup.—Presented. For China Ponies. Winners at this meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Morrison's *Tallapoosa*, 10st. 8lbs..... 1
,, Savile's *Saracen*, 10st. 5lbs..... 2
,, John Peel's *Mactarish*, 10st 5lbs. 3
,, do. *Grey Friar*, 10st. 5lbs..... 0
,, Walter's *Little Fish*, 10st. 11lbs. 0
,, De Benter's *Mongolian Chief*, 10st 8lbs..... 0

Little Fish jumped off with the lead which he kept until nearly the half mile, being closely followed by all but *Grey Friar*, who hung behind. At the quarter all the ponies were in a ruck, but on entering the straight *Saracen* and *Tallapoosa* came away and the former looked like winning, but had to succumb to the latter who won by a length, owing in a great measure to good riding. *Mactarish* was very well up for third place. Time 2 m. 37 secs.

7. The Coffee Cup.—Presented. For Japan Ponies. Winners of any open Race previous to this meeting 10lbs. extra. winner of No. 4 excluded. Weight for inches. Entrance, $5. Three-quarters of a mile.

Mr. Pringle's *Sirius*, 10st. 6lbs..... 1
,, Marlborough's *Typhoon*, 10st. 2lbs..... 2

Only two appeared at the post for this. *Sirius* led all through and on entering the straight came away easily, so that *Typhoon's* rider pulled his pony up. It is to be feared that the Yokohama favourite's day is done. But he has long been an ornament to this course, and can creditably retire under the shadow of his former laurels.

8. The Jockey Cup.—For China Ponies. Winners in China or Japan in 1876, and Winners at this meeting excluded. To be ridden by jockeys who have never had a winning mount in Japan. Weight for inches. Entrance, $5. Once round.

Mr. Marlborough's *Andante*, 10st. 11lbs... 1
,, De Benter's *North Mongolian*, 10st. 8lbs..... 2
,, John Peel's *Ta Phairshon*, 10st. 5lbs..... 3
,, Lessey's *Good Medium*, 10st. 11lbs..... 0

This was a good race for the three first named, the result being in doubt until the post was neared, when *Andante* just contrived to secure the victory by half a length. The rider of *Good Medium* seemed to make a waiting race of it, but unfortunately the distance was too short for his peculiar tactics to have a fair show. Time 2 m. 22 secs.

Second Day.

Friday, 3rd November.

Yesterday was favourable as regards weather for the second day's racing, though not so beautifully fine as Thursday was. Being the Mikado's birthday, and therefore a holiday, the natives attended in greater numbers than on the first day, while the foreign attendance was about the same. Several ladies enlivened the scene by their presence and, as on the previous day, by several exceptionally brilliant toilets, some of which might have emanated from Worth himself.

1. The Bluff Cup.—Presented. For China Ponies. Winners of two Races at the meeting 7lbs. extra. Weight for inches. Entrance, $5. Once round.

Mr. Morrison's *Lintie*, 10st. 2lbs..... 1
,, Savile's *Saracen*, 10st. 5lbs..... 2

For this only two started, so that there was no excuse for the advantage which *Lintie* was allowed to have when they did get away. *Lintie* led all through, and though he permitted his opponent to come up at the straight, never had any difficulty in maintaining his lead, despite a gallant attempt on the part of *Saracen* to wrest the prize from him. Time, 2 m. 18 secs.

2. The Maiden Stakes.—For Japan Ponies that never won a Race. Weight for inches. Entrance, $5. Once round.

Mr. Morrison's *Dignity*, 10st. 2lbs..... 1
,, Reid's *Drizzle*, 10st. 8lbs..... 2
Col. Forrester's *Grayling*, 10st. 4lbs..... 0

This was a poor affair altogether. A bad start was effected which allowed *Dignity* to rush away with a decided lead. *Grayling* bolted badly almost immediately after starting and was pulled up, leaving *Drizzle* to endeavour to catch the Tartan, which he quite failed to do, and though *Dignity* ran wide down the straight, won as he pleased in 1 m. 3½ secs.

3. The Owners' Cup.—Open to subscribers to the Cup only. For all Ponies. Winners of more than two Races at the meeting excluded. Weights as per scale. Entrance, $5. Half a mile.

Mr. De Benter's *Chief Mongolian*, 10st. 11lbs..... 1
,, John Peel's *Bonito*, 10st. 8lbs..... 2
,, John Peel's *Grey Friar*, 10st. 5lbs..... 2
,, Morrison's *Maris*, 10st. 8lbs.. .....dis.

A field of four appeared at the post, and for this event *Bonito* was somewhat of a favourite. If the general wish of the public could have decided the result, this pony would have carried off the prize for his popular but unlucky owner, but the Fates willed it otherwise. After some delay the ponies got away to another bad start, of which *Maris* had the best, securing and keeping the lead. At the trees *Chief Mongolian* forged ahead and challenged *Maris*, and was well up on his quarter on entering the straight, where the latter ran wide, taking the *Chief* over with him to the outside rail, so much so, that on nearing the post the latter had to pull outside, and only secured second place. On this account the owner of *Chief Mongolian* claimed a foul, which was subsequently allowed by the stewards after investigation, so that the cup fell to Mr. De Benter. Times 1 m. 2 secs.

4. The Visitors' Cup.—For China Ponies. Winners of one Race at the meeting, 7lbs.; of two Races, 10lbs. extra. Winners of more than two Races excluded. Weight for inches. Entrance, $5. One mile and a half.

Mr. Morrison's *Tallapoosa*, 10st. 8lbs..... W.O.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Unfortunately both for the Tartan stable and the public this was another walk over, as no pony could be found to compete against *Tallapoosa*.

5. The Autumn Cup.—For Japan Ponies. Winners of any open Race previous to this meeting, 10lbs. extra; winners at the meeting, 5lbs. extra. Penalties accumulative. Weight for inches. Entrance, $5. Three quarters of a mile.

Mr. Marlborough,s *Jim Hills*, 10st. 4lbs. 1
,, Pringle's *Sirius* (5lbs ex.), 10st. 11lbs. 2
,, Osborn's *Sandboy* (5lbs. ex.), 10st. 9lbs. 3

For this only three started and from the first the result was never in doubt, as *Jim Hills* rushed away with and kept the lead, winning with ridiculous ease. Time 1 m. 41¼ secs.

6. The Club Cup.—For China Ponies. Winners at the meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Morrison's *Braemar*, 10st. 8lbs. 1
,, Savile's *Crusader*, 10st. 5lbs. 2
,, De Benter's *North Mongolian*, 10st. 8lbs. 3
,, John Peel's *Mactavish*, 10st. 5lbs. 0

Only four appeared at the post out of fifteen entries. *Crusader* was fancied for this but could not head *Braemar*, who was never in danger but led from first to last, securing another victory for the Tartan in a canter. *Crusader* beat *North Mongolian* for second place by a length. Time, 2 m. 39 secs.

7. The Yokohama Plate.—For Japan Ponies. Winners at the meeting excluded. Weight for inches. Entrance, $5. Five Furlongs.

Mr. Savile's *Drift*, 10st. 2lbs. ..... +1
Col. Forrester's *Sirocco*, 10st. 4lbs. ..... +2
Mr. Reid's *Drizzle*, 10st. 8lbs. 3
,, Marlborough's *Typhoon*, 10st. 2lbs. 0

This was considered by many as a certainty for *Typhoon*, but the bad condition the old pony showed yesterday was apparent again to-day, and he was never dangerous to his opponents. *Drift* made the running, being followed by *Sirocco* and *Drizzle*. On entering the straight *Drizzle* ran wide, and the race lay between *Drift* and *Sirocco*, the latter picking up as the post was neared, and making a capital finish with *Drift* to the most exciting race of the day, which resulted in a dead heat.

Deciding Heat.

This was run off after the last race of the day. Mr. Savile, who rode his own pony, made the pace hot from the first and quite ran away from *Sirocco*, though the latter made a desperate and somewhat successful effort to lessen the distance between them when coming down the straight. But he could never catch *Drift*, who scored the first win for Mr. Savile at this meeting. It is but fair to say that in both heats *Sirocco* carried about 7 lbs. over weight.
Time: First heat 1 m. 24 secs. Second heat 1 m. 25 secs.

8. The Criterion Stakes.—For China Ponies. A forced entry for all Ponies that have run at the meeting. Winners of one race, 12lbs.; of two races, 17lbs. extra. Ponies that have run twice, and have not been placed, allowed 7lbs. Weight for inches. Entrance, $5. One mile and a quarter.

Mr. Morrison's *Braemar*, (12lbs. ex.) 11st. 6lbs. 1
,, De Benter' *Mongolian Chief*, 10st. 8lbs. 2
,, Savile's *Saracen*, 10st. 5lbs. 3
,, John Peel's *Mactavish*, 10st. 5lbs. 0
,, John Peel's *Ta Phairshon*, 10st 5lbs. 0
,, John Peel's *Bonito*, 10st. 8lbs. 0
,, Walter's *Little Fish*, (7lbs. allowance), 10st. 4lbs. ... 0

This brought out a field of seven who got off after some delay to a good start, *Little Fish* taking advantage of his allowance and making the pace. At the five furlongs all the ponies were well together, but *Braemar* took a decided lead which he maintained to the finish, and won easily by two lengths, notwithstanding the extra weight he carried and the strenuous efforts *Mongolian Chief* made to come up to him in the straight. Time, 2 m. 56 secs.

Third Day.

Saturday, 4th November.

The Club were again fortunate in having fine weather for their last day's racing. There was a slight falling off in the attendance both of ladies and the general public, but proceedings passed off successfully and pleasantly. Mr. J. A. Fraser officiated as judge at this meeting, and Messrs. Cruickshank and Cope as starters.

1. The Hurdle Race.—Value, $75. For all Ponies. Over Six (6) Hurdles. Weights as per scale. Entrance, $5. Once round.

Mr. De Benter's *North Mongolian*, 10st. 8lbs. 1
,, Marlborough's *Andante*, 10st. 11lbs. 2
,, Lessey's *Good Medium*, 10st. 11lbs. 3
,, John Peel's *Mactavish*, 10st. 5lbs. 0

Andante led off and took the first hurdle easily, being followed by *North Mongolian* and *Good Medium*. *Andante* had so good a lead up the hill that the race seemed to be entirely his own, but catching the top rail of the second hurdle he fell and threw his rider, thus giving a chance to *North Mongolian* which was taken advantage of. *Andante's* rider soon remounted, and caught up his opponent at the trees, and a good race ensued between the two down the straight, where owing to a swerve on the part of *North Mongolian* both took the last hurdle together. Strange to say *Andante* did worse in the run in than expected, and the *Mongolian* won by two lengths. Time 3 min. 0½ sec.

2. The American Cup.—Presented. A Handicap for all China Pony Winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5, *compulsory*. Open also to beaten Ponies at the meeting. One Mile and a quarter.

Mr. Morrison's *Tallapoosa*, 12st. 1
,, De Benter's *Mongolian Chief*, 11st. 2
,, Walter's *Little Fish*, 10st. 7lbs 3
,, John Peel's *Bonito*, 10st 7lbs. 0

Only four started for this. *Bonito* gave some trouble at the post, but eventually all got off to a good start. *Tallapoosa* led past the stand, followed at an interval by *Bonito*, the others being well in the rear. This position they retained up the hill, at the top of which *Little Fish* came up, and at the quarter all the ponies were well together, though the Tartan still led. On entering the straight *Mongolian Chief* was let out and made a good effort to catch *Tallapoosa*, but could not manage it, and the latter won after a good race in by a clear head only. Time, 2 m. 54 secs.

3. The Nippon Handicap.—A Handicap for all Japan Pony Winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5, *compulsory*. Open also to beaten Ponies at the meeting. Once round.

Mr. Marlborough's *Jim Hills*, 11s. 3lbs. 1
,, Morrison's *Distemper*, 10s. 10lbs. 2
,, Savile's *Saladin*, 10s. 2lbs 3
,, Pringle's *Sirius*, 11s. 3lbs. 0

Again four ponies appeared at the post who got off with a bad start for *Jim Hills*. *Saladin* and *Sirius* ran wide at the bottom of the hill, thus letting the other two well up. From the five furlongs the race lay between *Jim Hills* and *Distemper*, but after getting the lead the former was never headed, and won with lots to spare. Time 2 m. 24 secs.

4. The Scurry Stakes.—For all Ponies. Weights as per scale. Entrance, $5. Three furlongs.

Mr. Morrison's *Mavis*, 10st. 8lbs. 1
,, Savile's *Drift*, 10st. 2lbs. 2
,, William's *Picayune*, 10st. 5lbs. 3
,, John Peel's *Grey Friar*, 10st. 5lbs. 0
,, De Benter's *Chief Mongolian*, 10st. 11lb. 0

As might have been expected there was some trouble at the post, *Grey Friar* sustaining his reputation for fractiousness, so that more than one false start ensued, but they all eventually got off well together. *Mavis* and *Drift* jumped off with the lead and kept this position to the quarter, when *Mavis* drew ahead and had it his own way down the straight, winning by a length and a half. Time 45 secs.

5. The Solace Cup.—For all beaten Japan Ponies at the meeting. Weight for inches. Entrance, $5. Five furlongs.

Col. Forrester's *Grayling*, 10st. 4lbs. 1
,, ,, *Sirocco*, 10st. 4lbs. 2
Mr. Reid's *Drizzle*, 10st. 8lbs. 3

Only three went for this. *Drizzle* was left behind immediately on starting and never had a chance. Both of Col. Forrester's ponies raced together throughout, *Grayling* winning by a length in 1 m. 26 secs.

6. The Consolation Plate.—For all beaten China Ponies at the meeting. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Savile's *Crusader*, 10s. 5lbs. 1
,, John Peel's *Mactavish*, 10s. 5lbs. 2
,, Walter's *Little Fish*, 10s. 11lbs. 3
,, John Peel's *Ta Phairshon*, 10s. 5lbs. 0

Crusader led off hard held, but gave way to *Little Fish* going up the hill, and afterwards to *Ta Phairshon*, but picked up again at the trees. Here *Mactavish* made a splendid effort and came through his ponies, but although he led on entering the straight was unable to shake off *Crusader*, who again took the lead and finally won by several lengths. *Little Fish* was a bad third. Time, 2 m. 40 secs.

7. The Sayonara Stakes.—A Handicap for all Ponies. To be handicapped by the Stewards at the close of the second day's racing, when entries will be received. Winner of No. 2 excluded. Winner of No. 3, 10lbs., and winners of any other race after the publication of the handicap, 7lbs. extra. Entrance, $10. Once round.

Mr. Morrison's *Lintie*, 11st. 1
,, De Benter's *Chief Mongolian*, 11st. 2lbs, ... 2
,, Savile's *Saracen*, 10st. 7lbs. 3
,, *Bonito*, 10st. 2lbs. 0
,, Osborn's *Sandboy*, 9st. 10lbs. 0

From the start *Lintie* had the best of it, waited on throughout by *Chief Mongolian*, who, however, could never get ahead of *Lintie*, as the latter perhaps had an advantage in the handicapping. The race lay entirely between these two and resulted in an easy win for *Lintie* by a length, in spite of all the *Chief* could do. Time 2 m. 20 sec.

Original from UNIVERSITY OF CALIFORNIA

A bettoes, race for Japan ponies, 5 furlongs, then took place, for which seven ponies ran, with the following result. The winner was ridden by Dr. Wheeler's well-know and handsome little betto, who only weighs 5 stone, but who guided his pony to victory with a confidence worthy his appearance.

Col. Forrester's *Grayling*..... 1
Mr. Osborn's *Sandboy*..... 2
Mr. Pringle's *Sirius*..... 3

This was followed by a bettoes' race for China ponies, once round, for which four ponies went. Again the Doctor's little Phaeton was equal to the occasion, made the most of his light weight, and all through kept ahead of the crack pony of the meeting, Braemer, winning an excellent race in the good time of 2 m. 13½ secs.

Mr. Savile's *Crusader*..... 1
,, Morrison's *Braemar*..... 2
,, John Peel's *Bonito*..... 3

Law & Police

IN H. B. M.'s PROVINCIAL COURT.

Before H. S. WILKINSON Esq., Acting Law Secretary.

Saturday, October 28th, 1876.

W. COPELAND *v.* E. LEWIS.

Plaintiff claimed $204.90 on a promissory note, with $8 interest, and costs. Defendant admitted the claim, but had a counter-claim amounting to $287, part being for 16 kilderkins of beer supplied, the rest being value of some casks, barrels and bottles sent to plaintiff.

The Court said that as defendant admitted the claim of plaintiff, he was practically the plaintiff in this case, and would consequently have to open the case.

E. Lewis, sworn, stated:—I am a British subject, residing at No. 81 Yokohama. I admit the promissory note of $204.90. I bought 20 kilderkins of beer from Bourne & Co., and as I knew I owed Copeland this $204, I went to tell him of it. I said if I did not buy it someone else would, and it would be the same for him. He thanked me for telling him. I asked him how much he would give me for the casks when empty. I usually sell my empty casks to him, but this time he said he did not need empty casks there, having more on hand than he had use for. He had joined Wiegand a day or two before, but he said he was willing to buy the whole of the ale as it stood. I replied that I needed it myself and could not let him have it. He said that the *Modeste* people did not like lager beer but wanted good English ale. It was either the *Modeste* or the *Audacious*; I think the former. I then said I would see if I could spare any. I had promised 10 of them to Scott of the "New York Saloon." When I went home to give delivery of these 10, the man in charge said "Copeland has just been here and taken it all away." (Paper handed in.) That is the receipt. (Mr. Copeland admitted its authenticity.) That is a note of the value of the ale per kilderkin. (Produced.) $18 is the price usual in the Settlement, but having bought such a quantity it was reduced to $17.

Mr. Copeland had no questions to ask, but begged to make his statement.

William Copeland, sworn:—I am an American, staying at 123 Bluff. On the 8th July, Mr. Lewis came to me and sold 16 kilderkins of English ale at $1.30 per kilderkin. He had bought it at Bourne's Auction at the same price. The beer I bought for the benefit of Copeland and Wiegand, and took delivery of it. The two empty hhds. which he had charged me for, are our own property. He had been supplied with beer and these were the empty casks, which, according to our regulations, had to be returned. He was often provided with beer by me. He never charged me for the empty casks before. The two barrels I know nothing about. The bottles are all right.

To the Court:—Lewis asked me to take this beer off his hands, as he had bought it. He said it was very cheap, but I thought it unusually dear. I told him that he must remember that beer sold at auction by Japanese at $1.30 per kilderkin could not be very good. He insisted on my taking it. That is all the conversation we had.

To defendant:—I do not know anything about the barrels.

Defendant stated to Court that he had bought these hhds. and barrels of beer from Land, Crawford & Co., and he could show the receipts.

W. Copeland said the beer was poured down the gutter, whatever Lewis might say as to its excellence.

Mr. Lewis, recalled:—I cannot find out what I paid for the beer, I asked Copeland's man the day after the beer had been taken, and he said Copeland had told him he had bought it. The beer was the balance left when the firm of Hooper Brothers ceased. It was excellent beer. I paid more than $1,30 for it, though I cannot be positive. Mr. Scott can witness to this fact.

Malcolm Scott, publican, sworn:—I live at No. 179. I am a British subject. I remember about this stock of beer. It was good and fit for use. I tasted it. I asked Lewis to give me half of it but I did not get any.

To court.—I tasted the beer, and thinking it good I asked for half of it. No price was mentioned, but I daresay I should have had to pay $10 over what Lewis gave for it.

William H. Miller, sworn:—I am a British subject. I am a printer at No. 81. I remember this beer, and it was good. I know that Lewis sold some to Mr. Copeland; he told me so. I cannot say if I was in the house when it was delivered.

To Court:—I saw one cask taken from amongst the rest, and I along with others tasted its contents, I am sure it was the beer now under consideration.

Benoit de Yongh, sworn, stated: I am a Belgian subject. I remember tasting this beer some month ago. It was excellent. The bar keeper, when I asked for beer, told me he had some splendid English beer. I liked it very much and had a glass pretty nearly everyday, it caught my fancy so much.

This closed the evidence for defendant. Plaintiff called as witness his partner.

E. Wiegand, who was sworn: I am a partner in the firm of Copeland and Wiegand. I am an American. I remember this beer. About the 28th of July, Mr. Lewis came up the hill and offered 20 kilderkins of sour ale which he had bought at Bourne's auction to Mr. Copeland, who asked him what price he had paid for it. Lewis said $1 50, and he would give it for the same price. Mr. Copeland said he would take it at that figure and Lewis asked him to send for it as quickly as possible When we sent for it we only found 16 kilderkins. Mr. Copeland asked where the rest were? He was told that Lewis kept four for himself. Mr. Lewis was supplied with hhds. of beer, and the empty hhds. came back, though I could see none which did not belong to the brewery.

To defendant: There are 60 American gallons in a hogshed. You have bought hhds. of beer from us since I joined the firm. I was present when the conversation took place between Copeland and you. It was not fit to be drunk, and so you were told.

Defendant said the greater fool he to buy bad beer.

Witness to Court: The beer was thrown away. It was no use. Our object in buying the beer was to get the casks when empty.

Thomas Holm, sworn:—I am a German subject, and drayman to Copeland and Wiegand. I remember this transaction very well. Lewis told me he had some good English beer on hand, which he had bought for $1.30 per kilderkin. I told my employers about it and they said they might buy it for the sake of the casks, but they did not given any definite answer for Lewis. I was standing at the gate in the afternoon when Lewis called, and we went into the office. He then told Mr. Copeland what he had said in the morning. It was decided that Copeland would take it at the price Lewis had paid for it. I went for it on the Sunday morning, and told Mr. Lewis my errand. He said "Very well, very well," and when I remarked that there were only 16 instead of 20 he said that he intended selling the other four to his customers mixed with lemonade or something. After taking the 16 I gave a receipt for them in the name of my employers. (Paper shown.) That is it.

To the defendant:—You were in the house when I took the beer. I did not tell you we were making vinegar with it. I may have said so, but I do not think I did. Mr. Pearce was present also when I took the beer.

To the Court:—When Lewis told me he was keeping the beer it was so good, I answered in joke "We are making vinegar of it." We do make vinegar, but this stuff would not make it. I think Japanese must have made it.

Thomas Pearce, sworn:—I live at No 81. I remember this beer being delivered to last witness. I knew it had been bought at auction. I have often taken a little glass, and I, with other gentlemen, pronounced it remarkably nice. I think I was on an excursion to the country on the Sunday. I slept on the counter as usual during the night. I am a musician in the establishment.

To defendant:—I really do not remember whether you were at home when the beer was delivered. I remember hearing you say you were angry you had not been present when Copeland's man called.

The Court in giving judgment said:—The evidence in this case is very conflicting Plaintiff says he bought

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the beer for $1 30 and has three witnesses to prove the fact, whilst defendant does not know what he gave it for. So I must conclude the beer was sold at $1 30 per kilderkin. Judgment therefore is that Lewis pay Copeland the sum of $204 90 claimed in the petition and $12 costs. That Copeland pay Lewis $23 05 of the sum claimed in the cross petition and $6 costs. That therefore Lewis pay Copeland $187 85 within 10 days.

IN H. B. M.'s CONSULAR COURT.

Before H. S. Wilkinson, Esq., Vice Consul.

Wednesday, November 1st, 1876.

William Lovett, a seaman on board the British ship *Mary Fraser*, was charged with refusal of duty.

Prisoner admitted the charge, under provocation.

J. Dexter, master, sworn: I promised him money to go on shore, as he says, but as the others to whom I had given money returned on board drunk, I thought it prudent to withhold the $2 from him. The last time he got leave he returned to the ship after his time and was unfit for duty for 24 hours after. I offered to get the things he wanted and asked him to give me a memorandum. This did not satisfy him and on Monday night, he went on shore against orders and I did not see him till 10 o'clock on Tuesday morning. I sent for the constable, and prisoner in his presence refused duty, so I brought him on shore here.

Prisoner said he had asked for money to go on shore, but the captain refused. Then the mate gave him liberty to go on shore but without money. So he went on Monday night.

Captain Dexter denied this statement.

Prisoner to Court: I am willing to resume duty if the captain will give me the things I want or the money to buy them with.

Discharged upon payment of costs, on condition of returning to duty at once. His Honour remarked that masters of vessels should always fulfill their promises to the men, knowing how apt they are to take advantage of such an omission.

HAMMOND ON SPIRITUALISM.*

(The Nation.)

On this most dismal of subjects Dr. Hammond has given us a book that is both sensible and entertaining. His survey of so-called "spiritualistic" phenomena is extensive, and with a large and important part of them his intimate acquaintance with abnormal states of the nervous system has enabled him to deal very successfully. The results of a physician's experience are, moreover, very happily supplemented by historical research. One of the excellent points about Dr. Hammond's book is its frequent comparison of contemporary delusions with those of earlier times. He makes such wholesome use of the annals of witchcraft and the biographies of mediæval saints, mystics, and charlatans, as fairly entitles his book to a prominent place on the Index Expurgatorius. The marvels countenanced from time to time by the Roman Church fare no better in his hands than the wonderful deeds of the Homes and the Davenports, and of these it is left doubtful whether the most marvellous part is the audacity of the performers or the gullibility of the spectators.

According to Dr. Hammond, spiritualism is for the most part barefaced imposture, the remainder being innocent delusion. By many person who adopt this view on the whole, yet are unable to realize how great is the capacity of the human mind for being deceived, a reservation is made in behalf of divers phenomena which are alleged to take place in conformity to some undiscovered "nature law," or to require for their explanation some species of "force" other than those with which scientific men are familiar. Dr. Hammond is not inclined to admit any such reservation as this, which, even if it were allowed, would be of small use to the spiritualists. Even if an event were admitted to be inexplicable save by an appeal to some "force" other than those that have hitherto been studied, we should still have no sort of reason for assuming any connection between this unknown "force" and the "spirits" of deceased persons. Such an assumption could find no warrant whatever, save in a general *a priori* hypothesis, handed down to us from barbarous times, which has been uniformly discredited wherever there has been an opportunity for testing it. Even to describe such a "force" as "psychic" is to beg the whole question; for until we have subjected it to a long course of experimentation, like that which has built up our scientific knowledge of heat and light, we can have no means of knowing whatever it is "psychic" or not. It is, however, very unphilosophical at the outset to appeal to any new or unknown force until we have thoroughly exhausted all means of explanation furnishable by forces that have already been defined: and by the advocates of spiritualism no such preliminary enquiry has ever been made or even attempted. When, therefore, Mr. Crookes finds himself unable to explain the way in which Mr. Home causes the index of a spring-balance to descend without exerting any apparent pressure on the lever, it is a very violent stretch of inference to call in an imaginary "psychic force" by way of simplifying the matter. This is appealing from the known to the unknown, and it is in no such way that discoveries are made in those physical sciences which Mr. Crookes has so carefully studied. Dr. Hammond may well say that "there are so many ways in which known forces manifest themselves, and so little is known of the laws which govern them, that Mr. Crookes might, for the present, with safety and propriety, have held his opinion in abeyance." As Mr. Crookes's experiment is the only one cited in which the spiritualists seem to have been able to work in broad daylight, and to dispense with the grosser forms of jugglery, a brief description of it may prove instructive.

In order to test Mr. Home's pretensions to a power of altering the weights of bodies by "spiritual agency," Mr. Crookes constructed a simple and ingenious apparatus "consisting of a mahogany board thirty-six inches long by nine and a half inches wide and one inch thick. At one end a strip of mahogany was screwed on, forming a foot, the length of which equalled the width of the board. This end of the board rested on [the edge of] a table, while the other end was supported by a spring-balance" pendent from a tripod stand. Obviously, now, when Mr. Home placed the tips of his fingers lightly on the end of the board which was resting on the foot or fulcrum, the pointer of the balance ought to have remained perfectly stationary; even a heavy pressure directly over the fulcrum could not alter the position of the lever. But, as a matter of fact, the pointer descended, showing that the weight or downward pull at the end of the lever supported by the balance had been increased by from three to six pounds. In order still further to guard against the possibility of Mr. Home's exerting any muscular action on the board, Mr. Crookes placed a glass vessel full of water over the centre of the fulcrum, "and by means of an iron stand, quite detached from all the rest of the apparatus, a vessel of copper was held so that it dipped into the water without touching the sides of the glass vessel, the bottom of the copper vessel being perforated with holes, in consequence of which it was partially filled with water. . . . When Mr. Home placed his hands inside the copper vessel, any force passing through his hands had to traverse the water, hence no muscular action of his could have any effect upon the spring-balance. With the apparatus thus arranged, the lever oscillated as in his previous experiment, the average strain registered being three or four pounds."

Such were the phenomena to explain which Mr. Crookes invoked the assistance of an unknown something which it pleased his fancy to call "psychic force," while his companion, Dr. Huggins, more wisely declined to express any opinion. In connection with these phenomena, Dr. Hammond calls attention to an experiment of Prof. Tyndall's in which an egg is placed in an egg-cup and a long lath balanced upon the egg: if a dry stick of sealing-wax, which has been well rubbed with a piece of woollen cloth, be held over one end of the lath, the latter, no matter how heavy will rise to meet it. In dry weather many persons can make the finger serve the same purpose as the sealing-wax, by first shuffling their feet for a few moments over the carpet. Taking these things into consideration, Dr. Hammond arranged an apparatus like that of Mr. Crookes, and, applying the stick of sealing-wax just over the fulcrum, where Mr. Home's finger-tips had rested, the pointer of the balance at once descended. The same result was immediately afterwards obtained when, after shuffling over a thick rug, Dr. Hammond rested his finger on the same place. So far, therefore, the strain on the balance would seem to be due neither to ghosts of departed men nor to "psychic force," but to some peculiar manifestation of that commonplace agent, friction electricity. How far Dr. Hammond's experiments may be conclusive, it is not in our power to say. What it concerns us to notice is that his method of going to work, by searching for some analogous case within the region of experience, is the method of science and of common sense, whereas Mr. Crookes's method, of deserting the region of experience in quest of some "psychic force," is the method which characterizes alike the barbaric myth-maker and the ill-trained thinker in a civilized community. So long as scientific men are capable of doing such unscientific things, it is not to be wondered at that primitive superstitions still survive,

Original from UNIVERSITY OF CALIFORNIA

Some of Mr. Home's other tricks are suggestive in another way The feat of making a small table so heavy that the credulous by-stander cannot stir it from the floor shows what curious results may be obtained from highly impressionable people by riveting their attention. Dr. Hammond has himself performed this trick with entire success. Taking a small Japanese table, weighing less than two pounds, he informed a young man that he was going to make it too heavy to be raised from the floor. For a quarter of an hour he held the tips of his fingers on it, until the young man's attention became riveted, when he removed his hands and challenged the young man to lift the table. It proved immovable, and, "I saw" says our author, "that so far from endeavoring to lift it, as he supposed he was doing, he was in reality pressing it with all his might towards the floor." But as soon as Dr. Hammond had waved his hand over the table and declared that it might now be lifted, the young man lifted it with ease. Scientifically viewed, such phenomena are very interesting; they seem closely akin to the phenomena of hypnotism in men and animals, so strikingly illustrated in the experiments of Kircher and Czermak. Hens and pigeons can easily be put into a cataleptic state by holding a cork or a bit of chalk before their eyes so as to attract their attention: and in a similar way a frog's attention may be so absorbed that his belly may be cut open without his seeming to notice it. Mr. Braid has similarly hypnotized men; and Dr. Hammond produced complete anæsthesia in a lady by causing her to look for a few moments at a cork fastened upon her forehead while her back was cauterized with a red-hot iron.

As for Mr. Home's tricks of putting live coals into his waistcoat pocket and on other people's bald heads with impunity, such things have so long been commonplaces with second-rate conjurors that it is astonishing to find intelligent men like Mr. Wallace quoting them as instances of ghostly agency. Nothing could be easier for a clever juggler like Mr. Home than to exchange real coals for false ones, or to protect his own pockets and the heads of his dupes with asbestos cloth, without attracting notice. Such a proceeding would require far less skill than that of professional magicians, like Hermann or Houdin, in comparison with whose wonderful achievements the best performances of spiritualists are not worthy to be named.

Still keeping to Mr. Home, his famous trick of "levitation." or appearing to float through the air out of one third-story window into another, seems partly to illustrate the effects of intense expectation in producing hallucination, partly to show us for the thousandth time how little unsifted human testimony is worth; for on one occasion, while two "respectable witnesses" were sure that they saw the great "medium" come sailing feet foremost through the window, their less gullible companion was equally positive that the levitating gentleman was sitting quietly in his arm-chair all the while! Nothing is more common than for us to be told what people of undoubted veracity have seen. For our own part, if we were to answer frankly in such cases, we should take our cue from a celebrated naturalist whose friend was recounting to him a miraculous shower of frogs from the sky. "It is fortunate," said he, "that you have seen it, for now I can believe it. If I had seen it myself, I should not have believed it!" The commonest acts of perception are so liable to be warped by hypothesis (a fact which conjurors like Houdin consummately understand) that it is quite useless to conjecture what our witnesses may really have seen, unless we know much more than they are likely to tell us of the physical and mental condition under which their seeing was done. At a meeting of spiritualists in Boston, Mr. Robert Dale Owen once saw what he took to be an "apparition in shining raiment," being quite clear in his mind that no deception or illusion was possible under the circumstances. But Dr. Hammond, making a diagram of the rooms from data contained in Mr Owen's account, shows that, with the greatest ease, a "woman in white" might have been brought into the room and illuminated by means of a dark lantern without awakening suspicion. The case of Angelique Cottin, the famous "electric girl," is equally instructive. After tipping tables, repelling books, brushes, and other small objects, and disturbing magnetic needles before numerous "intelligent audiences," her alleged powers were carefully investigated by a committee of the Academy of Sciences, consisting of Arago, Becquerel, Geoffroy St. Hilaire and others. Tables, books, brushes, and magnetic needles, all kept most provokingly quiet, and the "electric girl" subsided into oblivion. So, numbers of people who watched the "Welsh fasting-girl" were quite sure that she subsisted without food; but, when really competent watchers were introduced, the poor creature died of starvation, destroyed by her own obstinacy and the criminal acquiescence of her parents.

We have touched upon but few of the topics treated in Dr. Hammond's book. Into his elaborate discussion of the painful and often disgusting phenomena of hysteria, ecstasy, and stigmatization we have not space to follow him. His subject is one which leads the enquirer into some of the darkest and most loathsome corners of the human mind; but the enquiry has, nevertheless, its uses.

THE PLANET SATURN'S DARK RING.

(The Spectator.)

Saturn is now the ruling planet of the night, and will continue to be so for several weeks. It may, therefore, interest our readers to learn some very striking observations have recently been made upon the ringed planet, at an observatory which in former years acquired great renown for Saturnian discoveries. At Harvard, Cambridge, Mass., there is a fine telescope by Merr (the maker of the object-glass of the great Greenwich telescope), which, unlike its brother at Greenwich, has been employed in the study of the sun, moon, and planets, with results scarcely matched and certainly not surpassed elsewhere. It was with this instrument that the elder Bond detected the satellite Hyperion, the last discovered of the eight moons of Saturn, and remarkable as travelling between the two largest moons, Titan and Japetus. The honour of this discovery had to be shared, however, with our observer, Mr. Lassell, who detected the moon while the news of Bond's success was on its way across the Atlantic. Another discovery made by Bond was also, by a strange coincidence, independently, but later, effected by an Englishman, during the interval between the discovery in America and the arrival of the news of it in England. He perceived inside the bright rings of Saturn, which had been known for nearly two centuries to astronomers, a dark ring, possessing the strange property, hitherto unheard of among celestial objects, of being transparent, so that where it crosses the disc of the planet the latter can be perceived through it as through a crape veil, to use Mr. Lassell's description. This strange appendage was discovered by Dawes a few days later in England. It is to this object that the discoveries we have now to describe relate. From the time of its detection the dark ring has been the subject, or, perhaps, we should rather say, the occasion of much speculation. It was not supposed to be an entirely new formation, though so clearly discernible when first noted that many wondered how it could so long have remained unnoticed when the planet was studied with the powerful instruments known to have been used in its examination. Pictures of the planet were found which seemed to show that the "crape veil" at least had been seen many years before Bond detected it. It does not say much for the earlier observers that they should have paid so little attention to a feature so strange, or for astronomers generally, that having the opportunity of examining the earlier drawings, they should have overlooked the peculiarity. So, however, it was. But though the newly observed ring was not regarded as an entirely new formation, it was seen to be highly probable that this ring had developed marvellously, for when first recognised as a ring it was quite a well-defined feature of the planet. The idea was suggested that the ring-system of Saturn had drawn inwards, and some even went so far as to compare the new inner dark ring to the front waves of an ocean bearing inwards upon the planet. In England the discovery led the Cambridge Professors of Mathematics to select the rings of Saturn for the subject of the Adams Prize Essay in 1857. Professor Clerk Maxwell, to whom the prize was awarded, deduced from the mathematical investigation of the subject the strange conclusion that the rings are formed of multitudes of minute satellites, as sands on the sea-shore for multitude. Thus the dark ring would come to be regarded as simply a portion of this mighty belt of small satellites, where the moons were widely scattered, so that the dark background of the sky could be seen through the ring.

The observations recently made by Mr. Trouvelot at Harvard accord perfectly with this theory, and seem explicable by no other. It has been noticed, in the first place, the planet's shadow where it falls on the dark ring undergoes strange changes of shape, as though the surface on which it fell were undulating. Now, although there might be irregularities on a solid ring, and though these, by changing their position as the ring rotated, might produce the effects described, we have no reason whatever for supposing that there are fixed unevennesses upon Saturn's rings large enough to be discernible from our distant stand-point. It is much more natural to suppose that the scattered moons forming the dark ring have such motions as to give an undulating surface to its rings. There is indeed, another explanation, which probably is also true, viz., that the planet's atmosphere is very deep, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

laden with enormous masses of cloud, which are continually changing in position, shape, and constitution, now floating high, now low; now swelling, now contracting; now dissolving into invisible vapour, anon condensing into masses as dense as our heaviest rain-clouds. The shadow of a planet surrounded by such vapour-masses would unquestionably vary, and we know that even on the bright rings the shadow of Saturn varies; but as it is seen to vary more markedly on the dark ring, we may infer that this ring has an undulating surface.

Next, Mr. Trouvelot has noticed that the inner half of the dark ring is so transparent that the outline can hardly be recognised where it crosses the planet, whereas the outer half is so much more opaque that the outline of the planet can hardly be seen through it. This fact is not only remarkable in itself but still more remarkable when we remember that until quite recently the character of the dark ring was quite different. The whole width of the ring was formerly uniformly transparent, or at least so nearly so that no difference could be recognised between the outer and inner parts of this ring. This thinning of the inner edge is probably accompanied by a gradual extension of the ring-system towards the planet. Clerk Maxwell long since pointed out that a change of this sort was to be expected, as a natural consequence of collisions taking place among the tiny moons forming this ring-system. And other observations by Mr. Trouvelot show clearly that multiplied collisions of this sort must continually occur. For he finds that from time to time the dark ring assumes an aspect showing that its substance is agglomerated in clustering masses, through which the light of the planet does not penetrate. How strange are the thoughts suggested by such changes! Within the ring itself what energy of life (so to speak) is indicated by the conflict of satellites! And as regards Saturn himself, does it not appear clear that while such changes as these are taking place in the nearer portions of his system, he cannot yet be regarded as a completed world? We see nature's hand still at work out yonder, fashioning under the very eyes of astronomers the system of a planet once thought to have been formed even earlier than our own earth. The processes of cosmical development which were formerly so energetically disbelieved, but have now taken their place among astronomical probabilities (and almost as certainties), seem here to be actually in progress. Nature has been detected in the act, and there is good reason for believing now, what was suggested by the present writer eleven years since, that "in the variations perceptibly proceeding in the Saturnian Ring-system a key may one day be found to the law of development under which the Solar system reached its present condition."

Shipping Intelligence.

ARRIVALS.

Oct. 30, *Malacca*, British steamer, Edmond, 1,708, from Hongkong, Oct 23, Mails and General, to P. & O. Co.

Oct. 30, *Tenessee*, U. S. flagship, Captain Young, from Nagasaki viâ Kobe

Oct. 30, *H. N. Carleton*, American barque, Harkness, 872, from Shanghai, Oct. 19, Cotton, to Strachan & Thomas.

Oct. 30, *La Clocheterie*, French corvette, Captain Breuniere, 2,000, from Kobe, Oct. 28

Nov. 1, *Courier*, Russian steamer, Lemascheffsky, 495, from Hakodate, Oct 29, Furs and Sundries, to Walsh, Hall & Co.

Nov. 1, *Lottie*, Russian schooner, Johnson, 35, from Pacific, Furs and Sundries, Captain

Nov. 2, *Nagoya Maru*, Japanese steamer, Connor, 1,914, from Shanghai and ports, Oct 25, Mails and General, to M. B. Co.

Nov. 2, *Fleurs Castle*, British steamer, Thompson, 1,622, from Shanghai, Oct. 29, General, to Adamson, Bell & Co.

DEPARTURES.

Oct. 28, *Cordelia*, British barque, Williams, 598, for Falmouth, Rice, despatched by Wilkin, & Robison.

Oct. 28, *City of Peking*, American steamer, Tanner, 5,079, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

Oct 28, *Nevada*, American steamer, Williams, 2,145, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Oct. 28, *Shinagawa Maru*, Japanese steamer, Seikmeier, 900, for Kobe, Mails and General, despatched by M. B. Co.

Oct. 28, *Glengyle*, British steamer, Donaldson, for Kobe, General, despatched by Jardine, Matheson & Co.

Oct. 29, *Martaban*, British steamer, Barlow, 2,500, for Foochow Ballast, despatched by Findlay, Richardson & Co.

Oct. 31, *Bombay*, British steamer, Smith, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

Oct. 31, *Hiroshima Maru*, Japanese steamer, Furber, 1,870, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Oct. 31, *Genkai Maru*, Japanese steamer, Young, 1,919, for Kobe, Mails and General, despatched by M. B. Co.

Oct. 31, *Bonito*, German 3-masted schooner, Stähr, 340, for Kobe, General, despatched by Simon, Evers & Co.

Nov. 1, *Thabor*, Japanese steamer, Pendered, 600, for a tour of inspection to the various Stations on the Southern Coast,—Lighthouse Department.

PASSENGERS.

Per Steamship *City of Peking* for Hongkong.—Dr. Carlo Barzillia, Mrs. N. Winters, D. B. Sickles, and T. B. Cunningham.

Per Steamship *Nevada* for Shanghai and ports.—Mrs. F. E. Haskell, Rev. Mr. and Mrs. Murray, Mrs. Pereira, Miss Kutchum, Miss Andrews, Mr. and Mrs. Strome, Mr. and Mrs Sawamura, Mr. and Mrs. Coignet, Mr. and Mrs. Newcombe, Mr. and Mrs. Moorhead, Mrs. Guy, Lieut. Chamberlaine, Professor Gluckmar, Messrs. Hemskerk, Van Delden, Bowler, Parks, Ross, Iwata, Orth, Brown, Kawashima, Bernhard, Kirby, Asada, Nishinomiya, Osenbrugger, Nachtigal, Keswick, Cameron, Chicano, No Jin, Oestmann, A. O. Gay, Miyamoto, Arikawa, Sakurai, Schroen, and Russanoff.

Per Steamship *Malacca* from Hongkong.—Lieut. Tate, R.N., Messrs. Cruise, Platt, Stanford, and Goodhead, for I. Jap. Railway, and 2 on deck.

Per Steam-ship *Bombay*, for Hongkong: Mr. and Mrs. Rickard and 3 Children, Mr. Kynnersly, Hon. J. G. Austin, Mrs. Wharry, Mr. and Mrs. Crane and 2 Children, Mr. K. Asano, Mr. N. Kumagai, Mr. M. Kihara, Lieut. Hawes, R.M., Lieut. Richards, R.N., Mr. G. Smith, Mr. J. Bath, Mr. R. Wilkinson, 1 European, and 13 Chinese in the steerage.

Per *Hiroshima Maru*, for Shanghai and way ports:—Captain Gorham, Miss Onubo, Mr. and Mrs. Wisner, Mrs. Ban, Lieut. C. W. Chipp, U.S.N., Messrs. Omihara, Goodhead, Stanford, Midzuno, Goodison, Ban, Cobden, McMahon, Wylie and 14 Japanese.

Per Steamship *Nagoya Maru* from Shanghai and ports.—Mrs. Grey, Messrs. J. McLean, G. H. Hodges, Horn, Boyd, Forrest, Bernhardt, Ford, Fobes, Baorschen, O. Smith, and 6 Japanese in cabin; 6 Chinese, and 309 Japanese in the steerage.

Per Steamship *Fleurs Castle* from Shanghai.—Messrs. Cance, Skelly, Queckett, and Haig.

CARGO.

Per Steamship *Nevada* for Shanghai and ports.—

Treasure	$229,730.
„	*yen* 180,611.

Per Steamship *Bombay* for Hongkong.—

Silk for England	314 bales.
France	122 „
Italy	42 „
Total...	478 bales.
Silk-worm's eggs, for Italy	10 cases.

Per Steam-ship *Hiroshima Maru*, for Shanghai, &c.:—
Treasure, *yen* 58,753 97; $246,203.46.

Per Steamship *Nagoya Maru* from Shanghai and ports—
Treasure ... ... $63,500.

REPORTS.

The *Lottie* reports variable weather since leaving the Kurile Islands. She has on board 230 sea otter skins.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Owing to the Race holidays we have no transactions to report, and quotations remain nominally the same.

Grey Shirtings:—							
7 lbs.	38½	yds.	39	in.	per pce.	$1.62½	to $2.10
8 lbs.	38½	yds.	44	in.	,,	2.00	to 2.55
8 lbs. 4 to 8 lbs.	38½	,,	39	in.	,,	1.90	to 2.55
9 lbs.	38½	,,	44	in.	,,	2.40	to 2.90
T. Cloth 7lbs.	24	,,	32	in.	,,	1.45	to 1.70
,, 6lbs.	24	,,	32	in.	,,	1.20	to 1.30

White Shirtings:—							
60 to 64 reed	40	yds.	35	in.	per pce.	2.20	to 2.40
Turkey Reds	24	yds.	30	in.	2—3 lb. per lb.	0.77½	to 0.87½
Black Velvets						8.25	to 9.25
English Drills	15	lbs.	40	yds,	30 in.	2.80	to 3.00
Taffachelass	12	yds,	43	in.		2.00	to 2.40

Yarns.—

No. 16 to 24	per picul	$30.50	to	35.00	No. 38 to 42	per picul	$39.00 to 42.50
No. 28 to 32	per picul	$31.50	to	39.00	Reverse Twist 16-24	,,	$33.50

Woollens.—The market shows a decided downward tendency, though little has been done during the past week. *Mousseline de Laines* can alone be placed at quotations, and in them we have no important transactions to report.

Plain Orleans	40—42	yds.	32	in.	5.55	to	7.00
Figured Orleans	29—30	yds.	31	in.	4.25	to	5.75
Shimagoro	30	yds.	30	in.	4.50	to	5.50
Italian Cloth	—30	yds.	32	in.	0.25	to	0.37½
Camlet Cords	29—30	yds.	32	in.	5.75	to	6.00
Camlets Asstd.	56—58	yds.	31	in.	16.50	to	17.50
Lastings, Japan	22—30	yds.	32	in.	12.00	to	13.00
Plain Mousseline de Laine	—30	yds.	30	in.	0.19	to	0.19½

Figured Mousseline de Laine	30	yds.	30	in.	0.27	to	0.32
Multicolored ,,	30	yds.	30	in.	0.30	to	0.40
Cloth, all wool plain or fancy	48	in.	to 52	in.	0.80	to	1.20
Presidents	54	in.	to 56	in.	0.75	to	0.80
Pilots	54	in.	to 56	in.	0.45	to	0.60
Union	54	in.	to 56	in.	0.60	to	0.75
Blankets, scarlet & green	6 to 8 lbs.				per lb.	0.42	to	0.48

Sugar.—There is a good enquiry for both *China* and *Formosa Sugars*, but holders continue unwilling to sell.

Sugar:—Takao in bag	per picul	$3.95	China No. 4 Kook-fah	per picul	$5.60
,, in basket	,,	$3.70	,, No. 5 Kong-fun	,,	$5.10
Taiwanfoo in bag	,,	$3.80	,, No. 6 E-pak	,,	$4.40
do. in basket	,,	$3.55	Swatow	,,	$3.40
China No 1 Ping-fah	,,	$7.80	Daitong	,,	$3.40
,, No. 2 Ching-pak	,,	$7.00	Japan Rice	$2.30	to $2.35
,, No. 3 Ke-pak	,,	$6.30	Kerosene Oil	,,	$3.80

Kerosene Oil.—The market remains in the same position as last stated.

EXPORTS.

Silk.—Owing to the better feeling adverted to in our last, the market was resuming some activity at the beginning of this week when transactions were interrupted by a succession of discouraging advices from Europe. The Japanese are willing enough to sell even at considerable reductions; but dark prospects and the difficulty of negociating credits keep most buyers out of the market. Under these circumstances our quotations must be considered as almost entirely nominal.

Since the 24th ulto., arrivals are 790 bales, and deliveries are 1,030 piculs, but large quantities are rejected day after day, and actual settlements cannot be ascertained.

Hanks, No. 1 to 2	$820	to	$860	nominal.
,, No. 2	$810	to	$820	,,
,, No. 2½	$760	to	$800	,,
Oshiu, Best	$820	to	$860	,,
,, Medium to Good	$780	to	$810	,,

Silk-worms' Eggs.—The resistance of buyers to the high pretensions of the Japanese continues. Some among the holders are now contemplating shipments to Europe for their own account, a scheme which is said to be supported by one of the native Banks. Others prefer an immediate realisation and are beginning to give way; they are selling assortments of annual green at from $1.80 to $3.30, and white from $1.50 to $2.50, according to quality, and whilst certain marks are still held at much higher rates a parcel of Goshiu is said to have been sold at $1.25. The business done at these prices, however, is very limited.

Total arrivals since the beginning of the season are about 1,100,000 cards against 800,000 last year at the same date. Total deliveries appear to be nearly 300,000 cards; but what actual settlements are we find it impossible to determine.

Tea.—Business has been almost entirely suspended during the past week, settlements being under 1,000 piculs. Prices remain unchanged, but have a downward tendency.

Common	$12.00	to	14.00	Fine	$27.00	to	33.00
Good Common	15.00	to	17.00	Finest	34.00	to	39.00
Medium	18.00	to	20.00	Choice	43.00	to	48.00
Good Medium	22.00	to	25.00				[scarce.

EXCHANGE AND BULLION.

Exchange.—The Race holidays have considerably interfered with business; the demand for Bank Bills is almost nil, and for Private Paper the rates have daily advanced to quotations.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 2d.	On Shanghai—Bank sight	76½
,, Bank Bills on demand	4s. 1d.	,, Private 10 days sight	78
,, Private 6 months' sight	4s. 2⅛d.	On New York—Bank Bills on demand	94
On Paris—Bank Sight	5.10	,, 30 days sight Private	96½
,, Bank 6 months' sight	5.20	On San Francisco—Bank Bills on demand	94½
,, Private 6 ms. sight	5.35	,, 30 days sight Private	97
On Hongkong—Bank sight	2 % dis.	Kinsatz	398
,, Private 10 days' sight	2½ ,, noml.	Gold Yen	392

NO. 63.

China Sea.

TAMSUI DISTRICT.

Coral Patch off the Entrance to Keelung Harbour.

THE following information has been received from Vice-Admiral A. P. RYDER, Commander-in-Chief, China Station.

"H. M. S. *AUDACIOUS* when leaving Keelung Harbour, Formosa, in May last struck on a CORAL PATCH, unmarked in the Charts. The position of this patch has since been determined by H. M. S. *LAPWING*, and is as follows:—

100 Foot Rock (Keelung Island)...S. 74° E.
Macedonian Point .....S. 3° E.
Brooker Point.....S. 27° W.

This patch is about 150 to 200 yards in extent with least water 3½ fathoms (reduced to low ordinary springs), soundings varying from 5 to 9 fathoms on the patch.

The bearings given show the exact position of the 3½ fathoms patch.

By order of the Inspector-General of Customs.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Hope for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants "to whom I served out a quantity of Holloway's Pills. These were "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, and "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. tf.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 9th November, at No. 1, Kaga Yashiki, Tōkiō, the wife of Revd. W. E. PARSON, of a son.

Notes of the Week.

The rebellion may be regarded as effectually put down. Mayebara and most of the ringleaders have been taken, and the *Nichi Nichi Shimbun* of this morning reports that the Commissary of the Akidzuki insurgents was captured at Kokura. On examination he divulged the facts that the outbreak was planned by Mayebara in the spring of this year, and the *sumarai* of Akidzuki, Kurumé, Saga and Kumamoto, together with some of those from Tōkio and the province of Etchigo, were invited to join in a movement against the Government to take place on the 26th and 27th of October. But the Kumamoto men acted with too much precipitation and thus disorganized the plans of the other rebels.

The ample vocabulary of abuse and vilification which constitutes the playful armoury of American public writers, appears to have been employed in vain against Mr. Tilden, whose election to the Presidential chair now appears practically assured. The theory of republicanism is that the wisest and best citizen shall be chosen to rule a nation, and it can hardly be pleasant to three-sevenths of a people to reflect that they have freely held up their first and representative citizen to the world as a perjurer, swindler, railway-wrecker, etc. These graceful terms may indeed lose all significance over a whole continent during a given member of months, but it may be questioned whether their lavish use, even during a restricted time, does not detract seriously from the punishment they should inflict when properly bestowed. The habitual association of such words with the successful Presidential candidate cannot but lower the dignity of the office he fills, which may ultimately fall into the same slough of degradation as the word politician—respectable as that still is among ourselves. In spite of the many examples of bad kings and bad nobles which the history of Europe affords, the words kingly, princely, imperial, royal, noble, gentleman, etc., retain associations full of dignity and enviable application. When our own Queen thanked Mr. Peabody for his benefactions to the English poor, she gracefully characterised them as "more than princely," nor could any happier expression have been found for the occasion. But unless the public writers in America are more frugal in their application to the Presidential candidates of the fragrant terms so generously bestowed on Mr. Tilden, it is more than probable that the formula "of more than Presidential infamy" will become one of the stock phrases of the nation, useful chiefly in summing up the careers of distinguished malefactors—a consummation devoutly to be deprecated, yet certainly to be dreaded. Much as we Europeans have to lament, we must still feel grateful that there is no inseparable association in our minds between the characters of our rulers and our criminals.

The practical working of republican institutions in America has long precluded the possibility of the election to the office of President of any man eminently distinguished above his fellows for virtue or wisdom—qualities which inevitably ensure his rejection—so that no surprise need be felt at the previous obscurity of the successful candidate. But putting aside, as slightly hyperbolical, such expressions as 'the pillar of a nation's hope, the centre of a world's desire'—which may be merely correlated forms of the 'swindler' and 'perjurer' amenities—Mr. Tilden seems a very respectable man, of no distinguished abilities and with distinct proclivities in favour of 'soft-money.' Moderate and sensible men of the other camp associate his name with repudiation, and conscientiously think that if his principles are logically pursued they can only terminate in this undesirable conclusion. But, on the other hand, they are so sick and ashamed of the corruption into which the nation has been plunged since the civil war, and which has 'so thoroughly soaked into the character of the whole political class'—an expression for which we have American warranty—that they are inclined to waive their individual party predilections, and hope for the correction of objectionable proclivities by other than party influences. A choice which is acknowledged to lie between corruption on the one side and repudiation on the other, imposes serious limits on the aspirations of a people extremely sensitive to English opinion—for, so far as we see, they care little for any other external estimate of their affairs—and not indisposed to imagine that their political philosophy and system are far in advance of our own. But if success be the test of the experimental science of government, we shall hardly be seriously disturbed at a little creaking of our own machinery so long as we see our enterprising rivals expending their whole energies on getting theirs decently clean.

It is the happy fortune of a few individuals or parties to throw a halo around the principles or institutions they represent. Monarchy, as a system, is, at this moment, not without its debt to at least one

living Sovereign, under whom liberty, security, contentment and peace have made such firm advances as must convince all reasonable men that these blessings may be enjoyed in their fullest extent under that form of government. It has been the misfortune or the lasting shame of the Republican *régime* of the past eight years in the United States, to illustrate the old saying, *Corruptio optimi pessima*—to show that the noblest of political theories, even when accepted as the basis of a nation's polity, is no guarantee against evils of the first magnitude in political life, and that that high ideal of government and the possibilities of human nature which are the presumed foundations of a republican system, may be mocked by the fruits for which that system must be held directly responsible.

Can the Consuls put together no scheme which would approve itself to the Foreign Representatives and the Japanese authorities with the view of doing something at least towards diminishing the great evil to which the U. S. Consul-General has so often called attention—the sale of liquors of a really poisonous and deadly intoxicating quality? The scenes daily witnessed in the streets and the cases brought before the consulates really cry loudly for some interference, or, if that be impossible, some organization which will have the effect of protecting sailors against these horrible compounds. To see fine young fellows, and fine old fellows, for that matter, as was the case on Thursday last, lying in the streets in the midst of this Japanese population around us, or brought up before the Consuls on charges of helpless drunkenness, is a scandal of the first class, most humiliating to us and to the men themselves. Is there no way of making the Temperance Hall a lever for reform in this direction; or cannot the Sailor's Home be made to stand somehow—we really do not know how, and only throw out the suggestion—between our sailors and this form of discredit? We are much with General Van Buren in his sympathy with the men who fall by these poisons, though until their sale can be checked or prevented, or some organization can be raised to stand between them and the sailors, we think punishment the only deterring power. But we cannot reconcile ourselves to leaving the whole question as it now stands, and think that if the Consuls will take it up, with the determination of dealing with it, something of this scandal and disgrace, and, it may fairly be said, hardship, to the sailors, might be abated.

There is an airy gaiety about the way in which deadly weapons are used by the jovial blades who keep drinking saloons here, which speaks volumes for the demoralizing effects of all this drunkenness. In a case tried on Tuesday before General Van Buren, a man goes to the "Alhambra Saloon" and asks for some liquor, which is refused him because his score is already too large. He breaks out into abusive language, and the barman takes up a revolver and "shoots at his leg to frighten him!" Dr. Eldridge testifies that the wound was in the vicinity of the femoral artery, and had the bullet cut it, nothing could have prevented immediate death. Is there no way of solving this municipal problem? Granted that men who go round drinking without paying, like this man Grundy, are miserable creatures, they are not to be cured by lodging bullets within a barleycorn of their femoral arteries.

The following is an extract from a letter published in the *Japan Herald* of last Tuesday evening:—

On the road leading from Fujisawa to Enoshima,—a road that most of us have passed over in many a pleasant country jaunt,—lives a small farmer, by name Suzuki Izaimon, an honest, hard-working man. Until lately, his family consisted of his wife, their son aged thirty, the son's wife aged twenty-eight, and two daughters aged respectively twenty-four and twenty-three. On the fifth of last month the daughter-in-law was taken suddenly ill and, after a few days' suffering, died, leaving behind her three little children. Her husband was then stricken down and likewise died. The two daughters were next seized with the fatal complaint, and soon were laid beside their brother and sister. Two friends who came to assist in nursing the sick caught the dreadful disease; one of them is dead, the other getting better. Two of the little orphans were attacked, but are recovering. The last to suffer is the aged mother, and worn out by ceaseless watching and grief she lies helpless, and apparently will soon follow her children. There is no one left but the poor old father who has to nurse a dying wife, and attend to three little orphan grand-children, for none can be found to go to a house which, as the country people say, seems to be under a curse. The harvest has to be got in, the land to be tilled, but there is no one to do it, or to render any assistance to the aged couple in this, their hour of terrible need.

The writer, Mr. G. C. Pearson, makes these facts the occasion of an appeal for assistance to the members of the Community, and we are glad to hear that it has been so fully and generally responded to that he has requested no more money may be sent to him. The case is altogether too hard and sad.

The decision in the case tried on Tuesday last, Beato *v.* The P. & O. Company, was ill reported in our own daily issue and in one of the evening papers. It apparently placed the Acting Law Secretary in the position of quashing the verdict of the Jury in favour of the plaintiff, and giving it in favour of the defendants. But this was not exactly so. The finding of the Jury and the ruling of the Judge upon it, will be found elsewhere at the end of our amended report of the case. We trust the plaintiff will pursue his case, and test the value of these clauses in Bills of Lading, which might more shortly assume the formula "Not responsible for anything whatever." We have said a few words upon the case elsewhere.

The common Japanese tradition of the rising of Fujiyama simultaneously with the sinking of Lake Biwa, is well reflected by Milton in the following sentence:—

> So high as heaved the tumid hill, so low
> Down sunk a hollow bottom broad and deep,
> Capacious bed of waters.
>
> *Paradise Lost. Book VII. Line 300.*

Nor will those who watch the 'Matchless Mountain' day by day deny the appropriateness of the well-known and beautiful figure of Goldsmith in the *Deserted Village*, to its customary appearance:—

> As some tall cliff, that lifts its awful form,
> Swells from the vale, and midway leaves the storm,
> Though round its breast the rolling clouds are spread,
> Eternal sunshine settles on its head.

The Chevalier de Schaeffer, Austro-Hungarian Minister, has returned to Japan.

We observe with pleasure that Mr. Zappe has returned to Yokohama to resume charge of the German Consulate.

From the "Japan Mail Daily Advertiser."

Monday, 6th.

M. Berland gave his second performance on Saturday evening to a house which was again not so well filled as it ought to have been. Miss Héléne Berland sang *La Chanson Politique* from "Fille de Madame Angot" very well indeed, and was in consequence encored. M. Berland's impersonations were again excellent. The entertainment concluded with the Opérette Bouffe *Chez un Garçon*, in which both M. and Madame Berland took part.

From the *Akébono Shimbun.*

It has been rumoured that about 600 men have assembled at Niigata and are preparing for an attack on the *Kencho.*

From the same.

Some fifty of the Kumamoto insurgents have fled to the Konbusen hills. No strict search has yet been made for them by the Imperial troops, with a view to arrest them, as it is expected that the hardships they are now undergoing will soon drive them to surrender.

From the same.

Mr. Iwanami, a *chusakan* of Kumamoto, arrived in Tôkiô on the 2nd instant, having travelled overland in great haste, for the purpose of reporting the exact details of the outbreak to the Government.

From the same.

A report was made to the Tôkiô garrison that about 50 men had assembled in the neighbourhood of Tamagawa (Bushu), but nothing was discovered when officers were sent to make investigation.

From the same.

A large force of police were again sent to Yamaguchi *ken* from Tôkiô on the 2nd instant.

From the same.

There is a rumour that hard fighting occurred between the Yamaguchi insurgents and the Imperial troops of Hiroshima garrison on the 31st ulto., when a large number of the latter were killed. Mr. Mayebara is now at Hagi, and the insurgents are said to be greatly increasing in number.

From the *Mainichi Shimbun.*

We have heard the report that the man-of-war *Unyô-kan* sank near Ô-shima, off the coast of Idzu, and that some 3 officers and 20 sailors were drowned. This is merely report and we are not certain whether it is true or not, but give it for what it may be worth.

From the *Hochi Shimbun.*

Since the 31st ultimo fighting has daily taken place between the insurgents of Chôshiu and the Imperial troops in that province, and some of the former have been killed, while it is reported that 200 of the Imperialists have been placed *hors de combat.* It is said, however, that during the engagement which took place on the 1st inst., the insurgents were beaten and repulsed.

From the same.

The insurgents at Akidzuki reassembled and fought with two companies of troops from the Kokura garrison, but their attack was not successful.

From the same.

The departure of Her Majesty the Empress to Kiôto has been postponed for the present.

Tuesday, 7th.

From the *Nichi Nichi Shimbun.*

A fire broke out in the house of a Chinaman in Kobe at 7.50 p.m. on the 4th instant, and destroyed 36 houses before it was extinguished.

From the same.

The price of swords has greatly risen in the capital.

From the same.

A telegram from Kokura dated the 29th of last month says that the insurgents of Kumamoto have reassembled, in number about 500, and that there are signs of their proceeding to Yamaguchi *ken.*

A telegram received on the same day states that two battalions of infantry and two companies of artillery were sent from the Hiroshima garrison to check the advance of the Akidsuki insurgents, but the latter took an unexpected route, and evading the Imperialists, managed to unite themselves with the Kumamoto insurgents.

From the same.

At the commencement of the outbreak Mr. Mayebara's party was strong, but its numbers have greatly decreased through contact with the Imperial forces. Judging from the way in which the rebels reserve their fire when in action it is further supposed that they must be short of ammunition, and the Imperialists therefore hope to force them to surrender by surrounding their position. It is not expected that further engagements will take place, but General Miura has requested that a man-of-war shall be sent to Shimonoseki.

From the same.

There are rumours current that the *samurai* of Saga have broken out in rebellion.

From the same.

The rock on which *Unyôkan* struck was that on which the M. M. steamer *Nil* was wrecked. The *Unyôkan* did not sink, and the *Meiji Maru* was despatched to her assistance on Sunday, for the purpose of getting her off the rock if possible.

[This is extremely doubtful.—Ed. *J.M.D.A.*]

From the *Hochi Shimbun.*

A telegram from Okayama at 2.35 p.m. on the 4th instant states that there are signs of an insurrection breaking out at Fukuyama in Bingo, and Matsuyama in Iyo, on the island of Shikoku.

From the same.

A telegram received on the evening of the 5th instant states that the Mr. Mayebara had taken possession of the powder magazine within the Castle of Hagi, and if his supplies last out, it is expected that he will not be very soon nor easily subdued.

From the *Akébono Shimbun.*

There are signs of a disturbance breaking out at Usa, in the province of Bungo.

From the same.

The Imperial troops were successful against the Chôshiu rebels on the 4th inst., but Mr. Mayebara has been active in stirring up the people of the neighbourhood to join his standard, so that his followers now number about one thousand.

From the *Chôya Shimbun.*

There are many signs of an insurrection breaking out among the *shizoku* of Hiroshima, Shimane, and Tottori *ken.* Since the 2nd instant a great number of telegrams have been received from the Hiroshima *Kencho* by the Government. It is known that one very important message was received on Saturday, the 4th instant, at 1 p.m., but the precise nature of it has not yet transpired.

From the same.

On the 4th much military baggage belonging to the Tôkiô garrion was sent to Tatsunokuchi, Tôkiô, to be shipped thence, so is therefore supposed that some of the troops of the capital are to be despatched to the south.

From the same.

A large number of the Police force will leave Tôkiô on the 6th instant for Shimane *ken* (Unshiu.)

From the same.

The Imperial troops were beaten by the Chôshiu rebels at Hagi on the 2nd instant, and it is said that the town was consequently set on fire.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

From the same.

On the 3rd instant a telegram announced that one of the Chôshiu insurgent leaders had been captured. It is therefore presumed that the Imperial troops were more successful than on the previous day.

From the same.

It is said that an agreement had been made between the Kumamoto insurgents and those of Chôshiu, that the attack by each should be simultaneous, but for reasons unknown the latter were a little dilatory in their movements.

From the same.

The insurgents of Chôshiu have in their possession 3,000 Sniders and eight large guns, but it is uncertain where they obtained them from.

From the same.

The *Daijok'uan* has issued an order, that whenever any suspicious looking persons are seen in or about the capital the fact is to be reported to the garrison head-quarters without delay.

From the *Osaka Nippo.*

Since the 1st instant a battalion of the Osaka garrison has been stationed at the Temposan fort.

Wednesday, 8th.

At 12.30 a.m. a fire broke out in a small lane leading from the Tokaido at Kanagawa, which, owing to the strong wind prevailing at the time, spread with great rapidity. Six native fire engines were quickly on the spot, but could not succeed in mastering the flames before it had destroyed about 400 houses. An area has been cleared by the fire extending for about half-a-mile along the Tokaido, and from the bluff adjoining that road down to the sea. By dint of hard work the Japanese succeeded in staying the further progress of the fire at half-past four o'clock. The fire broke out in three separate places within a few minutes of each other. It is possible that this was due to natural causes, considering the high wind blowing; but incendiarism may at least be strongly suspected. The fire was extinguished by pulling down some of the threatened houses.

The M. M. Company's steamer *Tanais* with French Mails on board to the 24th September, left Hongkong at 6 p.m. on the 3rd instant.

From the *Chôya Shimbun.*

An order that all the Imperial troops in Chôshiu should unite to make an attack and so at once put down the insurrection in Chôshiu, was given on the 5th instant.

From the same.

On the night of the 5th instant three armed men entered the Branch Office of the Agricultural Department at Shimosa and killed three watchmen. They went away without taking anything, and seemed to be different from ordinary robbers.

From the same.

Some 500 men of the Kagoshima *ken* (Satsuma) have disappeared, it is reported.

From the *Hôchi Shimbun.*

Mr. Sakamoto, of the Army Department, has been ordered by the Government to start for Niigata immediately.

From the same.

A strict watch is kept over those natives of the province of Aidzu who are now residing in the capital.

From the same.

Twenty policemen are constantly on guard at the residences of the *Daijin* and *Sangi.*

From the same.

The man-of-war *Adzuma Kan* is now preparing to leave for the south.

From the same.

It is said that Mr. Kido will be despatched to warn the *shizoku* of Yamaguchi *ken* against any act of rebellion.

From the *Akébono Shimbun.*

Ten men belonging to the Kagoshima *ken*, and fifteen belonging to the Kôchi *ken* entered the province of Chôshiu, saying that they had arrived according to a previous agrement made with Mr. Mayebara.

From the same.

The Government has informed the Army Department that the King of Loochoo is to be saluted in the same manner as the Chiefs of various departments.

From the *Nichi Nichi Shimbun.*

Mr. Matsukawa, of the *Chugai Hiôron*, was on the 6th inst. sentenced to three months' imprisonment, for having violated the Press-laws by writing an article published in his paper.

Thursday, 9th.

The *Meiji Maru* has just returned from the scene of the wreck of the Japanese man-of-war *Unyokan*, and reports that vessel as now lying about 50 yards above high water mark, near the village of Atawa, about 26 miles north of Osima, at the entrance of the Kii channel. She is completely stove in, and now lies filled with sand and shingle, and not worth the trouble of being floating off again. When the *Meiji Maru* left, everything of any value had been recovered from the wreck.

From the *Chôya Shimbun.*

A telegram which arrived from Yamaguchi on the 6th instant at 7.30 p.m., states that on that day a general attack was made upon the Chôshiu rebels at Hagi, and that they were put to utter rout by the Imperial troops.

From the same.

Two of the Chôshiu leaders, Yokoyama and Shirai, were captured in Unshu on the 5th instant, but Mayebara is still at large.

From the same.

Mr. Naganuma, the editor of the *Kôko Shinpo*, was sentenced to 3 months' imprisonment and a fine of 50 *yen* on the 7th instant for violating the 12th clause of the Press-laws, by publishing an article reflecting on the Prime Minister.

From the *Nichi Nichi Shimbun.*

Reports having arrived that the fugitives from Chôshiu have entered Shimané *ken* (Unsho), a strict search is being made with a view to discover them. Mayebara and other leaders are also said to be hiding in this *ken.*

From the same.

On the arrival of the Tôkiô police at Hagi on the morning of the 5th instant they were immediately attacked by the insurgents, who succeeded in making them retreat with some loss, but on the day following the police attacked and defeated the insurgents.

From the same.

The *samurai* of Satsuma who were living in Kiôto, have, it is said, suddenly left that city.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

From the *Hôchi Shimbun.*

The Governor and Vice-Governor of Kagoshima *ken* have informed the Government that they desire to resign their posts.

From the same.

Mr. Hanabusa, of the *Gaimusho*, will start for Corea on the 18th instant.

From the same.

A letter from Kurumé dated the 31st of last month states that there are yet several hundreds of Akidsuki insurgents at Ko-ishiwara, near the foot of Hiko-san, and that as the garrison troops in pursuit had come up with them at the above place on that date, an immediate attack was expected.

From the *Mainichi Shimbun.*

On the morning of the 7th instant the *Genkai Maru* arrived in port with a large number of Satsuma *shizoku* on board.

Friday, 10th.

A telegram received this morning from the United States announces that the Democrats have carried the elections, and consequently Mr. Tilden will be eventually elected President.

Yesterday afternoon, a seaman from the U. S. flagship *Tennessee* was brought before the United States Consul-General on a charge of drunkenness. His Honour was grieved to see such a fine looking old man in so sorry a plight, and judging that he had already suffered sufficiently for his folly, dismissed him with a warning.

From the *Hochi Shimbun.*

Advices from Kiushu, which arrived on the 8th instant, state that the *shizoku* of Saga broke out in rebellion at 2 a.m. on the 8th instant, but they now number only sixty persons.

From the *Chôya Shimbun.*

Since the 7th instant the Government have removed the prohibition that telegrams could not be sent beyond Okayama, and messages can now be forwarded throughout the line.

From the same.

A Japanese Post Office is to be established at the port of Fusan in Corea.

From the *Nichi Nichi Shimbun.*

The Government is making the strictest search for Maki, of Kagoshima; Matsumoto, of Tottori, and Nakane and Kimura of Wakamatsu. They are supposed to have been amongst the party that cut down some policemen at Kowami-chô, Tôkiô, not long ago, so the Government has given orders to the various *ken* for their arrest.

From the same.

General quietness prevails near and at Niigata, and there is no fear of any outbreak.

From the *Akébono Shimbun.*

There is a rumour that Mr. Mayebara has fled to Kagoshima.

From the same.

An attempt was made by some persons to kill a colonel of the Imperial army a few nights ago. The would-be assassins, provided with fire-arms, entered the house of the officer in question while he was luckily absent, on ascertaining which fact they left without in any way molesting his family.

From the same.

A rumour is current that news has been received from Aichi *ken* (Owari) announcing that a disturbance broke out at that place at 4 p.m. on the 7th instant.

Saturday, 11th.

John Kune, another sailor from the *Tennessee*, was charged with drunkenness yesterday morning in the United States Consular-General Court. He was ordered to pay a fine of $1, and some *jinrikisha* hire which was due from him, and then dismissed with warning not to appear before His Honour again on such a charge.

From the *Chôya Shimbun.*

A telegram was received at 10.25 a.m. on the 8th instant, announcing that Mr. Mayebara with other insurgent leaders had been captured at Uriu, in Shimané *ken* (Unshu), on the evening of the 7th instant.

From the same.

Nine of the thirteen *samurai* who cut down some policemen some time ago at Kowami-chô, Tôkiô, have already been arrested in the capital, and three others at Niigata. Among these is a Mr. Maki, who was formerly an editor of a newspaper in Tôkiô.

From the *Hôchi Shimbun.*

The *Genro-In* has compiled a code of criminal laws embracing eighty clauses. This has been laid before the *Sei-In* for its consideration.

From the same.

Mr. Koidzuka, the editor of the *Yokohama Mainichi Shimbun*, was tried at the *Kencho* on the 9th instant, for certain publications in his paper contravening the Press-laws.

From the *Akébono Shimbun.*

Since the sixth instant, Messrs. Kido, Ito, Sugi, Shishido, Nomura and others, all belonging to Chôshiu, have not appeared in their offices as usual, and it is said the there is some division among the members of the Government, but we think there are no good grounds for such a supposition.

From the *Osaka Nippo.*

The Governor has given an order that no one shall walk through the streets of Osaka at night without carrying a lantern.

IMPERIAL GOVERNMENT RAILWAYS.

Kobe and Osaka Station.

Statement of Passenger Traffic for the week ending 5th November, 1876.

Passengers	Yen	7,356·045
Luggage, Parcels, &c.	„	393·040
Goods	„	489·228
Total..	Yen	8,238·313
Corresponding period last year	Yen	5,132·926

From the West Coast of Africa advices were received last week to the effect that the King of Dahomey still defied the blockade. He had blockaded his own inland lagoons, and prohibited his people from using British goods. The *Daily News* understands that the French Government are greatly alarmed for the safety of a considerable number of French subjects who reside in the interior of Dahomey, and that strong representations on the subject are about to be made to our Foreign Office. News has been since received by the *Western Morning News* of the escape of four Frenchmen at Appi, who had been made prisoners by order of the King. They got off to the beach and embarked in canoes found there; but the surf was so formidable that their boats thrice capsized, and everything they had was lost. They arrived at night alongside her Majesty's ship *Conteé* naked and more dead than alive. They were subsequently transferred to a French corvette. The Frenchmen had been told that on the first gun fired from the squadron their throats would be cut.—*Pall Mall Gazette.*

THE INSURRECTION.

WITHOUT any intention of exaggerating the importance or danger of the insurrection which the Government has so promptly and successfully quelled, no impartial observer of the condition of this nation can be satisfied that such an event should be treated as a light matter. The native press seems to us to err in this direction. It does not, in our opinion, dwell with sufficient seriousness on the deplorable fact that the Government, whether by its own or its subjects' fault, has been forced to imbrue its hands in the blood of many hundreds of them, and has lost many of its own men in the strife. Be they pieces or pawns, the occasion is not the less lamentable, for successes gained in civil war leave a bitter taste behind them, and blood thus shed cries longer from the ground than any other. Not a few will be found to say that a measure of spoliation or repudiation has goaded a large class into rebellion, and that a Government which is strong enough to despoil its subjects should also be vigilant enough to prevent them from so acting as to bring down their blood on their own or its head. We have given very full reasons for viewing the measure for the capitalization of incomes and pensions—the proximate cause of the insurrection—in a less severe light. But we have never denied that no arguments from necessity or expediency can free it from the taint of injustice, or absolve it from the discredit of something like an enforced communism. It may be doubted whether there is any analogy in the history of nations for that prosperity among men which the Arabian and Hebrew philosophers of Holy Writ saw, to their utter perplexity, waiting upon dishonesty and injustice; for the lives of nations are indefinitely more prolonged than those of individuals. Whatever problems the method of the Divine Government may present to us, nothing can be more certain or more clear than that it is noble, stern and inflexible, and that, in the long run, wrong will never come right. It may be expiated, perhaps: but it never can be as though it had not been. It is not easy to conceive an argument more calculated than this to make a serious statesman scrupulously and severely just in his dealings with the people whose welfare is entrusted to him.

But while all crimes are blunders, there are blunders which do almost as much harm as crimes. These men in the south-west seem to have been sufficiently irritated by the measure which took away their swords, when down comes another to insist that they shall dress their hair in European fashion. This measure was passed here some years ago, and has more or less been conformed to. Doubtless, too, it has done something towards weaning the people from old customs which were obsolete, and has helped, in conjunction with many other influences, to place their minds in a favourable attitude towards the foreign policy of the Government. It seems droll, perhaps, to say so, but we believe this to be true. No doubt, too, this is a desirable result for the Government to bring about. But it is hardly in human nature to tolerate such an order. In this neighbourhood, in Tōkio, and at the open ports, a change of this kind, if enforced, comes about without great difficulty on account of our familiar intercourse with the people, their imitative disposition, and the good sense with which they now acknowledge that they would willingly be more like us than they are. In eastern Kiusiu, however, foreigners are but little seen, and the inhabitants seem hard to convince that they have anything to learn from us. They connect their swords, their pensions and their top-knots with the time of the supposed tutelage of the Gods. They are jealous of innovations, impatient of all these new-fangled notions of the capital, and restiff and irritable under a *régime* which they associate with diminished incomes, high taxation and acknowledgment of the superiority of foreigners. Think for a moment what effect would have been produced, in Cornwall, let us say, if Charles the Second on his return from France had ordered the Trevelyans and Trelawneys and Pendennises and Bullers to cut their clothes or wear their hair in the fashion of the detested 'Mounseer.' The whole country would have been in a flame, Devonshire and Dorsetshire would have joined, and to this day the people would be singing ballads to commemorate their victory—for we may rely that, at whatever cost, they would have disobeyed the order. The abolition of the swords was a good measure—irritating, no doubt, and sorely trying to a class of men who identify them with half of the feelings which make life bearable. The measure for the capitalization of incomes was necessary perhaps: but it was tainted with injustice; must have been regarded by seven-tenths of those affected by it as wholly unjust; and perhaps exasperated them more on this account than taking away their swords. What aristocracy in the world was ever called on to stand, or ever stood, such a shower of blows? Why be in such a hurry to transform the whole country? Why over-govern so much? Is there not, first, dawn, then twilight, then perfect day? Is it light in the valleys because the sun has risen on the mountain tops?

The cure is: Educate, educate, educate; administer the Press-laws with greater leniency; strain a point even as soon as possible to relax them; let the Missionary have fair play, with his higher views of GOD, of truth, of loyalty, of pure life, of higher faith, of thoughts and hopes of a future, to dwell on which is an increasing and infallible source of strength and invigoration to the mind, an incentive to duty and a reason for doing it.* Take the fetters off trade; encourage industry; shoot any one on the spot who gets a cent from the Treasury by indirect means or without value received; and regard any one who votes for another iron-clad as a traitor to his Sovereign.

* We must protest, however, against this being attempted, as is sometimes the case, by men so ill-grounded in the Japanese language that they make our theology and ethics alike ridiculous. We hear from time to time lamentable stories on this subject from good scholars.—[ED. *J.W.M.*]

Details of the capture of M. Domenico di Bernardo, a rich poprietor of Sicily, by brigands, are furnished by the Italian papers. For eleven days and nights they kept M. di Bernardo marching through a thick forest at a rapid pace. Except that his companions never stopped before any obstacle, whether a precipice, or a torrent, M. di Bernardo has nothing to complain of in respect of the treatment he received at their hands. The food with which they provided him was of the most exquisite kind, and such as could not be found in an ordinary hotel in Italy. No luxury, even to the finest ices, was wanting at their table. The leader of the band, the terrible Leonte, distinguished himself by his politeness. As the Italian newspaper says, he showed himself to be a gentleman transformed into a brigand from a mere love of the art. An easy good humour prevailed in the society of the robbers, and when, on the payment of the ransom, he was released, his guardians expressed their deep regret at losing so pleasant a companion.

BEATO v. P. & O. COMPANY.

THE judgment of the ACTING LAW SECRETARY in the case BEATO v. the P. & O. COMPANY appears to demand a few words of comment.

Plaintiff sued defendants for damage done to certain goods, his property and consigned to him, and conveyed by them. The issues of fact were,

1st.—Was the damage sustained by the goods between the time when they were received and the time when they were delivered by the defendants?

2nd.—Was the damage caused by fresh water?

3rd.—The value of the goods.

The issue of law was:—

Presuming the goods to have been thus damaged while in charge of the defendants, were they responsible for it, seeing that they claim exemption from all such responsibility in virtue of a clause in their bills of lading thus exempting them.

Now, after the evidence upon the issues of fact had been taken, the plaintiff's Counsel was about to argue the issue of law, when Mr. WILKINSON interposed, suggesting that these three issues of fact should be left to the jury, and their verdict upon these taken, subject to such proceedings as the defendants might institute to determine the legal points. There could be no objection to this course, which was adopted, and, after the summing up, the jury found all three issues in the plaintiff's favour. But Mr. WILKINSON then, by a series of interrogatories, extracted from them the opinion that the damage was owing to the negligence of the Company, and having done this, gave a judgment reversing their decision in favour of the plaintiff, grounding it upon the law he had prevented the plaintiff's counsel from arguing. In other words, he first of all bars the question of law, and then applies the law to reverse the decision of the jury. We submit that this can be neither law, reason, common sense nor justice, if only because it decides a case without hearing it.

Of course, as could only be the case, Mr. WILKINSON gave the plaintiff leave to move to set aside the judgment. But before whom is this motion to be heard? Before Mr. WILKINSON. In other words, he is to be asked to reverse his own decision? Doubtless he has the power to do this, but the reversal or alteration of a judgment should surely not be sought at the hands of the judge who pronounced it. In England it would be sought, under the new Judicature Act, at the hands of a Divisional Court, composed of several judges. Here, no such Court is possible, and this was an additional reason—as it seems to us—for accepting the verdict of the jury in the usual way, and leaving the parties affected by it to their usual remedy, viz, an appeal. Or, at the least, the plaintiff should have been allowed the benefit of the verdict, and the defendants might have been allowed permission to institute proceedings to reverse it. This would, at all events, have left the issue of law undetermined, and Mr. WILKINSON wholly unbiassed by any previous ruling upon it.

Now that all our liberties are secure, a vast increase of power has lately, and very wisely, been placed in the hands of the judges, but this is liable to abuse in small places like this, where both the bar and public opinion are weak and appeals rare. Under these circumstances the functions of the Press become specially important, and must be exercised with the greatest vigilance and indifference to personal feeling of every kind.

SPIRIT OF THE JAPANESE PRESS.

HORSES *versus* ASSES.

(Hōchi Shimbun.)

Spirited horses are liable to bite or kick; but when harnessed to a light carriage and driven by a good coachman, they traverse a long distance in a short space of time. Weak horses are not so apt to bite or kick, but neither can they travel so rapidly, and this being the case, men do not like to make public exhibitions of them.

A good judge of a horse looks out for one which possesses speed and strength, and troubles himself little about the tendency to kick or bite. A less skilled man, however, who cares nothing for racing, lays on the whip and shows how well he can manage a weak horse. But when the animal is brought down to so abject a condition of docility, he is of no practical use whatever.

With such powers existing as Russia, England, Germany and others, the world is running a perpetual race, and we must bear in mind that this makes no paradise of it. Though these powers may not desire to increase their territories, yet they are forced to keep men-of-war armed with great guns to protect what they do already possess. Thus every one who enters into this competition must seek out and delight himself with strong horses and scorn weaker creatures.

How, then, is it that there should be men in Japan who desire that the Government should have a weak-spirited people to rule over men subservient to the officials, without a thought whether the orders they obey are good or bad? This want of discrimination is altogether a bad thing. When the Government gives unreasonable orders and passes unjust laws, such acts should be reproved by the people and the revocation of them, if possible, brought about. Men who are heedless as to what laws are passed for them to obey cannot rightly be termed component parts of a nation. They are little better than dolls.

Again, such acts as closing the mouths of the people and thereby depriving them of their liberties, or extinguishing in them all desire for improvement by acting in direct contravention of their wishes, are praised by vulgar politicians, to whom these measures seem excellent methods of procuring and preserving tranquility. This is indeed a marvel to us. The time for ruling this nation as if it were composed only of a pitiful set of helpless wretches, is fast disappearing. Modes of government which were successful enough two thousand years ago* cannot be regarded as good for these days. For we know that weak horses cannot hold out long, nor can weak spirited men maintain the independence of a nation. To satisfy the aims of these vulgar politicians, the people must be reduced to the condition of a set of weak-minded helpless fools, and by the time they have brought about entire tranquillity and content, the country will practically have lost its independence.

If these vulgar politicians direct their efforts to closing the mouths of the people, we shall be so thunderstruck at the absurdity and thoughtlessness of the act, that we shall regard all further remonstrance as ridiculous. Were this to come to pass, the officials of the ordinary run of mind would doubtless be highly delighted and imagine that the people could now be easily governed. But the greatest blessing for the country is that they are not so. All governments are administered by men, and their minds, even though they may be officials, are as liable to weakness as those of other men. If this weakness were allowed to be corrected by public opinion, there need not be the slightest anxiety regarding any difficulty in governing the nation. The people who are easy to be governed are men wholly devoid of any feeling of independence, who care nothing whether their government be good or bad, and who, as we said before, are no better than a pack of dolls. But when men scorn to be dolls, it is just as natural that they should comment on the mistakes of their governments as it is for the officials to make those mistakes.

Let us imagine for a moment our men of learning and intelligence, and all the rest of the people, holding back their opinions from the public in fear of their weakness. A general tranquillity might appear to prevail in the country, and, in the eyes of the narrow-sighted, this might appear to be the happiest state imaginable. But how could we, on so weak a horse, so to speak, ride against the strong ones of the world? And from this we may conclude that though it might be better for the Government if the people were weak and easily ruled, yet, for the nation, it is a great blessing that it is otherwise.

By the words "people not easily governed" we do not mean

* The writer here seems to refer to the rule of the Chinese Emperor Jinnow-Shikō who destroyed all the books in his Empire.—[*Trans.*]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

men who would cause disturbance and insurrection in the country, or who do at random just what suits their humour. We mean men capable of estimating the acts of the Government, and of urging upon it the correction of such mistakes as it may make in its course of administration. In doing this men want neither fire nor sword. Public opinion is their weapon. And if this public opinion were appreciated, as it elsewhere is, the government would correct its errors.

If we look to the history of the rise and fall of nations, we see that no country in which the people were oppressed and slavishly treated as a set of helpless wretches, has ever prospered, and those countries which contain an easily governed people are the scorn of other nations.

Again, the countries which are difficult to govern steadily increase in power. Nothing can guide us like the lessons of history, and this is what it teaches.

Japan now differs vastly from what it was a few years ago, and having been admitted into this world of competition and struggle, who can desire that it should only contain a mass of weak spirited "easily governed" men? Surely, no man.

The higher classes of our countrymen are desirous of promoting the welfare of the country, and there is no reason why the people should be more backward in becoming men not easy to rule.

The Anti-Foreign Party.

(Chôya Shimbun, 1st November.)

The injurious effects upon the country of the cry *Sakoku-joi* have indeed been great, and when we seek for its origin we find it has its root in ignorance. Shameful though it be, it is a fact that our countrymen who sympathize with this cry are imbued with a feeling of self-conceit. The spirit of extravagant admiration for military prowess lasted for such a length of time in the country that the ambition of our countrymen could not be satisfied but by acts to the ultimate effects of which they were profoundly indifferent. But we here refer to a by-gone condition of mind which found vent in these cries. The cause having disappeared, there is no longer any necessity for commenting on the effect.

But when we examine the history of the country from the time shortly anterior to the overthrow of the Tokugawa Government down to this day, we cannot recall a single act done by those who promoted or echoed the cry of *Sakoku-joi* which has been in the smallest degree beneficial to the country. No; whatever they did was always either directly or indirectly injurious.

It is possible that certain reckless writers, on reading this, may say "you are ignorant of the whole question and had better be silent about it. Was it not an honour to the *Sakoku-joi* party, and a benefit to the country, to overthrow the Tokugawas?"

But we also well recollect those days and the then condition of the country, and we know that the *Joi* party enormously embarrassed the Government by cutting down foreigners and setting fire to their houses. And we are none the less certain that those who really overthrew the Tokugawas and opened the country to free intercourse with foreigners were not really men of the *Joi* party. They are the men who now form the Government. For the *Joi* party to plume themselves for the noble act of overthrowing the Tokugawas is as if the vermin in our gaols were to take credit to themselves for assisting to carry out the sentences of the judges by tormenting the unfortunate prisoners.* No one in his senses would regard such an opinion as anything less than absurd.

Looking at the question from another point of view, it may perhaps be pleaded that the members of the *Joi* party who were among the adherents of the former Government, brought about its overthrow. But we ourselves held a position under that Government, and were long troubled by the importunities of these men. Had they not been so numerous about the old administration, it never would fallen with so much humiliation and amid the ridicule of the whole world.

It will be seen from what we have said that the action of these men has in no way profited the present Government. On the contrary, indeed. In each and all of their acts they did serious mischief. Should they not be abhorred by all?

But we will leave their past injuries and come to those which they now inflict.

Since the Revolution the Government has been animated by no such feeling as that of the *Joi* party. Intercourse with foreigners has been promoted, and, as far as possible, every thing has been done in the style of the western nations to promote the welfare and happiness of the people. Some of the more sensible of those who found it convenient to wear the *Joi* mask and who clung to our old customs, perceiving that the country was making great strides towards civilization, became ardent partizans of the new *régime*.

But not all of them. There remain yet some who imagine that Japan is the most powerful country on the face of the earth, and that with a single sword or spear they can slay thousands of the drilled troops of England or Russia. They speak of the reform of our military system as the defilement of our national customs, and the change in our mode of dress as opposed to the will of the gods. Thus there are men who know not the true meaning of the words 'country' and 'God'—men whose dreamy minds have never been wakened to realities. The worst among them envy those now in power, and embarrass the Government just as their predecessors did the Tokugawas. And they will continue to trouble it until the cursed fatuity concerning the past which muddles their brains, is beaten out of them.

Look at one of their acts on the night of the 24th of last month. Those who murdered the officials of the *kencho* and the officers of the Kumamoto garrison are, as we understand, men of the *Jimpu*† party, and this name implies that they are remnants of the old *Joi* party who are yet numerous about the country. The men we refer to were irritated at being forced to cut their hair and to give up wearing their swords, and the bloodshed their rising has caused has brought disgrace on the whole nation. This tells, too, upon the Treasury, and must place their own lives in danger. Oh! it is deplorable that they cannot be awakened from these dreams, and all their perversity arises from ignorance and vain conceit. The injury they do us is enormous. They were the curse of the last Government and are none the less so of the present. If such cries continue, they will disturb the whole country and slavery will overtake the nation.

We have written the above in deep sorrow.

The Insurrection.

(Chôya Shimbun.)

Those who became alarmed on hearing that an insurrection had broken out, and cried out that it was one full of danger to the country, prove themselves to be but little acquainted with the real state of affairs.

A country may fittingly be compared to a human body. If a man gradually withers away through some unknown cause, the doctors give the case up because no remedy can be found for it, and organic disease is likewise held to be dangerous. But a slight chilliness or fever is not a thing to be alarmed at, and again, there are certain maladies, such as boils, which are good for the constitution, cleanse it from noxious humours and thus ultimately improve its condition. And therefore when disease seizes on a country we must first see where it originates, and not be frightened out of our wits before we have ascertained this.

Since the rebels in the north-east were defeated by the Imperial troops in the last civil war, the country has enjoyed continued tranquillity with the exception of the outbreak at Saga, which it did not take long to quell, and these affairs went on quietly enough. But evils sometimes come in an unexpected manner, and though the insurgents who fired the barracks at Kumamoto and killed many of the civil and military officers were soon put down, the *samurai* of the Yamaguchi *ken* were induced to follow this example and break out into rebellion.

Since the measure was passed for the capitalization of the incomes of the nobles and gentry, the *samurai* have been greatly irritated. Moreover, previous to this there were many thousands of discontented men in the country, who could not be weaned from our old customs, who disliked all the reforms the Government has lately been making, and who hoped that something might occur which they could convert into an excuse for rising against the Government. At the time of the Saga insurrection the *samurai* of the whole Island of Kiushiu showed a disposition to join it, but fortunately it was put down before they could do so. Yet their minds were not calmed by the suppression of the outbreak and the trouble at Kumamoto has originated in the old feeling.

But, in our opinion, this breaking out is more like a boil

* The ingenuity of this illustration is beyond question or praise. But it is cruelly unsavoury.—[*Ed. J.W.M.*]

† *Jimpu*—Divine Breath. This appellation is derived from the fact that there is a common belief among the Japanese that the mind which dispersed the invading force of the Chinese despatched by one of the Mongolian line of Emperors was a miraculous interference of the gods. This event occurred about six hundred years ago.—[*Trans.*]

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

than anything else, and, in all probability, we shall ultimately be the better for it. If the whole of the *samurai* should unexpectedly arise in revolution, the extent of the calamity would be unimaginable.* The insurrection which lately broke out has arisen out of a momentary excitement, the insurgents had no leaders to combine and guide them, and their destruction will be of great benefit to the country. There is therefore not the slightest ground for alarm. But in a long peace men's minds become dull and they are apt to be caught off their guard. Disturbances of this nature produce vigilance and tend to strengthen the foundations of the country.†

USEFUL MINERALS AND METALLURGY OF THE JAPANESE.

F.—Arsenic.

By Dr. Geerts.

Meeting of the Asiatic Society of Japan on the 8th November, 1876.

Literature.—Stan. Julien et Champion, Industries, &c., Paris, 1869, p. 47, Chinese Technology: 天工開物 *Tenko kai butsu*, Vol. VI., Tab. 6. Natural History 本草綱目 *Hon-zo ko-moku*, Lib. IX., Fig. 25 and 26; Lib. X., Fig. 52 and 53. Ono Ranzan. 木草綱目啓蒙 *Hon-zo ko-moku kei-mo*, Ed. 1847, by Ono Tsunenori and Te ken-shi yeki, Vol. 5 and 6, Japanese Encyclopedia, 倭漢三才圖會 *Wa-kan-san-sai-dzu-e*, Vol. 61.

Arseniferous minerals are very abundant in Japan, especially the *Arsenides* and *Arsenic-sulphides*. The yellow and red sulphides of arsenic, known as orpiment and realgar, and the native white arsenic, or arsenic-blossom occur in considerable quantities in China, but are not yet found in Japan to a considerable extent. The Chinese have known these three latter ores from the remotest times, and were acquainted with their poisonous properties long before we had in Europe any knowledge about these minerals. *Aristotle* (4th century B.C.) has mentioned for the first time both the sulphides of arsenic under the names of *σανδαράχη* and *ἀρσενικόν*, the first being realgar and the latter yellow orpiment, but the Arabian chemist *Geber** (5th century) first describes the poisonous quality of arsenic. Chinese works of the 8th century before our era speak already of arsenic as a highly poisonous substance. It seems, also, that the Hindoos have known the use of these arsenic minerals in leprosy from the earliest times.

Realgar, orpiment and native white arsenic are distinctly known to the Chinese and Japanese, but as to the numerous *arsenides* and *arsenio-sulphides*, there exists great confusion and want of any distinct knowledge. All ores, in which arsenic is combined with various metals or with metallic sulphides, are designated by the generic name of 礜石 or 礬石 *Yō-seki* or *Nedzumi-koroshi* (rat-poison), because they yield arsenious acid by a process of roasting and sublimation. The crude arsenious acid obtained by this process bears also the name of *Yō-seki*. The name 砒石 *Hi-seki* is commonly given to all substances which contain arsenic, but these Chinese characters are used more specially to denote the arsenic-bloom or native white arsenic. The character 礜 *Yō* of the word *yō-seki* means *rat-poison*, whilst the figure 砒 *hi* or 砒 *hi* is derived from 貔 *Hi* or *Tokoki-kémono* (fierce animal) and means properly "bad stuff" *(ashimono)*. The confusion of names has caused the Japanese to believe that the rough arsenious acid, prepared by the roasting of arsenides *(Yō-seki)* is a different substance from the natural arsenious acid *(Hi-seki)*. Old Chinese works speak of several kinds of natural *yō-seki* or arsenic-minerals, but in a very unsatisfactory manner. I have not yet succeeded in collecting one of these ores by the names given to them in Chinese and Japanese works, because of the profound ignorance which I found to exist among the native naturalists. The only "*Yō-seki*" procurable, and well known to every one, is the crude arsenious acid, prepared by the roasting of several arseniferous minerals. I will mention the names of the several kinds of *Yō-seki* of the Sinico-Japanese works, but must leave them undetermined, on account of the impossibility of seeing and examining these substances. There are then:

白礜石	...*Haku-yō-seki*.....	White arsenic-mineral.
青礜石	...*Sō-yō-seki*.....	Green „ „
紫礜石	...*Shi-yō-seki*.....	Violet „ „
紅皮礜石	...*Kohi-yō-seki*.....	Safflower-bark „ „
桃花礜石	...*To-kuwa-yō-seki*..	Peach-flower „ „
金星礜石	...*Kin-sei-yō-seki*...	Golden-star „ „
銀星礜石	...*Gin-sei-yō-seki*...	Silver-star „ „
特生礜石	...*Toku-sei-yō-seki*..	Isolated „ „
握雪礜石	....*Aku-setsu-yō-seki*.	Snow-ball „ „

The last named mineral is said not to be poisonous, and probably is not an arseniferous mineral; the others should possess nearly the same properties with exception of the colour. The two first named kinds are especially recommended for medical use.

The character of *yō-seki* is held to be one of the principal minerals impregnated with the male principle of nature (陽石 *Yō-seki*). It is therefore considered to contain a large amount of internal heat, and forms, according to Chinese medical philosophy, one of the most powerful medicines to subdue all diseases which are caused by the female or cold principle in nature. Water containing *Yō-seki* dissolved is said never to freeze, even at the lowest temperature, and several lakes in China are believed to contain *Yō-seki* on account of their water never being frozen. Snow and ice cannot remain for any length of time on the mountains in the interior of which this mineral is found. Some native works say that the crane (文鶴 *Bun-kuwan*) swaddles her young with a piece of this mineral, but other more prudent authors deny this story.

Rats die quickly, but silkworms are said to grow big and fat, if they eat this poisonous substance. The last named kind of *Yō-seki*, namely *Aku-setsu-yō-seki* (snow-ball-arseniferous mineral) is a white rough mineral from which a liquid exudes during the winter. This stone is considered the marrow or brain of the minerals (石腦 *Seki-nō*) because it is believed to possess the quality of lengthening life and of transforming mercury into a solid substance, if heated with this metal.

Native writers speak of natural white arsenic *Hi-seki* 砒石, in the following words. "This mineral is found of better quality and more abundantly in China than Japan, and should be most abundant in the neighbourhood of copper mines. But it is also found dissolved in certain mineral-waters, the poisonous water of a spring in 信州 *Shin-shu* (China) being the most renowned. This water should have a greenish colour and at the bottom of the spring solid *Hi-seki*, white arsenic, is found. When this natural white arsenic has been purified by sublimation in a closed vessel, it is called 砒霜 *Hi-sō*, "*Rime of Arsenic.*" The naturalist, Ono Ranzan is of opinion that the poisonous qualities of the water of the river of Tamagawa, near the mountain Koya-San, in the province of Kii; of the water of the spring *Tori-no-jigoku* (bird's hell) at Arima in the province of Setsu; of the mineral water on the volcanic Unzenga-daké at Shimabara in the province of Hizen, and of the stone named *Setsu-sho-seki* at Nasu, in the province of Kotsuké, are all due to a certain amount of arsenious acid.

Having mentioned what native books say about arsenic, I will now describe the different Japanese arseniferous minerals, which have come under my knowledge.

1. Arsenical Pyrites.—I adopt for this mineral the Sinico-Japanese name 鉄色礜石 *Ko-shoku-yō-seki* or *Hagane-iro-yō-seki*, "Arsenic-mineral with a steel-grey colour." As synonym I have adopted the name 砒化鐵 *Hi-kwa-tetsu*, which means "Arsenide of iron."

This mineral forms amorphous masses, with a steel-grey metallic colour and pretty hard. It is found in Japan in very large quantities in the same veins with copper

* This is a marked case of that tendency to "go off at a tangent" which is such a characteristic of the Japanese mind."

† This is a mighty easy way of dealing with a serious commotion in which many hecatombs of men have lost their lives. Such an affair is evidence of a great deal of serious discontent, which a Government will take more or less to heart in proportion as it is more or less sagacious and humane.

* *Gebri* Summa perfect, Part. I, Lib. II, Cap. II.

Original from UNIVERSITY OF CALIFORNIA

pyrites. The latter ore is often mixed with and adheres to arsenical pyrites. In the pure state this mineral contains about 66 per cent. of arsenic, 30 per cent. iron and 2 to 4 per cent. sulphur, but it is often mixed with the following ore, so that the chemical constitution is extremely variable.

2. MISPICKEL or *Arsenio-sulphide of Iron* (sulphurous arsenical pyrites). This mineral resembles very much the former in its physical qualities, and differs only by a larger amount of sulphur (about 20 per cent.) which it contains. I adopt the same name: 鋼色礜石 *Ko-shoku-yō-seki* and the synonym 砒化鐵及硫化鐵 *Hi-kuwa-tetsu-to-rika-kuwa-tetsu*, which name expresses the chemical constitution (arsenide of iron with sulphide of iron). This mineral is also found in the same veins with copper-pyrites or sulphurous tin ore (Tinkies). Both these arseniferous ores are used in Japan for the roasting and sublimation of crude arsenious acid, which process I will describe afterwards. (For localities where it is found, see *Copper-pyrites*, Vol. III., part I., p. 40.)

3. PHARMACO-SIDERITE or *Cubical arseniate of iron* (*Würfelerz* or *Dice-ore*), for which ore we propose the name 六面礜石 ROKU-MEN-YO-SEKI (Hexhedrical arsenic and the synonym 六面砒酸酸化鐵 *Roku-men-hi-san-san-kwa-tetsu* (cubical arseniate of iron). This curious mineral is not uncommon in China as well in Japan. It forms perfectly cubical hard crystals of a dark brown colour and of various sizes. I saw some fine specimens from Kiura, in the district Onajori, in the province of Bungo. The mineral is sometimes found in Japanese druggists, shops under the wrong name 自然銅 *Ji-nen-do* (native copper). Besides, the cubical iron-pyrites, which differs from *pharmaco-siderite* in its metallic brilliancy and yellowish colour, bears also the inexact name of *ji-nen-do*.

4. OLIVENITE or *Arseniate of Copper*.—This ore is found in Japan at Ashiwo in the province of Shimotsuké and at Naganobori in the province of Chôshiu (Nagato), in the form of compact or fibrous masses of a dark greenish colour and iridescent surface. I have given it the name 蒼礜石 SŌ-YŌ-SEKI (greenish arsenic mineral) and the synonym 砒酸酸化銅 *Hi-san-san-kuwa-do* to express the chemical constitution. It is not improbable that the *Sō-yō-seki* of old Chinese and Japanese books is identical with this ore.

5. GREY-COPPER-ORE (antimonial and arsenical) [*Panabase. Fahlertz*].—The mineral known by this name has a very complicated and variable composition, not less than six, and sometimes seven elements being found in it. It may be regarded as a combination of sulphide of copper with the sulphides of antimony, arsenic, iron, zinc and often silver. It has a blackish-grey colour with a metallic lustre, and forms in Japan one of the principal ores used in the extraction of silver and copper, although the former precious metal is rarely present in any large quantity. Grey copper ore gives off in the roasting process a considerable amount of impure arsenious acid, and forms one of the causes of the unhealthy life to which Japanese copper-founders generally are unhappily condemned. This mineral is in Japan mostly found together with copper-pyrites. (For localities where it is found see Metallurgy of Copper Vol. III, part I, p. 28.)

6. TENNANTITE or *Arsenical grey-copper ore*.—This forms crystalline masses of a lead-grey colour, and resembles much the former mineral of which it is only a variety. It has also a very variable composition, but may be regarded as a combination of sulphide of copper with mispickel. In Japan it is found accompanied by copper-pyrites, one of the most common ores of this country.

7. CUPRO-SULPHIDE OF TIN *(arseniferous). (Tinkies).* 硫化錫鑛 RIU-KUWA-SHAKU-KŌ.—Tinkies seems to occur abundantly in the provinces of the south-west of China, but in Japan I know only of its being found in the provinces of Satsuma and Bungo where it is worked upon tin. It contains generally a considerable amount of arsenic, of lead, antimony and copper, so that the tin obtained from this mineral is always very impure and often arseniferous. The Japanese know very well that their native tin is not a pure metal, and is much less valuable than Malacca or Banca tin.

The above mentioned ores form the different arsenides and metallic arsenio-sulphides which I have met with in this country. There are still many other arseniferous minerals, which I have not yet seen here, but many of them doubtless exist in Japan, as for instance:

Native arsenic (metallic) "*Scherbenkobalt*".....砒金
Kupfernickel or arsenide of nickel.....砒化曌結兒
Arsenical nickel or bi-arsenide of nickel.第二化曌結兒
Nickel-glance or sulfo-arsenide of nickel.....硫化砒及硫化曌結兒
Nickel arseniate.....砒酸酸化曌結兒
Arsenical cobalt or Tin-white cobalt (Smaltin or Speis cobalt)砒化格枚爾多
Cobalt-glance or sulpho-arsenide of cobalt (grey cobalt)....硫化格枚爾多及砒化格枚爾多
Cobalt-arseniate.....砒酸酸化格枚爾多
Red silver ore or sulpho-arsenide of silver.....硫化砒及硫化銀

All these minerals occur generally in metalliferous veins or deposits of the primitive and metamorphic rocks, which are so well represented in Japan.

8. NATIVE WHITE ARSENIC *(Arsenic-blossom)*, 砒石 HI-SEKI or 信石 SHIN-SEKI. Synonyms: 信砒 *Shin-ki.*—黃龍萃 *Kô-riu-kuwa.*—赤帝萃精 *Seki-tei-kuwa-sei.*

This mineral, the "*Safed Sumbul*" of the Hindoos, is well known in India and China, and seems to be found in relatively small quantities as a secondary product near solfatares and certain volcanic mineral springs. As known in commerce, it forms crystalline, semi-transparent crusts or concretions, partly consisting of aggregates of small prismatical crystals, and partly mixed with a reddish, yellowish and greyish substance of a more compact character. This latter coloured admixture contains probably some metallic arsenic and sulphides of arsenic. The reddish or yellowish part bears the name 砒黃 *Hi-wo, i.e.* "yellow arsenic," and those pieces which have the colour of raw beef are much esteemed by the native druggists as a medicine against itch, leprosy and other skin-diseases.

I am not quite sure whether this mineral is found in Japan, although it can be seen in every Japanese drug-shop. I have, however, reason to believe that all this white arsenic comes from China, where it is found especially in the province of Kiang-shin *(Shin-shu)*, but I have some pieces in my collection which are said to have been found at the volcano Unzengadaké, at Shimabara in the province of Hizen.

9.—ORPIMENT (crystallised) or YELLOW SULPHIDE OF ARSENIC 雌黃 SHI-WŌ (i.e. *(female yellow)*, *Synonyms:* 金液 *Kin-yeki.*—帝女血 *Tei-jo-ketsu* (*i.e.* Blood of the Empress). The fine crystallised kind or soft scaly aggregates of a bright yellow colour I have never seen in Japan, although sometimes fine Chinese orpiment can be found in the collections of Japanese naturalists. The name *Shi-wo* is more particularly applied to the crystalline bright yellow specimens. Orpiment in compact or granular masses of a dull orange colour, the *Hartal* of the Hindus, can be found with every Japanese fire-work maker, and bears the name 石黃 SEKI-WO *(i.e. yellow stone)*. Whilst the first crystallised kind from China is very high in price, the latter can be bought cheaply. It is used chiefly in pyrotechnical mixtures, for the fabrication of a yellow kind of ink or drawing stuff, and in medicine against different diseases of the skin. I know only one place in Japan where orpiment is found in respectable quantities, Sadayama-dani near Sapporo, on the island of Yezo.

No. 10. REALGAR or RED SULPHIDE OF ARSENIC. 雄黃 Ū-wō or Ō-wō (*i.e. male yellow*). This mineral, the "*Mainsil*" of the Hindus, is not rare in China, but in Japan an inferior kind only has been found up to to this time. The Japanese import the better kinds from China, and distinguish, according to quality, three varieties:—

1. 鷄冠石 KEI-KUWAN-SEKI (cockscomb-stone) or the true *o-wo* with a fine bright red colour. It forms irregular masses, is soft to the touch and must not give any smell even when rubbed with the fingers. This kind is highly appreciated by the Chinese and Japanese in jewellery and medecine.

Original from UNIVERSITY OF CALIFORNIA

2. 雌黄 Kun-wo (odorous realgar). This variety has no bright red colour, is hard and not as pure as the former. It gives an odour when rubbed with the finger.

3. 臭黄 Shu-wo (fetid realgar) is the most inferior kind and possesses a peculiar kind of garlic odour. The Chinese wash this fetid realgar with vinegar in order to remove its bad smell, and by this means augment its commercial value.

According to the Japanese chronicle *Zoku-nihon-ki*, some inhabitants of the province of Isé presented the first Japanese realgar to the Emperor Monmu Tenno, in the year 699.

The Chinese and the Japanese of the old schools of art cut ornaments, mostly balls, fruits, peaches and small vases, from this mineral, which takes an excellent polish. Sometimes *netsuke* of cut and polished realgar can be found in curio-shops, and I have often seen a series of fine polished spheroids of realgar, cry-tal, rose-quartz, agate and jade fixed on silver ornaments (ships, birds, flowers) for the *Tokonoma*.

Although a piece of well polished realgar forms a pretty precious stone, it is useless for any other purpose than for articles for the drawing-room, on account of its softness. The objects made of this mineral cannot support contact with other substances, without losing their polish.

The small Chinese medicine-cups made of realgar, are already too well known to need much mention. In Japan, however, I have never seen these cups, the use of which seems also to be perfectly unknown in this country. The *netsuke* of realgar were considered formerly a kind of preservative (amulet) against fever and malaria (邪気, *yaki*), but of late, it seems, they have lost their reputation. A small portion of powdered realgar is sometimes placed upon burning charcoal as a protection against mosquitoes, who die speedily from the poisonous vapours of arsenious acid, given off by this roasting process. Besides it is used for the preparation of a reddish ink and painting colour.

I am not sure if the Japanese know the method of producing artificial realgar by fusing arsenical pyrites with iron-pyrites, as it is effected in Europe.

The localities in Japan where it is found, known to me, are:

Provinces.	*District.*	*Place.*
Isé	Itakagôri	Tanjô-mura.
Sendai		Minoha-yama
Rikuzen (Mizawa *ken*)	Kurihara-gôri	Mouji-mura.

After having thus mentioned the different arsenic ores, I will now proceed to the description of the preparation of arsenious acid.

Preparation of arsenious acid, 雄石 Yô-seki or *Nedzumi-koroshi*.

Sublimed arsenic is prepared in China and Japan by a rude process of roasting and sublimation. Different arseniferous minerals are used as material, but chiefly arsenical pyrites, tennantite and grey copper ore. This work is very dangerous to the workmen on account of the bad construction of the roasting furnace and condensing apparatus. The Chinese method which is sometimes used in Japan, and is described in the Chinese work on Technology *Ten-ko-kai-butsu*, is better than the original Japanese manner, which I shall mention afterwards. The inclosed figure is a reproduction of the said Chinese work and gives some idea of the whole apparatus.

A temporary furnace is built with stones and rough clay in an uninhabited place on the mountain. It has the shape of a cone cut off at the top. The narrow upper part of this cone is loosely covered by a subverted semi-globulous iron-vessel, and at the lower and wider part of the conical furnace is an opening for the entrance of the air and for the introduction of the ore and fuel (wood). The ore being divided into smaller pieces by hammering, is placed upon the wood in the furnace and afterwards firing is commenced. The sulphides (of the ore) are decomposed by the double action of heat and air, the sulphur escaping for the most part as sulphurous acid gas. The arsenic of the ore is thus converted by the air into arsenious acid and the latter is deposited as a fine powder or semi-crystalline crusts on the inner side of colder iron vessel. When the sublimated crust has obtained a certain thickness, or if the iron pot becomes too hot, the fire is allowed to cool, in order that the sublimate may be removed. The first iron receiver is then replaced by another and firing is again commenced, until the stock of the ore is exhausted. The condensed matter in the iron receivers is still very impure, and contains ordinarily a considerable amount of oxyde of iron. For this reason it has always a yellowish or brownish colour.

In this impure state it is mostly known in commerce under the name of *Yô-seki* or *Nedzumi-koroshi* (rat's-poison).

Sometimes, however, it is subjected to a second sublimation, or is purified by means of cristallisation. It becomes then a white coloured crystalline powder and bears the name of 砒霜石 Hi-so-seki "*Rime of Arsenic.*"

During this roasting-process the workmen are advised to remain at a distance of at least 100 feet off the furnace in the direction from which the wind blows. The same workmen may not work continually; they ought to change after each two consecutive operations, if their health is not to be speedily destroyed.

According to Ono Ranzan, the preparation of arsenious acid is effected in Japan principally at the mountain Ginsan in the province of Iwami; at Nasuno in the province of Kotsuké, and at Nagano-bori in the province of Choshiu (Nagato). The arseniferous minerals are laid upon the fuel is a small open furnace, rudely built with some stones and clay. They upper part of the furnace is closed by wet straw-mats and firing commenced. The arsenious acid formed by this roasting process is condensed by the wet mats, and finally the latter becomes dry and burns to ashes. The fire is extinguished and the crude arsenious acid taken away. It is very impure and has a yellowish or brownish colour. This old Japanese manner of preparing arsenious acid is still more unhealthy and rude than the Chinese process already described. The roasting of arseniferous minerals is even in Europe an unwholesome operation, although good furnaces and large condensing chambers are used, but the Sinico-Japanese methods are, in fact, very dangerous to the workmen.

If the ashes of the mats which have served in this operation are thrown into the river, the fishes are said to die speedily.

Until the year 1661 the sale of arsenious acid *(yô-seki)* was perfectly free in Japan, and the Chinese exported it also into this country. But the Emperor Gosai Tenno prohibited the importation on account of the numerous cases of poisoning at that time.

The arsenic mines in the provinces of Kotsuké and Setsu were closed and palisaded, but in latter times this prohibition was again withdrawn. At the present time the sale of arsenious acid and other poisonous substances is subject to registration, according to the new law of the department 衛生局 *Yé-sei-kiyoku* (Medical Policy or Board of Health) of the Ministry of the Interior, 内務省 *Nai-mu-sho*.

At present cases of poisoning are creditably rare in Japan and less than in most foreign countries, but there was a time when it was not so. It is said that formerly political and social adversaries used the ceremonial tea-parties, named *cha-no-yu* to poison their enemies secretly.

Under the guise of friendship the adversary was allured into the small tea-room or summer house which is invariably to be found in the garden of every official of a certain rank, and the tea was there served with all the customary ceremonial. The guests of highest rank drank first, and the host dispensed the tea without the aid of servants, who were never permitted to be present at an official *cha-no-yu*.

Thus the tea-parties became the most famous occasions for all sorts of secret negociations, political intrigues and even of poisoning. It was at one of these that the celebrated general Kato Kiyo-masa, Prince of Higo, and contemporary with Taiko Hideyoshi, was poisoned secretly in 1611 by the Shogun Iyeyasu at an official *cha-no-yu*.

The chief use of arsenious acid of Japan is as rat-poison; further it is used in medicine and for the melting of an alloy of copper antimony and arsenic, called 白銅 *Haku-do* or "White Copper."

The antidotes recommended by native works for poisoning by arsenic are numerous, the three following however are considered the best.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

1. A cold infusion of a kind of small bean 綠豆 *Roku-dzu* or *Bundo-mamé* or *Yayenari*, the *Phaseolus radiatus* L., var. *Subtriloba Mig.* of botanists. The efficacy of this infusion would be augmented when it is mixed with powder of dried human excrement.

2.—Very fine powder of lead or tin, as it is obtained when these metals are rubbed on a hard stone.

3.—Powder of a kind of red ochre mixed with a little water.

There can be no doubt that these antidotes are inferior to the hydrated peroxide of iron recently prepared, as it is adopted by most of the foreign Pharmacopœias for this purpose.

Correspondence.

DR. HEPBURN'S DICTIONARY.

To the Editor of the "Japan Weekly Mail."

Sir.—I have of late had occasion to occupy myself with Japanese measures and weights, and have naturally had recourse to Dr. Hepburn's Dictionary for ascertaining their equivalent in English. I found, however, that as a rule, the indications of Dr. Hepburn are of such a nature as would lead an inattentive reader into serious error.

The following will serve as specimens:

One *momme*, says Dr. Hepburn, is equal to 58.33 grains Troy; and one *fun*, we find, is "the tenth part of a *momme*, or 16 grains Troy." One of these indications, at least, must be entirely wrong.

Under *rin* we read: "One *rin* is equal to 0.583 grain troy." A simple calculation will consequently give one grain Troy as somewhat less than two *rin*. Under the word *jaku*, however, we meet a sentence saying: "One grain troy is a fraction less than 6 *rin* of Japanese weight."

One *hiki* is said to be equal to 52 feet; and one *tan* is given as: "the half of a *hiki* or 28 feet."

A *koku*, we are told, measures 5.13 bushels, or 7.551 cubic feet. A *to*, then, which Dr. Hepburn himself says is equal to the tenth part of a *koku*, should consequently contain a little over half a bushel, or 1304.81 cubic inches. But, strange to say, the dictionary gives it as "a little *less* than half a bushel, or 1097.520 cubic inches."

The *shō* is said to contain 109.752 cubic inches, and to be equal to ten *go*. Consequently a *go* should be 10.9752 cubic inches. But it is stated to be: "A box, $4.\frac{67}{100}$ inches square and $2.\frac{50}{100}$ inches deep, containing $53.\frac{133}{100}$ cubic inches."

Though I have not the material at hand to enable me to give the correct equivalent for the Japanese expressions above mentioned, still, as Dr. Hepburn is constantly—and, as a rule, deservedly—quoted by other authors as the authority on all subjects relating to the Japanese language, I consider it right to draw attention to such palpable inaccuracies, because incorrect information, especially on such matters, is almost worse than none.

I may mention that when the second edition of the Dictionary was published at Shanghai, I, in the *North China Daily News*, drew attention to several errors in the book, amongst which the discrepancy in giving the equivalent of the *Momme*, *Fun* and *Rin*, was especially mentioned. I at the same time expressed a hope, that if a third edition should appear, such errors would be rectified. However, for some reason or other—perhaps because the paper mentioned was not the proper forum for the article, which thus escaped the attention of those concerned—the Pocket Edition which appeared a long time after has exactly the same mistakes.

I remain, Sir,

Yours obediently,

WILLIAM BRAMSEN.

Tōkiō, November 6, 1876.

PUNCTUALITY.

To the Editor of the "Japan Weekly Mail."

Sir.—A few days ago I was served with a summons in the name of H. B. Majesty to attend the Court at Kanagawa as a juror at 9.30 o'clock on the 8th instant, and attached to this summons there was a note to the effect that I was liable to a fine not exceeding $50 if I did not attend.

At some inconvenience to myself I walked into the Court room punctually at the time named in the summons. There was no one there except some jurymen, who were hanging about the door. The morning was cold and there was no fire in the room. After waiting till five minutes to ten o'clock the clerk entered and called over the names of the jurymen. At six minutes past ten o'clock the barristers entered, and shortly afterwards the Judge. I felt inclined to ask the Judge why I had been called there at 9.30, but thought that the remonstrance I intended to make would come best from me in the jury-box. Fortunately, however, I escaped serving. May I therefore beg you to favour me with any information in your power for my future guidance? If half-past nine means ten o'clock at the British Consulate, it seems to me that the summons should say so—what do you think? I saw you there, and you can vouch for my accuracy.

ONE SUMMONED FOR THE JURY.

Law & Police

IN H. B. M.'s PROVINCIAL COURT.

Before H. S. Wilkinson, Esq., Acting Law-Secretary.

Messrs. J. Edwards, J. Creyk, R. Johnstone, B. H. Pratt, and J. Farmer as jury.

Tuesday, November 7th, 1876.

F. Beato, *vs.* J. Rickett, Jr. as Agent for the P. & O. Company.

This was a claim for $1,100, value of goods belonging to plaintiff, and damaged on board one of the steamers for which defendant is agent.

Mr Dickins appeared for plaintiff and Mr Ness for defendant.

Mr Dickins stated his case, saying that the gentlemen of the jury had merely to decide whether certain goods which arrived from Europe in one of the steamers of the P. & O. Co., for which defendant is agent here, were damaged by salt or fresh water. Plaintiff claimed the amount of $1,100 value of the goods damaged, and to prove his assertion that this damage occured through fresh water he called as witness, first

F. Beato, sworn, stated:—I am a British subject, and plaintiff in this case. I remember the goods in question arriving here in January last. They were ladies' leather bags, packed in tin-lined cases, and were shipped in London on board the P. & O. Co.'s steamers. On the arrival of these goods we sent to take delivery of them. The weather was so unpropitious that my Chinaman was unable to get them for six or seven days. The boxes being wet as the Chinaman told me.

Mr Ness here objected to this, saying that conversation with a third part was not evidence.

Witness said he must explain how he knew that the boxes were wet, and continued:—I saw the goods in the godown the day after they were landed. The contents were all mildewed. Mr Abbot and Mr Blakeway, both experts, were with me. I also examined them myself. I thought it was salt-water at first, but afterwards I tasted some of the saturated paper and found it was fresh water. I examined them at another time with more experts; Mr Bayne, Mr Abbott, Mr Talbot, Mr Blakeway, Mr Rickett and Mr Center. On that occasion I again thought it was fresh water. Mr Rickett did not give any opinion on that occasion. Then Mr North analysed the paper and concluded that it was fresh water. Mr Rickett gave no opinion. Indeed he seldom spoke. In the end we agreed to have them sold by auction. The ten cases were sold for about $1,065. (Account sales referred to). There were 65 dozen bags altogether. The value in Yokohama is about $38 to $39 per dozen, upon delivery. The contract price was $40, freight and all expenses included. They were stored for some time in the *Tiptree* by the P. & O. Company.

Cross-examined by Mr Ness.—I do not know in what condition these goods were in when shipped at Southampton. I do not know that they might have been damaged before shipment. I do not know that I received notice of the arrival of the goods. Not more than five or six or eight days elapsed before they were taken delivery of. It was snowing at the time. My Chinaman landed them,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

They lay on the hatoba for six or seven hours, and were then taken to the godown at No. 67. I do not know that the goods were damaged on the hatoba. They were not exposed to inclement weather. Snow was on the ground, but on the day they were landed it was fine weather, just like to day. They could not sustain damage on the hatoba. I did not see them on the hatoba. I don't know whether they were exposed or not. I saw them in the godown the next morning. They had been opened the night before and then it was found that they were damaged. I think nearly all of them were opened in my presence. One or two boxes were slightly wet externally. I don't know if the tin case had been properly soldered—you want me to give an opinion I don't know anything about. Water can always find its way into the inner case even though tin-lining. There was a kind of crystalization resting on the top of the tin which I thought must be salt, but upon tasting I found it was not. The brown paper the bags were wrapped up in was saturated, and I tasted it and found it fresh water. Everyone present gave the same opinion. If every body says one thing they must be right; don't you think so? When they were to be sold at auction the cases were emptied and we found water down in the corners, which was in my opinion fresh. But I am not a chemist to analyse it. There is always a market for such goods in Yokohama. I have no idea when the damage occurred.

Edgar Abbott, sworn, stated: I reside at No. 28, and have had seven years experience in shipping matters. I remember examining the goods in question.

Mr Dickins here produced the official report of Mr Abbott's survey, asking him if that was correct.

Mr Ness objected to this, saying that witness's opinions should be given without reference to such document.

Witness continued:—My opinion was that these goods were damaged by fresh water. I gave the report in writing to the Agents of the Insurance Company, Messrs. Strachan & Thomas, on whose behalf I surveyed. I really do not remember the exact date. I think the report was made the day after the examination.

Mr Dickins asked that witness be allowed to refresh his memory by reference to the report.
